The newspapers which thus change hands include the *Evening Standard*, the *Daily Sketch*, and the *Sunday Herald*, published in London; and the *Daily Dispatch*, the *Evening Chronicle*, the *Sporting Chronicle*, the *Sunday Chronicle*, and the *Empire News*, published in Manchester.

Lord Rothermere is already the principal proprietor of the *Daily Mail*, the *Daily Mirror*, the *Evening News*, the *Weekly Dispatch*, and the *Sunday Pictorial*, and Lord Beaverbrook of the *Daily Express* and the *Sunday Express*.

It is expected that the control of Hulton's northern publications will pass into the hands of Lord Rothermere, and that the Metropolitan publications will be acquired by Lord Beaverbrook.

The purchase price is very large, and it is stated in the City that a new public issue in connection with the transaction will be made in the middle of the month.

Sir Edward Hulton has for some time been in ill-health, and it is understood that anxiety about his eyesight has been a principal factor in his decision to dispose of his newspaper interests.

The statement has been made in the Press that the Berry group offered Sir Edward Hulton £6,000,000 for his entire undertaking, but were outbid.

The "Warrington Guardian."

Congratulations are justly being showered upon Messrs. Mackie and Co., Ltd., of the *Guardian* Press, Warrington, whose offices and works were gaily decorated with flags and bunting on Monday afternoon, upon the occasion of the celebration of the 70th anniversary of the foundation of the *Warrington Guardian*.

At the head of the works a huge canvas bore the motto "1853-1923. Seventy years old and still on top," and around the panelling above the arches along either side of the centre flooring were the names of the series of South Lancashire and Cheshire *Guardians*.

The principal event in the celebrations was the starting by Lady Greenall of a 24 page rotary newspaper press, upon which has been printed a special 24-page souvenir issue of the *Guardian*.

There was a large and representative attendance of townspeople. They were received in the board room by Sir Gilbert Greenall, Bart., C.V.O. (chairman of the directors), Sir Peter Rylands (vice chairman), Mr. J. J. Whitley, Mr. Roger C. Parr (directors), and Mr. J. C. Coppock (managing director).

The guests, in small parties, accompanied by the directors and members of the staff, then proceeded to inspect the printing works, newspaper department, bookbinding department, and the general machine department. They were extremely interested to see and have explained to them the apparatus of a modern printery and a model plant for the production of newspapers. After viewing the battery of linotype machines they saw the making-up of the mid-weekly papers on the stones, and proceeding to the foundry witnessed the making of a page plate. The central attraction was the huge rotary machine, and when Lady Greenall started it on its long journey through the years the working was witnessed with extreme interest. Copies of the 24 page papers produced were examined, and the company then returned to the board room, where the Mayor proposed "Prosperity to Mackie and Co., Ltd., and the *Guardian* Press," and Sir Gilbert Greenall and Sir Peter Rylands responded.

Order for British Hand-Made Paper.

A report from Maidstone states that a big order for hand-made paper has just been executed for the Russian Government. The order was for a high-grade paper and a condition of the contract was payment on delivery.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investment,
Miscellaneous.

One Insertion	**3/0**
Three Insertions	**6/0**

For every line exceeding three lines **1/.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion	**1/6**
Three Insertions	**3/0**

For every line exceeding three lines **6d**

Sales by Auctions, Tenders.
Patents for Sale.
Legal and Financial Announcements

Replies may be addressed to Box Numbers, Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C.4, for which a fee of 6d. is charged to cover Postage of Replies.

Cheques and Post Office Orders to be crossed and made payable to STONHILL & GILLIS.

Telegrams: Stonhill, Lud, London.
Telephone: 8407 City.

Situations Vacant.

REQUIRED, Capable DRAUGHTSMAN; must have had Drawing Office experience, either on Rotary Web Printing Presses or Sheet-fed Offset Presses; state age, experience and salary required.—Box 14252.

SUBSCRIPTION CANVASSER wanted for old-established Printing Trade Journal; ground, South of England.—Reply, in first place, to Box 14162.

WHOLESALE AGENT wanted for Great Britain, with good connection amongst Stationery and Allied Trades, for Belgian Proprietary Article.—Apply, Box 388, Pratt's Advertising Agency, 51-2, Chancery, Lane, W.C.2. 14261

Situations Wanted.

FOREWOMAN (PRINTERS) disengaged; experienced; hardworking and reliable.—R. L., 3A, Brondesbury-road, Kilburn, N.W. 14259

PRACTICAL PRINTER, used to Management, desires Post; good class work or place of trust; estimating, charging-up, buying, interviewing, etc.—Box 14253.

PRINTERS' and STATIONERS' CUTTER, well up in all classes of work and all kinds of machines, seeks situation; Day, Night or Jobbing.—A. E. Pelling, 10A, Peabody Buildings, Golden-lane, E.C.1. 14257

SALE BY AUCTION.

By Order of the Receiver for the Debenture Holders.

Re F. J. DIPROSE & SON, Ltd.,
81, Carter Lane, London, E.C.4

PLANT, MACHINERY AND STOCK OF A MANUFACTURING STATIONER.

A 42 in. Crosland Self-Clamp Guillotine, 26 in. Furnival Hand Clamp, 26 in. and 24 in. Hand Clamp ditto, 25 in. and 30 in. Sectional Treadle Perforators, No. 4A and No. 8 Brehmer Stitchers, 5 and 6-Wheel Paging Machines, two 22 by 14 in. Nipping Presses, 32 in. Multiple Power Punching Machine, 42 in. nearly new Shaw's Double-strike Ruling Machine, 36 in. by 42 in. Hand Rulers, Round-Cornering and Punching Machines, Handle Letters, Bookbinders' Stores, Rolls, Creasers, Gluepots, etc., 2 and 3-H.P. Electric Motors, Shafting and Belting, Fixtures, Fittings, Office Furniture, 4 ft. Oak Roll-top Desk, No. 4 Smith Premier Typewriter, 24 in. Vulcan Safe, Tables, Chairs, Stock of Account, Manifold, Cash and other Books, Papers, etc., and numerous other Effects.

Also Lease of Premises, having 17 years unexpired, at a rental of £150 per annum.

FRANK G. BOWEN, Ltd.,

WILL SELL BY AUCTION on the Premises as above, on Thursday, October 18th, 1923, at One o'clock. On view day prior.

Catalogues of the Receiver, A. Willmott, Esq.; Messrs. Francis Nicholls, White & Co., Chartered Accountants, 14, Old Jewry-chambers, E.C.2; and of the Auctioneers, 62a, Aldersgate-street, E.C.1.

Machinery for Sale.

SMYTH-HORNE, LTD.,
1-3, Baldwin's-place,
Gray's Inn-road, London, E.C.1.

Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

Business for Sale.

TO PRINTERS and OTHERS.—Manufacturer of Wired and Gummed Price Tickets has up-to-date PLANT and BUSINESS for IMMEDIATE DISPOSAL.—Write, Box 14262.

Miscellaneous.

WASTE PAPER: ITS RECOVERY AND RE-MANUFACTURE. By Jas. Strachan. A Fund of Information; price 12s. 6d.—Stonhill and Gillis, Publishers, 58, Shoe-lane, London, E.C.4.

Advertising Convention.

The first meeting of the general committee of the International Advertising Convention to be held at the British Empire Exhibition next July, was held at the offices of the Newspaper Proprietors' Association, Ltd., on Monday. Mr. Harold Vernon, president of the Thirty Club, was in the chair, and representatives of the printing trade present included Mr. A. E. Goodwin and Mr. C. Arthur Bates. Committees were appointed to make the necessary preparations for the convention, which will be attended by 2,000 delegates from America, and by a considerable number from the British Dominions and from the Continent. Advertising, publishing, printing, and selling sections are supporting the convention, and already £15,000 has been subscribed towards a fund of £50,000 to defray expenses. Offices for the convention have been opened at Sentinel House, Southampton-row, W.C.

Encyclopedia of Imperial Trade.

The compilation of a comprehensive survey of the resources and possibilities of the Empire is being undertaken by the Federation of British Industries. The idea is to collect all available information likely to be of service to the producer of raw materials, the manufacturer, the merchant, or the financial house, and, in fact, to compile a convenient encyclopædia of Imperial trade. The Federation have enlisted the support and co-operation of the various Governments of the Empire in supplying much of the information upon which the work will be based.

The survey, which will be in several volumes, will be arranged as far as possible by grouping those materials which fall naturally together (*e.g.*, one volume will be devoted to non-ferrous metals, another to communications, etc.), to each of which a separate volume will be devoted. By this means the products, requirements, and undeveloped resources of the different parts of the Empire will be dealt with. It is hoped that the series will be complete by the spring of 1924, so that publication will coincide appropriately with the opening of the British Empire Exhibition.

DEVELOPMENT OF LANGLEY AND SONS, LTD.—Various items of attractive publicity matter reach us from the Euston Press, which, by the way, is one of the few up-to-date printeries making plentiful use of advertising of all kinds, including posters, in popularising their printing. The firm's old order office at the corner of George-street and Drummond-street, where the business was established in 1860, has just been closed in view of the recent opening of a more prominent and convenient shop and order office at 276, Euston-road, close to the meeting place of Tottenham-court-road and Hampstead road.

Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, OCTOBER 11, 1923.

The Machine and the Man.

THE question of the effect which the introduction of labour-saving machinery has upon the amount of unemployment in industry is of vital interest to all trades, and not least to those trades associated with the printing craft. The riots that attended the introduction of mechanical typesetting showed the strong view taken of the matter in those days by the workpeople of the printing industry; and certain modern developments, such as photo-typesetting, promise to bring the same problem to the fore in the near future. Mr. W. Howard Hazell, chairman of Messrs. Hazell, Watson and Viney, Ltd., and president of the London Master Printers' Association, has had his attention drawn to the matter by a recent article in the *Ninteeenth Century and After*, and he has employed his able pen in writing for the same journal a vigorous reply to the previous writer's conclusion. That conclusion was that the introduction of labour-saving machinery exerted a permanent harmful effect on the labour market. Mr. Hazell directly controverts this, and in doing so marshals a convincing array of facts and figures to prove his case. He first reviews the course of unemployment in industry generally during the past fifty or sixty years—the period of the great development of labour-saving machinery—and shows that, whatever may have been the immediate effect of the introduction of this machinery, the ultimate effect was not to create serious unemployment, the period showing no general increase in unemployment. He points out that the number of unemployed rises and falls with the state of trade, and is affected by various internal and external influences, and fluctuates throughout the whole period. He notes the effect of labour-saving machinery in cheapening the finished product and so stimulating the demand, and the cotton trade is cited as one example of the invention of labour-saving machinery leading to increased employment.

Printers and Labour-Saving Machinery.

OF special interest is Mr. Hazell's treatment of the experience of the printing trade in this respect, figures being adduced to show that the use of labour-saving machinery does not permanently reduce the number of persons employed, but, on the contrary, actually increases it. "In the printing trade," says Mr. Hazell, "improvements have been made, not by one sweeping change that has revolutionised the industry, but by the continuous invention of machines that carry out a process or a part of a process with less labour than formerly. The last forty years have seen the invention of composing machines by which one man can set as many letters as five or six men working by hand. The growth in the size and the speed of the printing machinery, and the use of many automatic appliances, have probably increased the output per person employed in printing sheets to nearly the same extent. The modern novel is now bound by a series of complicated machines, whereas some forty years ago all the processes except two or three were done by hand. Under the conditions of hand labour it needed the work of about 450 women and of about 600 men for an hour to bind 5,000 cloth bound novels of the usual size. By the use of labour-saving machinery the same work can now be done by about 130 women and about 170 men in an hour, *i.e.*, what formerly required approximately 1,050 hours of labour to produce is now completed in approximately 300 hours. The increase in the output of newspapers per man employed is as great as or greater than in other forms of printing. The printing industry shows how necessary it is, when considering the effect of machinery on employment, not to examine only the actual trade or part of the trade concerned, but to consider the reaction owing to increased output on the industries that are allied to it. The much greater use of machinery in the printing industry has coincided with improved education, and the cheapening of books and newspapers has caused a very large increase in the number of persons engaged as booksellers and newspaper dealers to distribute the greater output made possible by the use of machinery."

* * *

The Price of Paper.

THERE are rumours of a probable advance in the price of printing and writing papers. So far, we ourselves have not encountered any case of further advance on what are at present regarded as market prices. It cannot be claimed that to-day's selling figures at the mill end leave much margin over cost, and there are many makers who would gladly add another farthing per lb. on the top of their current quotations if they thought it possible to get it without losing business. The impression has all along been that the present level would stand until the demand showed signs of real revival. In the present state of trade, any attempt to lift market levels would merely have the effect of postponing any revival that there might be in prospect.

* * *

The Paper Merchant's Service.

A POINT that ought to be driven home to the paper merchant of to-day is the fact that he might extend his service to the paper user. Especially in the field of printing and cover papers there is scope for the development of sampling systems. Only one firm to our knowledge has seen the necessity of helping the printer to clinch inquiries in a prompt and efficient manner by equipping him with sample sheets for the compilation of dummy booklets and for proofing purposes. A book of paper samples or a cabinet of printed octavos has its own particular sphere of use, but it has also its limitations. It does not enable the printer to accompany his estimate with a proper sample of paper.

Personal.

Lord Curzon will preside at a complimentary dinner to Mr. T. P. O'Connor, M.P., in London, on October 25th.

Sir George Truscott, Bart., was 66 on Tuesday.

Sir Fredk. Becker is still in Canada and is not expected back until the end of the year.

The honour of a Knighthood has been conferred upon Mr. Stephen Henry M. Killick on the occasion of his retirement as one of the Sheriffs of the City of London. Sir Stephen is chairman of Cropper and Co., Ltd., and a well-known member of the London Stock Exchange.

The Right Hon. G. H. Roberts, M.P., who, after severing his official connection with the Labour Party and being returned to Parliament as an Independent, and recently joined the Conservative Party, has now resigned from the position of joint president of the Industrial League and Council which he has long held in association with Lord Burnham.

Mr. Roberts, who has represented Norwich as a Labour Member since 1906, has been unanimously adopted as one of the official Conservative candidates for the next Parliamentary election.

The opening address of the series of six craft lectures to be held at Stationers' Hall during the winter months, will be delivered by Mr. R. A. Austen-Leigh, M.A. (past president, Federation of Master Printers), on Friday, October 12th, on "The Romance of the Printing Craft."

The chair will be taken at 6.30 p.m. by Mr. Edward P. Vacher, F.R.G.S. (Master of the Worshipful Company of Stationers).

Mr. G. R. Hall Caine, the president of the Bookbinders' Cottage Homes and Pension Society, has written an introduction to the interim report of the Society. He shows that over £5,000 has been raised towards the rebuilding, but another £5,000 is still needed.

Mr. W. J. Parrish, publicity expert for Messrs. Iliffe and Sons, Ltd., gave a very instructive address on "How to Get More Printing Business" to the members of the Association of Master Printers of South-East London at the Crystal Palace on Tuesday night.

Mr. G. Poulton, the president, was in the chair, and a report of this interesting meeting will appear in our next issue.

Mr. J. Griffiths (Cornwall Press) was elected the South-East representative on the London Costing Committee.

Mr. Wickham Steed, lately editor of *The Times*, is purchasing the *Review of Reviews*, and hopes to take up active editorship before the end of the year.

Mr. H. W. Nevison is another well known journalist to join the ranks of the autobiographers. His retrospect, "Changes and Chances," just published by Nisbet, gives a vivid insight into the life of a journalist who has made a great name as a war correspondent.

Mr. E. S. Agnew, a director of *Punch* has declined the invitation of the Liberals to contest the Stamford Division of Lincolnshire.

Mr. Percival Marshall, at a luncheon given by the Council of the British Association of Trade and Technical Journals, was presented with a silver-fitted suit case and an illuminated address in recognition of his five years' chairmanship of the Association. The presentation was made by Sir Edward Iliffe.

Captain T. A. Newton, who was previously connected with the bookbinding trade in London, and is now Publicity Officer to the town of Launceston, Tasmania, is greatly impressed with the climatic and other natural advantages of that neighbourhood, also with the big industrial possibilities which are being rapidly developed.

Mr. John T. Burke, the London editor of the International News Service, and formerly London editor of the *New York Herald*, has been given a farewell dinner at the London Press Club on the occasion of his return to America.

Mr. P. H. Benson, a member of the literary staff of the *Daily News* and son of Mr. W. P. Benson, a well known Liverpool journalist, has been married at Manchester to Miss Ivy Lilian Richards, of Whalley Range, Manchester.

Reminiscences of 50 years' service on the *Newcastle Chronicle* were given by Mr. William H. Cartner, a member of the commercial staff of that journal, who was last week presented with a travelling case by his colleagues on his retirement.

Mr James E. Archibald, of Manchester, has resigned the hon. secretaryship of the Manchester District of the Institute of Journalists on leaving the district to take up work elsewhere.

Mr. James Wallace, the deputy overseer of the *Greenock Telegraph*, has been the recipient of gifts from the proprietors and staff on retiring after 44 years' service on that paper.

Mr. J. D. Tufin, of Messrs. Benn Brothers, has been appointed editor of the *European Commercial* at Vienna, in succession to Mr. M. Sparks, who has returned to London to edit the *Hardware Trades Journal*.

Mr. Herbert E. Binstead, the editor of the *Furniture Record*, will, on Thursday next, October 18th, be the guest at a banquet given by the Furnishers' Chamber of Trade in appreciation of his 21 years' service in that capacity. Lord Waring will preside, and he will be supported by Mr. Ernest Benn.

Sir Alfred Robbins, P.G.W., President of the Board of General Purposes of English Freemasonry, has, it is reported, decided to retire from journalism at the end of the year. His coming retirement, however, applies only to his professional work, and his activity on behalf of Freemasonry is likely to be increased rather than diminished.

Sir Alfred Robbins has now entered on his fiftieth year in daily journalism, forty-five of which have been spent in Fleet-street, including thirty-six as representing the *Birmingham Post*. He has long been the "Father" of the lobby of the House of Commons, and since 1903 has filled the positions of chairman of the London district of the Institute of Journalists, vice-president, president, and treasurer of the Institute, and chairman of the Institute's orphan fund, which latter post he has held for the past twelve years.

Mr. P. W. Holden, a director of Messrs. Wiggins, Teape and Co. (1919), Ltd., during his visit to Australia and New Zealand, from which he has just returned, came away with two indelible impressions on his mind. One was the boundless hospitality extended to a visiting Britisher, and the second the brilliant prospects that await the fortunate millions who will eventually find their way to the sunshine and wealth of these countries.

Mr. Holden found throughout Australia and New Zealand the strongest possible British sentiment applied to trade, and it will be the fault of the Mother Country if this dies down owing to the indifference of the home public to Australasian products.

Mr. F. W. Fordham, of the firm of Messrs Norton, Burt, and Sons, has been successful in securing the first prize in the membership card display competition for 1924 arranged by the London Society of Compositors. The second prize was awarded to Mr. J. Burton (Messrs. Knapp, Drewett and Sons), whilst the third award was secured by Mr. W. Pearson (London Caledonian Press).

The Boy Worker.

[contributed.]

It is the aim of all enlightened statesmen that boys and girls should stay at school for a much longer period than they at present enjoy, and thus spend the most critical time of their lives under the pleasant conditions of school life. Yet it is obvious that this will not be a speedy reform, and meanwhile the conditions of those who are compelled to leave school at an early age should be considered. It would indeed be difficult to exaggerate the danger which inevitably results from the sudden transplantation from the short and pleasant days at school to the long and harassing days in the office and workshop.

The great need of youth is for some protection such as men obtain from their trade unions, and where the adult worker is assisting the employer, as in the printing trade, to make the lot of the young people as pleasant as possible, and to protect them from accidents, long hours and bad health, conditions are much better than they used to be. The Joint Industrial Committees of employers and employees that have been formed in many areas up and down the country, and the national J.I.C.'s are doing very good work in this respect and should have the ardent support of all interested in the welfare of our youths.

Technical education is also very necessary, and if the skill we get in our adult workers of to-day is to be continued and bettered in the generation that is to follow the theory of their craft must be taught in our technical schools and the practice taught in our workshops. This does not mean that long hours must be spent by the apprentices, for arrangements are easily made whereby the youngsters can be given leave of absence for a couple of hours from the workshops when they are to attend evening classes at the schools.

The need for technical schools is fully recognised by all the education authorities and matters are fairly well advanced now for their provision and maintenance; but our workers of to-day must more fully recognise their responsibilities to the young people and give more sympathetic help to them in the workshops. Too often are the youngsters snubbed and told to run away when they ask questions of their older workmates, or grumbled at when they make mistakes and cause the workmen a little extra trouble to put matters right. The fact that the present grown-ups had to go through the mill when they were learning their trade and had to put up with it is no reason why the youths of the present should suffer likewise. One of the ethics or rules of the Boy Scout movement is for each to perform at least one act of kindness every day. Is it too much for us to ask each adult worker to perform a similar act each day on behalf of the apprentice or learner in his shop? One little hint to teach the youngster something, or one word of commendation for a little job correctly or well done on each of the 300 working days of the year is 300 steps forward in the education of that youngster and a year of work made more pleasant and happy.

The future of the printing or any other trade is with the youth of to-day, and if the quality of printing is to be maintained and skill in craftsmanship is to be kept at the highest possible standard the best of apprentices must be induced to come into the industry. There are, no doubt, many other points of consideration in this respect and many ways in which improvements can be made, but among the most important are those that will help the young workers, facilities for technical education by which they can learn the theory of their trade, and kindness and consideration in the shops when they put their theory into hard matter-of-fact practice. Employers and workpeople can help in this latter respect, and gentlemanly conduct on the part of the adults of to-day will help to make gentlemen of the future generation of workers and thereby lift our craft and industry to a position even higher than it holds to-day.

The first number has appeared of the *British Russian Gazette and Trade Outlook*, a new monthly review intended to "bring about some definite common-sense and constructive action by keeping all who are concerned with Anglo-Russian business in touch with one another."

DIVIDENDS AND REPORTS.

ST. NEOTS PAPER MILL CO.—Report for three years to April 30th, 1923, states that a large quantity of new machinery has necessarily been purchased at high prices ruling during period; the directors have considered it prudent to write off greater part of this expenditure before arriving at net profits. Electric light has been installed, and electric drive to more outlying portions of plant. Net trading profit for three years, after allowing for depreciation and making adequate provision for taxation liabilities, was £19,381, plus £8,836 brought in and unclaimed dividends £22, making £28,239. Directors recommend final dividend of 10 per cent., tax free, for year 1921-22, carrying forward £9,114

NEW COMPANIES.

AUTOTYPE CO., LTD.—Capital £25,000, in £1 shares (7,500 5 per cent. cumulative preference and 17,500 ordinary); to acquire the business carried on by W. M. Rouse, surviving executor of the late C. Sawyer, at 74, New Oxford street, and 22, Dyott-street, W.C., and at West Ealing as the Autotype Co., together with the trade marks and other assets and the liabilities thereof, subject to, and with the benefit of, two agreements (1) dated June 15th, 1909, between the said C. Sawyer, and S. E. Green, and (2) dated September 11th, 1911, between the said C. Sawyer and the Autotype Fine Art Co., Ltd.; to adopt an agreement with W. M. Rouse and Eva G. Paddon, and to carry on the business of producers and manufacturers of, and dealers in, articles, substances, materials and goods of all kinds for use in lithographic, photogravure, collotype and other processes, photographers, printers, engravers, etc. Private company. First directors: W. M. Rouse, P. E. Wall and E. E. Moreau. Registered office: 74, New Oxford-street, W.1.

LEICESTER PAPER STAINING CO., LTD.—Capital £5,000, in £1 shares; to carry on the business of manufacturers of, and dealers in, wall papers and wall hangings and papers of all kinds, dealers in chemical materials, etc. Private company. First directors: J. E. Pendleton, T. Nicholson and W. Dawber. Registered office: The Mills, Birstall, Leics.

"WEEKLY WESTMINSTER GAZETTE."—The Progressive Publications, Ltd., registered as a private company on September 27th, with a nominal capital of £21,000, in 8,000 ordinary "A," 8,000 "B" and 5,000 deferred shares of £1; to carry on the business of proprietors, printers and publishers of newspapers and other literary works, stationers, advertising contractors, etc. The directors are authorised by the articles of association to acquire the *Weekly Westminster Gazette*. First directors: John A. Spender, J. R. Bryce Muir, Hon. R. H. Cawley, P. Guedalla, Major the Hon. W. H. M. Pearson and E. E. Taylor. Registered office: 12, Cursitor-street, E.C.

"DEMOCRAT," (1923) LTD.—Capital £30,000, in 27,500 ordinary and 2,500 deferred shares of £1 each; to acquire the newspaper called the *Democrat* and the business of a newspaper proprietor, printer and publisher carried on by P. R. Creed, of 1, Tudor-street, E.C. Private company. First directors: T. E. V. Wilson, W. E. McConnell, H. N. Bolton and O. W. Nicholson. Registered office: 1, Tudor-street, E.C.

NEWTON TRUST, LTD.—Capital £10,000, in £10 shares; to carry on the business of financiers, contractors, manufacturers, engineers or miners, printers, newspaper owners, etc. Private company. Provisional directors: G. A. Notts and C. Piper. Registered office: 88 and 90, Chancery-lane, W.C.1.

G. AND D., LTD.—Capital £100, in 1s. shares; to carry on the business of printers, stationers, paper and ink manufacturers, booksellers, advertising and publicity agents, etc. Private company. First directors: P. T. Davies and E. R. B. Graham. Registered office: 222, Strand, W.C.

DOCUMENT PHOTOGRAPHING CO., LTD.—Capital £1,000, in £1 shares; to carry on in England and elsewhere the business of photographers, printers, engravers, publishers, book and print sellers, advertising agents, etc. Private company. First directors: W. C. Crocker, V. S. Wood and W. A. Crocker. Registered office: 20, Bucklersbury, E.C.

W. H. BEERS, LTD.—Capital £2,500, in £1 shares; to carry on the business of engineers and manufacturers, manufacturers and sellers of machinery, waxed and unwaxed paper, plain or reinforced foil, fibre and cardboard cases, board in the form of collapsible fibre cases, roofing and other building materials, etc. Private company. Subscribers: W. H. Beers and T. Darwood. Registered office: Central House, Kingsway, W.C.2.

MEERLOO OFFICE EQUIPMENT CO. LTD.—Capital £1,000, in £1 shares; to take over the business of printers and stationers, carried on at 80, Mark-lane, E.C., as the "Meerloo" Office Equipment Co., and to adopt an agreement with S. Stern, and to carry on the said business and that of cabinet makers, etc. Private company. Permanent directors: S. Stern and J. Meerloo.

EDMUND MARTIN, LTD.—Capital £15,000, in £1 shares; to acquire the business now carried on by Edmund Martin, and to carry on the business of manufacturers of and dealers in all kinds of animal lubricants and products, pieces for paper manufactures and dyes, etc. Private company. First directors: Edmund Martin, A. C. Tipper and L. J. W. Bain. Registered office: 167, Caledonian-road, N.

SACRE AND CO., LTD.—Capital £2,500, in £1 shares; to acquire the business of advertising specialists, now carried on by L. H. Sacre and H. G. M. Rew at Sentinel House, Southampton-row, W.C., as "Sacre and Co." Private company. Directors: Capt. L. H. Sacre, Capt. D. C. Wace, Major H. G. M. Rew and Col. M. M. Haldane.

HINDLEY'S PHARMACY, LTD.—Capital £100, in £1 shares; to take over the drug business at 13, Walthew-lane, Platt Bridge, Wigan, and to carry on the business of chemists, stationers, dealers in photographic goods, etc. Private company. Directors: Emma Hindley, J. P. Hindley and H. T. Charnock. Registered office: 13, Walthew-lane, Platt Bridge, near Wigan, Lancs.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

NORTON AND GREGORY, LTD. (drawing office material manufacturers, etc.).—Deposit on September 6th, 1923, of deeds of Junction Works, Hythe-road, Willesden Junction, N.W., to secure all moneys due or to become due from company to Barclays Bank.

GLOUCESTER GALLERIES, LTD. (fine art publishers, etc., Bishopston, Bristol).—Issue on September 19th, 1923, of £500 debentures, part of a series already registered.

E. AND F. N. SPON, LTD. (publishers, printers, stationers, etc., London).—Particulars filed of £3,000 debentures authorised August 27th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital (if any), the whole amount being now issued. Also registered land registry charge on the upper floors of 57, Haymarket, W., dated August 27th, 1923, as additional security, to the above-mentioned debentures. Holder: E. A. Barton, The Cottage, Cumberland-park, N.

RIAM, LTD. (engravers, mounters of art work, etc.).—Particulars filed on September 21st, of £5,000 debentures authorised June 1st, 1923, charged on certain properties in Shoreditch, and the company's undertaking and property, including uncalled capital, the whole amount being now issued.

JOHN RISSEN (1923), LTD. (manufacturing stationers, printers, paper and box makers, etc., London).—Particulars filed of £8,000 debentures authorised September 12th, 1923, charged on the company's property, present and future, including uncalled capital, the whole amount being now issued.

PHILLIPS, MILLS AND CO., LTD. (waste paper dealers, cartage contractors, etc.).—Mortgage and land registry charge on the "Bridge," "Granary," and "Bridge House" wharves in Wellington-road and Battersea Bridge-road, S.W., both dated September 25th, 1923, to secure £10,500. Holders: W. Kelley and E. S. Phillips, Bridge Wharfe, 16, Wellington-road, Battersea, S.W.

BANKRUPTCIES, etc.

Re ELDRED A. H. HUNTER, late of 193, Upper Thames-street, E.C., and "Riverscroft," Shepperton, paper agent.—The first meeting of creditors was held on October 3rd at the London Bankruptcy Court. Mr. F. T. Garton, official receiver, reported that it appeared from the debtor's statements that he had been in business as a paper agent for many years, and for 20 years prior to last June he was a partner in a firm carrying on business in Upper Thames-street, E.C., but then withdrew owing the firm about £7,000 in respect of overdrafts and guarantees. In 1915 he also started on his own account as a printer and stationer, using his private address at Shepperton, his object being to provide employment for disabled ex-service men. The undertaking was successful until after the Armistice, when he held a large stock which depreciated in value. In order to keep it alive, he turned it into a limited company styled Matthews, Hunter and Whish, Ltd. The company was registered in January, 1922, with a nominal capital of £6,000, of which £100 was subscribed in cash and £500 issued in debentures. Mr. Matthews became a director and the company took over his business which was known as Forbes and Matthews. The debtor acted as chairman of the company, the registered offices being at 5, Grocer's Hall-court, E.C. In June, 1922, the company was in difficulties; the debtor then took entire charge, the other directors thereupon surrendering their shares. He (debtor) tried all ways to keep the concern going, but without success, and at the instance of the debenture holders Mr. Albert Goodman was appointed receiver. The debtor afterwards assisted Mr. Goodman, but the business was finally closed down about three months ago, and he (debtor) was of opinion that it is doubtful whether the assets will realise sufficient to discharge the claims of the debenture holders. Since then the debtor had been without occupation. He roughly estimated his liabilities at £10,000 and had no assets of tangible value. An execution was levied by a creditor four months ago, when everything was removed and sold, leaving £5 due on the debt. The debtor attributed his insolvency to the failure of the company and the amounts he had guaranteed on its behalf. A resolution was moved for Mr. A. Granville White, C.A., 14, Old Jewry Chambers, E.C., to act as trustee to administer the estate in bankruptcy, but the creditors decided to leave it in the hands of the official receiver.

Re AMOS SALVADORI, 21, Frith-street, Soho, W.—The public examination of this debtor was held on October 9th at the London Bankruptcy Court, the accounts showing one liability of £500 and assets "nil." The debtor stated that he came to England in April, 1922, and became editor and publisher of a weekly anti-Fascist journal called *Il Comento*; in April last judgment was given against him as the publisher of a libel in the journal and these proceedings followed. He attributed his failure to his liability for damages awarded in the libel action. The examination was concluded.

From the London Gazette.

PARTNERSHIP DISSOLVED.

H. W. Wrigley and J. A. Ridgway, advertising specialists' manufacturers and agents, 16, Mosley-street, Manchester, under the style of Wrigley and Ridgway.

BANKRUPTCY ACT, 1914.

RECEIVING ORDER.

T. H. Hennell, 30, Thornhill-crescent, Barnsbury, lately residing at 126, Broadhurst-gardens, Hampstead, journalist.

Norwegian Paper Contract with RUSSIA.

It is announced from Norway that the Borregaard concern has signed a contract for the delivery of 500 tons of paper to the Russian Paper and Cellulose Trust. The latter was ready to take a much larger quantity—up to 3,000 tons—but the Norwegian mills, it is suggested, were afraid to enter into such a commitment, in view of the fact that the shipping season will come to an end in a few months. No details are available as to prices and terms of payment.

Associated Newspapers, Ltd.

Issue of 250,000 Bonus Shares.

An extraordinary general meeting of the shareholders of the Associated Newspapers, Ltd. (proprietors of the *Daily Mail*, *Evening News*, and *Weekly Dispatch*), was held at the Memorial Hall, Farringdon-street, on Saturday. Mr. Thomas Marlowe (chairman of the company) presided.

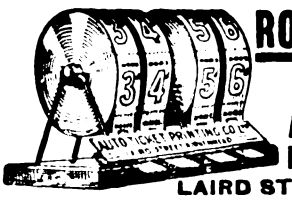
The chairman said the meeting had been called to carry a step further the resolution which was adopted on March 9th. The company on that occasion took powers to increase the capital by the creation of a further half-million deferred shares. Two hundred and fifty thousand of these had been issued and it was now proposed to issue a further two hundred and fifty thousand by capitalising a portion of the undivided profits. The directors were unanimous in recommending this course and the auditors, who had carefully examined the position of the company, were also satisfied.

Sir Andrew Caird (managing director) seconded and the resolution was carried unanimously.

THE JAPANESE EARTHQUAKE.—The earthquake in Japan has led to such methods being adopted as have come to the fore in this country during strikes or other interferences with normal printing production. Dr. Ritson, of the British and Foreign Bible Society, states that he has just received full information regarding the complete destruction of the £10,000 worth of plates and stock in the Japanese earthquake. But, he adds, their staff at Kobe are going ahead and are photographing the pages of some of their books and making plates from them, from which they print, so as to replenish the stocks. The Fukuin press (*i.e.*, the Gospel press), which was a big concern at Yokohama and Tokio and printed all the Bibles for the Bible Society, has only six survivors out of its four hundred employees. Among those who perished is Mr. Mukaoaka, the principal of the firm.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.



BELGIUM (LUXEMBURG).

A Belgian firm of good standing desire to secure for the whole of Belgium and the Grand Duchy of Luxemburg the representation of British manufacturers of note books, note paper, etc. (Reference No. 333.)

NORWAY.

A firm of commission agents in Christiania desires to secure the representation for Norway of British exporters of paper of fine qualities. (Reference No. 341.)

Printers' Managers and Overseers ASSOCIATION.

Seeley Cup Final.

The possession of this trophy aroused considerable interest amongst the members of the first three provincial P.M. and O.A. Centres—Liverpool, Manchester and Yorkshire—who assembled on the green of the Newton Heath Bowling and Lawn Tennis Club, Ltd., Claremont-street, Manchester, on the 29th ult., to witness ten Liverpudlians attempt to overthrow an equal number of Tykes. Supporters were plentiful from all centres, as the company numbered 60.

Unfortunately, owing to indisposition in the home circle, the donor of the cup was unable to be present, so President Robinson, of the Manchester Centre, deputised for Mr. Seeley.

Owd Jooa Thackrah, the Yorkshire county referee, led off by meeting Mr. W. Cain, a winner of some 70 bowling prizes, and the veteran "met his Waterloo," as the heavy green taxed his strength, he having recently had a breakdown. The games were so well balanced that had Pattinson and Rhodes put up good scores against their Liverpool opponents, the result of the contest might have been different. Manchester had held the cup for two years, Yorkshire for one year, and now this year Liverpool proved to be the best team and won on merit.

The sides and scores are as follows:—

Liverpool		Yorkshire	
Cain, W. H.	21	Thackrah, J.	13
Martin, F. W.	20	Booth, Wm.	21
Caldwell, H. R. ...	21	Hamer, A. L.	20
Maxwell, W.	21	Pattinson, H. D. ...	3
Graham, J. J.	21	King, James	13
Ball, P.	12	Wheelhouse, J. D. ...	21
Wilson, J. E.	10	Atkinson, F.	21
		Rawstron, E. W.	
Dyson, Bentley ...	19	(captain)	21
Peate, C. (captain) ..	21	Rhodes, E.	10
Field, R.	21	Cawthra, A.	20
	187		163

An excellent tea was served in the café of the Failsworth Industrial Society, Ltd., Church-street, Newton Heath, and amidst the clatter of knives and forks and the cup that cheers but does not inebriate, the fun and laughter was prolific. Everyone feeling at peace with the world, two of J. and G. Finch's Daimler char-a-bancs were requisitioned and after an enjoyable trip the party was ushered into the headquarters of the Manchester Centre—the "Mitre" Hotel—where a musical evening was spent.

President F. E. Robinson, in welcoming the visitors and friends, said he was sorry the donor of the cup was absent, because Mr. Seeley would have been gratified with the enthusiasm that had been displayed by all parties. His first thoughts when offering to give a cup were to bring about a unity of the various Centres, and the gathering that evening had justified the idea. The game right through had never given much preponderance to either side until near the close, and when one compared the totals—Liverpool 187, Yorkshire 163—it was seen that there were only 24 points in favour of the winners. He congratulated Liverpool on capturing the cup, and also Yorkshire for the way they had played the game as true English gentlemen. He suggested that the three Centres should get together earlier so that a chance might be had in securing a dry green, fit and matured, having a nip in it, and then Manchester might win. (Cries of oh! oh!) A wire giving the result had been sent to the donor of the cup. Owd Jooa had, in conversation, passed some remarks to him that the rules governing the play for the cup were too stringent, therefore he would say, let each Centre desiring to enter the competition make suggestions for consideration. Personally, he would rather see it free from all restrictions except that of good fellowship and unity amongst all the members. On behalf of Mr. Seeley he asked the Liverpool president to accept the cup in the true spirit by which they had won it. Manchester had thought a lot about the hospitality meted out to them by Liverpool when they met at Gateacre, and they hoped some day to reciprocate that good spirit.

President Mackie (Liverpool) on accepting the cup said it was a great pleasure to be on the winning side. It had been remarked that a wet green was all in favour of the novices, but he would put it down to the expert tuition of Captain Peate. He congratulated Yorkshire upon the way they had taken their reverse, but he hoped both would meet again, and Liverpool would try to console Yorkshire by showing them the cup and again taking it back to the city on the Mersey. He regretted the donor's absence as he might have filled the cup with joy; also, he thanked Manchester for the way they had catered for the events of the day.

President H. Temple (Yorkshire) having had to leave for home,

Mr. A. L. Hamer deputised, and remarked that their team had come to Manchester to give Liverpool the knock-out blow, but he had to admit they had been beaten by a better team. He would not admit, as Manchester had done, that Liverpool had wiped the floor with them, because the difference in points did not admit of such a construction.

Vice-president Scouler (Manchester) said he was pleased to see such a great gathering, and also congratulated Liverpool, after their years of disappointment, in securing the trophy.

Captain Peate (Liverpool) stated he was proud of his team, and all praise was due to the members for so skilfully handling the woods, both when they met Manchester and when they had met Yorkshire.

Secretary Poole, the ever-popular senior officer, remarked that Liverpool had reserved a place ever since they met Manchester at Hunt's Cross and now it was going to be filled. That day many members had said to him "Why look so serious?" Well, when it was mooted that Liverpool and Manchester had to meet, various members were dubious of success, but he was optimistic and bis side had won. The same happened again when Yorkshire had to be fought, and he said to the pessimists, "Liverpool is going to take it from them," and they had done so. Those gatherings allowed members to know one another and they were good for the Association. He thought Mr. Seeley had not been given enough credit for bringing together the members of the various Centres for the past four years, and the spirit of unity that had been engendered made all of them better friends.

Mr. Edward McVay (Manchester past president) added that the gathering had made everyone feel happy. Unity was strength and kindliness was helpful. The ladies present that day had brightened up the rather clouded atmosphere, and they were always pleased to find the daughters of Eve in their social gatherings.

Mr. J. Thackrah (Yorkshire) said his advice could be summed up in three words: "Play the game." As an old bowler he had to admit the best team had won. If the green was heavy, owing to the lateness of the season and the atmosphere, it was the same for both novice and professional.

Mr. W. H. Crowther, noted for his Yorkshire characteristics, said his team had intended to win, but they had failed, and would "lend" the cup to Liverpool for twelve months.

Mr. H. R. Caldwell (ex-president, Liverpool) agreed that the cup was given with the best intentions and the object had been attained. He appreciated any honourable means for preventing lack of enthusiasm, and as an ex-president his remarks were based on facts. The hard work of the secretaries, and the troubles of the presidents were sometimes a source of pessimism, therefore, whenever something came forward to bind them together and increase their enthusiasm, they should grasp it.

Past-President Nuttall, in a humorous speech, traced the history of the cup.

During the evening it was suggested that Liverpool, Manchester and Yorkshire form a Northern League; Birmingham, Nottingham and Leicester form a Central League; and that sufficient influence be brought together to obtain a trophy to be called the "P.M. and O.A. Cup." Other Centres could follow on similar lines.

President Robinson invited all P.M. and O.A. members to be present in Manchester on Saturday, November 10th, when there would be a demonstration (by kind permission of Messrs E. Hulton and Co., Ltd.), on the Ludlow Elrod machine, and later in the evening Mr. J. H. Nuttall would give a discourse on its workings and possibilities. Further particulars would be announced later.

Messrs. Jas. N. Poole and J. King moved a vote of thanks to the president, and Messrs. McKie, Hamer and Wilson respectively moved thanks to Manchester secretary, A. Gavin, A. Hellewell, and E. C. Balls for the successful efforts they had made in catering for the gathering.

WEE MAC.

Australian Notes.

A New Daily Newspaper—"Daily Telegraph" Dividend—New Offices for P. J. Firth, Ltd.—Saving Money on Paper—Economy in the Government Printing Office—Tasmania also Uses the Axe—New Company.

(From Our Sydney Correspondent.)

A NEW consumer of news-print paper is shortly to arrive in the form of a daily newspaper for Perth. Various influential gentlemen are at the bottom of the project for establishing the *Perth Daily Sun*. Among the promoters are an owner of race horses, an ironmonger, a politician, a lawyer and a squatter. The prospectus allows for 200,000 shares of £1 each, of which 120,000 are offered to the public at 1s. down and 4s. on allotment, other instalments of 5s. spreading over one year. The balance of 80,000 shares will be held in reserve. Already 26,000 shares have been taken up by the founders, and when an additional 50,000 have been taken the company will proceed to allotment.

THE directors of the *Daily Telegraph* Newspaper Co., Ltd., Sydney, have declared a dividend, at the rate of 8 per cent. per annum, for the half of the company's financial year, which ended on June 30th last.

P. J. FIRTH (QUEENSLAND), LTD., have recently moved from their old premises in Tank-street, Brisbane, which they were renting, to a new factory and warehouse in Alfred-street, facing Brunswick-street Railway Station. The new building is situated on a block of land 140 feet square, the building having a frontage of 120 feet with a depth back of 126 feet. The cost is in the neighbourhood of £14,000.

NOTABLE economies are reported to have been made by the Railway Department in New South Wales by cutting down the consumption of paper. It is stated that by shearing three-quarters of an inch off the railway weigh bill the department saved a thousand a year, while £400 was saved by reducing the size of the official telegram form by one inch. Altogether, by these methods, the railway printing bill for the financial year just closed is lower by about £17,450.

IT is pointed out in an official statement that the savings by the Commissioners were partly due to the decrease in the price of paper, but many of a permanent character have been made. It has been certified that a saving of £2,500 per annum has been effected by the department's decision to use newsprint paper for many departmental forms and publications which have no permanent value, and which were hitherto printed on higher quality paper. Large numbers of forms and books have also been reduced in size to eliminate waste. The goods consignment note has also been reduced slightly in size, with a resultant saving of some hundreds of pounds per annum.

STRINGENT economy in other directions is also likely to affect the amount of paper consumed in Government departments. Sir Arthur Cocks, Commonwealth treasurer, has been carrying on a very vigorous campaign, incidentally cutting down the staff of the Government Printing Office very drastically. Twenty six printing employees have been discharged and 25 more are under notice.

THE curtailment of work in the Government Printing Department and the discharge of employees, some of whom have had many years of service, has naturally aroused the criticism of the Amalgamated Printing Trade Union. Incidentally Mr. Bell, the secretary, suggests that the proportion of the saving to be credited to cheaper paper is very much greater than the treasurer allows for.

IN Tasmania also the economy axe has fallen upon the Government Printing Department, where seven officers are recommended for retirement.

AN Advertisement is always working.

A Printer and His Own Advertising.

By W. H. SESSIONS, Fellow of the Incorporated Society of Advertising Consultants and Managing Director of the Ebor Press, York.

(*Continued from page 256.*)

The house journal is another method of a printer's advertising which is well worth consideration, and there are some very fine ones being put out by different printers in the country. I believe this form of advertising is a very good one indeed for the printer. The difficulty, of course, is to have the matter good, for not every printer will be, or have on his staff, an attractive writer or editor. Even if he has, it often happens that the editor is busy and so cannot get to his copy-writing, and when he does the works are busy and cannot print it, and so it is left over and becomes, instead of a monthly, an occasional reminder (with great emphasis on the "occasional"), which appears only when things are slack and therefore loses very much of its value. If a house journal is started by a printer I would suggest that it be somebody's job to send it to the compositors promptly, and that the works get it out to time, even when busy, and even if it means working overtime to do so. This is particularly important at those times of the year which are followed by a lull. It may seem folly to suggest to a printer, who is busy just before Christmas, that a house journal be got out in this busy rush, when it will be such an excellent fill-up in the lull after. After all, however, the main purpose of the house journal is to find profitable work for this lull after Christmas, and it should be ready for despatch before the lull occurs, as much of its usefulness is lost if it comes out when the slack time is half over. For those printers who feel that a house journal is too big a thing for them to attempt, and who yet feel that this style of advertising would be good, I would suggest that they may find openings for them to issue monthly something of interest to their customers in quite a simple way. Examples of what I mean are: coming events, time and 'bus tables, and other means of giving in a concise form useful local information. Combined with their own advertising, this may be even more valuable to those who receive it than the literary matter sent round by the big firms who employ a highly paid advertising department to be responsible for it.

But the main plank of advertising for the printer will undoubtedly be general direct advertising. Of course a good deal is done in this way by printers, but I would suggest that it is too much looked upon as a fill-up for slack times and is not based on a definite advertising policy. Let it be worked out on a settled plan, after the other points which I have mentioned have been considered and decided upon. Have the scheme laid out in draft form for, say, a whole year, then, if a slack time comes along, by all means get on with the next six months' advertising and so have it ready for its appointed dates. But this is a very different thing, in respect of successful publicity, from haphazard advertising got out only in slack times.

May I sound a word of warning? A printer's advertising should not be more expensive in style than his customers could themselves afford. An example of a bad piece of printers' advertising taught me a lesson many years ago. I used the best possible paper both as regards the slip and the cover paper, and the ribbon, although effective, was expensive to insert. The result of this advertising was that it attracted a good deal of attention and brought a good number of enquiries, but as soon as these enquirers knew the price, they found that the expense was too high, so it brought no result in actual orders, although I think it did help us with those people who did not enquire the price in making them think of us as good printers. Nevertheless, in spite of this last fact I feel that if I were to issue practically the same thing again I should, with my added experience, strive to secure the same effect of good printing in such a way that when a customer was struck with it and asked for the price, the figure would be within his reach to purchase. By all means let us have good printing in our own advertisements, and it may want to be a little bit better than the average run of the direct advertising of our customers, but it is to be remembered that the firms who will get out a piece of direct advertising regardless of cost are very few and far between, whereas the number who want good printing at a reasonable price are very many more, and the printer must work his direct advertising accordingly.

Collective Advertising.

As I said before, there is a great field for direct advertising and it would be an advantage to many printers if 24, Holborn could set up an advertising department to advise printers and to prepare first-rate copy for printers' direct advertising, as well as to prepare suitable illustrations from which electros could be sold or loaned. Naturally a printer wants to print his own advertising matter, but in view of the high cost of really good designs and blocks, and the need of good selling copy, it would be an advantage, to the smaller printer at all events, if he could for a moderate fee have the use for his local advertising of good copy and illustrations. In the same way I believe those printers who have a newspaper could be helped in their newspaper advertising.

I should like to mention, too, in connection with advertising, the excellent suggestion Mr. Strange of Eastbourne made at the annual meeting this year about the Master Printers' Association starting a national campaign in connection with printing. Looking through the report, I see that he suggested the slogan of the campaign should be, "Use more Print and Make more Profit," whereas I suggested, in supporting his idea, that it should be "Print More, Sell More." The difference is small, and I have used the two phrases to give you an idea of the lines upon which such a campaign might be run to increase the use of printing. I do think that both the Federation and the individual printers could unite in a really good national advertising campaign to extend the use of printing, and I am satisfied that it would be most profitable to the trade. Of course such advertising would cost money, and there is always the man who will not contribute, but who will reap the benefit; still, if you wait for everybody to come in you will never get started. The amount that would be required, although large in total figure, would only be a small amount in actual cost to the individual, with every member of the Federation joining in. The president of the Federation mentioned that one industry had agreed to give 1d. in the £ on sales to the campaign, and Mr. Storey, of Leeds, mentioned that the campaign was costing another industry £100,000; but the £100,000 of the industry and the 1d. in the £ of the individual printer would, I am satisfied, be money very well spent, and I am hoping that much more will be heard of Mr. Strange's suggestion. Ideas like this generally take a few years to grow, but we shall never need such a campaign more than at the present time, and we ought individually to do all we can to promote the rapid growth of this idea of Federation Advertising, and we need not wait for the Federation advertising to do more ourselves.

Now comes the question: should a printer advertise in the papers?—I mean the printer who has not a paper of his own. I should say that for the local printer direct advertising is the better, because there is this unique thing about the printer, which no other trade enjoys, that the printed paper sent out is not just an advertisement, like those of other firms, but to the printer it is an actual sample of his wares. Because of this added gain direct advertising and posters will always pay a printer best. When, however, you come to printers who are seeking not the trade of a locality but the trade of a large area or printing for a specific trade, it will probably pay a printer to use those papers which are read by the men whom he wishes to reach. We know how we read the advertisements in our own trade papers, and we want to forget that the business men in other trades read theirs with just the same interest. Here again the problem is chiefly one of the individual business and who it wishes to reach, so that printers should explore the possibility of newspapers, weeklies, monthlies, and any other means of advertising. The problem depends entirely upon how any method reaches the people wanting to be reached, and all methods must be critically considered from this point of view.

What to Say.

Just one word about writing advertisements. It is proverbial amongst advertising men that the man who will talk most excellent advertising copy when face to face with his customer, will write almost useless copy when he sits down to write an advertisement. This is because, when he is face to face with his customer, the customer's needs are uppermost in his mind, whereas, left alone, those technical details which take up so much of his business time rise naturally to his thoughts.

The details of our printing are known to us, even too well known, indeed, to be interesting to our customers. We are, for example, very interested in whether a piece of printing is produced by letterpress, flat bed litho, or offset litho; but this is only a very mild point of interest to our customers, and to some of them of no interest at all; what they want is the finished result; it does not really matter to them how we do it. If, therefore, we think of our customer and his needs in writing our advertisement, any technical details will drop naturally into their right place and only appear as they effect those needs, or help the customer to come to a decision.

How to Back Up the Advertising.

This point, whilst vital to the success of any advertising scheme, is especially important to a printer, because he has rarely samples of the actual goods and can only show specimens giving an idea of what the actual goods will be like. If, therefore, a printer decides to specialise in some line of printing he must be prepared for the enquiries which should come along. If for instance he is trying to extend the use of certain printing he must prepare samples, perhaps dummy suggestions until the samples grow, and if his customers will write from a distance he must have sufficient sample sets by him in order to be able to send to several enquirers at once. It is not easy to go fully into such a matter because it will be realised that there are so many different ways of advertising printing, but this illustration will indicate that it is not sufficient to get out an advertisement, it is necessary for us, when drafting an advertisement, in imagination, to walk into our own office as a possible enquirer, or to write to ourselves a letter of enquiry and then plan how we should deal with it. This is useful in another way, for perhaps we may in our advertisement copy become too enthusiastic in what we say and be "floored" by an enquirer who takes our advertisement at its face value. It is better to "floor" ourselves and re-write the advertisement, than be "floored" by a possible new customer. One of the great advantages of planning out how we are going to back up our advertising does indeed lie in the greater truth we put into our advertising, and the best advertising is always truthful; in however pleasing a way the picture may be painted, it must represent an actual scene.

Then, too, let us not forget to keep any travellers, or other people who have to do

Digitized by Google

with customers, fully informed as to what is being advertised. If regular customers are not likely to see an advertisement, special care should be taken to see that they do, such, for example, as pulling off copies of a newspaper or magazine advertisement and sending them round by post. Indeed, whilst on the subject of existing customers, it is well to remember how important it is to see that the opening orders which come from advertising are turned into permanent custom, and that existing customers' purchases of printing are checked at regular intervals, to detect those whose trade has fallen away or stopped altogether. The printer who has these points brought under his personal review in some concise form will be able promptly to stop the serious damage which a tactless counter clerk, correspondent, or traveller can do to even the best firm.

Judging Results of Advertising.

Now it is repeat orders which bring advertising profits. It should be remembered that advertising rarely pays for its cost on the first order, but that the profits of advertising most often come from repeat orders. Indeed, a successful advertisement may have every appearance of failure and loss, because it may only secure printing totalling to, say, 10 per cent. of the outlay from an advertisement, yet repeat orders on this 10 per cent. coming several times a year and for many years will turn what appeared to be a loss into a handsome investment

The beginner in advertising is too apt to see the wonderful results of the advertising of big firms, who have indeed grown big through advertising, and to compare them with his own meagre immediate results and to drop out of advertising, thinking it has some mysterious nature largely dependent on luck. This has actually been done when advertising was paying well, considered in its true perspective of the return over a year or two of trade.

What is the real secret of success? There is no mystery and but little luck about advertising; it is careful planning, keeping at it, and following it up which pays. Whilst advertising very largely secures the enquiry on the first order, it is only the real quality of the printing and service which can back up that advertising and make it a continued and a growing success. Hence the same study of the customer's needs, which produced a successful first advertisement, should be continually employed to hold securely both new and existing customers. The second order is the acid test. Above all, it should be remembered that if those customers, who have sent a trial order, can be induced to order a second time, the greatest step has been made towards creating permanent custom and permanent increase of business. Hence it is well to adopt as a selling motto: "It is the second order that pays."

Now there is an idea that advertising is like a man standing on a chair in a crowd, he gets an advantage, but if all the crowd get chairs, no one is any better off, and each has his chair to carry home. This, however, overlooks one of the most important sides of advertising, that of creating the desire to buy, of creating new and extended uses of printing. One of the difficulties of the printing trade at the present moment is that there is not enough work to go round; the result is a fall in prices until orders hardly pay. Lowering prices to secure orders is a slippery slope, for competitors follow suit, and in the end no one benefits except the buyer of printing. Finding new openings for the use of printing is better, and there are large untilled fields yet before the printers.

I am satisfied that we printers do not do enough advertising, and a good deal of the advertising which is done loses much of its force, because it is a fill-up for spare time and not part of a definite advertising campaign, which must be carried on, however urgent the jobs may be which are in.

If the use of these seven points is appreciated it will be seen that such planning means hard work, and hard thinking most of all. It means getting a firm grip of every detail of the business, and also of its broad policies and future possibilities; it means a careful study of the customers' needs; it means, too, an investment of a certain sum of money. But it also means an increasing enjoyment in business; the steady improvement of details as they are studied; the delight of building up and planning out the future, a plan which is not just an ideal, but one of which there is steady aiming all the time and which, whether success is slow or fast, should eventually succeed; and finally, if successful advertising means spending money, it also means bringing in a good return for that money and for the other much larger sums invested in the business.

British Paper Trade.

Views of a Canadian Visitor.

Impressions of the British paper trade have been voiced by Mr. J. H. Weldon, president of the Provincial Paper Mills, Ltd., on his return to Canada following a six-week's stay in this country.

In answer to a question as to the condition of the paper trade in England, Mr. Weldon said that there were evidences of marked development and promises of future expansion throughout Great Britain—more so, in fact, than there had been in many years. Although it was generally admitted that comparatively few of the mills were making money just now, they are looking for readjustments and higher prices in the near future. In the meantime, however, the British paper manufacturer is feeling keenly the competition of French, Belgian, German and Scandinavian mills which are doing considerable dumping into the English market and making it impossible for the British papermaker to manufacture at a profit. However, despite these conditions the industry remains on a firm foundation.

"The Englishman," said Mr. Weldon, "does not depend so much on modern machinery as Canadians, but on the other hand he puts great store by economy and thrift. In other words, he doesn't know what it is to plunge ahead and trust to luck and his business may be all the firmer rooted for that."

The Empire Exhibition.

Asked whether he would advise a general co-operation of Canadian paper manufacturers in displays of paper products at the coming Empire Exhibition, Mr. Weldon replied:—

"I most heartily approve of the Exhibition and appreciate its value, but exhibitors failing to make sales must not be disappointed. Much should be done in the direction of placing before the British public the great resources of Canada in the way of raw material. The average investor in England has not got it clear that Canada is in a position to supply their market with raw material from our vast forests in the shape of pulp, with the result that he is still looking to Norway and Sweden for his supplies. I think that the part of Canadian papermakers at the show is to educate the British investor in the paper industry and if exhibits can be arranged along these lines I think they will do much to further the interests of the Canadian paper trade as a whole. Let us bend our efforts towards placing Canada's forest wealth before the British financial public in such a way that they will see the wisdom of looking to this country as a field for investment in pulp and wood fibre papers. There is already a big market over there for Canadian kraft and news-print and I see no reason why this shouldn't be extended to other lines. The way to do it is to tell them and show them what we can do."

A PAPERMAKING EXHIBIT.—At the carnival held in Bury recently by the Bury Trades and Labour Council on behalf of the local War Memorial Fund the committee of the Bury branch of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers exhibited a tableau representing the papermaking trade.

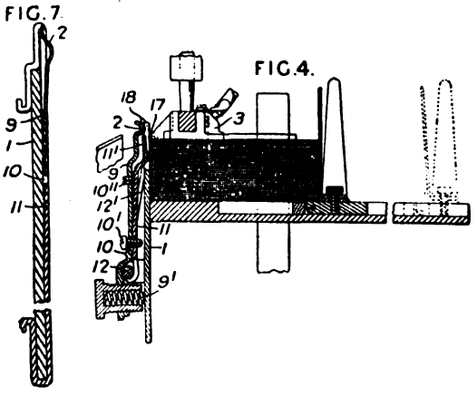
New Inventions

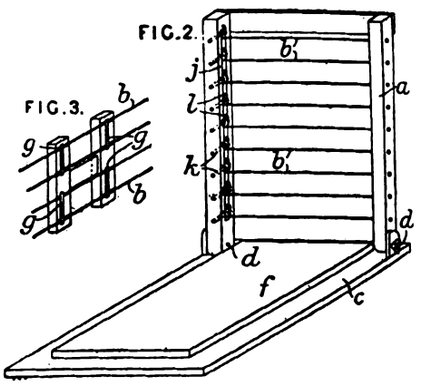
Finishing Printers' Rules.

A milling machine for finishing printers' rules to a specified height, as patented by Mr. C. F. Moore, comprises two adjustable cutters between which a group of rules is fed. The cutters 8 are mounted on draw-spindles 6 carried by headstocks 3, 4, and are driven by belts 18. Each headstock is longitudinally adjustable on its base by means of screws 4^a, and the bases are also adjustable on the bed 1. The rules *a* are carried in a frame 11 secured



to a saddle 10, Fig 2, and are clamped by screws 17 and a plate 12 which is attached to a screw 14 pressed upwardly by a spring 15 and guided by pins 16. The frame is fed by a screw 33 driven through pinions from a worm-shaft 24, Fig. 1, and belts 23, 19. The pinions 30, 31 are mounted on a sector 29 carrying a pin 34 which engages one of three index notches on a fixed plate 29^a, providing for forward, neutral and reverse feeds. In the position shown, the screw 33 is driven through the pinions 28, 31 and 32, and in the reversed position the additional idler 30 is introduced in the drive, while in the neutral position the pinions 30, 31 are free from the pinion 32. The shaft 24 is mounted in a swivelling bearing 36 so that the worm may be dropped at the end of the feed traverse by the saddle 10 tipping a lever 35 which supports the shaft 24. Re-engagement is effected by hand.

Feeding Sheets to Presses.



Mr. C. H. Martin has patented an invention whereby sheets are fed from a pile to a printing-press, etc., by a pneumatic sheet-separator 3, which separates the top sheet and carries it over a barrier 1, and any sheets adhering to the top sheet are separated from it by resiliently mounted projections 2 normally extending over but not in contact with the top sheet, the projections 2 being displaced out of the path of the sheet held by the separator 3 and being returned to contact laterally against the edges of any adhering sheets to detach them from the separator. The sheet-removing device is formed as an attachment which can be secured to pneumatic separators of known kind. As shown the projections 2 are formed on spring arms 9 secured by rivets 10, and screws 10^1, 10^{11}, to a clip 11 mounted on a shaft 12 supported by bearings from the barrier 1. An adjustable spring 9^1 presses the local adhesion between them. For acting on long sheets an attachment with a long shaft 12 is used, and in addition to the central

tappet members as described, adjustable auxiliary tappet members are also employed. In a further modification, a tappet spring 9, Fig. 7, having a projection 2 is fastened directly to a clip 11 by a rivet 10, and the ends of the clip are bent to engage the barrier 1.

Stencilling Posters.

Stencilling apparatus for producing mammoth posters by hand, patented by Mr. P. Clements, comprises a frame *a* pivoted at *d* to a base *c* and adapted to fold thereon, a number of wires *b* stretched horizontally, vertically or diagonally across the frame, and a series of blocks representing letters, numerals, signs, etc., fixed to the wires whereby ink, paint, etc. may be sprayed from the rear of the frame so as to print on a sheet of paper laid on the base *c*. The letters may be grooved to receive the wires, turn buttons *g* being provided to

retain them in position. The wires *b* may be tensioned by rotating levers *k* fixed to pulleys mounted in a slot *j* in one of the bars *a*, retaining pawls *l* being provided. Alternatively the wires may be tensioned by eye-bolts passing through the frame. An upstanding part *f* engaging between the bars *a* may be provided on the base *c* but this may be dispensed with if the letters are sufficiently thick to rest on the base or the latter may consist of the part *f* only. Stops may be fixed to the base *c* to take the weight of the frame *a*.

RUSSIAN BOOK PRINTING.—In 1913 34,000 books were published in Russia, says *Russian Information and Review*, but in 1916 only 18,000. In 1920 the total printing output amounted to only about 30 per cent. of pre-war. Since the beginning of quieter times, however, publishing has gone steadily ahead. In 1922 8,000 books were published. These books, on the average, were half as large again as before the war, and in general more copies of each book were printed.

13 IS THIRTEEN AN UNLUCKY NUMBER ? WE SAY **NO** 13

? CURIOSITY ?

is a human failing. It is also a commercial asset. Curiosity is, in fact, one of the secrets of modern commercial success. It keeps you in touch with every modern development of the trade in which you are engaged.

It is a commonplace to say that the printing trade covers a range of activities greater than most.

Obviously, therefore, you haven't the time personally to gather the information to keep thoroughly in touch. This is done for you by the *British and Colonial Printer and Stationer.*

You probably have many friends in the trade, however, who are not keeping in touch.

CO-OPERATION

You can help your friends and us by introducing to them the *British and Colonial Printer and Stationer.*

Let us have their names and addresses : we will do the rest.

THE

British & Colonial Printer & Stationer

has been established for nearly 50 years. The more important features are :

Reports of Trade Associations, Societies, etc.,
Latest Commercial Intelligence
Technical Articles
Trade Notes
etc.. etc.

A monthly issue contains a section devoted to the **Bookbinder** with notes and news and market prices.

The monthly **Lithographic** issue contains special litho matter including litho notes and news.

The **Quarterly Export** issue deals with colonial and foreign markets and provides a general review of the home trade.

COST

The yearly subscription to the *British and Colonial Printer and Stationer* is **Thirteen Shillings** including postage. Is it not worth it?

Send us your friends' names and addresses **To-Day**.

The "WINKLER" High Speed Automatic Art Press.

With Oscillating Cylinder and Printed-Side-Up Delivery Without Sticks.

Discriminating printers recognise it to be the ideal machine for producing Fine Half-Tone and Multi-Colour Work.

Unequalled for Dead Register, Rolling Power, Impressional Strength, Speed. Absence of Gear Marks and Noiseless Running.

Occupies only about half the floor space of a two-revolution machine for the same size of sheet.

The middle inking roller is of smaller diameter, thus eliminating any possibility of circumference marks on solid surfaces.

The forme is supplied with **fresh** ink from **all** inking rollers both during the forward and backward space movement of the bed.

To prevent "picking" when printing difficult work on art paper **electric heating** of the bed is provided, the inking rollers being specially **water-cooled.**

Automatic Cylinder Check, Throw-off of inking rollers and Slow Motion.

THE above is the Registered name given to the only real

SUBSTITUTE FOR BOOKCLOTH FOR BOOKBINDING AND OTHER PURPOSES.

It wears equal to cloth, and the colours are fast against moisture and rubbing, and it is only about one half the price of cloth. It is being used extensively by some of the best known Bookbinders and Publishers.

For Samples and Prices apply to the Proprietors and Manufacturers:

SUBLETHA LIMITED,

53 LORD STREET, LIVERPOOL.

Gold Inks

(LETTERPRESS)

IF you have never yet tried Gold (Letterpress) Inks or are familiar only with those hitherto obtainable, Lorilleux and Bolton's gold inks will be a revelation to you.

No modern printer keen on cutting costs and speeding up production can possibly afford to ignore the handiness and economy they offer.

The following points show the great superiority of Lorilleux & Bolton's gold inks:—

1. They do not clog or harden on the rollers.
2. Need no specially skilled operator.
3. Are suitable for either platen or cylinder machines.
4. The machines can be run at normal speed.
5. Retain their brilliance for long periods.
6. Print the type thoroughly and heavy solids without difficulty.

Available in light and dark shades of gold as well as silver.

Write for specimen prints and generous sample tin to-day.

How to Get More Printing Business.

Mr. W. J. Parrish, Publicity Expert, Presents Some New Ideas from the Consumer's Standpoint.

The problem of how to create a greater demand for printing is very much in the air just now, and master printers are considering schemes of advertising with this end in view. It was appropriate, therefore, that the members of the Association of Master Printers of South-East London, at their meeting on Tuesday of last week, at the White Swan Hotel, Crystal Palace, should be occupied with an address by Mr. W. J. Parrish, publicity expert for Messrs. Iliffe & Sons, Ltd., entitled "How to Get More Printing Business." Mr. Parrish looks at printing from a different angle from that of the master printer, and as one who places considerable orders for a variety of printing required for publicity purposes, his views and ideas were at once new and important.

Mr. G. Poulton (Poulton Brothers, Ltd.), the president of the local Association, was in the chair, and formally introduced Mr. Parrish.

Why There is a Dearth of Printing.

Mr. Parrish began his address by frankly declaring that he knew little about printing. At the same time, for a good many years he had, as the representative of a large firm, been a purchaser of printing covering a wide range, from high-class brochures to cheap leaflets. Confining himself to general printing, as apart from periodical publications, he went on to analyse the reason why there was a dearth of printing. He first of all mentioned reasons over which none of them had any control, namely, the financial stringency due largely to the war, and subsequently to the peace. There then arose the question whether there was competition in other directions, and he declared that the only competitor of printing could be printing, because in the process of advertising there was no other means by which the necessary information could be dispensed.

It had been suggested that the growth of periodical advertising was detrimental to other forms of printing, but he did not believe that. He thought the more advertising there was the more printing would be required. There were some things which could not be covered by press advertising, and which must be supplemented by catalogues. Again, there were cases where it was not necessary to approach a big public, and in order to reach a limited number of people, the services of the printer and the post were required.

There was, of course, one great difficulty that the printing trade had to overcome. He referred to the lack of good advertising men, who could prepare the copy for the printers. They would agree that it was necessary to get their MS. or their "copy" properly prepared, and if there were more people doing that it would be a big inducement for more firms to have their publicity matter printed

Another very important question was: What was the place of printing in relation to general business? He thought they would all agree that it was quite essential. No business could progress without it. If they agreed that printing was essential to a business, then he maintained that its use could be encouraged, and important questions, from the master printer's point of view, were: How could it be encouraged, and were they doing everything they could to encourage it?

Mr. Parrish went on to advocate the use of literature in this connection, being a particular believer in the folder. While he received a considerable quantity of literature, very little of it came from the printer. In the case of his own firm, they used folders for all sorts of purposes, and they paved the way for their representatives who went out for orders. He did not mean that in every case they should send out expensive literature, because the results would not justify it; but he thought it would be an advantage to printers if they got a list of their likely customers and sent to them examples of good printing, not necessarily expensive printing. Master printers should keep in touch with potential customers, and let them know that they were ready to help them.

Question of Advertising.

Coming to the matter of printers' advertising, either individual or collectively, Mr. Parrish suggested that before anything was done it would be an advantage if the printer was to make sure that his house was absolutely in order. What he meant was, he should be in a position to live up to any standard in the matter of nicely printed literature. In his own case, he had read one or two printing advertisements, but on going further into the matter, he found that the printers did not live up to their professions. He did not ask for anything unreasonable, but he maintained that it was important that the printer should be able to live up to any claims he made.

The speaker went on to mention one or two of the weaknesses of printers, although he had a full appreciation of their difficulties. For instance, he knew they must receive some very bad "copy," which made it impossible to get any idea of what the customer required. There were, in fact, many cases where the customer himself did not know what he wanted, and that was a direction in which the printer could do a great deal to get more business.

In the matter of assisting purchasers of printing, printers, and particularly the smaller printers, could be of great service. Every printer, even if he only possessed three platens, should have a service department, and according to the character of his business he should have someone who could see that any copy received was set up to good advantage, that proofs were sent out in a proper way, thus avoiding the error which so many printers made of setting the type in a manner which repelled the customer. A little assistance to the compositor from the office or from the supervisor would probably avoid a lot of the trouble he had in mind, because nothing was more annoying than receiving a proof which did not please.

Mr. Parrish was convinced that business people would send out more printing if they could rely upon greater assistance from the printer. What they had to do was to put the ideas of the customer into shape and set them out in an attractive form.

Another direction in which service might be rendered was in the distribution of the printed matter, and in outlying districts printers might well undertake the distribution of leaflets through the post, or by hand, at an inclusive charge.

Soulless Printing.

One of Mr. Parrish's criticisms of printing was that it was soulless, and he maintained that printing could be either full of life or it could be practically dead. They might have the same wording, the same type, and the same paper, yet one specimen of printing would be soulless, while the other would be replete with life. It often required very little to make the difference It might be effected by an initial or a spacing, or some other slight rearrangement.

Mr. Parrish handed round the room specimens of publicity matter to illustrate what he meant, and in the case of his own printers, he mentioned that they had made a study of what he wanted, until now they gave him every satisfaction. As a consequence, his printing had not only gone smoothly, but he had used more of it. For instance, if a customer had to stop and correct proofs, and waste time over the telephone, that would prevent him from putting new ideas into operation, which would involve printing.

Mr. Parrish had a word to say about the composing rooms, some of which, he said,

L&M

LITHO ROTARIES

THE PRESSES WITH SPECIAL FEATURES.

THESE LITHO ROTARIES have now been in use for many years, and have fully demonstrated their value to practical printers on all classes of work. When designing and developing these presses, our engineering experts collaborated with practical printers in order to give to the lithographic trade the best machines for direct and offset printing.

We especially invite those houses who at present are engaged solely in letterpress printing. and are considering the possibilities of litho machinery in their own business, particularly offset printing, to permit us to advise them in the matter. We shall be pleased to arrange for one of our experts to discuss the matter with any printer who writes us accordingly.

General printers who intend to extend their lithographic departments by installing Litho Rotary Presses should send for full details of the

were like the infernal regions. He suggested there should be more light in these rooms.

Too Many Types.

Then with regard to types, he asked master printers if they were sure that all the types they possessed should be used in these days. In all probability, half of their existing types should be scrapped. For his own part, he confined himself to three variations—Roman Old Face, some of the Plantin series, and some of the Cheltenham series. He thought much of the trouble experienced arose from the fact that there was too much type in the printing office. He insisted that master printers must adapt themselves to modern ideas. Enthusiasm was another asset they must cultivate.

Master printers were also advised to keep specimens of their own printing, so that they might let potential customers see what they were able to do, and at the same time be able to give some indication of the cost.

Discussion.

Mr. J. Brigenshaw, in opening the discussion, first turned to Mr. Parrish's suggestion of throwing out type. He pointed out that type was the capital of the master printer, and to propose that he should scrap this was rather a tall order. With regard to the specimens which had been handed round, these represented a very high ideal to work up to, but they would have to go a long way to educate the ordinary customer to such a standard. The speaker urged the need of co-operation between the master printer and the compositor, and proceeded to mention the discussion of the advertising scheme at the Federation Council meeting, during which a figure of £20,000 or £30,000 was mentioned. Before any steps were taken, however, suggestions were to be received from the various alliances, and brought up for consideration by the Council.

Mr. Lack (Dartford), referred to the difficulties which local printers had in adopting schemes of advertising, because the local papers and the hoardings were probably in the hands of one's competitors. It was ideas they wanted. There were, of course, idea merchants, but it was rather expensive to buy ideas by the yard. The only thing that he (Mr. Lack) could suggest would be for the Federation to institute an ideas department, with a view to assisting local printers to obtain work from traders and factories in their districts.

Mr. F. Mason, hon. secretary of the local Association, suggested that a resolution on the lines indicated by Mr. Lack should be forwarded to headquarters. Mr. Lack had been responsible for the idea of advertising which had occupied the attention of the Federation, and perhaps this matter of the ideas department might go forward in place of the larger scheme.

Mr. E G. Baker, M.P.A. Assistant Secretary, mentioned the procedure which had taken place in the consideration of the advertising scheme and intimated that a representative of one of the largest houses in London had suggested the establishment of a central bureau at headquarters for the assistance of printers. One or two members appeared to think that printers were not expert enough in salesmanship to persuade their customers to buy printing, and eventually the resolution was put forward that a

BINDERS TO THE PRINTING TRADE.

PRINTERS who have the facilities for folding, sewing and casing up, can be supplied with cases made in Leather, Rexine, Pluviusin, Imitation Leather, Cloth, or any other material, blocked or embossed in Gold, Imitation Gold, White or Coloured Foil Leaf, ink in any colours.

Our staff consists of more than 300 capable workers, provided with the most up-to-date machinery.

We shall be pleased to submit samples for Trade Catalogues, etc.

Digitized by Google

scheme, or alternative schemes, should be submitted to the alliances for the purpose of obtaining their views. It was thought that the scheme or schemes should embody certain suggestions, such as the establishment of central bureaux at various points in the country; also that courses of lectures to master printers should be arranged, and that a publicity expert should be appointed to visit the centres. There were other suggestions with regard to the issuing of literature.

Mr. T. Jenkins said he had tried the printed form of literature and the circular letter, and he had found the latter to produce better results. He asked Mr. Parrish whether he considered there was any prejudice against the printer's form of service as compared with that of the advertising agent. The speaker said he found buyers would take advantage of a well laid-out piece of literature which established a style for a series of leaflets, and subsequent orders would be placed with a jobbing printer, who would adopt the style established.

A Step in the Right Direction.

Mr. Parrish, replying to the discussion, said it was a step in the right direction that master printers were getting together to discuss such important matters as they were engaged upon that night. He said he did not overlook the fact that type was the capital of the printer, but the point was whether capital could be badly used or well used. He maintained that with the smaller printers, some of the type was not bringing them any return, and therefore they could afford to scrap it. He held that with ordinary border rules and sans type, by good spacing and observing proper widths, or by boxing certain words, they could achieve most of what was necessary. Although his firm spent lavishly on printing they did not spend foolishly. They spent to create a good name quite as much as to get immediate returns. That was a matter which concerned the printer small or large. If they sent out 100 circulars and did not get an immediate reply, they must not think their money had been wasted. Promotion matter was sometimes regarded merely as paving the way for the outside man to get the business, and it certainly helped to create it. With an idea of how much business it was expected to get, he worked out approximately how much they were justified in spending on advertising. They believed very firmly that good printing paid, and if printers could only get that idea into the heads of business men, they would increase the demand for printing. With regard to an appeal by a circular letter, Mr. Parrish argued that this should be confined to two or three neat paragraphs nicely printed. As to the question of an ideas department, although that might be helpful, he was not in favour of the stock idea. He held that there was not a man in the printing business who had not ideas. They had got to have enthusiasm, believe in themselves, in their men, and in their works, and not be afraid of work.

On the motion of Mr. Grubb, seconded by Mr. Griffiths, a cordial vote of thanks was passed to Mr. Parrish for his address.

University of London Lectures.—A series of public lectures in the School of Librarianship, at University College, has been arranged for Wednesdays at 5.30, and includes some of special interest to printers. Amongst them are the following: October 24th, "Illustration of Books," by Mr. T. G. Hill, A.R.C.S., F.L.S. (lantern illustrations); November 21st, "Handwriting and Early Printing," by Mr. Hilary Jenkinson, M.A., F.S.A. (lantern illustrations); January 30th, "Illuminated Manuscripts," by Major Cyril Davenport, V.D., F.S.A. (lantern illustrations); February 27th, "Printing Presses and Machinery from the Earliest Times and their Influence on the Book and Newspaper," by Mr. R. A. Peddie (lantern and other illustrations). These lectures are open to the public without fee or ticket.

Mr. C. F. Cooper, who has lately been in business on his own account, has now been appointed agent for Birmingham and the Midlands for George W. Turner, sole representative in the United Kingdom for several well-known German paper mills. All business for this district will be dealt with at his Birmingham office address, 45, Newhall-street, Birmingham.

NORTH London Master Printers' Association

Variations in Estimating.

The opening meeting of the above Association took place in the Church Parlour of the Finsbury Park Congregational Church on Tuesday of last week, the chair being occupied by Mr. L. F. Hunt (president). There was a good muster of the members, and addresses were given by Messrs. A. Langley, John D. Wise, P. D. Michael, A. Williamson.

Mr. W. J. Mizen (secretary) having read the minutes, Mr. Whyte was asked to explain the position regarding the question of collective advertising now under consideration by the Federation of Master Printers. Mr. Whyte said they had had a most encouraging council meeting, and had decided to recommend to the Federation that they draft a scheme and submit it to the Alliances for their opinion. Seven or eight suggestions were put up by London, to be circulated to the provincial centres for their views. One idea that found favour with the London Council was the starting of classes in salesmanship for master printers. Another was the holding of a course of lectures to be addressed by advertising experts. It was also thought that there should be public meetings held throughout the country, and addresses given by prominent men in the advertising world. Whatever was done collectively would not, of course, prevent master printers circularising their customers as they thought best.

The chairman thought printers were very backward in pushing their own goods, and recommended some such scheme as was adopted by the gas and milk trades.

Mr. T. Sellens, the Association's local collector for the Printers' Pension Corporation, expressed the hope of a good response from the members to the 200 circulars he had sent out.

Time Variations.

Mr. P. D. Michael (Secretary of the Home Counties Alliance), on being called upon to speak, said he reckoned it a privilege to address North London printers, and to present to them some of the difficulties confronting printers in the Home Counties. Taking as his theme the time variations in estimates—to which attention was drawn by Mr. Sessions' paper at the Cost Congress—Mr. Michael contrived, with the aid of some mammoth charts, to bring clearly home to his hearers the importance of the subject. He explained that in the early part of August the Home Counties Alliance inaugurated an estimate competition. After inquiry, it was found that of the 350 members of this Alliance 84 expressed their willingness to send in the estimate forms. They were told there would be no names mentioned, but that numbers only would be used. One of the jobs for which an estimate was asked was a crown 8vo. pamphlet of 16 pages with a four-page cover, and on which the time occupied on the various operations was to be stated. The 58 members who actually sent in replies represented both small and large printers. The result of the test, continued Mr. Michael, revealed some startling variations in the times allocated to various operations.

From the extraordinary results obtained, Mr. Michael hinted they might think there were some fools in the Home Counties. All he asked them to do was to try a similar experiment themselves. He was sure they would have a surprise and that they would find just as many time variations. The complaint that was generally put forward was that of price-cutting. They were beginning to see that it was not price-cutting that was the trouble, but that it was the difference of estimated times that caused the variations in estimating. He asked each of them to give the subject very careful attention in order that a satisfactory remedy might be found.

Mr. Langley's Address.

Mr. A. Langley said the problem involved in the variations of estimates was one of the greatest the Federation had to tackle. It seemed to him if they could find the cause of the variations they would very quickly secure the remedy. The whole trouble, in his opinion, was due to sheer ignorance. Referring to the 100 per cent. variation in many of the estimates of the fifty-one printers in the home counties, Mr. Langley thought the disparity could be found mostly among the smaller printers. He had an idea that when the small printer got a job to estimate he took his own times on which he personally could do the work. Mr. Langley was not much in favour of the expert estimator in any business, but believed more in the practice of getting the time from the men who actually got the work out. Another point that was often overlooked in estimating the cost of a job was that work should be estimated from the point of view of how it could be executed in their own offices, and not in somebody else's. Mr. Langley did not believe in sticking too closely to schedules, in estimating for jobs. He knew of printers who did their reckoning in quarters of an hour and calculated the day as consisting of thirty-two hours. Working to schedule might be all right in engineering establishments, where repetition work was in progress. Printing was not repetition work. They should endeavour, in giving estimates, to have regard to the conditions of the office ruling at the time. In concluding, Mr. Langley referred to the problems the Federation had in hand, and said he believed they would eventually complete the work of the costing movement. He thought they would also solve their troubles and secure a standard costing rate, and at the same time remove the difficulties in the way of getting standard times for estimates.

Mr. A. Williamson (Federation Costing Secretary), continuing the subject of variations in estimates, said he was present at a meeting of the East and North East Association, when there were eight or nine jobs put on the table for members to estimate right off the reel. The variations that occurred in the estimates given for these jobs were staggering, differences being in some cases as much as 100 to 150 per cent. He thought what the trade was suffering from more than anything else was that it had in it too many practical men, without sufficient commercial instinct.

Mr. Williamson then instanced the case of a newspaper and jobbing printer who was quite proud because he had found out, after his linotype operator had been called up during the war, that he could set twice as many thousand ens in an hour as the professional operator, but, though he was getting double the output from the machine, he did not think of doubling his charging-out rates! It was essential that every individual operation should be compared with the finished totals.

Salesmanship.

Another thing Mr. Williamson advocated was salesmanship. He thought it very important that printers should have the power to impress on the man on the other side of the counter the actual face value of the job. To illustrate his point, he mentioned that Mr. Whyte recently went to a bookseller and inquired the price of a certain book he wanted. On being told the price Mr. Whyte informed the bookseller that the book was being sold cheaper at another shop. Mr. Whyte was so impressed with the vigorous reply that came from the bookseller, combined with his ability to sell, that he bought the book. Mr. Williamson believed if printers also were more independent in the sale of their wares, customers would respect them more. After speaking of the necessity that existed of combining the commercial instinct with the practical mind in the conduct of their businesses, Mr. Williamson said he was accustomed to telling them what the Costing System would do. That evening he would give them some negatives. For instance, it would not make the customers buy their jobs from them; it would not make them better printers; it would not enable them to sell a single article at a higher price than they were selling it at before; it would not make it necessary for them to increase their charges one iota, and it would not prevent them from getting work that was coming along. However, it was up to them when they had installed the Costing System to find out what it would do. He was quite sure that many men to-day giving their time and attention for the benefit of the printing industry in London and the surrounding district would never have been able to do so had it not been for the Costing System.

Mr. J. D. Wise, the next speaker, alluding to the splendid work made possible by

the existence of the Federation, stressed the importance of printers helping one another in their difficulties. Speaking with regard to the commercial side of their businesses—a very important one—Mr. Wise thought a man with a small plant and a fair capital in the bank could do much better than a man with a big plant and no liquid capital. It was a great mistake for a man to increase his plant when he had to strain to the utmost to pay for it. He considered it a great advantage to small men to belong to the L.M.P.A., for they then got to know one another better and were able to trust their brother printers with their work. Speaking of men who estimated their jobs upon their own idea of the value of production, Mr. Wise instanced the case of a man who once told him that he had got the composition of a certain job done for next to nothing. Mr. Wise asked his friend how he had done it, and got the reply that it was executed by himself "after they had all gone." They had heard a great deal about the variations in time, but he hoped they would not make the mistake of thinking they only occurred in the Home Counties. Mr. Wise then dealt with the unwisdom of thinking that the lowest estimate always secured the order, and in support of his arguments related one or two of his own personal experiences. In concluding, he briefly referred to the question of advertising, and expressed the belief that printers should educate themselves up to it so as to make themselves fitted to be the real advisers of their customers.

The Chairman, Messrs. W. J. Mizen and D. A. Wintehead, tendered the thanks of the meeting to the various speakers. The same three gentlemen were appointed as the local Costing Sub-Committee.

Caxton Home, Limpsfield.

The sixth annual concert in aid of the above-named institution will be held at the Central Hall, Westminster, S.W., on Saturday, October 27th, and an excellent programme of music and song has been arranged. These annual concerts are looked forward to as giving an opportunity for subscribers to meet old friends and patients of the Home, and have from their inception struck a popular note. It is proposed to place the whole of the proceeds of the concert towards the reduction of the debt on the building. Messrs. G. F. Chapman and W. F. France are again acting as hon. secretaries, and will be pleased to receive applications for tickets, or donations, at the London office, 3, Cursitor-street, E.C.4.

Bookbinders' Cloth Specialities.

We have had submitted to us for inspection several specimens of bookbinders' cloths which are being produced by Messrs. Bentley, Smith and Co., Ltd., of 38, Faulkner-street, Manchester. This firm are the actual manufacturers, and are in a position to supply bookbinders' cloths in a great many different shades and qualities to suit the exacting requirements of the publishing and stationery trades. Whilst specialising in the manufacture of book cloth, one of the firm's principal aims from the commencement of their operations was to secure for their goods standard designs and colours, and in that policy they intend to continue. Among the specialities included in a very comprehensive range are art vellums, common colours, paper-lined cloths, art canvas and cotton buckrams. Of the specialities mentioned, Messrs. Bentley, Smith and Co., Ltd., are giving special attention to the efficient production of their canvas art vellum cloths, a class of manufacture which not only presents an excellent art effect but also offers something novel to the customer. Judging from the specimens to hand, these makes are capable of securing the best possible appearance of the better cloths on medium qualities, while they also have a wide range of semi-pad colours which give the highest effects attainable with the best qualities. The prices quoted are quite competitive, and cover a wide scope. The cloths are made in 38 9 in. widths, a feature which will be appreciated by the bookbinder.

The London representatives are the old-established firm of Messrs. Lee, Behrens and Co., Ltd., 2, King Edward-street, E.C.

Trade Notes.

Partnerships dissolved announced during the week include that between C. E. Webley and F. J. Ball, wholesale stationers and paper bag-makers, 2, Northumberland-buildings, Bath, under the style of Webley and Ball, also that between J. M. Wardman and D. Grandage, publicity agents and advertising contractors, at Palatine-chambers, Halifax, York, under the style of Tower Publicity.

Postal Regulations.—The Joint Industrial Council of the Printing and Allied Trades intends approaching the Postmaster-General at once, pointing out the urgent necessity for the reduction of postal rates and the removal of restrictions on the printed matter rate, and pressing that the new regulation regarding the use of trap envelopes should be reconsidered.

The Association of Master Printers of the London Central Districts has arranged a very attractive meeting for Monday, the 22nd inst., when Mr. Arthur Chadwick, chairman and managing director of Amalgamated Publishing Services, Ltd., will speak on "Print: Its Relation to Direct Mail Advertising (American Methods)." The meeting will be held at Stationers' Hall, at 6 for 6.30 p.m.

The Flag Day.—Arrangements for the Flag Day on the first pay day in November in aid of the Printers' War Orphan Fund are proceeding satisfactorily, but it would be of great assistance to the promoters if firms that have not yet done so would at once apply to 24 Holborn signifying how many flags they are likely to use. No charge is being made for the flags, which can be sold for what can be got for them, and unused flags can be returned. A South African printer set a good example the other day when he called at the offices of the Master Printers' Federation. Seeing the Flag Day poster, he asked to be allowed to contribute a cheque for five guineas.

Rochdale and District Printing Crafts Guild.—The Rochdale and District Printing Crafts Guild held their annual whist drive and dance on Saturday last in the Ambulance Drill Hall, Rochdale. About 150 persons were present. During the evening Mr. Ormerod (president of the Guild and of the local Master Printers' Association) presented the shield won by the Combine Cricket Team and the bowling trophy won by "B" team of Ormerod Bros.

Trade Union Matters.

L.S.C. and Piece Work on Periodicals.—Declaration was made before the week-end of the result of last week's ballot taken of the London Society of Compositors on the subject of compulsory piece-work. A list of periodicals had been prepared and the proposal balloted upon was:—"That all members engaged in the periodical houses included in the list give a fortnight's notice of their intention to cease working under present conditions, and offer their services at the end of the fortnight under the piece-work conditions laid down in the Committee's proposals." No indication has been given of a date for the giving of notice. The proposition was carried by a majority, a large number of members refraining from voting. The result was: In favour, 5,450; against, 2,687; majority in favour, 2,763. Subsequent to the ballot the L.S.C. asked for a conference with the L.M.P.A. in the hope of some agreement being reached on the linotype and monotype piece scales. This conference has been arranged for to-morrow (Friday). These scales have been under consideration for a considerable period and at one time were investigated by the London district committee of the J.I.C. which decided against the Society's claim.

N.U.J. Dinner.—Great success attended the first annual dinner of the Central London branch of the National Union of Journalists, held at the First Avenue Hotel, Holborn, on Saturday. Mr. George Bateman was in the chair. Mr. Walter Meakin, president of the union, responded to the toast of the union, and the other toasts honoured were "Central London," proposed by Mr. Jay, and replied to by Mr. F. J. Mansfield, "The Guests," proposed by Mr. W. Betts, and responded to by Mr. T. Dickson (Aberdeen), and "The Ladies," proposed by Mr. J. E. Brown, and responded to by Miss Edith Shackleton Heald.

Our Romantic Industry.

Mr. R. A. Austen-Leigh's Lecture.

Printers to-day might be pardoned for thinking of the history of the printing craft as a subject that has become not only well worn, but even threadbare, yet Mr. R. A. Austen-Leigh showed on Friday evening that, if looked at by one who is strongly human and gifted with a sense of humour, the past still glows with fresh colours and is rich in entertainment, suggestion and stimulus for the printer of to-day. The occasion was the opening address of the series of six craft lectures at Stationers' Hall under the auspices of the Stationers' Company and the Printing Industry Technical Board, and Mr. Austen-Leigh took as his subject "The Romance of the Printing Craft."

The Master of the Worshipful Company of Stationers, Mr. Edward P. Vacher, F.R.G.S., presided over a crowded attendance, and amongst those on the platform were two past masters of the Stationers' Company, namely, Messrs. Edward Unwin and Henry Hill, also Mr. Richard Bentley, F.S.A. (Upper Warden of the Stationers' Company), Mr. J. R. Riddell (hon. secretary of the Livery Committee), Mr. W. Whyte (secretary of the London Master Printers' Association), and Mr. T. W. McAra (secretary of the Newspaper Proprietors' Association).

After conveying expressions of regret at absence from Sir William A. Waterlow, Mr. W. Howard Hazell, Mr. W. Bullett, Major G. Brimley Bowle and Mr. Geo. W. Jones, the chairman, as Master of the Stationers' Company, welcomed the gathering to the historic Stationers' Hall. He spoke of the success that had attended last session's series of lectures, and said the large gathering that evening evidenced unflagging interest and unswerving support. He said that no more fitting person than Mr. R. A. Austen-Leigh could have been invited to deal with the subject of the evening, and he mentioned some of the many prominent offices Mr. Austen-Leigh has held, and holds, in the printing industry, and his distinguished services to the craft. "We are proud," said Mr. Vacher, "to have him here to-night, and I am satisfied you will give him a most kindly greeting."

Such greeting was given in unmistakable fashion, and Mr. Austen-Leigh, after briefly acknowledging the compliments paid him, proceeded with his lecture. This was of such a character as to call, we think, for more than a condensed report, and we therefore propose to publish it *in extenso*, giving a first instalment in this issue, the rest to follow later. At the conclusion of his lecture Mr. Austen-Leigh received a notable ovation.

There was very little in the way of questions or discussion. The composing stick reputed to have belonged to Benjamin Franklin, now in possession of the Stationers' Company, was on view, and a member of the audience asked what evidence existed to show that this really was what it claimed to be. Despite the imposing representation of the Stationers' Company on the platform, this question could not be satisfactorily answered on the spur of the moment. No authoritative reply was forthcoming, either, to a questioner who asked why the height of type was made precisely what it is.

Mr. Henry Hill, who fittingly eulogised both the lecture and the lecturer, proposed a most hearty vote of thanks to Mr. R. A. Austen-Leigh. Mr. T. W. McAra seconded in a witty speech, and the motion was carried most enthusiastically.

Romance of the Printing Craft.

By R. A. AUSTEN-LEIGH, M.A.

In dealing with the romance of printing, it is clearly necessary to say something about its invention. But, first of all, what exactly is printing? It is merely a labour-saving substitute for writing. Vast as have been the results of the invention in the more rapid spread of knowledge and information, it was a revolution only in method, not in form.

Its invention cannot of course be compared for importance with the invention of symbols to record facts and ideas which led to the art of writing and was the beginning of civilisation. The real revolutions in the form of the book occurred when clay tablets gave place to rolls made of reed, and when rolls in their turn gave way to the codex form, or the book in the shape in which we know it.

Clay tablets were used in ancient Babylon, but as early as 2500 B.C. the roll form—from which we get our word "volume"—was already known in Egypt. It may be worth reminding you that the rolls were written on one side only, on a substance made out of reeds grown in Egypt called papyrus, that they were written in columns side by side, like our modern newspaper or like the *Strand Magazine*; that you held it upright marking it with your right hand, and rolling up again with your left what you had read. We do not use this form much nowadays, but we see something like it in roll-up atlases that are often found upon walls, only these roll up from top to bottom instead of from side to side. The roll form of volume (and remember that the word "volume" means "rolled") remained without a rival till the second century B.C., and was not entirely superseded till the fourth century A.D.

Origin of the Book.

The common story of its supersession is as follows: Eumenes II, King of Pergamum, about 200 B.C. desired to extend the library of his capital, but was opposed by the jealousy of Ptolemy, King of Egypt, who forbade the export of the papyrus reed, hoping thus to check the growth of the rival library, and Eumenes was forced to use skins of sheep and calves as writing material, with the result that such material became known as "pergamentum" (from his capital "Pergamum"), which word has been converted into our "parchment."

The use of parchment, which was far tougher and thicker material, and capable of being written upon on both sides, led to the introduction of the codex, or book form as we know it. The original tablets were like our slates, but made often of wood, *i.e.*, beech (from which perhaps our word "book"), fir, and box, covered with a thin layer of wax; two or more were often hinged together; parchment on its introduction soon began to take the place of the wax tablets, and as separate pieces could be sewn together, eventually there emerged the modern form of the book as we know it Nor did the form alter when a new writing material made from a pulp of linen and rags was introduced from the East in the tenth century, though not very commonly used till the fifteenth. The name of the previous material, papyrus, was transferred, and we know it to-day as paper.

The Manuscript as Model.

The invention of printing, then, in no way altered the form or even the appearance of the book. Nay, the aim of the first printers was to copy the appearance of the MS. book as closely as possible. There is a story that Fust, one of the earliest to practice the craft, in order to conceal the new invention, pretended that his printed books were MS. books, and that only when he was charged with necromancy for producing them so fast, and in danger of being burnt to death, did he reveal the secret.

Inventions are often curiously conservative. You may compare the early days of the railways; their object seems to have been to make you think you were still travelling by coach or carriage—only rather faster and without the horses; thus we see in early pictures carriage-folk seated in carriages fastened on to railway trucks; and similarly all the language of coach-travelling was transferred to the railways, and this is why we still talk of railway-coaches, guards, drivers, booking offices, cloak-rooms and the like. It was the same with printing, which copied closely the best MSS., and which continued the old words of volume, paper, and book, adding just the new words "types, presses," etc. And it was as well that it was so, for after many centuries' development, the production of the best MSS. had become seemingly almost perfect. You have only to study an illuminated Missal or book of hours to see that to copy such work closely was as much, if not more, than could be expected of early printers with the rough means at their disposal. That they often succeeded may explain why a cynic has said that "printing was born perfect and has been deteriorating ever since."

Signatures.

In one small mechanical matter I think we must admit that the printer usually falls short of the scribe—I refer to the "Signature" mark. The signature is, of course, the letter of the alphabet (or the numeral) to be found just below the last line of type on the right hand side of the first page of every sheet. It was a device used by the scribes in MS. days as a help to the binder, but the scribe, in signing each sheet, placed the signature so low on the page that it disappeared under the plough of the binder. When the printer appeared, he found it inconvenient for printing purposes to have an odd letter so far removed from the bulk of the type, and therefore placed it just under the lowest line, where, however, the binder could not remove it. There it remained, an eyesore, though a small one, to the reader, who has no use for it, but a blessing to the race of bibliographers, a great part of whose lore is absolutely dependent on it. Remember, too, that in the alphabet of signatures the letters J, V, W are omitted; also that French printers used to believe that if mistakes or accidents occurred in a book, they were sure to occur in signature O.

Types.

There is much more that one might like to say on the subject of types—whether the first were made of wood in the same manner as our poster type of to-day, whether the earliest metal ones to be cast were cast in sand, and who was the genius to invent the punch, the matrix and the adjustable mould. We know that as early as 1468 the shape of the types was much the same as to day. And how do you think we know that, seeing that it is hardly to be expected that any can have survived? Well, we know it because several instances have come to light in old books of the accidental impression of a type, pulled up from its place in the course of printing by the ink ball, and laid at full length upon the face of the forme, thus leaving its exact profile indented upon the page. Corroborative evidence has been found in some early examples discovered in 1870 in the bed of the River Saone, near Lyons, opposite the site of one of the famous fifteenth century printing houses of that city.

Of the various kinds of type there is little time to speak. Volumes have been written about them, and they have a peculiar fascination for many. The romance of history lurks in the names of the sizes; pica, bourgeois and brevier, are words whose pronunciation are a snare to the layman, and the origin of which is at least dubious, although it is suggested that breviaries gave their name to brevier, being chiefly printed in that size. The three great families of type are, of course, Gothic (one known in this country as English), Roman and Italic. Gothic and Roman were introduced in imitation of the manuscript-writing in the German and Latin countries respectively, while Italic was first used by Aldus Manutius in imitation of the current Italian handwriting of the day, the writing of Petrarch according to tradition being taken as a model. You have an easy illustration that it imitated handwriting, by comparing the Roman and Italic form of the first letter of the alphabet. Numerous as are the styles of type in existence, adventurous souls still go on cutting fresh faces. Like ladies' dress, types have their times of fashion. Old face and modern face are still fighting for supremacy. Caslon gave way to Bodoni at the end of the eighteenth century, but reversed this position in the second half of the nineteenth century. For the moment there seems a revival of Bodoni, but an Englishman, Caslon, will remain the great name among typefounders; his "a" and "s" may be weak, but to many of us his old face type has a charm excelled by no other. Before leaving the question of type it may be of interest to recall the fashion, which is a very old one, of issuing type-specimen sheets. The oldest known one is that of Ratdolt, of Venice, in 1486. They often began with the words of the Paternoster, but I believe it was Caslon who first began the practice, so long continued, of using the opening words of Cicero's famous philippic against Catiline, "Quousque tandem abutere, Catilina, patientia nostra?" Incidentally the reason why Latin was used was because of the greater frequency in that language of n's and m's and q's and such-like letters, which make a better show than some of the letters more commonly occurring in English.

William Caxton.

Now for a word or two about William Caxton, the father of English printing. His name was usually pronounced Cauxton, and often spelt Causton, a name not unknown in London printing circles to-day. He was born at Tenterden, Kent, apprenticed to a London mercer from 1438 to 1448, then went into business at Bruges in Flanders; became governor of the English merchants at Bruges in 1462. Literature was one of his hobbies, and he set himself to translate a French romance on the Story of Troy, which he finished in 1471; the book was in great demand, so much so that Caxton's hand got weary of making copies of it, and resolved to learn the new art of printing. Until recently it was a matter of doubt whether he learnt the art at Bruges or Cologne sometime between 1471 and 1474, but Colonel Birch, of the British Army of Occupation, has lately made good use of some of his leisure and proved from his search among the archives at Cologne that Caxton was residing there from July 14th, 1471, to the end of 1472. In 1474, either in Bruges or Cologne, he produced the first book printed in English, "The Recuyell of the Histories of Troye." In 1476 he left Bruges for England, and at Westminster on November 18th, 1477, he completed his "The Dictes and Sayengis of the Philosophres." Before he died in 1491 he had produced 77 different books. He worked at the sign of The Red-pale, at the Almonry in Westminster. He was buried at St. Margaret's, where both a tablet erected in 1820 by the Roxburghe Club, and a stained glass window set up by the London printers and publishers in 1883, commemorate him. There is no authentic portrait of him, but many of you must be acquainted with pictures which depict him clad in a fur gown, displaying to King Edward IV. and his Queen a sheet freshly pulled from his press.

The standard life of him is by William Blades, the uncle of Mr. Alfred Blades, well known to many of us. Copies of Caxton's books fetch large sums of many. His well-known mark is supposed to signify his initials, W. C., with another hieroglyphic between the initials, probaby "74" for 1474, the year of his first printed book.

Printers' Marks.

Caxton's device leads me on to say a word or two on the subject of printers' marks generally. In the earlier days of printing, before there were such people as publishers, the printer assumed, what was often his due, the main credit for the production of a book, and one of his methods of doing so was by displaying either on the title page, or on the last page, his device. Some of these were merely pictorial, others had punning references to the printer's name. Thus Italian printers frequently made use of some variety of the combination of a circle and a cross in white on a black or red ground. Aldus used an anchor and a dolphin, Elzevir a sphere, Plantin a compass. Of punning ones, Andrew Miller, Scotland's first printer, used a mill, Grafton and Norton, a tun. John Day's showed a sleeper being awakened, with the motto "Arise, for it is Day." But with the emergence of publishing as a distinct branch of the trade,

Lecture delivered at Stationers' Hall on Friday last, under the auspices of the Stationers' Company and Printing Industry Technical Board.

Digitized by Google

the printer generally has had to content himself with an ordinary imprint—though he had even to go without this as a rule during the eighteenth century. Instances, however, of such devices are known to-day. One of the finest is that used by the house of Constable in Edinburgh on the great Edinburgh edition of Stevenson. It is a ship in full sail, and around it is the punning motto: "Firma pererrat aquas et constabilitur eundo." It is almost impossible to translate the Latin and preserve the play upon words. But a very loose paraphrase might run "Firm and stable stands the firm of Constable."

The renaissance of English printing in the last fifty years, led by commercial firms such as Constable's of Edinburgh and private presses like the Kelmscott, has enormously improved our standard of book printing. It is questionable, however, whether the "reading" of books is anything like as good as what it was, and to some extent this may be attributed to the regulation of late years adopted by the trade unions, that all readers shall have been compositors. The chief difference to-day between a book printed in England and in America lies in the way in which words at the end of a line are (when necessary) divided, the American dividing by sound and the English by derivation. Thus the Americans would divide "typog-raphy" where we should divide "typo-graphy." There are signs of the American practice coming into fashion on this side—and even worse. William Morris in a letter to a correspondent once pointed out the impossibility of dividing the word "which" but in a recent book surveying the history and practice of printing, I came across such horrors as the divisions pas-sed, me-thod, is-sued, hith erto.

(To be Continued.)

South-East London Master Printers

A Few Matters of Business.

Apart from the address which Mr. Parrish gave to the members of the Association of Master Printers of South-East London on Tuesday week (of which a report appears on another page) there were a few matters of business discussed.

The Chairman, Mr. G. Poulton, referred again to the appeal which is being made on behalf of the Printers' Pension Corporation, pointing out that it was hoped to write off the debt and to place the fund, as it should be, on a sound basis. He called attention to the flag day which has been arranged for the first pay day in November, and expressed the hope that it should be taken up with enthusiasm in the various printing works. Headquarters wanted to know, however, how many flags should be provided, and applications for these should be made at once.

Costing.

Mr. Poulton, after a brief reference to the general wage position, drew attention to the subject of costing, and mentioned the keenness of the president, Mr. Howard Hazell, in this matter. Mr. Hazell was anxious that his year of office should mark a big step forward in costing, and to that end he was organising a stronger costing committee. In London he wanted on that committee a representative from each district association, and as the South-East section had no representative, Mr. Poulton asked for a nomination.

Mr. J. Griffiths (Iliffe and Sons) was elected to serve on the committee, that gentleman observing that his firm had just installed the System on a very large scale.

The President added that it had been suggested that in each district the Costing Committee should instal the Federation System in two houses which at present were not so equipped. The idea of the scheme was to disabuse members of the idea that it was a difficult system to work or that it involved a lot of extra labour. These two installations would be made under the aegis of the L.M.P.A. and would be quite free.

New Members.

The following new members were elected: Messrs. W. T. Ramsden, Kenley; D. Schaffer, Forest Hill; and A. A. Fieldson, Catford.

Paper was among the principal exports from Esthonia to Russia during the past three years, the quantities being: 1920, 6,200 tons; 1921, 12,600 tons; 1922, 19,800 tons.

Mr. Charles W. E. Goodwin.

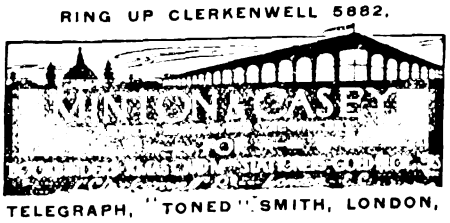
A journalistic career of promise has been cut short by the death of Mr. Charles William Ewart Goodwin at the early age of 38. Commencing his life as a journalist on the *Montgomeryshire Express* a paper on which quite a number of well-known pressmen received their early training, he went to Preston, Salisbury and Brighton, and subsequently took up a position in Messrs. Hulton's office about five years ago, and had lately been in charge of the picture page of the *Daily Dispatch* and the *Sunday Chronicle*. He was keenly interested in all forms of sport and made a special study of wireless telephony. The respect and esteem in which he was held by his colleagues in Shoe-lane was shown by the handsome wreaths and the large attendance of members of the staff at the funeral at Ilford on Saturday last. He leaves a young widow and four children. He was a younger brother of Mr. A. E. Goodwin, secretary of the Federation of Master Printers, who has, we hear, received very many expressions of sympathy from master printers in all parts of the country.

Mr. Percy H. Adlard.

The death occurred on Friday of Mr. Percy Harold Adlard, a partner in the firm of Adlard Brothers, printers and paper dealers, Octagon, Plymouth. During the war Mr. Adlard served in the Buffs and 11th Fusiliers, and was wounded in the head by shrapnel about a month before the armistice was signed. Six months ago, he was operated on by a London specialist. The specialist advised his removal to a nursing home in London for further treatment and a second operation, from the effects of which he did not recover. Mr. Adlard was one of the sons of the late Mr. William Adlard, of Clifton, a partner in a Cheltenham firm of paper makers, and before taking over the business in Plymouth with his brother, Mr. Albert Adlard, 22 years ago, he was associated with other brothers in Birmingham. An inquest was held at Westminster on Monday, a verdict being returned that Mr. Adlard died as the result of wounds received in warfare. The interment took place at Northfield Church, near Birmingham, on Tuesday, and a memorial service was simultaneously held at Eggbuckland Church, near Plymouth, at which Mr. Adlard was a regular attendant.

Printers' Managers and Overseers ASSOCIATION.

MANCHESTER AND DISTRICT CENTRE.



The October meeting was held on Saturday last in the Mitre Hotel, when President F. E. Robinson had the support of Vice President F. Scouler and some thirty members. Minutes of May meeting having been read and passed,

President Robinson said that the treasurer, Mr. Jas. E. Mayo had just passed through a critical period, and when he and the secretary called, Mr. Mayo was beyond the danger zone, making satisfactory progress, yet it would be some time before he would again be fit for business. The secretary was requested to send a letter conveying the good wishes of the members for a speedy recovery.

The Association's annual report and balance-sheet was passed subject to the following resolution being dealt with: "That we ask London to supply more explicit details under the heading 'Management, Expenses and Commission,' as the item, £234 11s 9d. seems a large amount to put under one head." The movers were Messrs. J. H. Nuttall and Chas. N. Knowles, Mr. Robert Marshall supporting.

Stationers and Unemployment.

THE Livery Committee of the Stationers' Company are to be congratulated on providing the stage for so important a statement as the Minister of Labour had to make on Tuesday on the subject of unemployment schemes this winter. It was quite the most notable occurrence on that day. Unemployment, unfortunately, is a grave menace, and it is some consolation to know that the Government are alive to the matter. Schemes involving an expenditure of 50 millions ought to do something to relieve the situation. This method of dealing with the problem, of course, does not meet the views of the Labour party, and it would be more satisfactory if industrial conditions did not render necessary such action on the part of the Government. But it is essential to provide some work, and that which is contemplated is of a useful character. Moreover, it may tide over until business once more gets on the move, for we are surely by this time far round the cycle of depression. Mr. R. A. Austen-Leigh had the honour of introducing Sir Montague Barlow to the Livery Committee, and Sir Cecil Harrison proposed the vote of thanks, which was more than usually deserved. Members of the allied trades attended in goodly numbers to listen to the Minister's able statement.

* * *

The Newspaper Deal.

BUYING of newspapers seems to be developing into a craze. The latest and largest deal of the kind is that by which the *Daily Mail* Trust Ltd. has acquired the business of Messrs. Edward Hulton and Co., of London and Manchester, for six million pounds. The Hulton undertaking had been built up with great commercial acumen, and included at least seven important newspapers — two evening papers, two mornings, two Sunday papers and the *Empire News*. Lord Rothermere and Lord Beaverbrook were associated in the deal. The former apparently has the controlling interest in all the Hulton organs except the *Evening Standard*, in which Lord Beaverbrook assumes control. The proprietor of the *Daily Express* has also purchased the *Pall Mall Gazette*, which, it is stated, is to be incorporated with the *Evening Standard*. Comments on these developments have been numerous but guarded, except where opposite political views have been ventilated. The movement towards large combines has grown much of recent years, and the printing and allied trades have experienced it in their midst. But the acquisition of newspapers gives great power, and there are those who fear the growth of such trusts on this account. However, newspapers are bound to give the public what they demand, so that there is some safeguard here in the direction of great combines. On the other hand, there are still important organs under independent control. Perhaps, therefore, as Lord Burnham observes, coalitions of the Press may add to its financial stability.

W. & N.W. London Master Printers.

Mr. Frank Colebrook on Mechanical Developments in Printing Machinery.

The October meeting of this Association was held at some disadvantage on Monday evening, owing to the necessity for finding, at short notice, a meeting place other than the usual. The difficulty was eventually surmounted by the kindness of Messrs. Morton, Burt and Sons, who provided accommodation at 58, Porchester-road, and perhaps the more intimate nature of the surroundings made the meeting all the more pleasant.

After light refreshments had been very hospitably served, the chair was taken by Mr. J. Emlyn Jones, the Association's president, and in opening the meeting he explained the circumstances leading to a change of meeting place, and also expressed satisfaction at the presence with them of their very energetic hon. sec., Mr. J. R. Burt, who had only just recovered from indisposition.

After the reading of the minutes, which recorded the very successful September meeting when Mr. W. H. Sessions was the principal speaker and in which reference was made to the full report which had appeared in *The British and Colonial Printer and Stationer*, a few items of correspondence were dealt with. A letter from headquarters reminded members of the urgent needs of the Printers' War Orphan Fund, and another communication drew attention to the Flag Day arranged in aid of the Fund, to be held on the first pay day in November.

The speaker of the evening was Mr. Frank Colebrook, who had been asked to lecture on "The Evolution of the Printing Machine." Introduced in complimentary terms by the chairman, Mr. Colebrook dealt in informal fashion with the series of inventions and developments which have led to the printing machinery of the present day. A large number of important and interesting facts were mentioned, and some curious and instructive books, prints, etc., were exhibited for members' inspection. We hope to publish a résumé of this address in next week's issue.

At the conclusion of the lecture a number of points were discussed by several different speakers, Mr. Goss referring particularly to Mr. Colebrook's mention of the future possibilities of certain processes and suggesting that Mr. Colebrook be asked to address them again at a later date and deal particularly with the outlook for the future. The thanks of the meeting to Mr. Colebrook were expressed very cordially by Messrs Burt, Jones, Perry and others.

WE have received a copy of the interesting special number just issued to celebrate the coming of age of the *Rand Daily Mail*, which was established in 1902. Stories of notable "scoops" by the journal, the art of the newspaper cartoonist, advertising and its advantages, and the various processes employed in the production of the paper, form the subject of special articles.

A Visitor from the United States.

Mr. H. A. Phinney, of the Cross Paper Feeder Co.

Mr. H. A. Phinney, president of the Cross Paper Feeder Co, of Boston, Mass., is at present on one of his frequent visits to this country and is renewing acquaintance with many friends in the British printing trade. We found opportunity the other day for a conversation with him, in the course of which we elicited some interesting remarks upon his association with British printerdom.

Photo, Elliott and Fry.

Mr. H. A. Phinney.

Mr. Phinney, who is accompanied on this trip by Mrs. Phinney, is staying at the Savoy Hotel, his usual place of residence when in London, its central heating arrangements making a very strong appeal to the American's sense of comfort. Though there is a definite touch of the States about Mr. Phinney, he refuses to be labelled a foreigner, as his ancestry only a generation or so back hails from Exeter on his mother's side and from Barnstable on his father's. He has a business-like, genial presence, and is, of course, an outstanding personality in the particular line which he has made very thoroughly his own.

It was in the year 1906 that Mr. Phinney first crossed the Atlantic to try his skill at inspiring British printers with sufficient enterprise to make them invest in an automatic feeder—a step regarded in those days as a big venture. No doubt Mr. Phinney could, if he liked, tell some entertaining stories of his early experiences at this rather thankless task. The "service" spirit now so much talked of—and increasingly applied—in the business world, was not much to the fore at that period, and it was a common thing to find a travelling salesman regarded not as a prospective helper but as an unmitigated nuisance—especially if the things he talked about were out of the ordinary rut. We gathered from Mr. Phinney that it took him four months to sell his first three machines, and we guess that behind that statement there must lie many memories of rebuffs that were hard to bear, and of severe testings of his grit and tenacity. In those days the average printer's view, based to some extent upon unfortunate experience, was that there was not in existence any such thing as a reliable automatic feeder, and even if a prospective customer could be made to admit the possibilities of the new mechanism, £100 seemed the limit of price that could be at all considered, and when the would-be salesman mentioned £300, he was regarded as a person whose mind was a fit subject for a pathological inquiry.

Things have changed since then, however, and automatic feeding is now accepted as an obvious necessity for many classes of work. It was, we understand, Messrs. Spottiswoode and Co—through Messrs. R. Affleck and Colonel Trench—who, greatly daring, gave Mr. Phinney the first English orders for the Cross feeder. Mr. Phinney can now look back upon some twenty or so visits to our shores, and the Cross feeders installed in this country number about 800. He finds the British printer of to-day much more accessible and much more enterprising than he was in the bad old days, when a day's round of 17 visits to printing offices had been known to result in only a single interview.

An inquiry as to how our visitor found business here at the present rather difficult juncture, brought the reply that it was very fair, considering the adverse general conditions. He told us that no less than 120 printing houses have installed his company's machines, and that a single firm possesses as many as 96 of these feeders.

The Cross feeder can be regarded as of British origin, seeing that Mr. Frank L. Cross, the inventor, was of British extraction, and born in Wensleydale, Yorkshire. Moreover, Cross feeders for this country are made at the works of Messrs. Peter Hooker, Ltd., of Walthamstow, and the company employs British staffs on both clerical and mechanical sides. Mr. Cross, who is an expert electrical and mechanical engineer, a graduate of Cornell University, devotes all his time and energy to scientific research into the principles of automatic paper feeding, and his are the principal brains behind the improvements which, from time to time, are made in the Cross machine.

After a busy stay of about seven weeks, in the course of which he has contrived to make a trip to the Continent, Mr. Phinney will sail for America on November 3rd.

Personal.

Messrs. Alfred Langley (vice-president of the L.M.P.A.), S. F. Oxley (president of the Home Counties Alliance), W. Whyte (secretary of the L.M.P.A.), and A. Williamson (secretary to Federation Costing Committee) were the principal speakers at a very successful group meeting and luncheon held at Maidstone on Tuesday.

We are glad to hear that Mr. W. J. Boyle has passed safely through the further operation which he had to undergo, and that there is every hope that he will now make progress to complete recovery.

There was an unusually large gathering of Freemasons at the installation last week of Lieut. A. Donald Harber as Worshipful Master of the Crusaders' Lodge, Longton, Stoke-on-Trent. Lieut. Harber is a director of the firm of Messrs. Hughes and Harber, Ltd., printers and stationers, of Longton.

Mr. Geo. W. T. Harrod has been appointed assistant secretary to the Federation of Master Printers in succession to Mr. W. Willett. Mr. Harrod has had considerable experience in the advertising world, and has also the advantage of a legal training. He takes up his duties at 24 Holborn next week.

Mr. A. Chadwell, the popular president of the above Association, was on Friday elected president of the Electrotypers and Stereotypers Auxiliary to the Printers' Pension Corporation. This makes the tenth year in succession in which Mr. Chadwell has occupied this position.

The Bookbinder

Artistic Bookbindings in Paper Boards.

A NOTABLE FORWARD MOVEMENT.

In an article in this journal about a year ago we drew attention to the big field which the progressive bookbinder had before him in the direction of the production of artistic paper board bindings. We referred to the increased use of gaily coloured paper board covers by the Continental bookbinder, particularly the German, and indicated the pleasing possibilities offered by the wonderful range of fancy papers produced in the paper mills of to-day.

Big strides in this direction have lately been made in the United States, and we note with interest an article on artistic board bindings by the New York "Publishers' Weekly," the writer being Mr. Franklin Spier (formerly of Alfred A. Knopf, Inc.). The following are excerpts from this article—

Once on a time, says Mr. Knopf, bookshelves showed a monotonous, if dignified array of cloth books neatly stamped in gold leaf. They were substantial but drab. The library was the gloomiest corner of the home. Nowadays bright colours, unfamiliar decorative patterns, gay paper labels with chaste typography make the book shelves a beauty spot in the home. You can suit your book bindings to your mood—orange or vermilion for the excitable, brown for the thoughtful, and deep blue, let us say, for Mondays. And they are all over the house. The segregation of books passed out of fashion at the same time as glass doors and keys for bookcases. You can even select your books for their harmony with the furnishings of the guest-room or sun-porch. The general result has been to make books more lively, more interesting, more intriguing, individually and en masse.

A Metamorphosis.

One of the chief factors in the metamorphosis is the return to the paper or board-bound book. Cloths, while they are made in a number of satisfactory colours, are limited in the uses to which they can be put, as the only cloths suitable for bookbinding are canvas, linen or buckram weaves, and all cloth books are apt to be pretty similar. The familiar embossed "patterns" do not add much by way of decoration to the individuality of the book, as they are practically inconspicuous—if not, they are objectionable.

There is nothing new about the idea of paper or board bound books as a medium of artistic decoration. French, German, Italian and Russian books have been so bound for several hundreds of years. The cloth bound book in fact is, and always has been, the exception rather than the rule on the Continent. Purchasers who wish to give their books permanent place in their libraries have them individually bound, often in leather. Unornamented paper covers are found everywhere in Europe, but there is a generous and constant output of the decorated ones. The Germans, particularly, excel in the variety and beauty of the patterns of their decorated board books. There is a familiar small edition of German classics, beautifully bound in decorated boards, and consisting of five or six volumes which, before the war, could be purchased for a few marks.

What America is Doing.

The greatest step made by American manufacturers of books, particularly the firms of publishers who have been experimenting for several years past in new and artistic bindings, has been to adapt the idea of the decorated board bound book to the needs of American publications, full-length novels, poetry and works of belles-lettres as published here. As a rule, richer, more substantial, and perhaps even more beautiful books have been so produced in America for regular (unlimited) editions than in Europe. Bookbinders of the Old World, particularly in England, are probably still ahead of us in individual and special edition bindings

Whether the entire case is made of decorated boards or only the sides—in which event the back is cloth or leather—the principles involved are the same. The decorated paper is either printed before it is pasted over the board cases, or the cases are first made with blank paper and then printed complete. Both methods have special advantages. Where the decorative design is an "over-all" pattern, that is, a repetitive figured design covering the entire area, it is generally better to print the paper first, in a sheet large enough to cover the boards and turn in at the edges. It is rather difficult to get exact register in printing a completed cover, and a design coming close to the margins might overlap on one edge and leave a blank space along another. The edges of the book would furthermore be blank. The figured-pattern paper, previously printed, turns over the edges and obviates this.

The Papers Available.

Furthermore, it is possible to obtain lithographed and wood-cut papers, already printed, in an amazing quantity and variety of designs, showing effects that it would be quite impossible to duplicate by printing directly on the made-up cover. Such papers are often imported from Japan, China, Germany, Austria, and Australia, and the use of these papers at present rates of exchange makes the manufacture of decorated board books extremely feasible.

Many designs can be effectively printed directly on the made-up cover, however. When only one or two colours of ink are to be used, when the design is bold, striking and fairly simple rather than delicate and intricate, or when it consists perhaps of the title, author's name and an illustration in line, this procedure is generally followed. Strong lettering and contrasting inks are most effectively employed in this method. If an "over-all" pattern is printed directly on the cover the cut or die should be somewhat larger than the cover to obviate blank margins.

Limitless Possibilities.

The combinations and possibilities of board bindings are practically limitless and offer an attractive opportunity to the manufacturer of books who believes that the attractive appearance of a book will help to increase its sales, as well as to the one who loves good-looking books for their own sake. But the designing of them is an art requiring a special aptitude and a real sense of taste. The differences between combinations of various colours are often slight but very important. An off shade, or out of harmony design, is fatal. It is temptingly easy to slap together any kind of figured paper to make a decorated board book, and one sees in the bookshops quantities of garish and ugly books. Fortunately the revival of this type of book manufacture has enlisted the interest of some of our best designers and decorators, and one can predict an increasingly satisfactory production of artistic bindings.

Finally, a word concerning costs. Where board bindings were used to cut down the cost of manufacture (and cheap-looking the old-style board book certainly was), to-day even the simplest board binding, without decoration, costs nearly as much as a cloth binding.

On the score of durability there is still room for experimentation and improvement If the paper for binding is selected with a view to strength as well as beauty, particularly if the surface is fairly hard so as to prevent "rubbing" at the edges and corners, satisfactory results are obtainable. A large, heavy book should always have a cloth back, and perhaps it would be better in making a book of this kind to give it cloth corners.

Notes and News.

The State of Trade.

The bookbinding industry is in anything but a satisfactory condition owing to the general depression in trade. It cannot be claimed that there has been any improvement during the last few weeks. In fact there are many houses complaining that orders are fewer and smaller. Both the letterpress and stationery sides are affected, the former perhaps in a more acute degree. The public are not spending money on books and they are not sending their periodicals for binding. Publishers' cases are not sought, and as a matter of fact, there is nothing to induce publishers to introduce new books in part numbers, normally a source of ultimate good business for the trade binders.

Publishers' Difficulties.

Publishers are complaining bitterly of the season's failure. They have not lagged in the production of new books, as the lists are beginning to show. Technical books and works of reference may be in demand with the commencement of the winter classes for students, but this is merely a temporary phase and does not involve a great consumption. Fiction is at a low ebb, and the bureaux and libraries are the principal purchasers at present Strangely enough, while there is so much unemployment in the publishers' binding section of the trade, quite a number of houses are investing in new machinery. This may be a sign of the survival of the fittest, for with everything depending upon price keenness and maximum production at minimum cost, efficiency in equipment is a first essential. Once again we are reminded that when bookbinders invest in the highest class and most recent of labour-

Digitized by Google

saving plant, it is mainly foreign machinery that they buy.

Demarcation of Labour.

On the subject of keenness in competition it is a well-known and almost an accepted fact that in certain classes of production many houses and districts are handicapped from the start. No doubt custom has a lot to do with it, but it is outrageously unfair that there should be differentiation in the privilege accorded to one house and another. Demarcation of labour is alluded to. Here it will be whispered in high places that a delicate subject is being approached. It is high time that all the delicacy was knocked out of the subject and that approaching gave way to grappling. There is neither sense nor reason in one firm being allowed to employ girls to do work that another firm is debarred from performing in a similar manner. There is a machine on the market that will put marble paper on the sides and cloth up the backs of books and turn them out like sausages from a sausage-making machine. Put a girl in charge of such a machine and there will be little scope for argument as to demarcation of labour.

Need of Uniformity of Conditions.

There is a big firm in the Midlands where girls are allowed to perform quarter binding up to ¼ in. thickness, and that limit is good enough for 75 per cent. of the quarter-bound work that is executed. There are houses within easy distance where girls are hardly permitted to touch a glue brush. In Manchester there are firms where girls have always taken on quarter binding, and by virtue of the establishment of custom, do it still. If another house in the vicinity attempted the same thing there would be the probability of a national strike. In direct consequence there is no fairness in competition for quarter bound and scholastic work, or for that matter in the whole field of manufactured stationery. Neither the Bookbinders' Union nor the Masters' Federation can defend the conditions which prevail, and it is becoming time that they were rectified and made uniform throughout the trade.

The Leather Market.

The leather market is on the quiet side. Prices are firm for bookbinding leathers of standard grade, but there are always clearance lines and special parcels on offer from one source or another. Quite recently pigskins suitable for half-binding have been offered at 6d. per square foot. This is cheaper than basil. Bookbinders are not usually very keen about half-binding in pigskin. It is rather harsh and hard to work.

Prices of Leather.

The list prices previously quoted for leathers will hold good for to-day's market. In case readers have not preserved their copies we append the following:—Thin glazed skivers, 5d. per sq. foot; stout skivers, 6d.; pastegrains, 5½d. to 6d.; thin coloured basils, 7d. per sq. foot; ditto for half-binding, 8d.; stout basils, 9d.; grained basils, 10d. to 1s., according to colour, substance and design; roller basils, 6½d. to 7d.; fair basils, 9d.; rough fleshes, 8½d.; rough goats or morocco, best, 1s. 2d.; seconds, 10d.; rough calf, best, 1s. 2d.; seconds, 10d.; fair calf, best, 1s. 9d.; seconds, 1s. 6d.; pigskins, best, 1s. 6d.; seconds, 1s. 3d.; anglos, 1s. 9d.; seconds, 1s. 6d.; law calf, best, 2s.; seconds, 1s. 10d.; hard-grained goat's, 2s.; best morocco coloured, 2s. 3d.

Marvels of Marbling.

A centre of attraction amid all the many printing and binding activities of the Government Printing Office (U.S.A.), is the paper marbling tank, in charge of an agile marbler whose deft fingers comb the surface of the tranquil waters of the tub and weave thereon beautiful colour combinations and designs, writes Mr. C. M. Littlejohn in the "Inland Printer." Following his skilful combing harmonious patterns of scarlet and emerald, crimson and azure, take definite shape and remain static upon the water. With a simple movement he produces marvellous peacock feathers, dark blue veins, ivory and enamel dots, and an infinite variety of delightful contrasts to adorn some of the fine publications turned out in that office. Visitors pause longest at the fascinating bath with the floating colours, and watch the genial marbler, whose combs and skimmers make quick changes in the surface of the water, where he marbles many sheets of paper with widely diverse shades and colours.

Marbling has become so rare that even printers skilled in other branches of the industry are not familiar with the art, which has lent so picturesque a setting to many old volumes. Many interesting points are explained to them when they pause to watch the process and ask questions of the guide as to the mixtures used. So few marblers are there in the world the process may be said to be almost a lost art. It has been estimated authoritatively that there are only twenty-five marblers practising this art in the United States, and of this number three of the leading members of the craft are employed in the various establishments of the District of Columbia.

Permanent Record of the Art.

The history of the art has been most elusive, with but scattered references here and there throughout the centuries following the birth of printing, and with but little data preserved to the present generation. The majority of publishers and bookbinders who desire marble paper are content with the cheap imitations turned out rapidly and inexpensively by lithographed processes, so the art has been suffering a steady decline, if it indeed flourished at any historic period. In order that something may be known of this art by the present generation as well as by future ones, a permanent collection of photographs showing the bath, colours and designs, as well as the chemicals and instruments used for marbling paper at the Government Printing Office has been secured and deposited in the Graphic Arts Division of the Smithsonian Museum, and Mr. R. P. Tolman, in charge of the division, has prepared short legends for these various pictures and articles forming part of the equipment of the marbler, as well as a brief résumé of the art itself. It is probable that the process was discovered in Holland before the end of the seventeenth century, as marbled paper has been found in some of the Dutch books printed at that time. It is claimed that the Augustinian monks practised marbling in some of their works in 1694, and in later years England and other countries had exponents of the art. Yet to-day marbling seems to occupy but a small position among the printing and graphic arts, the production of marble papers by lithographic processes having much to do with the decline of hand marbling and the paucity of skilled marblers.

Visitors to the Government Printing Office always are attracted and their curiosity is intrigued by the process of marbling and by the water colours used on the gum solution to produce the beautiful effects. The colours are contained in small buckets on the side of the tub, and are dropped from the tip of the paint brush, only a drop at a time. These drippings radiate quickly into large polka dots on the surface of the prepared bath and are transferred to the sheets of paper which the marbler touches gently to the surface holding the colours. As if by magic the transfer is made on the plain white sheet. To stimulate the spread of the colours once they are dropped on the surface, a solution of gall has been chemically mixed with the gum forming the bath. Once the various colours have been dropped from the buckets containing the separately mixed paints and spread upon the solution, the marbler draws a "comb" across the surface to form any design he desires.

The Materials Used.

In the process are used chiefly gum tragacanth, gum hogg (sterculia ureus), Irish moss (carrageen) and flea seed (Plantago psyllium), and the gall which has been mentioned for spreading the water colours. The tragacanth when being prepared for use is soaked in a quantity of water for three days; the Irish moss is well washed, soaked in cold water and boiled for an hour or more; while the flea seed requires a soaking in boiling water before it can be effectively used as one of the ingredients of the bath. The ingredients are dissolved, strained and reduced to their proper consistency by the addition of water, and are then ready for use in the trough, which should be of ample proportions, large enough to take paper of the size to be marbled and to permit the free movement of the comb and skimmer and the arms of the marbler.

When the solution is poured into the tub it should be of sufficient quantity to almost fill it, bringing the surface high and within easy reach of the physical control of the workman, who, in order to produce the best effects, needs ample space and convenience for the delicate manœuvring of the comb. The comb, which is simply a piece of wood holding metal pins in the edge, is drawn in skilful manner across the drops of colour, as many as desired being spread upon the surface. After a pattern has been formed and its transfer made by pressing the paper against the surface, the marbler must use a wooden skimmer in order to clear the surface of the old designs and colours and permit the formation of the new. One sweep of the skimmer and the colour combination is broken. The marbler then drops anew his new shades, recombs or redesigns for the next effect and makes another transfer.

When marbled, the paper must be cut to the proper size of the volume and then glazed. The glazing is accomplished by either passing the paper between heavy steel rollers or rubbing it with a piece of agate set in the end of a hand tool. It is then ready for binding with the printed text.

DIVIDENDS AND REPORTS.

WINTERBOTTOM BOOK CLOTH CO.—The directors of this Manchester company have decided to capitalise part of the reserves and to distribute the same in the form of 10 per cent. non-cumulative preferred ordinary shares of £1 each among the ordinary shareholders in the proportion of one for every two ordinary held. This will absorb practically £500,000 of the reserve. The company has at present an issued capital of £1,687,390, of which £998,100 is in ordinary shares, £389,290 in 6 per cent. first preference, and £300,000 in 7½ per cent. second preference. The reserve fund amounts to £580,000, and investments at or below cost stood in the last balance-sheet at £455,663. Last year the company paid 15 per cent., tax free.

RAPHAEL TUCK AND SONS.—The accounts for the year to April 30th last, after providing for depreciation, income-tax, etc., show a profit of £47,389, against £48,163 for the previous year. The ordinary dividend is again 10 per cent. (including the interim payment of 4 per cent. already made), while £2,577 is transferred to special dividend reserve fund and £5,881 carried forward, against £5,727 brought in. The reserve accounts now stand as follows: Capital reserve, £8,845; special dividend reserve, £60,169; general reserve, £35,042. The various departments of the company's business, it is stated, maintain their sound and healthy condition.

UNITED PRESS.—It was announced in Tuesday's *London Gazette* that a first dividend of 8s. 6d. will be paid on October 31st in respect of the United Press, Ltd.

NEW COMPANIES.

RUMPH AND WAITE, LTD.—Capital £500 in £1 shares; process engravers, printers and stationers, etc. Private company. First directors: A. J. Rumph, A. V. Waite and Mrs. C. A. Marr. Registered office: 3c, Shoe-lane, E.C.4.

HAMMOND AND GRIFFITHS, LTD.—Capital £3,000; to adopt an agreement with H. B. Hammond, and to carry on the business of printers, stationers and advertisers as formerly carried on by the said vendor at 1, Quality-court, Chancery-lane, W.C.2. Private company. First directors: H. B. Hammond and C. J. B. Griffiths. Registered office: 1, Quality-court, Chancery-lane, W.C.2.

G. H. KNIGHTS, LTD.—Capital £1,000; printers, publishers, bookbinders, stationers, lithographers, engravers, etc. Private company. Permanent directors: G. H. Knights, G. N. Davies and Mrs. F. Davies. Registered office: 68, Aldersgate-street, E.C.1.

J. BAINES, LTD.—Capital £2,000 in £1 shares; to acquire the business of a printer and lithographer, now carried on by J. Baines at 48, Nelson-road, Gillingham, Kent, as "J. Baines," and to carry on the business of newspaper, magazine, book, commercial and general printers and publishers, newspaper owners and press agents, lithographic and colour printers, etc. Private company. Permanent directors: E. Millett and J. C. Dodd. Registered office: George-yard, Barnsley.

E. J. REID AND CO., LTD.—Capital £10,000; to carry on the business of an advertising contractor and agent, as formerly carried on by T. H. Wilkins as "E. J. Reid and Co." at 49-50, Watling-street, E.C.2, and that of proprietors and publishers of newspapers, journals, magazines, books and other literary works and undertakings, etc. Private company. First directors: T. H. Wilkins and E. G. Collins. Registered office: 49-50, Watling-street, E.C.

WORLD MARKETS, LTD.—Nominal capital of £50,000; to promote and protect commerce generally in all parts of the world; to carry on the business of newspaper proprietors and general publishers, printers, lithographers, engravers and advertising agents, warehousemen, etc. Private company. Subscribers: A. F. Nash and J. A. D. Gillespie.

THE GREYFRIARS PRESS, LTD.—Nominal capital of £400,000; to adopt an agreement with Wm. C. Iliffe and Sir Edward M. Iliffe, to hold acquire and deal in shares, stocks, bonds or other securities, and land, houses and other property, to carry on the business of agents, trustees, managers, attorneys, treasurers and secretaries, to undertake and execute all kinds of financial, commercial and other operations, to promote companies, etc. Private company. First directors: Sir Edward M. Iliffe and W. Coker Iliffe.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

LAKEMAN AND TUCKER, LTD., printers, etc. London.—Particulars filed of £1,500 debentures, authorised September 29th, 1923, charged on the company's undertaking and property, present and future, including any capital for the time being issued and uncalled capital, the whole amount being now issued.

CAFFRY AND PRIESTLEY, LTD. (general and artistic printers, stationers, etc., Nelson)—Satisfaction in full on October 4th, 1923, of mortgage dated September 4th, 1903, securing £300.

SHAKESPEARE PRESS (BIRMINGHAM), LTD.—Particulars filed of £3,000 debentures, authorised September 12th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital (if any), the whole amount being now issued.

GARNETT MEPHAM AND FISHER, LTD. (stationers, printers, etc., Brighton).—Satisfaction to the extent of £100 on July 1st, 1923, of debentures dated August 12th, 1915, securing £400.

SWINDON PRESS, LTD.—Particulars filed of £12,250 debentures authorised September 24th, 1923, constituting a fixed charge on the company's freehold land and buildings erected thereon, machinery and goodwill, and a floating security on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued (ranking *pari passu* with such of the £17,500 prior debentures as are outstanding).

HUDSON SCOTT AND SONS, LTD., printers, decorative boxmakers, etc., Carlisle.—Satisfaction (a) to the extent of £600 on October 1st, 1923, of debentures dated October 1st, 1913, securing £18,400, and (b) to the extent of £7,200 on October 1st, 1923, of debentures dated October 1st, 1918, securing £12,200.

WESTMINSTER GAZETTE, LTD.—Particulars filed of £25,000 debentures authorised on September 26th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

WESTMINSTER PRESS, LTD.—Issue on September 26th, 1923, of £25,000 debentures, part of a series already issued.

THOMAS AND GREEN, LTD.—Satisfaction of debentures dated July 1st, 1903, September 13th, 1905, June 9th, 1909, and February 3rd, 1911, for securing £20,000, and of second debenture, dated May 24th, 1922, for securing £40,000. Issue of series of debentures dated October 1st, 1923, for securing £60,000, secured on the undertaking and property of the company, both present and future, including uncalled capital. Mortgage dated October 2nd, 1923, in favour of the National Provincial and Union Bank of England, Ltd., to secure all sums from time to time owing, secured on freehold land and property at Wooburn, Bucks.

BARNES (SOUTHSEA), LTD. (manufacturers of and dealers in paper).—Transfer of mortgage and further charge on 85, Palmerston-road, Southsea, dated September 26th, 1923, to secure £2,000. Holder: H. Brake, "Tintern," Bedhampton, Hants.

BUSBRIDGE AND CO. (1919), LTD., paper manufacturers, etc., London.—Satisfaction to the extent of £8,000 on April 23rd, 1923, of debentures dated April 9th, 1919, securing £24,000.

SHEFFIELD INDEPENDENT PRESS, LTD.—Particulars filed of £5,000 debentures authorised September 24th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued (ranking *pari passu* with £60,000 debentures issued pursuant to resolution dated July 8th, 1920).

WIPES

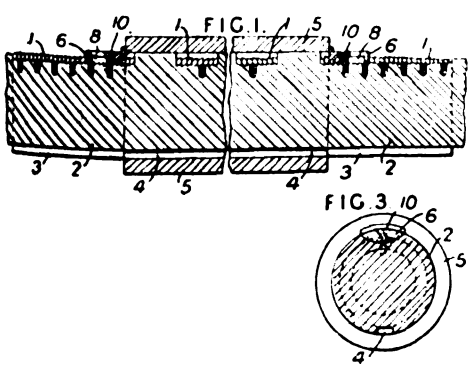
New Inventions

Bookbinding Inks.

Metallic-pigment and other inks for application by heated stamps to bookbindings, labels, etc., as patented by the Alchemic Gold Co., Inc., are made with a vehicle consisting of a resinous thickening agent, such as colophony, dammar, copal, Burgundy pitch, Canada balsam, or benzoin, dissolved in a solvent having a boiling-point between the limits 200 degs. to 300 degs. C., specified solvents being terpineol and other derivatives of the terpene series, benzyl alcohol, aromatic esters such as terpinyl acetate, benzyl acetate and ethyl benzoate, and oil of dammar resin.

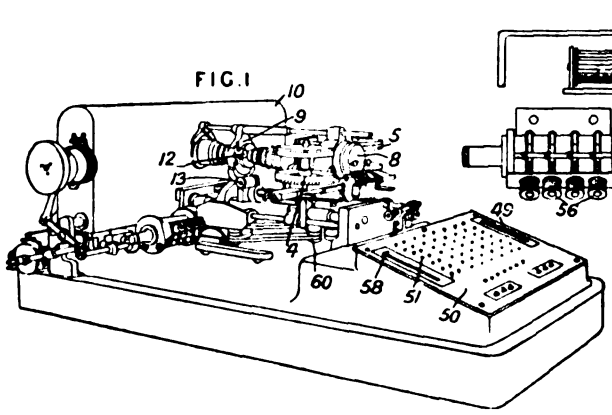
Bronzing Machines.



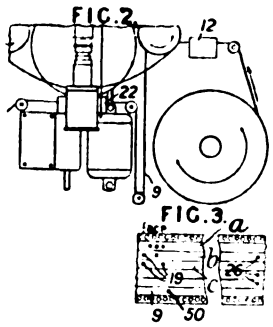
Mr. G. Newsum, whose name is well-known in the trade in connection with printing and bronzing machinery, has patented a bronzing machine of the cylinder and roller type in which the use of grippers is dispensed with. It consists of a casing *b* with a rotating cylinder *i* and a plurality of burnishing rollers 9 . . 14, pairs of rollers 3 . . 8 which forward the sheets from the feed-board *e* through the opening *c* to the periphery of the cylinder *i*, and pairs of rollers 16 . . 21 which deliver the sheets through the exit *d* in the

casing to the delivery table *f*. Bronze contained in a trough *p* is picked up by the roller *q* and transferred by rollers 1, 2 to the forwarding rollers 3, 5, surplus bronze being removed from the front of the sheets by roller 7 and any bronze on the back of the sheets by a brush or roller *k*. A finger *s* switches the sheets off the cylinder *i* to the delivery rollers 16 . . 21, which latter serve also as dusting-off rollers. Specification 152,053 is referred to.

Securing Printing Rollers.



In this invention, printing-rollers are secured against longitudinal movement upon their mandrels by means of members adjustably secured to racks formed on the

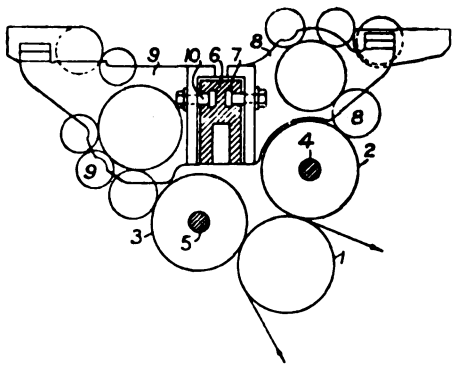


mandrel, or on a member provided thereon, and engaging the ends of the roller. In one form, Figs. 1 and 3, the roller 5, which is secured to the mandrel 2 by the ordinary key 4 and key way 3, is prevented from moving longitudinally by toothed blocks 6 engaging rows of concave teeth 1 and secured adjustably to the mandrel by screws 10 and slots 8. The teeth 1 may form a continuous rack or, as shown, may be arranged as short racks to suit standard lengths of rollers. In another form, the teeth 1 are provided on a member arranged at the bottom of the keyway 3, the blocks 6 engaging the ends of the key 4. The invention is patented by Messrs. E. Crawshaw and W. Stuart.

Photo Type-Setting.

Mr. E. K. Hunter has patented an invention whereby printers' composing apparatus of the kind comprising means controlled by a perforated strip for selectively projecting characters on to a sensitive surface, the strip 9 is provided with word-spacing perforations 50 and justifying-perforations 26 which co-operate to impart a uniform justified word-spacing movement to the sensitive-surface carrier. The keys for forming the character-

perforations 19 and word-spacing perforations 50 operate counters showing the sum of the spaces occupied by the characters, and the number of spaces respectively. The sum is automatically subtracted from the length of the line, and divided by the number of spaces, and perforations 26 representing the quotient are then made in a part of the strip following the normal perforations. The keys may operate the punches and counters by electric means. The prepared strip is passed through normal and master control boxes 12, 22 containing electric or like devices arranged so that when the perforations 26 are presented



in the box 12, the differential mechanism described in Specification 200,127 is set, this mechanism being operated to impart feed to the sensitive-surface carrier each time a perforation 50 is presented in the box 22. The perforations in the strip may be arranged on longitudinal areas, *a*, *b*, *c* . . . having code values 1, 2, 4 . . . . and each symbol is assigned a code-value equal to the sum of the code-values of the perforations representing the symbol. Specification 195,104 is referred to.

Printing Plate Production.

A tablet for the preparation of originals for the photographic production of printing plates, particularly for printing "white-line" wood-cuts is patented by Mr. H. R. Morgan, and comprises a foundation consisting of wax or a mixture of wax with a suitable white material, and a thin black or other dark coloured coating. The design is cut into the tablet by a burin, scraper, or other tool, gradation in the width of the white line being easily obtained by the use of a tapered tool. Preferably the foundation consists of two parts of Japan wax and one part of precipitated chalk, and the dark coating of Indian ink or lamp-black.

For Stop-Press Matter.

Under an invention patented by Messrs. E. T. Morris and T. J. Mills, seal or edition headings and late or stop-press news are printed on newspapers, in the desired positions and colours, by an arrangement comprising two cylinders on separate shafts spaced sufficiently far apart to enable the cylinders to be adjusted to any position for printing in the same column in different colours, or in different columns. The cylinders 2, 3, for printing edition headings and late news respectively are arranged upon shafts 4, 5, spaced apart a sufficient distance to enable the cylinders to be moved past one another, so that either cylinder can be set to print in the required column of a printed paper passing over an impression cylinder 1. The inking-mechanisms are also arranged so that they can be moved past one another. The inking-mechanism 8, 9, are adjustable on a bar 6

formed with T-slots 7 to receive bolts 10 by which the inking-mechanisms are secured in the desired positions.

Paper Containers.

A British patent has been granted to Hydroloid Ltd., covering an invention for the manufacture of paper vessels and containers.

Vessels and containers such as paper bags, drinking vessels and plates are formed of paper which is either previously or subsequently treated with sizing material such as animal size, casein or albumen, then passed between pressure rollers either in the sizing material or subsequently, and is also treated with alum, chrome salts, formalin, &c., to harden the size and render it insoluble in water, the hardening material being mixed with the sizing material or used after the sizing. Acids, such as lactic acid, or alkalis, such as caustic soda, may be added to the size. The paper may be allowed to stand in a wet state both before and after hardening, and may be cooled by a current of cold air prior to drying on skeleton drums by warm air. Glycerine or an easily emulsifiable material, such as soap or castor oil, may be employed to toughen the treated paper, and a coat of transparent varnish may be applied to impart flexibility to the paper.

Let the idea get into your head that you are going to fail and you are pretty sure to prove a good prophet.

Simplified Typography Commended

Mr. Chas. T. Jacobi at Birmingham.

As previously briefly announced in our columns, Mr. Chas. T. Jacobi, formerly managing partner of the Chiswick Press, delivered a lantern lecture on "The Advantages of Simplified Typography" at the Central School of Arts and Crafts, Birmingham, on the 4th instant. The chair was taken by Councillor Percival Jones, president of the Birmingham Master Printers' Association.

In expressing his appreciation of the honour of being invited to deliver the first of the series of lectures for the session, Mr. Jacobi remarked that he felt he was thereby renewing the acquaintance of some old friends. The principal of the School, Mr. Fletcher, he had met at Leicester some years ago, and was familiar with the good work that gentleman had done there. The speaker also made appreciative personal references to Councillor Percival Jones and Mr. D. R. King, secretary of the Midland Master Printers' Alliance. Mr. Jacobi went on to remark upon the good equipment possessed by the Birmingham Central School, which, he said, provided every facility for turning out really good work.

Proceeding to discuss typography, Mr. Jacobi showed on the screen examples of the old style of work involving a multiplicity of different faces. He was thankful, he said, that a more simple form of lettering and of display now prevailed in general work, and this was largely attributable to the influence of the various technical classes. With the aid of lantern slides the connection was shown between early MS. books and the types now in every-day use

In a reference to the work of American type designers, credit was given to the excellent designs produced by Bruce Rogers and F. W. Goudy, and type faces by these designers as adopted by English printers were shown on the screen. Mr. Jacobi remarked that previously American printers had relied somewhat on the English market for the best founts, but he thought the position was now becoming reversed, for we were indebted to America for some very good designs, suitable not only for book work but also for commercial or jobbing work. Formerly we were flooded from the other side of the Atlantic with jobbing types of most grotesque or fantastic character, but fortunately it was now realised that all lettering should be more simple and devoid of so many eccentricities.

The speaker dealt also with the principles of lay-out, and commended the simplified styles of the present-day which have superseded the old fashion, with its elaborate and meaningless use of decorative matter.

In commending to his hearers a study of the literature of printing, Mr. Jacobi pointed out the value of the trade Press with its technical information and news of trade developments which helped to keep the student up-to-date.

A final word of cheer was given to those students who were inclined to be discouraged by past failure in their work. Experience was gained, said Mr. Jacobi, by way of errors and mistakes; perseverance was the real secret of success.

Paper and Stationery for Egypt.

His Majesty's Commercial Agent for Egypt has forwarded to the Department of Overseas Trade copies of the specification and conditions of tender for the supply of paper and stationery required by the Central Stores Department Cairo, for the year 1924-25. Sealed tenders will be received up to noon on November 29th, 1923.

The London office of the Egyptian and Sudanese State Railways, Queen Anne's Chambers, Westminster, S.W.1, has notified the Department of Overseas Trade that samples of a few of the articles required are available for inspection by interested firms provided that three days notice is given.

A copy of the conditions of tender and specification may be seen by interested United Kingdom firms on application to the Department of Overseas Trade (Room 41), 35, Old Queen-street, London, S.W.1. A limited number of copies are also available for firms in the provinces, who are unable to arrange for inspection in London. (Reference 11614/F.E./M.P.)

L. & C.M.P. Alliance at Llandudno.

The Lancashire and Cheshire Master Printers' Alliance have held another successful business and social week-end, the autumnal gathering having taken place at Llandudno from Friday to Monday last. The meeting place being in Wales, an invitation had been extended to the members of the North Wales Alliance, and there was a fair sprinkling of members from the latter Alliance among the seventy or so ladies and gentlemen who were assembled at the Imperial Hotel.

The party began to arrive on Friday evening, and the very full programme commenced on Saturday morning with golf and bowling matches. Ladies as well as gentlemen competed for the golf prizes, but owing to the state of the greens, ladies were debarred from participating in the bowling, and the prizes provided went to swell the number to be won at the whist drive that took place in the evening, when dancing was also indulged in.

At the business meeting in the afternoon, Mr. W. M. Schofield, president of the Lancashire and Cheshire Alliance was in the chair, and welcomed to the meeting Mr. W. B. Wykes, vice-president of the Federation of Master Printers and Mr. W. H. Powlson, president of the North Wales Alliance, and the other visitors.

Mr. W. B. Wykes expressed sorrow at the absence of Mr. A. E. Goodwin, secretary of the Federation, owing to bereavement. He went on to describe the activities of the Federation, referring to its democratic constitution and the work of the 25 committees that deal with matters affecting all printers. Other matters he touched upon were the understanding arrived at with wholesale paper merchants with regard to the supply of paper to consumers, municipal and State printing, postal rates, collective advertising, and the costing campaigns in the Midland and the Lancashire and Cheshire Alliances.

Mr. Powlson foreshadowed the time when every printer would want to belong to the Federation and the membership would ballot as to whether they should be accepted.

A lively discussion ensued on the subject of collective advertising in which Mr. H. Woodrow, Mr. J. S. Brunton, Mr. F. Rickett and others took part.

The dinner in the evening was a most successful and happy function. The toast of "The Federation of Master Printers" was proposed by Mr. W. M. Schofield and responded to by Mr. W. B. Wykes, who, in the absence of Mr. Goodwin, also proposed "The Lancashire and Cheshire Master Printers' Alliance." To this Mr. J. S. Brunton (vice-president of the Alliance) responded. The "Alliance Humorist"—Mr. E. Gloner (Manchester) was called upon to propose "The Ladies," and he was all but outrivalled in his forte by Mrs. Pollard (Oldham) who replied. The last toast was "The Visitors," and this was ably handled by Mr. A. Bethell (past president of the Alliance, and president of the Manchester and Salford Association), and Mr. W. H. Powlson (president of the North Wales Alliance).

From this last toast arose the outstanding feature of the week-end. After Mr. Powlson had replied in reminiscent vein to Mr. Bethell, he produced an attaché case. From this he drew forth some old coins and medals concerning printing, and finished up by handing to the chairman some old and valuable prints to be used for the benefit of the Printers' War Orphan Fund. Throughout the day, Mr. Bethell, who is chairman of the Joint Industrial Council committee responsible for this Fund, had had the "Flag Day" on his mind, but these prints gave him his opportunity. Later in the evening he was constituted auctioneer, and the prints were "sold" by Dutch auction, and realised the sum of £118. Mr. W. Geo. White, the untiring secretary of the Alliance, cheerfully accepted the position of auctioneer's clerk, and was kept busy during the remainder of the week-end on the duties which this new job imposed. Moreover, at the end of the auction the prints remained with the auctioneer, and will be handed to Mr. Wykes for similar use in other parts of the country.

WITH the Bulletin of the Federation of British Industries there is now being published quarterly a Trade Barometer which is intended to assist traders to forecast business conditions.

Paper for Argentine Mint.

The Commercial Secretary at Buenos Aires (Mr. H. O. Chalkley, C.B.E.) has forwarded to the Department of Overseas Trade, a copy of the conditions of tender, specifications and samples of paper for the printing of postage stamps, Exchequer and Inland Revenue securities, etc., required by the Argentine Mint.

Tenders must be presented by January 2nd, 1924, on stamped paper by a duly authorised representative and enclosed in a sealed envelope addressed to the Senor Director de la Casa Moneda, Buenos Aires, accompanied by a certificate of deposit in the Argentine Bank of the Nation of an amount equivalent to 3 per cent. of the tender price.

Quotations must be in Argentine gold c.i.f. Buenos Aires. Payment will be made to the local representative after inspection and approval of the consignment.

The paper is to be delivered in three equal parts, counting from date boat arrives at the port and not from date of delivery of documents, on July 1st, September 1st and November 1st respectively.

Samples of the paper and a translation of the conditions of contract, specifications, etc., may be inspected by United Kingdom firms interested on application to the Department of Overseas Trade, Room 41, 35, Old Queen-street, S.W.1, up to October 30th, after which date they will be available for loan to firms in the provinces who are not in a position to inspect them in London.

In the event of any interested United Kingdom firms being unrepresented in the Argentine Republic, the Department will be pleased to suggest the names of local firms who have been reported as being suitable to act as representatives for the submission of tenders

Reviews of Samples, etc.

Photogravure Papers.

Evidently having reference to a recent comment regarding photogravure printing a volume showing gravure papers in several tones and substances has been placed in our hands by Messrs. John Dickinson and Co. The production, which embodies excellent photogravure reproductions in monotone and colour, has been arranged in collaboration with the engraving firm and the ink-maker, the former the Sun Engraving Co. and the latter Messrs. B. Winstone and Sons. The highest praise we can bestow upon the effort is that it is as successful as any that have come over from the States, where they are the leading specialists of the world in matters of this kind. If we rate our standard in advertising according to U.S.A. practice, we are not in the least inclined to judge our paper-making on a similar basis. The English paper-maker could always make paper, and especially printing paper, better than anyone else. The character of photogravure paper is essentially English and it only remained for the home mill to investigate the especial requirements of the photogravure process in order to produce grades of paper embodying everything that could be desired. In the volume in question Dickinson's have demonstrated that their Croxley mill can set a lead in the manufacture of photogravure paper calculated to bring out all the most delicate detail of the process in an economical manner.

De Luxe Cover Papers.

Bartons' Paper and Cardboard Co., Ltd., of Birmingham, is numbered in the ranks of the real service houses in the trade. In this matter we speak from actual experience. The advertising agent or printer who seeks to perform better work and pass from the repeat or copy style to the creative will find help and inspiration in the paper carried and the samples issued by this house. At the moment we are perusing a new booklet of Khorosan Covers, a wonderfully effective production on the loose-leaf principle and strongly cased. Khorosan Covers in paper and board substances are shown with a finish reminiscent of antique hide and suitably termed cordovan. Eight art shades of distinctive character are shown in this series and each specimen is printed with suggestive colour schemings. Equally beautiful is the Luristan set of cover papers shown in six Persian colourings, daintily intermingled with a suggestion of various tones. Luristan covers are produced in four finishes, matt, seal, persian and antelope, and in two substances paper and board.

Pasteboards.

Messrs. T. W. Leigh and Co., of Liverpool, submit for our inspection several sets of white pasteboards manufactured by Messrs. Bradbury Bros., Ltd., of Eaton and Albion Mill, Congleton, for whom they are the sole selling agents in England. We have before referred to Leigh's of Liverpool, as one of the merchanting houses which thoroughly understand the principles of correct distribution and act upon them. Leighs are no less fortunate in having Bradbury's to support them than Bradbury's are in having the Leigh method of distribution. On their merits the boards of which we have sample sets will sell. They will sell because they have the quality, offer a wide range and rank competitively in price.

Ewart and Collis.—The directors of Ewart and Son have issued a circular to shareholders in Ewart and Collis in which they criticise the terms of the proposed sale of the Sunbury Works, etc. They state that they are personally large shareholders in Ewart and Collis, and that they have requested the board of that company to summon a meeting of shareholders to consider resolutions to place Ewart and Collis in voluntary liquidation forthwith, and to appoint an independent chartered accountant to be liquidator.

A new Birmingham by-law makes it an offence to throw paper in the street, and the first prosecution took place last week, when a man was ordered to pay the cost of the proceedings for having torn up a number of bills and scattered the pieces on the road.

Disinterested Advice.

In "Notes for Buyers," the house organ of Messrs Spicers, Limited, "Ubique" writes: "By the way do you take in the weekly journal of the craft, the 'British and Colonial Printer and Stationer'? I haven't a farthing of money interest in it, but fair's fair; and when I see this country producing a weekly printing trade paper which the craft in other great countries cannot produce, and when I see such plenty of good craft matter in it, I feel constrained to put in a word about it. You are surely not doing yourself justice unless you take it and regularly glance over it."

SUBSCRIPTION FORM.

Please send me weekly "The British and Colonial Printer and Stationer," at 13s. per annum (including postage) until countermanded.

The Japan Earthquake.

Harrowing Experiences of Messrs. Lendrum's Agent.

Mr. R. E. Cook writes Graphic Description.

Mr. R. E. Cook the representative of Lendrum, Ltd., in Japan, has written a letter to Mr. E. S. Lendrum telling in graphic language the story of the Japanese earthquake as he witnessed it.

Writing from Kobe, under date September 12th, he says:

At the first shock I was in the office and made straight for a doorway, and I think to this I owe my escape. There was no time to think of anything. The violence of the shocks was so great that it was difficult to keep in the doorway. It seemed as if the furies were determined to dislodge me from the refuge I had taken. I felt the building heaving in all directions and then falling away from me on either side. Then the door fell off its hinges across my head and I held it up with my arm. Pieces of masonry were falling all the time and I cannot say how long the tremors lasted, but it seemed an interminable age.

It was a bright, hot day and yet clouds of dust and plaster from the falling buildings had turned it almost into night. When the first big quake subsided and the dust had cleared I found I had nothing but the sky above me, wreckage all round, and here was I perched on the top floor of our building. As I left my doorway I saw I had a sheer drop to the ground, which was piled high with wreckage. As for the staff I could see nothing of them for piles of debris, but luckily I had given most of them Saturday off and had in only one clerk and two office boys. I cannot say what happened to them as I seemed completely isolated up aloft.

I started out to find my wife, who was on the Bluff about a mile away. There were no roads left, so had to climb over tops of fallen houses, but nothing delayed me. I had to cross over an over-turned rikisha which was in my way and got caught in the revolving wheel and put my knee out. As every prominent landmark had gone I had to make my way to the Bluff by sense of direction only. The whole of one side of the Bluff had fallen, carrying with it houses, and causing further havoc in Motomachi. After considerable effort I managed to climb the Bluff and the devastation there was even more complete than below. I finally reached the spot where I thought our house should be and found my wife, distracted, coming to meet me.

When the quake came she was outside the garage and was thrown into the fence near the house. She tried to get up, but the earth was heaving too much, but she scrambled on all fours across about ten feet to climb on to another fence, crouching to escape the falling débris. By that time the church immediately at the back of our house had collapsed, part of it being saved from falling on her by the garage roof. Houses opposite in our lane collapsed like packs of cards before the quake had finished, with all the occupants inside. The two next door burst into flames at once, and our own house heaved up and down, but only partially collapsed, our house being one of the four that remained in the whole of the Bluff, but everything since has been destroyed by fire.

There was no time to be lost, as fires had already broken out all round and the three houses burning in our narrow lane were too near to be safe. My cook, in hysterics, pointed to a heap of fallen masonry at the side of the house imploring me to extricate her two children somewhere underneath. I tried several times, but it was useless, as I was unable to lift even a stone, being spent and exhausted. Another woman nearby called out without a tear, "Oh, God! will nobody get my children out?" There were two mites, but no earthly chance. Our amah had gone and we never saw her again.

After the Quake the Typhoon.

Soon after the quake a typhoon sprang up and fanned the flames. We saw that we should only be trapped in the fires, and so I fought my way into the house. I had still time to gather up my wife's engagement ring and a few things of value from the dressing table. The heat of the sun was also getting intense. We made our way out of Yokohama to the open space. On the way more violent shocks caused us to take shelter for a long time under some trees, where Japanese women gave us cold tea to drink, but we had to move from here as it was dangerous, the houses nearby having broken into flames, which were being fanned by the wind.

The earth everywhere showed huge fissures and the side of the hills had fallen away in all places. We came out on the road running through Yokohama and met the first three British refugees, three Scotsmen from the Banks, one of whom had his head cut open almost from end to end. When we came to the house of a friend situated on the edge of the cliffs overlooking the sea we set to work to bandage our wounded friend, but no water could be had, so we had to make use of some ice which we found in a house near by. The poor fellow was nearly delirious, but my wife and I managed to hold him down. We did not think it safe to remain long in this place, as we were too near the edge of the cliffs, and earthquakes were taking place the whole time. We did not want to be saved from the big one to perish in a smaller one down the side of the cliffs.

We sought refuge on the racecourse and here we met about a dozen British families, including many wee babes and aged parents. It worried us not to see the numbers increasing, as we feared this place would be the only possible one to escape to, owing to the terrible fires which were spreading all over Yokohama through the typhoon. Several men walked in during the night from Tokio, some 14 miles away. We found drink galore in the Golf Club House, which had withstood the earthquakes, being only a wood hut.

A Night of Horror.

I cannot stop to describe the terrible night, with all its incessant tremors and the noises of burning Yokohama and the cries of the homeless. We could hear the crackling of the flames miles away. The majority of the Japanese refused to leave their homes, while thousands of them camped out on the open spaces, bearing their loss with remarkable fortitude. The fumes of burning oil from all sides nearly choked us. However, sleep was impossible for anyone with the flames burning up the neighbourhood.

We could not have stayed very long in this place, as there was nothing but a few tins of biscuits among us all. As a matter of fact we had very little, if anything, to eat for 24 hours after the quake. It was fortunately a warm night and we all found a bed on the putting greens, as we would not trust ourselves to sleeping (?) under any kind of structure.

The next morning after sunrise we washed in a stream running through the course, and at about 7 someone arrived from another outlying part of Yokohama (the Y. C. and A. C. Ground) saying that there were a few foreigners there also, where the Club House had also been their salvation. This messenger also told us that there were boats in the harbour which would take us off if we could manage to walk back along the devastated Bluff to the waterside. This was glorious news, but we were all in fear and trembling of having to negotiate the awful shambles for about two miles. Our sorry looking party made its way slowly along through the "Dirty Village," where the houses were entirely of wood and nearly meeting over our head. The occupants were even trying to put their houses back into some sort of condition, although subsequent quakes (there have been 700 recorded already since the big one) must have brought what was left to the ground.

Havoc at the Bluff.

When we got to the Bluff itself it was impossible to recognise it as the same place. There was not a house which had not been burned out and there were huge cracks in the earth. The width of the Bluff had been reduced in places to that of a footpath. I cannot describe the utter horror of it all. I never saw France's devastated regions, but I am sure nothing could have been so terrible as this. Yokohama was a complete smouldering or burned-out city from end to end. We passed our house and, surprising to relate, the flames had only just that minute reached it. In spite of my wife's protests I determined to rush in and secure some clothes for her. I found my way into the bedroom, where wardrobes were flung face down to the ground, and grabbed hold of the first bunch of things I could lay hold of—it included an opera cloak and a white serge costume! On the way out I saw a package of Imari plates which I had bought for her the day before at Myanoshito, and I grabbed these too, our only souvenir. Outside my poor distracted cook and her husband met me and told me they had not been able to find their children.

We finally got down to the sea shore, after passing many an incident and scene which would wring many an ex-resident's heart. Of the hospital there was nothing left but the burned out beds. On the shore there were hundreds of refugees of all nationalities, and it was a pitiful sight. Chinese seemed to predominate and they had to be knocked off the rescuing boats so that we could get the women and children and aged on board.

The wait for the boats was a terrifying suspense. Yokohama was still burning furiously, as the oil tanks and barges were alight. The Japanese as a whole acted splendidly, especially the amahs, who refused to leave their masters and mistresses and children, but the sendos (men who ply the sampans and motor launches) refused to take any refugees out to the boats and even demanded 50 yen per person from people who hadn't a bean in the world. The British and American boats were simply marvellous and did wonderful work.

The Burning Sea.

The danger was not over when we got on to the ship's boats, as the oil had spread on the surface of the water in the harbour and was burning at a furious rate. It was four feet deep and endangering the safety of the rescued and rescuers. Launches were continually cutting patches round the steamers and crews were throwing water over the sides of the ships to prevent fire. In the end it became so bad that vessels had to go outside the breakwater. Even the latter had not escaped injury, as the quake had sunk a large part of it and this made navigation very difficult.

There were many wounded cases on board, and we were the last boat-load they took on. There were 500 refugees on this boat alone, 170 being Chinese. Many of the very badly crushed and wounded died on board, and their ends were all marked with wonderful fortitude, but they must have suffered agonies.

As the wireless could not get Kobe for some time it was feared that Kobe also—in fact the whole of Japan—was laid waste, and we quite expected and hoped we should have to go on to Shanghai. But this was not so, and as we were short of provisions we had to go on short rations in food and water—two meals a day. Can you imagine the sigh of relief which we all heaved as 12 hours later we lifted anchor? We have seen the last of this awful place and no one who was in the quake and fire ever wants to go there again. From the sea Yokohama is a completely devasted region.

The officers and crew of the "Dongola" were marvellous, and I am sure for the three days we were on board not one of them could have had a wink of sleep, particularly the stewardesses, who never stopped ministering to the wants of the wounded and dying.

On the way to Kobe we saw further evidence of damage by the quake to such places as Yakosuka—the big naval base, the forts at the entrance to Tokio Bay and several places within a radius of about 50 miles from Yokohama, which apparently was the centre of the disturbance. On arrival at Kobe we found only one steamer had got in in front of us, and you may be sure there were anxious crowds to meet the boat.

We had only the clothes we stood up in until our kind friends gave us a few, but there are many hundreds of refugees similarly placed to us. The clothes we came away in are, of course, torn and dirty and oil-covered. We have lost everything we possessed except a few of my wife's rings and two or three dresses. I arrived with 70 sen in my pocket (about 1s. 5d.). However, I think the Hong Kong Bank will pay us any money we can prove as being on deposit with them, and this will at least make things a bit brighter. Apparently, as far as Kotani can see at the moment, there are absolutely no prospects of doing anything whatever in Tokio, as well as in Yokohama, for the present at least, and they are all coming up to Kobe to make the best possible dispositions until conditions in Tokio and Yokohama show an improvement. The safes and everything in the office have been burned out and we cannot as yet see how we stand.

Norwegian Paper Market.—*Farmand* states that the volume of inquiries has been reduced, and prices are giving way to some extent. This state of affairs especially covers market conditions in finer brands, while the demand for kraft has improved slightly, when compared with the preceding weeks.

Hand-Made Paper Stalwart.

Retirement of Mr. Arthur Saword.

The retirement of Mr. Arthur Saword from active participation in the hand-made paper industry marks a period in an interesting career.

When asked for some of his recollections of his branch of the industry, Mr. Saword pointed out that the paper trade with which he has all through his career been associated —viz., hand-made paper—does not lend itself a great deal to changes, as the process of manufacture – *i.e.*, by hand—is much about the same to-day as it was when the industry was first brought from abroad to this country a couple of hundred years or more ago.

It is now over 35 years since Mr. Saword first went to Alton in Hampshire to succeed Mr. John Henry Spicer, who was then retiring from the King's Mill situated in that town and owned by Messrs. Spicer Brothers. This was in the year 1888 and Mr. Saword continued to manage the mill—and on one day a week came to London to sell paper, etc.—right up to the year 1910, when for economy and other good reasons, it was determined to transfer the whole of the business and work-people to the new and very up-to-date present mills at Eynsford in Kent, where the two businesses are run conjointly and respectively under the titles of H. and W. R. Spicer and Co. and Arnold and Foster, Ltd.

Upon being transferred to the mills at Eynsford in the year 1910, Mr. Saword was created a director of Arnold and Foster, Ltd., which position he has held up to the present, now over 13 years.

One of the noteworthy incidents which occurred in his later career at the Eynsford mills arose out of the Great War, when paper money was issued by the British Government, and Arnold and Foster, Ltd., were called upon to make this money paper. Mr. Saword, therefore, saw millions of 10s. Treasury notes turned out every week for some years continuously.

Mr. Saword's recollections of personal trade associations are of the pleasantest. During the whole period he has been connected with the paper trade, he has invariably found all the members of the trade with whom he has come in contact during the whole 35 years to be of the best, and in leaving it for retirement he does so with much regret; but his three score years and ten demand the rest which he has so well earned.

Photo, Miles and Kaye, London.

MR. ARTHUR SAWORD.

FURTHER contributions to the Lord Mayor's Japan Fund include the following: Mather and Platt, £1,000, Spicers, Ltd., and James Kenyon and Sons, Ltd., Waterlow and Sons, Ltd., John Dickinson and Co., Ltd., each £105.

Varnished Paper.

The manufacture of papers which are resistant to moisture by coating them either with a layer of gelatine or with one of varnish is a well-known procedure. But it has been found that such papers are not suitable for use out-of-doors, as for example in bill posting work, for the rain and the weather soon cause the paper to curl and swell up and peel off from the wooden fences and signs on which it is pasted.

According to the new process of making these papers, this disadvantage is removed by first treating the paper in the usual manner with gelatine and then coating the gelatine-coated paper with varnish. The paper treated in this manner loses its tendency to absorb moisture. The gelatine coating is applied to the paper while in the wet condition and then the paper is dried. Oil or varnish colours are used in the varnishes which are employed to give the paper a second coating. The finished paper can be used for a variety of purposes where a strong, water resistant paper is required. It can be used as wall covering and also on floors.

More Newfoundland Enterprises.

One of the newest proposals for paper mill development in Newfoundland has been placed berore the Legislature by Mr. Malcolm Mooney, of Quebec, who is seeking from the Government the transfer to him of a large timber area on the north-east coast of the island for the usual rentals. Mr. Mooney agrees to undertake to build a paper and pulp mill on these limits within a period of three years and to spend $300,000 on the project within a year after the signing of the contract between him and the Government. The agreement would call for the erection of a mill with a capacity of 100 tons per day.

According to Mr. H. J. Crowe, who is associated with Mr. Mooney in the scheme, a 500 ton mill is aimed at.

THE FUTURE OF SOUTH AFRICA

THE strong development and progress shown by South Africa, even during the depression of 1922, indicates in no uncertain fashion the measure of prosperity that country will enjoy in more normal times.

The trade outlook for the Union of South Africa in 1923 is extremely encouraging at the present moment, and the attitude of all in that wonderful country—from the Premier (The Hon. Gen. Smuts) down to the smallest Printer—is one of well-founded optimism.

Supply houses catering to the Allied Trades anxious to develop the South African market will be sent a post-free copy of

13 IS THIRTEEN AN UNLUCKY NUMBER ? WE SAY **NO** 13

? CURIOSITY ?

is a human failing. It is also a commercial asset. Curiosity is, in fact, one of the secrets of modern commercial success. It keeps you in touch with every modern development of the trade in which you are engaged.

It is a commonplace to say that the printing trade covers a range of activities greater than most.

Obviously, therefore, you haven't the time personally to gather the information to keep thoroughly in touch. This is done for you by the *British and Colonial Printer and Stationer.*

You probably have many friends in the trade, however, who are not keeping in touch.

CO-OPERATION

You can help your friends and us by introducing to them the *British and Colonial Printer and Stationer.*

Let us have their names and addresses : we will do the rest.

THE

British & Colonial Printer & Stationer

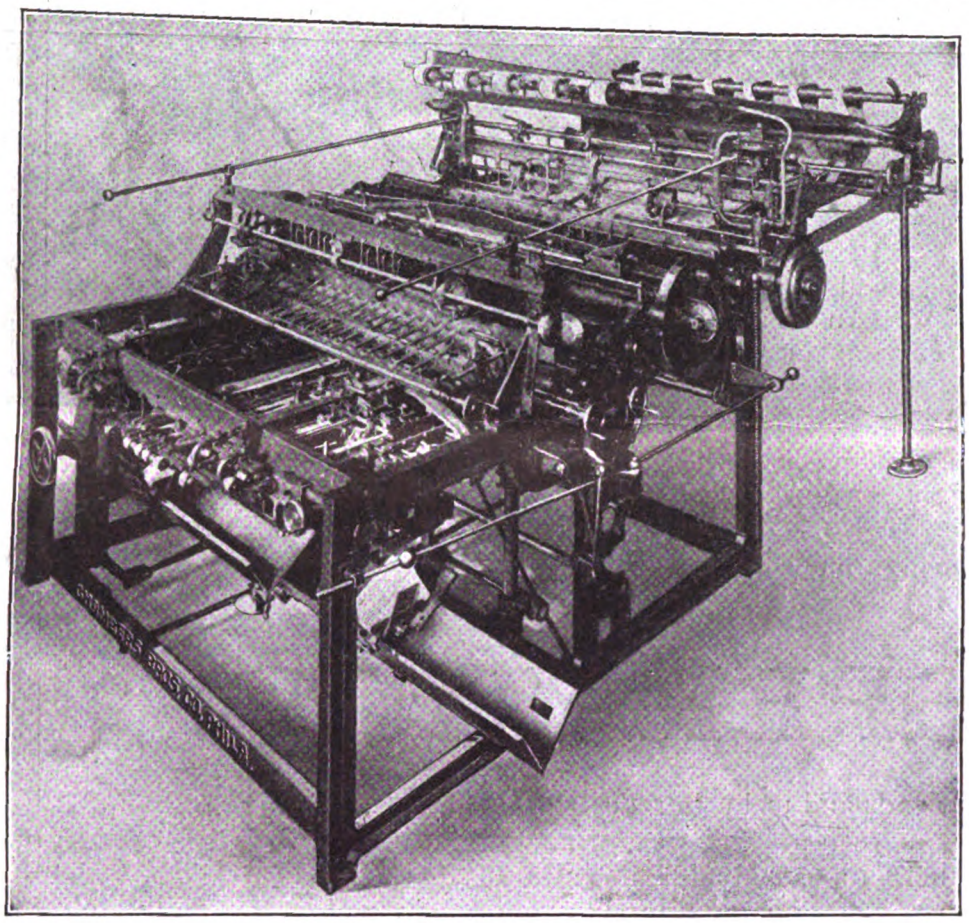
has been established for nearly 50 years. The more important features are :

Reports of Trade Associations, Societies, etc.,
Latest Commercial Intelligence
Technical Articles
Trade Notes
etc., etc.

A monthly issue contains a section devoted to the **Bookbinder** with notes and news and market prices.

The monthly **Lithographic** issue contains special litho matter including litho notes and news.

The **Quarterly Export** issue deals with colonial and foreign markets and provides a general review of the home trade.



COST

The yearly subscription to the *British and Colonial Printer and Stationer* is **Thirteen Shillings** including postage. Is it not worth it?

Send us your friends' names and addresses **To-Day**.

THE PRINTING OF HEBREW.

A Jewish Printer Tells of the History and the Difficulties of Printing the Hebrew Tongue.

The tragedy, romance, and mystery attaching to the Hebrew race is largely reflected in the Hebrew printing press of the past and present, and a group of London printers found fascination as well as information when a Jewish printer on Thursday last addressed them on the subject of "Hebrew Printing." The speaker was Mr. B. Weinberg, of 138, Brick-lane, London, E.C.1, a man well versed not only in the technique of Hebrew printing, but also in Hebrew history and tradition, his researches having taken him over the greater part of Europe. The occasion was the well attended October meeting at Stratford of the Association of Master Printers of E. and N.E. London. Mr. Weinberg spoke extempore for about an hour, and, despite the difficulty of using a language other than his native Yiddish, commanded close attention the whole time, on account both of the interest of his subject and of the evident enthusiasm with which he approached it. The main points of the lecture were substantially as follows.

Before the invention of printing, the most important items of Hebrew literature, viz., the Bible, the Talmud, etc., were multiplied in MS. form, the greater part being produced by Italian scribes, who used to write in the open air in the streets of Italy. With the invention of printing, the new art was very quickly applied to the production of books in the Hebrew character, Gutenberg having printed the Bible in Yiddish in 1456.

Persecution and Print.

A fact which has much influence upon the history of Hebrew printing is the great amount of persecution to which the Jews have been subjected. It is this that explains the rarity of Jewish MSS. or early printed works, as the persecutors desired the destruction of these. At the time of the invention of printing, the Jews were, in many parts of the world, robbed of almost all human rights—the rights of free movement from place to place, of following their own religion, of engaging freely in trade. Often they were confined in the ghettos, of which one reads in such books as George Elliot's "Daniel Deronda." They were allowed to engage in only the humblest of trades, such as that of dealing in rags and bones, and the gates of the ghettos had to be locked at an early hour in the evening. The ghetto Jews were debarred from setting up their own printing presses, and so were driven to finance printing presses outside, getting their religious literature printed by the natives of the countries in which they lived. Thus we have the anomaly that the first printers of Jewish religious literature were Christians. There is a proverb that no wall can confine a Jew, and the Jewish faculty for overcoming difficulties was instanced by their obtaining printed Hebrew literature at this time, as it was also by their eventually escaping from the bondage of the ghetto.

For the printing of Jewish religious literature, however, there proved to be an immense demand, as every Jew who attends a synagogue must carry his own service book. The supply of these books was very inadequate, and accordingly a long agitation was carried on with a view to gaining for the Jews the right of printing for themselves. The struggle was a hard one, and success came only by degrees and after protracted effort. It was in France first that the Jews were granted some rights to the printing of their own literature, but it was in Italy that there was first erected a printing press devoted wholly to the printing of Jewish literature. This was established in 1486, and the first prayer book was printed in that year by an Italian named Soncino, the concern being financed wholly by Jews.

Some Exemplary Printing.

In Italy, about the year 1488, Venice was the seat of the principal printing houses for the production of Jewish books, and that was the place where Hebrew printing was developed to the highest standard of art, and even to day, with all the advantages of new processes and improved apparatus, the work of the Venetian printers cannot be excelled or even equalled. Some of the foremost printers of the present time are reproducing by photo-engraving the old title pages, etc., of some of the books of 400 to 500 years ago, because the excellence of the work and the immense amount of labour involved were such that it cannot be attempted to day.

This excellence of craftsmanship in early Hebrew printing is an interesting link between religion and art. Art has many of its roots in religion. In Christianity the first pictures were portraits of the Apostles, and church windows and church mural decorations provided the grounds for some of the finest of early art productions The Jews, however, in the early days of printing had no incentives to employ art for the beautifying of such things as these. They were a persecuted people, here to-day and driven away to-morrow, and often the only possession the harassed Jew could carry with him was his Bible—and the old-time Jew, unlike some of his modern co-religionists, was inseparable from his Bible. Thus the art of the Jews lavished itself upon his devotional literature, and the printing of these books became an expression of religious art.

Typographical Difficulties.

The printing of Hebrew presents the difficulties common to Oriental languages. The lines are read from right to left (instead of from left to right as in English), and the type should be set in the same direction. There are, however, many English compositors in this country who set Hebrew characters from left to right, not following the pronunciation and meaning of the copy, but merely mechanically reproducing the order of the characters, and afterwards reversing the whole line, so that it reads correctly. The Jewish compositor, however, has an easier task, as he sets a line from right to left, and need not afterwards reverse it.

One of the greatest difficulties in the printing of Hebrew is derived from the days of the MS. book. The early scribes had, in the copying of the Jewish sacred writings, developed a tradition that every page must begin and end with exactly the same word. No matter what the size of type adopted or the measure used, there was one fixed word which must be the first on a given page and also one fixed word which must be the last. There were also many other seemingly arbitrary restrictions upon the number of lines used, the shape of the column of type, and so on. The numerous accents which can be added to the characters are another source of trouble, for the addition or omission of one small accent may entirely alter the pronunciation and significance of a word. The complicated nature of the typography makes Hebrew setting a difficult matter for even the most learned Jew.

Much Hebrew printing was at one time done in Spain, but when the Jews were cruelly persecuted by the Spanish Inquisition this printing ceased, and at that time the Netherlands became an important Hebrew printing centre. The first Hebrew press in Holland was at Amsterdam, and from that town Hebrew devotional literature circulated all over the world. The first Hebrew printing press in this country was erected in Edinburgh, Scotland, in 1770, and some very beautiful Hebrew printing was done there 200 years ago. Hebrew was first printed in America in 1860, but the work produced in that country has not been noticeable for quality. American Hebrew printing, like most modern work, bears evidence of being turned out for the sake of commercial reward rather than produced under the inspiration of art or as the outcome of religious devotion. The early Hebrew printed books are an example to the present day, and call attention to the need that printers of our own time should do more that will merit the praise of posterity, and this they can do only by regarding their work less as a means of livelihood and more as an art.

Mr. Weinberg displayed for inspection several Hebrew books, and these were ex-

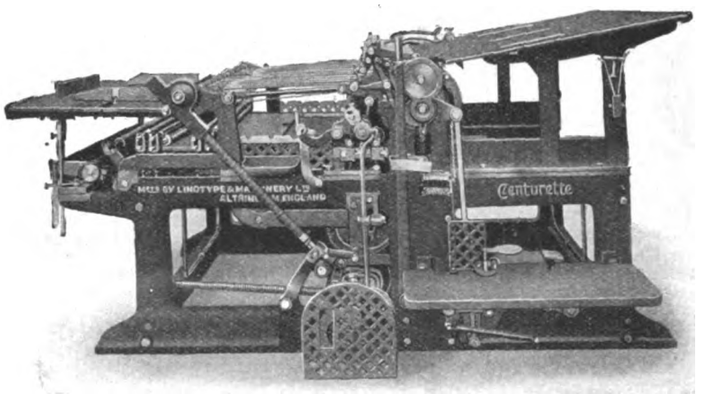
Digitized by Google

amined with much interest. One was a copy of the Talmud produced by Mr. Weinberg with his own hands, the composition and printing occupying two and a half years, and no less than 440 characters being used in the setting. Several questions were asked, and satisfactorily answered, and the thanks of the meeting were expressed to Mr. Weinberg by the chairman of the evening, Mr. W. H. Gillard.

The brief business of the meeting included the mention of communications from headquarters asking the Association to deal with certain proposals regarding collective advertising, and requesting the election of a small local costing committee. In the absence of the Association's representative on the L.M.P.A. council, it was decided to postpone the discussion on the question of collective advertising. As the East and North-East costing committee, Messrs. G. F. Tomkin, T. D. Hawkins, and A. Suckling were elected.

In regard to the proposed December visit of Mr. W. Howard Hazell to the East and North-East Association, it was agreed that December 11th be the date of the meeting, and that the place be the Three Nuns Hotel, Aldgate.

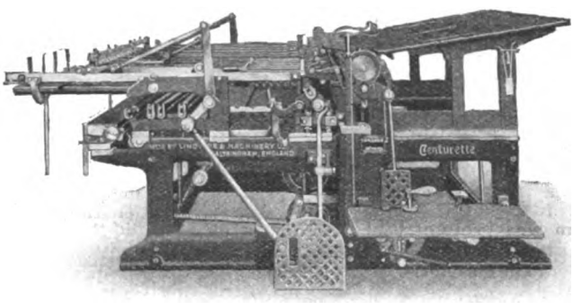
Mr. J. Johnson, L.M.P.A. organiser, reported briefly on his work in the district, and the chairman expressed the Association's thanks for the efforts he had made.



U.S.A. Paper Production.

The following statistics show the production and shipment figures (in tons) for the month of August, of different grades of paper as supplied by the reporting mills, and which is issued by the American Paper and Pulp Association:—

	Production	Shipments
News-print	132,604	129,173
Paperboard	117,932	116.551
Book	59,744	58,708
Boxboard (included in Paperboard)	82,062	81,325
Wrappings	50.563	47,348
Fine	22,859	23,097
Roofing, Sheathing, etc.	11,320	11,452
Tissues	9,192	9,917
Hangings	5,284	4.314
Bags (all kinds)... ...	8,720	8,306
Other grades not specified	15,288	14,429
Total—all grades ...	515,568	504,620



STATE OF TRADE.—A special correspondent of the *Morning Post*, inquiring into the state of the staple trades of Bristol writes: "In the printing trade, of which Bristol is an important centre, business at the moment is not very good, but there are signs of it improving. The high cost of production stand in the way of anything approaching a revival, but it was explained to me to-day that as manufacturers throughout the country realise the necessity of increasing their business they have to go to the printer in order that their product may be put before the public in as attractive and striking a manner as possible. There is now a tendency in this direction, which the printing trade heartily welcomes, and is laying itself out to meet in every possible way. As prices become steadier it is thought that this movement will grow.

Centurette

CENTURETTE—with Fly Delivery

This fast two-revolution press occupies no more floor space than a slow-running machine.

CENTURETTE—with Printed-Side-up Delivery

Built in one size only—Dbl. Demy—with either style of sheet delivery, Fly or P.S.U.

THE

Evolution of the Printing Machine.

Mr. Frank Colebrook's Review.

There was quite a jolly little gathering of the West and North-West London Master Printers' Association on Monday, October 15th. It was coffee'd and cake'd in one room of Messrs. Morton and Burt's premises, and then ranged up in another. It was to have met in Westbourne Park Chapel Institute, but something had gone wrong; not only could there be no lantern for that evening's lecture, but there was no room for "the poor printer"—until the W. and N.-W. president came to the rescue.

There was great pleasure in re-greeting Mr. Burt, for since the meeting at the Institute a month before he had been laid aside and only that day had come back to the office.

Members received information about the coming flag day for the Orphans' Pension Fund, and strong appeals were made to them to make it worthy of their reputation.

Mr. Frank Colebrook then gave an extempore talk on mechanical changes in printing presses and machinery. He recalled that in 1620 Jacob Blew introduced the first real improvement made on the hand press in nearly two hundred years. With links and levers he improved on the old-napkin press screw; he accelerated the platen movement and arranged that the force was greatest at the right moment. He introduced a heavy weight back of the top of the press to effect the return of the lever. In 1790 Nicholson drew up patents which foreshadowed flat bed cylinder and rotary newspaper printing machines with rollers and vibrators; and this although the mushroom ink dabber and the hand press was all that had so far been thought of. Ged's and Foulis's stereo inventions were concerned with plaster moulds, and naturally Nicholson did not propose curved stereos, but he did plan for tapering type to be fitted in formes on the sides of a prism; which prism was brought into contact with a cylinder. With Nicholson invention was the mother of necessity; he died in a debtor's prison. Bensley, the Bolt-court printer, visited him, and it is to be hoped did something for him, but all we know is that he caught keenly at Nicholson's ideas. Bensley had for some years—1806 and onwards—been financing efforts which the German ex-compositor Koenig had been making, these being directed towards quickening the movements of the hand-press. The press had increased from Gutenberg's first speed of about 25 sheets per hour up to about 250, with a great strain. That was the way *The Times* in 1814 printed its issue with news of Napoleon's first downfall and the decision to send him to Elba. William Blades, in his painstaking and delightful book "The Pentateuch of Printing," tells how Koenig carefully read the patents of which Bensley had told him; how he promptly turned down all his quicker flat-platen ideas and very soon produced his cylinder machine; and how 15 years after he declared that Nicholson's patent had nothing to do with his change. Blades' friend Goebel certainly resented keenly the idea that Koenig was a hypocrite in this declaration. John Walter patronised Koenig once he no longer needed patronage, and in November, 1814, *The Times* was printed on a Koenig—or perhaps Nicholson-cum-Koenig machine—which gave 1,800 impressions, or 900 sheets backed per hour. The rack of "mother's mangle" was seemingly a basic factor in Koenig's machine. Certainly it is in later types; particularly in the two-revolution of to-day, with this change that Miehle placed his cogs inside the enclosing rack; and used gates and shoes, and of course buffers to ease the return of the bed.

Bryan and Donkin in 1813 had prepared for the new printing era by great improvements in inking, or in other respects. Applegarth, who (with Cowper) was employed on the engineering staff of *The Times*, replaced Koenig's inking gear by something much better. A printer named Forster also made great roller improvements. Printing could never have advanced as it had through the engineer alone; the chemist, and the physicist had had to work concurrently, and in understanding sympathy. Rollers of wooden irresponsiveness or of jelly-like destructibility, and ink stiff as varnish or fluid as water would have made the best engineering skill ineffective.

Stanhope's iron press, stereotyping's advance, electrotyping's invention in 1839, and Senefelders' half-discovered, half-invented litho—things like these were alluded to by the speaker, but Mr. Colebrook's review was concerned chiefly with mechanical developments. A weird and wonderful machine was once used for the London daily press; a vertical cylinder bore formes of type and eight vertical cylinders surrounded it and pressed paper upon it. The well-remembered Turtle newspaper press was one in which founders' type was placed in column upon a cylinder. The brass column rules were tapered.

Main was a printer and an inventor, and again none too successful. He employed a long actuating rod working with a shorter arm. He swung his cylinder to and fro—it was called Main's Tumbler. The speaker remarked that he had owned one over thirty years gone by. The Perceler with its small cylinder was a lineal successor, in one sense, to the Main. An Ulverstonian machine with a travelling impression cylinder, made at Ulverstone, used to be repaired by Otley engineers, who also made printers' chases, and that led to Dawson (with help of his foreman Payne) producing in the fifties the first Wharfedale. Its talking points were its keeping bed and cylinder always in mesh, and that its bed motion was speeded according to the best service of the desired end—slow at start, quicker, then slow at end; involving no great shock at reversal, so that buffers were hardly needed though they would be an improvement. The cylinder by a very little over-travelled its due distance and by the push bar was put back to the exact right starting point, so that every impression was, so to say, a new start under absolutely right conditions. The Summit was an improvement on other Whafedale types; its features included top feed (Wharfe feed in general being at bottom of cylinder), and no flier contact with printed face.

The rack movements in the familiar large drop bar or gripper perfectors (Middleton, Dryden and Foord, etc.), were described. The double platen was also mentioned—a machine commonly worked by two lads. One put paper on the forme, lowered the tympan and passed under the platen to his left; the lad on the left did the same and passed under that same platen—on his right.

Lithographic machines did not very rapidly advance; so far as the speaker remembered. Litho was certainly studied with great price on the artistic side. Litho had its romances. Brooks and Day, of Gate-street, off Holborn, now Vincent Brooks and Day, were in 1848 or 1849 prosecuted by the British Government for levying war on a friendly state. It sounded terrible, and what it meant was that in 1848 they litho'd money for the rebel Kossuth who tried to defeat that miserable Emperor Francis Joseph (then young) whose long dishonourable reign was brought to a tragic close during the Great War. The Bank of England was instructed to see that all these Kossuth notes were burnt. It was whispered that Louis Napoleon, afterwards the French Emperor, secured payment for Brooks and Day.

There was not time to do more than allude to certain changes. Dr. Mackie composed his paper, the *Warrington Guardian*, with a type-composing machine he had invented. It was related to Jacquard machinery; it operated through ribbon perforations controlling mechanical movements. The watchmaker Mergenthaler with his justifying space band in chief, made the Lino the potency of to-day's great things; and the civil servant Tolbert Lanston did like service for the Monotype Feeders were a tempting field; they had to be merely mentioned.

There was much to say of the two revolution. When one was put down in London at Cassells in 1896 or '97 the makers stipulated (to ensure its having a fair chance) that there should be a deep bed of concrete under it and six or eight anchor plates. These were duly provided, and a four or five years' lease of life could then confidently be reckoned upon. Miehles, however, like Wharfes and donkeys and old soldiers, never die; they simply fade away, after thirty or so years. Two revolution champions appeared to claim that the even, same-pace-throughout movement of their bed so far from being any drawback in that it meant sharp reversal at the end of the stroke was a positive benefit at the reversal—through the great momentum. We might soon be offered a machine which combined the Wharfe bed movement and the continuous revolution of the cylinder, and the top delivery. Folding machines were alluded to, and the Camco with its clever diagonal rollers was mentioned.

Mr. Colebrook cut his matter short to allow of discussion, and Mr. Burt, Mr. Goss, Mr. Heron, Mr. Buckley, Mr. Leveridge, and the president, Mr. Emlyn Jones, were among those who took part. The president remarked that, whatever might be said, buffers were very necessary. The Reform machine came up for mention—a German demy folio vertical machine, rather suggesting a pillar box in main structure. Transfer rollers ran down one side and took an impression of an original upon a metal plate; and passing on and under the trunk of the machine returned on the other side and transferred the image to flat rubber; when it was taken off on paper; and all this without damping, but with chemical substitute as in Wharflitho. When this offset was not wanted its gear could be removed and the Reform could be used simply as an ordinary letterpress platen.

Mr. Goss said he hoped Mr. Colebrook would come again and next time would speak of reasonable likelihoods of printing developments in the near future.

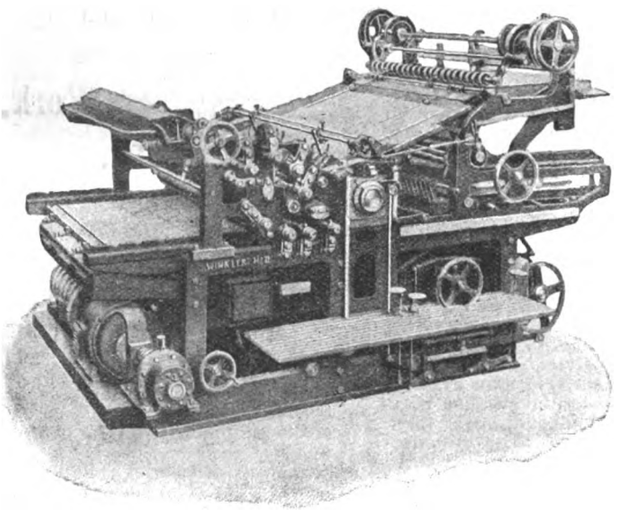
Latex Printing Paper.

In order to demonstrate the value of rubber latex in printing paper the *Netherlands Indies Review* is being printed on paper containing this ingredient to the extent of 2%.



Latex paper, it is pointed out, has many advantages over the old non-latex kind, although it will be found that the conservative printer will endeavour in many cases to advance objections to adopting the new paper. It is argued that this paper will not print as well as the old, but the reader is left to judge for himself. Another objection raised is that the ink will not dry, but as a matter of fact the rubber latex has no detrimental effects on the printing properties of the paper. Experiments have been made with all kinds of paper, and on all types of printing machinery, and the results given have been far more satisfactory than non-latex paper has provided.

"It can be conclusively demonstrated," says a contributor to the Rubber Growers' Association *Bulletin*, "that the addition of rubber latex actually improves the surface of any class or description of paper, which means that if a given surface is required, less pressure can be used with the rollers when finishing rubber latex papers than ordinary paper, resulting in improved bulk."

The "WINKLER" High Speed Automatic Art Press.

With Oscillating Cylinder and Printed-Side-Up Delivery Without Sticks.

Discriminating printers recognise it to be the ideal machine for producing Fine Half-Tone and Multi-Colour Work.

Unequalled for Dead Register, Rolling Power, Impressional Strength, Speed, Absence of Gear Marks and Noiseless Running.

Occupies only about half the floor space of a two-revolution machine for the same size of sheet.

The middle inking roller is of smaller diameter, thus eliminating any possibility of circumference marks on solid surfaces.

The forme is supplied with **fresh** ink from **all** inking rollers both during the forward and backward space movement of the bed.

To prevent "picking" when printing difficult work on art paper **electric heating** of the bed is provided, the inking rollers being specially **water-cooled.**

Automatic Cylinder Check, Throw-off of inking rollers and Slow Motion.

SWISS MANUFACTURE.

Trade Notes.

The week's partnerships dissolved include that between J. O. Jones, L. P. Hare, James W. Marshall and John W. Marshall, manufacturing stationers, 17, High-street, Stratford, London, E., under the style of the Transpaseal Co.

"Daily Mail" Trust Issue.—There was a great rush to subscribe for the £8,000,000 7 per cent. guaranteed mortgage debenture stock, which was so heavily over-subscribed that the list was closed at 9.45 on Monday morning, except for the consideration of preferential applications. The total amount of the applications runs into many millions over the sum issued. Among the assets of the Associated Newspapers Ltd. mentioned in the prospectus is a controlling interest in the Anglo-Newfoundland Development Co., Ltd., which produces over 55,000 tons of paper per annum.

Raphael Tuck and Sons.—Presiding at the annual meeting on Wednesday, Sir Adolph Tuck spoke encouragingly of the operations of the company, which were satisfactory in spite of the serious falling off in the general trade of the world. The company's great postcard postage competition had fully justified the labour and expenditure involved, and the real object of keeping picture postcards and the cheaper postage question well to the front had proved entirely successful. He was satisfied that the next Budget would see the entire question of postage revised, and the penny postage on letters and the ½d. postage on all postcards revived. Sir A. Conan Doyle and Mr. Desmond A. Tuck were re-elected directors,

Jobbing Price List.—The Costing Committee of the Federation of Master Printers' has issued a new price list in the form of a neat booklet, with a summary in sheet form for convenient reference. Every printer will find these prices a valuable aid in checking his own charges and a ready safeguard when estimating.

"Price-cutting in Difficult Times" was the subject of an address by Frank Colebrook at the annual meeting of the Bristol Master Printers' Association on October 18th. It was remarked in the after discussion that members had been given a lot of things to reflect upon. The latest competition of the Harmsworth press in the field of jobbing printing was mentioned by Mr. Colebrook and by an after speaker, the latter remarking that it is a very important matter.

The Home Counties Master Printers' Alliance is to conclude its very useful series of group meetings with one at Southampton on the 29th inst. The subject of "Variations in Estimating" will be discussed by Mr. R. A. Austen-Leigh (past president of the Federation of Master Printers), Mr. A. E. Goodwin (secretary of the Federation of Master Printers) and Mr. W. Whyte (secretary of the London Master Printers' Association), Mr. S. F. Oxley being in the chair.

A bohemian concert in aid of the War Orphan's Fund of the Printers' Pension Corporation has been arranged to take place at the Horns Assembly Rooms, Kennington, on Saturday, November 10th, under the auspices of the South London Auxiliary. Mr. J. E. Dixon (Amalgamated Press) has kindly accepted the position of chairman, and the excellent programme that is promised betokens a successful evening.

The late Mr. Charles Waddilove, of Bradford, Yorks, printer, who died September 21st, son of the late Sir Joshua K. Waddilove, left £53,716.

There was one case of lead poisoning in the printing trade in September.

Who Can Take an Apprentice?—Mr. Frank Colebrook writes from 146, Fleet-street to say that he is seeking a printing firm that can take as apprentice a young lad who is highly recommended by the headmaster of the Council School he has attended as not only a good worker but a cheerful and very willing lad, and, as the master puts it, "a good sport." Mr. Colebrook has seen enough of the boy to be very wishful to see him started in a good printing works. He expects him to make good for his employer and himself. Of course the lad would expect to be in the place a short time before being bound, for testing of his suitability. Will anyone who could take the lad write Mr. Colebrook?

Trade Union Matters.

Composition in Periodical Houses.—At the conference on Friday between the L.M.P.A. Labour Committee and the London Society of Compositors no conclusion was reached, the conference breaking off on the employers' refusal to discuss the revised proposals and their insistance that negotiations can be resumed only on the basis of discussing the merits of the linotype and monotype piece scales, with no possibility of their conceding the principle of compulsion in applying these scales. The representatives of the L.S.C. said they would report to their executive and communicate to the L.M.P.A. secretary thereafter.

Compositors and their Charging.—We understand from the headquarters of the London Society of Compositors that some uneasiness and resentment have been caused by a statement that appeared in a trade journal last week to the effect that the compositor charges up blocks as ordinary matter. The Society strongly denies this allegation.

T.A. and Meal-Time Working. — The Excutive Council of the Typographical Association have granted permission to the Reading branch to approach the local employers with the object of altering the branch rules so that when members are called upon to work during the dinner hour or beyond the usual closing-time in the evening a charge of 1s. instead of 4d. shall be made in addition to overtime rates.

The "Natsopa" Finances.—The Executive Council of the National Society of Operative Printers and Assistants give notice to the members that the payment of the additional contribution of 6d. per week will cease at the end of the year unless otherwise decided by the members. They, however, earnestly advise that "a continuation of the levy is absolutely necessary if we are to continue the Society on a sound financial basis," and give notice that a ballot will be taken on the proposal to continue the levy, the aim of the Executive being to provide a financial reserve equal to £5 for each male member and £3 for each female member of the Society.

Journalists' Unemployment Benefits.—The secretary of the National Union of Journalists announces that from January 1st, 1923, to September 15th, the Union paid out £1,461 in unemployment benefit, £157 in special unemployment grants, £315 in benevolent fund payments, and £182 widows and orphans grants. Twelve members of the Union are in receipt of £2 per week benefit, four members receive £1 per week, and two probationers are in receipt of 10s. per week.

Personal.

Alderman Sir G. Rowland Blades, Bart., M.P., has been gazetted as hon. Colonel of 54th (City of London) A.A. Brigade R.G.A. (T.A.), now in process of formation.

Mr. John Sever, who recently retired from the firm of Charles Sever, printer, King-street West, Manchester, of which he was a partner, has been presented with an illuminated address by the employees of the firm. Mr. Sever was associated with the firm for 35 years, and is an ex-president of the Manchester and Salford Association of Master Printers.

The Mayor of Wallasey (Alderman W. S. Chantrell) entertained to dinner at the Town Hall on Saturday night the members of the staffs of the local newspapers and the Liverpool journalists resident in Wallasey.

Mr. H. A. Phinney, of the Cross Paper Feeder Co., Boston, Mass., who is at present staying in London, will leave on Monday for the Midlands and Scotland. Mr. Phinney expects to sail from Liverpool for the States about November 3rd.

Mr. W. R. Cummins, the hon. treasurer of the North London Master Printers' Association, who is the Young Peoples' Sergeant Major of the Salvation Army at Highgate, has won the Army's Efficiency Shield for the greatest increase and efficiency in connection with work amongst the children during the past year.

Readers' Pensions Committee Dinner.

A Large and Distinguished Gathering.

The twenty-ninth annual dinner of the Readers' Pensions Committee took place on Saturday at the Royal Venetian Chamber, Holborn Restaurant, Major the Hon. J. J. Astor, M.P., presiding. As in past years the company included many leading representatives of literature and the newspaper world. The whole of the proceedings were carried out with marked efficiency, resulting in a most successful and enjoyable evening. Among those present were: Sir Frank and Lady Newnes, Mr. John Walter, Mr. Philip Champion de Crespigny, Col. Sir Arthur Holbrook, K.B.E., M.P., Sir Hermann Gollancz, D.Litt., Sir Wm. E. Berry, Bart., Sir Owen Seaman, Mrs. Belloc Lowndes, Mrs. Carruthers, Mr. E. Phillips Oppenheim, Rt. Hon. C. W. Bowerman, M.P., Messrs. W. A. Perkins, J. Randall, T. E. Naylor, A. O'Connor, H. Parker (Lloyd Memorial Home), J. Mortimer, E. W. Whittle, F. Hedger, C. S. Yeates, H. M. Gurr and R. J. Greene (hon. secretaries). As a result of the dinner the sum of nearly £600 was realised.

"Literature and the Press."

The loyal toast having been duly honoured Col. Sir Arthur Holbrook, M.P., in submitting "Literature and the Press," remarked that there was a discussion recently as to which country took pre-eminence in regard to literature. Englishmen were inclined to claim that benefit for themselves. If they looked back into history they would find that the first great move in the literary world was in the Elizabethan period when the English poet Shakespeare came to the front and established England's pre-eminence with regard to literary production. Of modern writers he presumed that Lord Tennyson took the leading place among literary men, but it was a question whether he would be as widely known three hundred years hence as Skakespeare was to-day. Referring to the modern Press he did not think it possessed very superior literary talent. He considered it the duty of the Press to reflect public opinion, not to lead it. One feared that a monopoly might be created as they had seen in America that might not be for the good of the State.

Mrs. Belloc Lowndes, in responding, disagreed with the proposer of the toast that the Press of to day was inferior in style to that of former days. In her mind there was to-day a closer connection between the Press and literature than ever before—in this country, at any rate. Except in the humblest type of provincial sheet, one never met with what was called journalese. Pressmen of to-day working at great pressure, wrote passages of fine, simple, vigorous prose; and our newspaper English might well be taken as an example by young literary aspirants. The journalist was compelled to write in direct vigorous English, and it was now admitted that the Press was the forcing ground of literature.

Sir Owen Seaman, who also responded, paid a tribute to the printer's reader, who held the whole field of ascertainable knowledge at his fingers tips. The reader was fortified by a library of reference books to which he resorted for confirming rather than for the purpose of adding to his own knowledge.

"Readers' Pensions."

In presenting the toast of the "Readers' Pensions Committee," Major Astor said that everyone with any acquaintance with the world of literature and the Press knew the debt which authors, writers and the general public owed to the proof reader. The reader, he proceeded, must get to know the writer most intimately. He could probably read the writer's writing as no one else could. He understood the writer's idiosyncrasies was familiar with that careless split infinitive and that reprehensible habit of attributing the right quotation to the wrong author. From every point of view it was an honourable obligation upon all who benefited from the work of the reader to remember the reader himself.

Mr. W. A. Perkins (chairman of the Committee) in responding, after a reference to the death of Sir William Treloar, a vice-president of the Committee, said sometimes the reader thought he was deserving of better treatment in comparison with some of the other branches engaged within the four walls of the printing office. Since the inception of the Committee thirty-five men and thirty-three widows had been assisted to obtain pensions through the Printers' Pensions Corporation. All this could not have been done but for the generosity of the ladies and gentlemen who annually supported their annual dinner, and also the friends outside their own branch of the profession. He asked for further support to the festival dinner of the Printers' Pension Corporation. He did that because he thought the Corporation, having undertaken the task of providing for the orphans of men killed in the War, should not be left without funds to fulfil all the obligations it had undertaken. Mr. Perkins then announced several fresh donations received for the fund, resulting in the amount mentioned above.

"Our Guests."

Mr. J. Randall proposed this toast and regretted that Mr. Phillips Oppenheim had had to leave the gathering earlier than was expected. He had, however, doubled his subscription before his departure.

Mrs. Carruthers, in responding, said perhaps they might look forward to the utopian days when such funds as they were helping to forward that evening might be superfluous, and who knew but what in the future their efforts might be directed towards helping a proprietors' pension fund?

Mr. Fredk. Peaker (president of the Institute of Journalists), who also responded, related many amusing accounts that might have appeared in print but for the vigilance of the printer's reader. He appealed to them all for support in the endeavour to secure clean journalism.

"The Chairman."

Sir William Berry, submitting the toast of "The Chairman," remarked that Major Astor was a newcomer to Fleet-street. He had come in connection with a very great journal, but he was different from any gentleman who came to Fleet-street only for his own private purposes. He thought that the partnership formed between Major Astor and Mr. John Walter and his family in regard to *The Times* was of good omen not only for Fleet-street but for the country as a whole. It was a cause for congratulation that what was undoubtedly the premier journal should have passed into the hands of a partnership which was not out for moneymaking alone, but for making that journal worthy of its high traditions. As a newspaper proprietor, he welcomed Major Astor into Fleet-street, and was glad to see him presiding over one of their charity dinners.

The toast was accorded musical honours.

Major Astor briefly replied, thanking Sir Wm. Berry, and mentioning that the pension now in hand was named after the chairman of the committee, Mr. W. A. Perkins.

The speeches were interspersed with some excellent musical items contributed by the following: Miss Mary Winter, Mr. Randell Jackson, Mr. Hector Gordon and Mr. Fred Froud (accompanist).

Another memorable evening was then concluded by the singing of "Auld Lang Syne."

RECENT WILLS include those of Mr. John Allen, J.P. (88), of Plymouth, formerly of Ivybridge, paper manufacturer (net personalty £4,340), £11,789, and Mr. Thomas Edward Royle, of Old Swan-lane, E.C., paper merchant, £10,640.

THE *Daily Telegraph* Paper Mills are sending round a neat folder containing a few samples of their standard makes. The papers include "news" and S.C. mechanical printings, M.F. and S.C. pure printings, laids, white and tinted banks and bonds. There is thus a wide range of papers, the banks and bonds covering ten shades. The white papers run from "news" to glazed imitation parchment. Stocks are held at the mills of white and tinted banks and bonds in usual stock sizes and weights.

The British Empire Exhibition.

What Printers are Doing.

Work is proceeding rapidly at the 1924 exhibition buildings at Wembley Park, and it is now possible to form some adequate idea of the great extent of the undertaking. By the courtesy of the exhibition authorities our representative visited the site the other day, and was shown over the works in progress under the guidance of an official who explained the extent and scope of the various buildings in course of erection, which, when completed, will combine to form the largest thing of its kind that the world has ever seen. The grounds cover an area of some 240 acres, and over £10,000,000 will have been expended on preparations before the exhibition opens in April next.

The buildings on the ground are being erected in ferro-concrete, in a pleasing but plain style of architecture, and consist of pavilions, conference halls, an Empire Stadium, a Palace of Art, and two immense industrial halls, the "Palace of Engineering," where machinery of all kinds will be shown, and the "Palace of Industry" for the general manufacturing exhibits. These two buildings cover an immense space, the Palace of Engineering alone occupying an area of more than eleven acres, or six times the area of Trafalgar-square, whilst the Palace of Industry occupies almost as much space. These buildings are nearing completion, and are now being roofed in, a feature being the sunk railway that runs through them in five lines, by means of which exhibits may be brought by rail from any part of the country right to the place they will occupy, without transhipment. When the exhibits are in position this railway line will be floored over, and at the close of the exhibition will be uncovered and rendered available for the removal of the exhibits.

Big Colonial Exhibits.

The buildings already mentioned are those in which the productions of the Home Country will be shown, and besides these each of our colonies is erecting its own buildings, and work on these is proceeding rapidly. Some idea of this colonial section of the show may be gathered from the following particulars: The Indian building occupies an area of 4·9 acres; the Canadian 5¾ acres; the Australian 5¾ acres; New Zealand 132,400 sq. ft.; Union of South Africa 216,000 sq. ft.; Newfoundland 6,000 sq. ft.; Burmah 75,600 sq. ft.; Malaya 97,000 sq. ft.; Ceylon 50,250 sq. ft.; Malta 2,025 sq. ft.; East African group 48,000 sq. ft.; West African 130,255 sq. ft.; West Indies 49,150 sq. ft.; and other colonies and dependencies have space allotted to the extent of over 100,000 sq. ft. The combined effect of the exhibits installed in these various buildings will be to give a comprehensive survey of the great wealth and resources of the British Commonwealth of nations.

Besides what may be termed the serious section of the Exhibition, there is a gigantic "Amusements Park," three times the size of anything that has ever been seen of the kind in this country, where all the latest attractions known to the ingenuity of the showman will be reproduced. In this section there will be many new "thrills," the details of which are at present being kept profoundly secret.

Printing Trade Exhibitors.

Up to the present a considerable amount of space has been booked, the list of general engineering exhibits is a long one, and with the trades we represent, the space already taken is satisfactory. Papermaking will be very fully represented, and in the printing and allied trades section, which will occupy the western end of the Palace of Industry a considerable amount of space is already taken. The following is a list of the firms that up to the present have secured positions:—G. W. Bacon and Co., London; John Bartholomew and Sons, Ltd., Edinburgh; Bishopsgate Stamp and Stencil Co., London; Blades, East and Blades (jointly with W. W. Sprague and Co., Ltd.), London; British Pens, Ltd., Birmingham; W. and R. Chambers, Ltd., Edinburgh; William Collins and Co., Ltd., London; Cosmic Crayon Co., Ltd., London; Cooke, Troughton and Sims, Ltd., York; Cross and Co., Dunstable; J. Curwen and Sons, Ltd., London; *Daily Telegraph*, London; Thomas de la Rue, Ltd., London; Edmund Evans, Ltd., London; R. Fletcher and Sons, Ltd, Manchester; Eyre and Spottiswoode,

Digitized by Google

Ltd., London; A. Chris. Fowler, London; Harvey's Ltd., Edinburgh; George Wadsworth Hughes, Birmingham; W. and A. K. Johnston, Edinburgh; Lorilleux and Bolton, Ltd, London; Lowe and Bryden, Ltd., Willesden; Lyons Ink, Ltd., Manchester; J. and E. Marx, West Norwood; McCaw, Stevenson and Orr, Ltd., Belfast; Mentmore Mfg. Co., Ltd., London; John Mitchell, Birmingham; Norton and Gregory, Ltd., London; Perry and Co., Birmingham; George Philip and Son, Ltd., London; W. M. Power, Ltd., London; Roneo, Ltd., London; George Rowney and Co., London; Royal Sovereign Pencil Co., Ltd., London; T. H. Saunders and Co., Ltd., London; Sexton Chatterton and Co., London; Spicers, Ltd., London; Spottiswoode, Ballantyne and Co., Ltd., London; Edward Stanford, Ltd, London; W. F. Stanley and Co., Ltd., London; Sun Engraving Co., Ltd., London; Raphael Tuck and Sons, Ltd., London; Universal Printers, Ltd., London (representing Bemrose and Sons, Ltd., London, Alf Cooke, Ltd., Norbury, Natzio and Co, Ltd.); John Walker and Co., Ltd., London; Waterlow and Sons, Ltd., London; E. R. Watts and Son, Ltd., London; Winsor and Newton, Ltd., London; British and Foreign Bible Society, London; Dean's Rag Book Co., Ltd., London; Gandy Belt Manufacturing Co., Ltd.

So far printers' engineers have not given their support to the show, but it is early yet, and there is time to secure floor space in the near future.

There is plenty of room between the various buildings in the exhibition grounds, and here the landscape gardener is already at work beautifying the prospect with the exercise of his pleasing art. A lake, spanned by several bridges, and containing islands is already in being, and by way of this ornamental water it is intended that the visitor may travel by boat from the New Zealand section at one part of the grounds to the Indian section at the other. Judging from the forwardness of the preparations and the number of buildings that are now approaching completion the Exhibition should be ready in good time for the opening date in April next, and it behoves intending exhibitors to secure their space and forward their specialties in time to co-operate with the promoters so that the show when it opens may be a complete whole.

Government Contracts.

Contracts were placed with the following firms during September:—

Stationery Office.

PRINTING, RULING, BINDING, ETC.

Letterpress Book Binding—Scotland (1923), contract for.—Henderson and Bisset, Edinburgh.

150,000 Form U.I. 92.—John Heywood, Manchester.

250,000 Registry Jackets.—Willmott and Sons, Ltd., London, E.C.

25,000 Motor Licence Books; 1,250 Books, Form 505/T.L.; Bdg. 1,000 Vols. Admiralty Claims Forms; 5,000 Blotting Pads; 7,000 Books D. 278—Waterlow and Sons, Ltd., London, E.C.

10,000 Recruiting Posters.—J. Weiner, Ltd., London, W.

42,100 Income Tax Receipt Books, Schedule A. and B.; 30,750 Income Tax Receipt Books, Schedule D. and E.; 480,000 Form U.I. 80.—H.M.S.O. Press, Harrow.

480,000 Form U.I. 80.—H.M.S.O. Press, London, E.

Bdg. 11,000 London Telephone Directories; Bdg. 1,200 Calendar of Treasury Books, Vol. VIII.—Nevett Bookbinding Co., Ltd., London, N.W.

750 Books D. 30.—Clements, Newling and Co., Ltd., London, E.C.

5,000 C.I.D. Diaries No. 24; 2,500 Signal Log Books S. 323.—McCorquodale and Co., Ltd., Wolverton.

Bdg. 4,000 copies Admiralty Handbook on Physical, etc, Training, Vol. I.; 3,000 copies O.U. 5,306 "Demolitions Drill Book."—J. M. Dent and Sons, Letchworth.

Bdg. 1,495 copies "Eastern Archipelago Pilot, Vol. II."; bdg. 2,434 copies London Telephone Directories; bdg. 3,970 copies London Telephone Directories—J. Adams, London, E.C.

480,000 Form U.I. 80.—J. Truscott and Son, Ltd., Tonbridge.

480,000 Form U.I. 80.—Wightman and Co., London, S.E.

480,000 Forms U.I. 80.—Metcalf and Cooper, Ltd., London, E.C.

Group 165 (1923) Post Office—Specified Forms—Section "B"; Group 162 (1923) Post Office—Printing and Ruling; Group 163 (1923) Post Office—All Operations; Group 164 (1923) Post Office—Specified Items (L. and M.)—"Whole Supply," Section B; 3,000 Books P. 1,029; 2,500 Books P. 1,166.—W. P. Griffith and Sons, Ltd., London, E.C.

Group 159 (1923)—Various Offices No. 1—Printing and Ruling; Group 160 (1923)—Miscellaneous Offices—Printing and Ruling.—Odhams Press, Ltd., London, W.C.

Group 161 (1923)—Post Office—Printing only.—Henderson and Spalding, Ltd., London, S.E.

Group 169 (1923)—Post Office—List of Offices.—Barclay and Fry, Ltd., London, S.E.

Group 168 (1923)—Post Office—Bag Lists; Group 164 (1923)—Post Office—Specified Items (L. and M.) "Whole Supply," Section C.—T. Beaty Hart, Ltd., Kettering.

Manchester Group 7 (1923)—Inland Revenue—Specified Forms.—Willmer Bros. and Co., Ltd., Birkenhead.

Group 165 (1923)—Post Office—Specified Forms, Section "A."—King and Hutchings, Ltd., Uxbridge.

Group 164 (1923)—Post Office—Specified Items (L. and M.), "Whole Supply," Section A.—Illustrations, Ltd., Salford.

Group 164 (1923)—Post Office—Specified Items (L. and M.), "Whole Supply," Section D.—G. S. Iken and Son, Bolton.

Crown Agents.

PRINTING MACHINERY.—Harrild and Sons, Ltd., London, E.C.

PRINTING MACHINES.—Dawson, Payne and Elliott, Ltd., Otley, Yorks.

A Stately New Type.

Stephenson, Blake and Co.'s "Verona."

From Messrs. Stephenson, Blake and Co., Ltd., we have received a handsome booklet sampling their latest type face, the "Verona," a face which will, we think, do nothing but enhance the fair fame of this well-known house. From the alphabets which we are able to show herewith, it will be seen that

A B C D E F G
H I J K L M N
O P Q R S T U
V W X Y Z &
a b c d e f g h i j
k l m n o p q r s
t u v w x y z
ct st

"Verona" is of the classic Italian genus: there is nothing of the eccentric or even of the strikingly novel about it, though it has distinctive features and shows a charm of its own when tastefully set. The sample book just issued is a delightful collection of a variety of choice pieces of letterpress composition, including book pages, title pages and jobbing work. This type is evidently of very wide applicability. It is adapted to be built up into masses of pleasingly even colour, whilst single display lines are marked with a dignified beauty.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investment,
Miscellaneous.

One Insertion 3/0
Three Insertions 6/0
For every line exceeding three lines 1/.

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion 1/6
Three Insertions 3/0
For every line exceeding three lines 6d

Sales by Auctions, Tenders,
Patents for Sale,
Legal and Financial Announcements

Per line 1/0

Replies may be addressed to Box Numbers, Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C.4, for which a fee of 6d. is charged to cover Postage of Replies.

Cheques and Post Office Orders to be crossed and made payable to STONHILL & GILLIS.

Telegrams: Stonhill, Lud, London.
Telephone 8407 City.

Situations Vacant.

GUILLOTINE HAND for Conqueror machine wanted; permanency to a good man.—Harrison and Sons, Ltd., Hayes, Middlesex. 14267

SUBSCRIPTION CANVASSER wanted for old-established Printing Trade Journal; ground, South of England.—Reply, in first place, to Box 14162.

Situations Wanted.

BINDER (LOOSE-LEAF), active, willing worker, used to good class work.—R. P., 35, Ducie-street, Clapham, S.W.4. 14264

Machinery for Sale.

ENVELOPE PLANT FOR SALE, including LEADER MACHINES for 6-in. by 3⅝-in. Envelopes and Wages Bags, RAPID MACHINES, SIMPLEX ADJUSTABLE MACHINES and TELLSCHOW ADJUSTABLE MACHINES for making Envelope Shape and Bag Shape, FISCHER MACHINE for making 6-in. by 3½-in. Envelopes with attachment for Printing, Cameo and Plain Stamping ADJUSTABLE GUMMING MACHINES and WINDOW FIXING MACHINE. This Plant can be seen running, by appointment—Further particulars and prices from Kenrick and Jefferson, Ltd., Business Equippers, West Bromwich. 14265

SMYTH-HORNE, LTD.,
1-3, Baldwin's-place,
Gray's Inn-road, London, E.C.1.
Occasionally we have Rebuilt Smyth Book Sewing Machines to offer, such Sewers having been thoroughly overhauled and refitted with New Standard Parts where necessary. We erect and teach on a trial basis.—Box 13993.

Machinery Wanted.

WANTED, ROTARY or WHEEL BEVELLING MACHINE; new or second-hand.—Macphail, 82, Gordon-street, Glasgow. 14266

Business for Sale.

TO PRINTERS and OTHERS.—Manufacturer of Wired and Gummed Price Tickets has up-to-date PLANT and BUSINESS for IMMEDIATE DISPOSAL.—Write, Box 14262.

LORD LEVERHULME ON ADVERTISING.—At Morecambe last week Lord Leverhulme laid the foundation stone of an extension to the hospital, and the Mayor, in receiving him at the Town Hall, regretted that that building was not more imposing. Lord Leverhulme, who was standing near the advertising department, said in reply:—"Do not trouble about a palatial Town Hall. Your future as a seaside resort depends upon the work done in this advertising room. Just as advertising built up big businesses, so it can build up busy and flourishing seaside resorts. Concentrate on telling through the Press your advantages to the wide world, and then your big Town Hall will come later."

THURSDAY, OCTOBER 25, 1923.

Postal Rates.

ONCE more the agitation in favour of the restoration of the penny letter post and half-penny post card rate is becoming insistent. Sir Adolph Tuck, at the recent meeting of his company, showed himself very optimistic on this question, and almost immediately afterwards there followed a letter to the Press from the Right Honourable F. Kellaway, the former Postmaster-General, who makes a very strong case in favour of the restoration. The views of such an authority as an ex-Postmaster-General should, of course, have particular weight. It was this gentleman who was responsible for the reduction in June last of the letter post from 2d. to 1½d, and at that time he almost promised that the penny rate would be reinstituted. Seeing that there followed a postal surplus of £6,000,000, this concession would doubtless have been granted. It is up to the present Minister, therefore, to carry this pledge into effect, especially since he has estimated for a surplus this year of over £4,000,000. Mr. Kellaway suggests as the real reason why the Post-master-General thinks the penny postage cannot be considered at the present time is that the postal services have to carry the losses of the telegraph services, amounting this year, it is presumed, to £1,350,000. It will be in the public interest that the telegraph services should be subsidised, he says, but he is not satisfied that it is in the public interest that we should be denied the immense boon of the penny post, in order to make up for the loss on the working of the Post Office telegraph service. It is rightly thought that if the Postmaster-General should see his way, whilst the Imperial Economic Conference is assembled, to announce the advent of the Imperial penny post, "he would make a gesture which the Dominions would find even more eloquent than the preference on dried fruits." Support for this argument is forthcoming from Mr. Massey, the Prime Minister for New Zealand, who at the Imperial Economic Conference last week, pointed to the anomaly of a letter from this country to New Zealand costing 1½d., while a similar postal package from New Zealand to Great Britain is carried for a penny. He thinks this is an anomaly which should be put right, and, of course, there is a great volume of opinion in this country to support that view.

* * *

Co-operative Service.

THE attitude of the postal department of this country to the industries which are large users of its services seems to be an erroneous one. At the meeting of the Central Districts branch of the London Master Printers' Association on Monday, the relations which exist in America between the postal service and the printing and advertising branches of commerce were remarked upon. On the other side of the Atlantic the Post Office works hand in hand with the trades mentioned. Care is taken to see in what direction the postal service can best assist industry, and views are obtained as a guide to procedure. The result of this is mutually beneficial to industry and the Post Office. In this country, of course, it is only by the very utmost pressure that any concession can be obtained from the postal authorities, whereas with a little more sympathy on the part of the officials there might be a better understanding of what industry requires, leading to a more adequate service and better financial results.

* * *

The Paper Trade.

WE hear that the news-print mills are still well supplied with orders, and are able to look forward to the winter season with confidence. Some of the esparto mills and a few in the wood pulp writing and printing section are also on normal output. The great majority of mills making E.S. papers are working from hand-to-mouth. A number of them are on short time and some are facing the probability of a temporary shut down all the time. October has brought no improvement in demand as yet, and merchants are no better placed than the mills.

Note Printing in India.

Work to be Transferred from England.

It is practically settled that the printing of currency notes, security documents, stamps, etc., should in future be undertaken in India, says a Calcutta correspondent of *The Times* (Trade Supplement). A report embodying the proposal has been submitted by Lieut.-Colonel G. H. Willis, Master of the Mint, Bombay, and Mr. F. D. Ascoli, I.C.S, Controller of Printing, who investigated the possibility of having the work done in India instead of in England. There is at present a contract between the Secretary of State and Messrs. Thomas de la Rue and Co, Ltd., for the manufacture and supply of adhesive stamps, postal stationery, and stamped paper. The contract ends in December, 1924, and the committee recommends that notice of termination should be given in June next. The total annual expenditure in the United Kingdom on stamps, stamped papers, etc., and the one-rupee note, but excluding currency notes of higher value, under the existing system will in 1924 probably amount to £3,600,000. Notice should be given to the Bank of England to terminate the supply of one-rupee notes as from December 31st, 1924. The committee recommends that the manufacture of materials, *i.e.*, paper, ink and gum, should not be undertaken at first. Referring to the choice between Government and private agency, the committee is in favour of the Government having its own plant and business in order to secure safe and efficient service. For the printing of currency notes, plates should in the first instance be imported from the United Kingdom. It is proposed that an experimental press for this purpose should be started on January 1st, 1924. The capital expenditure will be Rs. 26 lakhs and the yearly recurring expenditure Rs. 28 lakhs.

Central London Master Printers.

Direct Mail Advertising Discussed.

There are now many signs that the printing industry is beginning to address itself to the immense possibilities, which hitherto it has too largely ignored, in the advertising field. At the meeting of the Association of Master Printers of the London Central Districts on Monday evening at the Stationers' Hall, a further impetus was given to this forward movement by Mr Arthur Chadwick, chairman and managing director of Amalgamated Publicity Services, Ltd., who spoke on "Printing: Its Relation to Direct Mail Advertising (American Methods)."

The chair was taken by Mr. George Eaton Hart, who, in introducing Mr. Chadwick, was able to testify from his own experience to the immense development attained by direct mail advertising in America, and the enormous amount of printing which it entailed.

Lecture by Mr. Arthur Chadwick.

Mr. Chadwick then addressed the meeting, and dealt very ably with the whole subject of direct mail advertising. He spoke as an advertising man, who, however, realised very clearly the great possibilities now in front of the printing industry, and wished to see closer co operation between the creative side of advertising, as represented by the advertising man, and the productive side, as represented by the printer. Mr. Chadwick's lecture was full of information as to the nature and possibilities of direct mail advertising, both in this country and the United States, and he made a rousing appeal to the printers of this country to wake up to the big opportunities within their reach. We hope to report Mr. Chadwick's lecture more fully in next week's issue.

In throwing the meeting open for discussion Mr. Hart corroborated the lecturer's views as to the need for an awakening on the part of British printers, and he welcomed the beginnings of that awakening now apparent.

Mr. W. A. Northam stressed the view that the big developments to be looked for in the near future were in the hands mainly of the younger men. He thought that initiative was even of more importance than co-operation, to which the lecturer had given first place. Referring to the scheme of collective advertising now under consideration by the Federation of Master Printers, he said it was essential that the printer should show initiative in his own business, and experience for himself the value of advertising, before he could be in a position to guide his customers in the wise use of postal publicity.

Mr. C. Arthur Bates told how he had, in company with Mr. Chadwick, travelled some 10,000 miles, covering the principal large cities of the United States and being immensely impressed with the possibilities of print, as realised in America, particularly in respect of advertising. He thought printers had not adequately explored the creative side of their business. He would like to see the printer regarded by the whole commercial community as the man of ideas, as the one man who could best help in the lifting and widening and increasing of business.

Mr. Jarden remarked that though so much credit was now given to America, it should be remembered that America got its start from this country. It was a young country and began where we left off. He thought, too, that the advertising field would prove of more benefit to the large printer than to the small.

Mr. Hart expressed the opinion that the advantages to be gained were by no means confined to the large printer; the small man could find his own niche and achieve excellence in some special line of work. They wished to inspire the small printer with the point of view which the lecturer had put forward.

Function of the Post Office.

Mr. W. H. Burchell, hon. secretary of the Association, complimented his friend Mr. Chadwick upon the appeal he had made to printers to look around them and rise to the possibilities within their reach. With regard to press advertising, he felt that its value was not as great as might be suggested by the large circulations vouched for by the newspapers. A matter on which he would like to hear a little more was the subject of postal publicity on the other side of the Atlantic, and the attitude of the postal authorities thereto. He referred to the struggle in this country for cheaper postal facilities, and expressed the hope that at no far distant time the penny post would be re-established.

Mr. H. R. Grubb pointed out the special advantages which America possessed in respect of area and other conditions favouring the development of mail order business; he doubted whether so much success was possible over here.

Mr. Chadwick, in replying to points raised, emphasised the distinction between mail order business and direct mail advertising. The former, he said, was the result of the latter. He told something of the postal arrangements in the United States: there were three classes of mailing matter, with certain conditions attached to each class; for one cent it was possible to mail a substantial piece of print. An important point was that in America there was co-operation between the postal authorities and the advertisers, whereas during the War and since printers here had to go cap in hand to the permanent officials of the Post Office, pleading for reductions of postage. The advertiser was the biggest customer of the Post Office, and there should be mutually beneficial co-operation in this matter. He agreed that conditions with regard to direct mail advertising were different here from what obtained in the States, but possibilities here were as great in proportion to area, and advantages to be gained were just as substantial.

Mr. Hart expressed the very hearty thanks of the meeting to Mr. Chadwick for his illuminating and interesting address. Mr. Bates seconded, all present showing cordial appreciation.

The meeting then closed with a brief response from Mr. Chadwick, who intimated that he was wishful to see the inauguration of a Direct Mail Advertising Association in this country, and he hoped that printers would lend their aid to this development.

Electrotypers and Stereotypers

MANAGERS & OVERSEERS' ASSOCIATION

Lecture and Discussion on Metal Melting.

The monthly meeting of the Association took place on Tuesday of last week at St. Bride Institute, Bride-lane, the chair being occupied by Mr. A. Chadwell (president), supported by Mr. J. Black (vice president). The chief feature of the evening's programme was a lantern lecture by Mr. A. H. Mundey (Fry's Metal Foundry), who came along to fill a gap caused by the inability of Mr. Hall (Monometer Manufacturing Co.) to address the members, he having had a sudden call to the Continent. There was a good gathering of the members, and, on the invitation of the Association, about fifty students attending the metallurgical classes at the Central London Printing School were present. Several well-known representatives of stereotyping and machinery firms were present, including Mr. John Fry, Mr. J. Light and Mr. Tripp.

The minutes having been read and confirmed, a candidate for membership, Mr. A. T. Padbury (Messrs. Bradbury, Agnew and Co.), was unanimously elected.

The Lecture.

Mr. Mundey said he had not come to give a set lecture, but simply to fill the gap for their friend Mr. Hall, who, he believed, had intended to address them on the subject of metal melting. When thinking of metal melting, proceeded Mr. Mundey, the mind went to the question of fuel. With regard to what was fuel, he asked if they could define it in half-a-dozen words. He did not think they could. By the word fuel was meant any substance which could be economically used (by its combustion) for the generation of heat. The word economical, used in that sense, was the gist of what he was going to direct their attention to that evening, both in what he had to say and by examples on the screen.

Touching briefly on the eons through which wood was the principal fuel before being superseded by coal, Mr. Mundey described—especially for the younger members of his audience—the important properties of carbon, which, he said, was the centre of nearly every one of the fuels used to-day, for it entered into everything in some way or other. Starting from first principles, Mr. Mundey reminded them that they could not create or get more out of anything than was in it, and he asked them not to believe inventors who came along and said they were creating something. They should not allow themselves to be persuaded that things were better than first principles. With regard to heat, the essential thing for them to consider was that it should be convertible. All kinds of motion, power and energy were based on that one fact.

Solid versus Gas Fuel.

Mr. Mundey next quoted some figures given him by Mr. Chandler, of the South Metropolitan Gas Co., showing the enormous saving secured by the use of gas as against coal in the melting of forty-two tons of metal. After these figures, he was surprised to hear it said by some gentlemen using certain types of melting apparatus that they were getting more proficiency from solid fuel than from gas. In printers' language, he thought they could not be "costing" properly. In his opinion, they seldom got 10 per cent. efficiency with coal, but with gas they got 40 per cent. The main thing to remember was that they had to use carbon in such a condition so that it should be burned with economy.

Before throwing on to the screen a number of slides Mr. Mundey dealt in detail with the various characteristics of printers' metals—lead, tin, antimony, copper and zinc—all of which melted fairly easily excepting copper.

Interesting slides were then shown illustrating the gradual development of the furnace from the days of Tubal Cain to the present time. Among the more modern devices depicted, and of which Mr. Mundey pointed out what he considered the respective good points and weaknesses, were the Monometer furnace, the Mond gas plant, the Fryotype furnace and melting pots, the Senior and Junior Autoplate machines and the Winkler Casting machine.

Discussion.

Mr. J. Black, in moving a vote of thanks, paid a tribute to Mr. Mundey for the excellence of his address, and made special mention of the authoritative way in which he had handled the various processes dealt with.

Mr. J. Light said Mr. Tripp (a representative of Messrs. Winkler, Fallert and Cie) was present and would, with the permission of the chairman, be pleased to answer any questions relating to the Winkler Casting Machine.

Mr. Mundey asked what became of the air in the mould, and how it was got rid of in casting plates by the Winkler.

Mr. Tripp, in reply, said he was not at present prepared to answer that question definitely. The mould was hermetically sealed. The air did get out, but how he could not at present say. At the top of the metal in the pot, while the plate was being cast, it would be noticed that the metal was being agitated, and for that reason they must assume that the air passes through the metal in the pot, and thus acts as a stirrer. With regard to electrical heating, Mr. Tripp mentioned that if current could be got for not more than 2d. a unit it was worth using for the Winkler Casting Machine. In Switzerland it was about a ½d. a unit. He strongly advocated the use of electricity for the melting of metal. It was healthier for the operators; and with it the pot was not likely to crack.

Mr. Black inquired how the plate could be produced on the Winkler without the necessity of boring. Was it due to any particular virtue in the metal?

Mr. Tripp said it did not matter what metal was used, whether it was Fry's or any other. The metal they used only contained 3 per cent. tin. Because of this small quantity of tin they got a sound plate. In answer to Mr Black their plates required no trimming They lifted them out of the machine and put them straight on to the rotary machine, no boring of any kind being necessary.

Mr. Black said he was not satisfied in his own mind regarding the solidifying of the metal. He had not yet come across the metal or the liquid that would cool up to the jacket edge or the jacket surface with an even temperature all over.

Mr. Sunderland spoke on the question of the shrinkage and the variations in metal—matters that were a little bit puzzling to the stereotyper.

Mr. W. H. Longley seconded the vote of thanks, which was most heartily accorded.

Mr. Mundey, in reply, said with regard to the quality of metal used, Mr. Tripp would of course remember that in this country they were accustomed to demand very long runs for their stereo plates, much longer than were commonly required on the Continent. Further, a very high quality of "face" was also expected. These characteristics could not be obtained without a high grade metal, *i.e.*, one containing a full proportion of tin.

DIVIDENDS AND REPORTS.

GEORGE NEWNES.—Interim dividend of 5 per cent. on Ordinary shares for the year ending March 31st, 1924, payable November 14th (same as a year ago).

NEW COMPANIES.

ASSOCIATED ILIFFE PRESS, LTD.—Nominal capital £600,000, in £1 shares (500,000 7½ per cent. cumulative preference, ranking first for repayment of capital, and 100,000 ordinary); to adopt two agreements (1) with Iliffe and Sons, Ltd., and (2) with the said company and its liquidator, and to carry on the business of printers, publishers, advertising agents, stationers, proprietors of newspapers and periodicals, photographic printers, photographers, paper, paper bag and box makers, cardboard and ink manufacturers, etc. Private company. First directors: Sir Edward M. Iliffe, W. Coker Iliffe and T. W. Fletcher. If and so long as Cassell and Co., Ltd., hold at least £15,000 shares, they may from time to time appoint and remove a director. So long as any of the £500,000 7½ per cent. cumulative preference shares of Kelly's Directories, Ltd., shall be outstanding, no debentures or debenture stock constituting a charge upon the undertaking or assets of the company shall be created or issued by the company, unless an extraordinary resolution sanctioning the same shall have been passed at a separate meeting of the holders of said shares of Kelly's Directories, Ltd., convened and held in accordance with the Articles of Association of the said company; but nothing in this proviso shall apply to the debentures of this company for £500,000 referred to in the above agreements, or to any debentures lawfully issued or re-issued in place thereof.

I. PALMER AND SON, LTD.—Capital £2,000, in £1 shares; to acquire the business carried on by I. Palmer, trading as "Arthur Armitage," cardboard box makers and lithographers at Byron Works, Platt-street, Nottingham, and to carry on the same and the business of paper merchants, stationers, printers, jacquard card makers, suppliers of materials to the cardboard box, paper lace, hosiery and making up trades, manufacturers of and dealers in materials, goods and textiles, etc. Private company. First directors: I. Palmer and A. P. Palmer. Registered office: Byron Works, Platt-street, Nottingham.

CHURCHWAXERS, LTD.—Capital £5,000, in £1 shares; manufacturers of, agents for and dealers in paper and paper products and specialities of all kinds, etc. Private company. Subscribers: J. N. Wilford, J. A. Fitton, F. T. Harrison and E. Tonge.

AMERICAN ADVERTISING SERVICE, LTD.—Capital £500, in 1s. shares; advertising contractors, registration agents, business organisers and advertisers, publicity specialists and agents, billposters and canvassers, representatives of newspapers or periodicals, newsagents, journalists, etc. Private company. First directors: E. Schofield and A. E. Life. Registered office: 22-4, Great Portland-street, W.1.

GRANVILLE PUBLISHING CO., LTD.—Capital £1,000, in £1 shares; to adopt an agreement with C. Styles and J. Worsley, and to carry on the business of newspaper proprietors and publishers, advertising contractors, photographers, papermakers, manufacturing stationers, etc. Private company. Directors: C. Styles and J. Worsley. Registered office: 14, Henrietta-street, Covent garden, W.C.1.

SCOTT ADVERTISING SERVICE, LTD.—Capital £1,000, in £1 shares; general advertising and publicity agents, advertising contractors, printers, booksellers, newsagents and general commission agents, etc. Private company. Subscribers: Mrs. W. M. Higham and Miss F. W. Stewart. C. B. Scott-Fisher is managing director. Registered office: 45, Craven House, Kingsway, W.C.2.

BOLD WILCOCK AND CO., LTD. — Capital £500 in £1 shares; to acquire the business of commercial and general printers and stationers carried on by J. J. Bold and G. Wilcock, at 41a, Church-street, St. Helens, Lancs, as "Bold Wilcock and Co." Private company. Directors: J. Taylor, J. Taylor, junr.; J. J. Bold and G Wilcock. Registered office: 41a, Church-street, Helens, Lancs.

EVAN WILLIAMS (PRINTERS), LTD.—Capital £2,500 in £1 shares; printers, paper merchants and wholesale stationers at Newport, Mon. Private company. Subscribers: Major J. P. Brown, R. Bunt and W. M. Mordey. First directors by subscribers. Registered office: Prudential-buildings, Commercial-street, Newport, Mon.

GRANVILLE LESTER, LTD.—Capital £1,000 in £1 shares; wholesale and retail stationers, printers, lithographers, advertising and general agents, etc. Private company. Directors: W. A. Morley and Mrs. F. Morley. Registered office: 125a, Wollaton-street, Nottingham.

LINCOLN PUBLICITY, LTD.—Capital £500 in £1 shares; newspaper and magazine proprietors and publishers, publishers of local and general advertisements, advertising contractors and agents, bill posters and distributors, etc. Private company. First directors: A. W. Foster, J. Morris S. B. Tonge and A. H. Vidler. Registered office: 5-6, Bank-street, Lincoln.

STOCKWELL BOX CO., LTD.—Capital £3,000; manufacturers of and dealers in paper, and articles made from paper or pulp and materials used in the manufacture or treatment of paper or pulp, including cardboard, millboards, plain and fancy cardboard boxes, cartons, etc. Private company. First directors: A. J. Pickering, A. P. Pickering, E. F. Pickering and B. Goley. Registered office: Stockwell-head, Hinckley.

KEMIL, LTD.—Nominal capital of £300,000; silk, cotton and artificial textile manufacturers, etc., manufacturers of and dealers in machinery, cardboard and other boxes, packing and show cases, pattern and show cards, paper manufacturers, etc. Private company. First directors: T. Taylor, F. Dearden and H. Fildes. Registered office: Duchy-chambers (Rooms 2 and 4), Clarence street, Manchester.

READERS' LIBRARY PUBLISHING CO., LTD.—Capital £15,000, in £1 shares; proprietors and publishers of books, magazines, plays, newspapers and other literary works, printers, papermakers, advertising agents and general contractors, etc. Private company. First directors: E. B. Montesole, S. Walton, R. E. Hewett and D. Hall Caine. Registered office: Ancaster House, Cranbourne street, W.C.2.

"INDUSTRIAL INDIA," LTD.—Nominal capital of £1,000; to take over the business of owners and publishers of *Industrial India* carried on by the Tata Publicity Corporation, Ltd., at Navsari-buildings, Hornby-road, Bombay. Private company. First directors: A. G. Chamberlain and Mrs. L. N. R. Chamberlain. Registered office: 29, High-street, Exeter.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

PRESS PRINTERS, LTD. (London).—Satisfaction to the further extent of £1,100 prior to August 30th, and £8,800 on that date (being balance remaining due) of mortgage dated August 10th, 1903, securing £10,000.

LAVARS AND CO., LTD. (printers, Bristol)—Debenture dated October 6th, 1923, to secure £300, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: R. C. Matcham, 24, Christmas-street, Bristol.

RECORDER PRINTING CO., LTD. (London).—Particulars filed of £200 debentures authorised September 27th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

T. H. CRUMBIE, LTD. (printers, etc., Leicester).—Satisfaction in full on October 6th, 1923, of mortgage dated September 30th, 1911, and deed of further charge dated June 9th, 1916, securing £5,000 and £750 respectively.

T. H. CRUMBIE, LTD. (printers, etc., Leicester).—Mortgage dated October 8th, 1923, to secure £10,000, charged on various properties in Leicester. Holders: Leicester Permanent Building Society.

THOMAS SCOTT AND CO., PRINTERS, LTD. (Newcastle-on-Tyne). — Satisfaction in full on October 1st, 1923, of debentures dated October 16th, 1919, securing £2,000.

HENRY STARK, SON AND HAMILTON, LTD. (stationers, printers, etc., London).—Satisfaction in full on August 7th, 1923, of debenture dated January 28th, 1914, securing £1,000.

WESTMINSTER PRESS, LTD. — Particulars filed of £20,000 debentures authorised October 8th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital (subject to not more than £100,000 first debentures), the whole amount being now issued.

VITTY AND SEABORNE, LTD. (engravers, etc., London).—Satisfaction on October 2nd, 1923 (a) in full of debentures dated October 20th, 1921, securing £300 (b) to the extent of £400 of debentures dated March 24th, 1921, securing £1,350, and (c) in full on debentures dated January 15th, 1923, securing £350.

VITTY AND SEABORNE, LTD. — Debenture dated October 2nd, 1923, to secure £1,050, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: F. T. Staley, Craven House, Kingsway, W.C.

MORGAN AND HOADLEY, LTD. (publishers, etc., London).—Satisfaction to the extent of £750, on October 8th of debentures dated May 14th, 1923, securing £1,500.

W. HART AND SON (SAFFRON WALDEN)' LTD. (proprietors and printers of newspapers, etc)—Debenture charged on the company's undertaking and property, present and future, including uncalled capital, dated October 5th, 1923, to secure all moneys due or to become due from company to Barclays Bank, Ltd.

SIMPKIN, MARSHALL, HAMILTON, KENT AND CO., LTD.—Charge on 9, Newington-causeway and Horse Shoe Stables, S.E., dated October 1st, 1923, to secure £8,000. Holder: T. H. Hughes, Mersey-chambers, Liverpool.

LOCAL NEWSPAPERS, LTD. (Hertford).—Mortgage dated September 28th, 1923, charged on certain book debts amounting to £142 12s. 8d. in all, to secure all moneys payable by the company in respect of the printing and publishing of the *Hertfordshire Record*. Holders: Simson and Co., Ltd., 2, Fore-street.

HEREFORDSHIRE PRESS AND PRINTING CO., LTD.—Particulars filed of £10,000 debentures

Digitized by Google

authorised September 24th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

Durham County Advertiser and General Printing Co., Ltd. — Particulars filed of £5,000 debentures authorised September 24th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued (ranking *pari passu* with £15,000 debentures issued pursuant to resolution of December 15th, 1919).

Hudson Scott and Sons, Ltd., printers' decorative box manufacturers, etc., Carlisle. —Issue on October 1st, 1923, of £6,150 debentures, part of a series already registered.

Nottingham Daily Express Co., Ltd.— Satisfaction in full on September 21st, 1923, of debentures dated February 14th, 1921, securing £30,000.

Norwich Mercury Co., Ltd.—Particulars filed of £25,000 debentures authorised September 24th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

Lancaster Guardian, Ltd. – Particulars of £5,000 debentures authorised September 24th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued (ranking *pari passu* with two series of debentures for £7,000 and £3,000 issued on January 8th and September 8th, 1920, respectively).

Birmingham Gazette, Ltd.—Particulars filed of £55,000 debentures authorised September 26th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued (ranking *pari passu* with two series of debentures for £40,000 and £30,000 issued July 15th and December 3rd, 1920, respectively).

North of England Newspaper Co., Ltd. —Particulars of £10,000 debentures authorised September 24th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued (ranking *pari passu* with a debenture for £5,000 issued on August 4th, 1909, £6,000 debentures issued on December 18th, 1914, £9,000 debentures issued on August 25th, 1916, and £40,000 debentures issued on July 15th, 1920.

Nottingham Daily Express Co., Ltd.— Particulars filed of £30,000 debentures authorised September 24th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

Lincolnshire Chronicle, Ltd. — Particulars filed of £5,750 debentures authorised September 24th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued (ranking *pari passu* with such as are outstanding of £6,000 debentures issued pursuant to a resolution of June 4th, 1914, and in priority to £7,500 second debentures of which £5,000 have been issued).

Daily Gazette, Ltd.—Particulars filed of £10,000 debentures authorised September 24th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

Busbridge and Co. (1919), Ltd., paper manufacturers, etc., London.—Particulars filed of £4,000 eight per cent. second debentures, authorised July 24th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital (subject to £24,000 first mortgage debentures), the whole amount being now issued.

BANKRUPTCIES, etc.

Re Mayfair, Ltd., 13, Old Burlington-street, W.—The creditors and shareholders of this company, against which a compulsory winding up order was made last July, met last week at the Board of Trade Offices, Carey-street, W.C. The company was formed as a private company in October, 1910, with a nominal capital of £5,000, the main object being to publish a paper entitled *Mayfair*. It was also to carry on business as newspaper proprietors and general publishers. Prior to the War the paper was published weekly at 6d. per copy, but its sale, although good, did not cover the expenditure, and the necessary working capital was provided by one of the directors in the shape of loans. On the outbreak of War in August, 1914, the paper was reduced in size, and at the end of 1914 the regular publication was discontinued, numbers thereafter being published at irregular intervals. In May 1922 the financial difficulties of the company became acute, judgments were obtained, and the company experienced great difficulty in obtaining credit, also several contracts which had been made by various people for the publication of articles and cartoons were repudiated. In December, 1922, the publication of the paper was discontinued. The failure of the company was attributed to damage done to the company's reputation by a person named, and to the heavy costs incurred in the legal proceedings against that person; also to the fact that certain contracts which were expected to materialise were eventually repudiated. The creditors left the liquation in the hands of the official receiver.

Re Wm. E. Tucker (trading as Tucker Bros.), stationer, 14, Arthur-street, E.C.—An application for an order of discharge was made on Tuesday at the London Bankruptcy Court, on behalf of this bankrupt who failed in December, 1921, with liabilities amounting to £1,461. The official receiver reported that the assets were likely to realise £343, from which a dividend of between 2s. and 2s. 3d. in the £ would be paid. The discharge was suspended for two years on statutory grounds.

Italian papermakers complain that supplies of pulp from Germany under reparations have fallen away.

Spicers Ltd. cover an enormous range of paper and stationery, as evidenced by their latest sample sets. Everything in the way of paper is included, from tissue to unglazed cartridge. Their printings and writings are as varied as their boards. With regard to envelopes, these are suited to every purpose, and special flaps have been devised to meet the postal regulations.

Introduction of "Flong."

Sir,—In your article on "Stereotyping as a Metallurgical Operation," of September 27th, you referred to a note I wrote to Mr. Mundey claiming that B. Dellagana and Co., Ltd., introduced "flong."

In your issue of July 7th, 1921, the history of Dellagana's as far as can now be traced was fully set forth. That Bartolo Dellagana, the founder of this firm about 1840, did invent a flexible matrix to facilitate the casting of rotary plates in lieu of the method of bending plaster stereo plates, is believed to be correct, and the late chairman of the company, Mr. J. C. Barnard, who was the solicitor of Mr. B. Dellagana and formed this company on his death—confirmed the story.

The late Mr. J. Tiley, who was with Dellagana's for over 60 years, also always gave the history of flong and the origin of the name as set forth in your article of July 7th, 1921, as being told to him by Mr. Bartolo Dellagana himself.

Within the last few months a business card of J. and B. Dellagana, 90, Middle Abbey-street, Dublin, and 106, 107, Shoe-lane, London, has come into my hands The date cannot be fixed nearer than about 1870. It bears the Royal Coat of Arms and the words, "*The Times* Stereotypers," and also in a list of prices the rates for "patent" stereotyping as well as plaster and electros. Presumably "patent" indicated cast from flong. The prices for patent are lower than plaster and would seem to indicate it was then a new process. Whether the "patent" indicates that letters patent existed is not known, but the price list for stereos so named does indicate that Dellagana's were the recognised manufacturers of such plates.

George E. Holloway,
Managing Director and Secretary,

Romance of the Printing Craft.

By R. A. AUSTEN-LEIGH, M.A.

(*Continued from page 281*)

Next, as to who invented printing: here we are on uncertain ground. There are rival schools which claim Mainz and Haarlem as the place where it was first practised. In any case no one has ever claimed the honour for England; indeed, printing cannot be said to be one of the arts in which these islands have particularly shone. It is doubtful whether, with the exception of Baskerville, we have ever had a printer who has enjoyed European fame until we reach the days of William Morris.

As to the date of the invention, it may be taken as roughly between 1440 and 1450, and perhaps it is a wonder that it was not invented earlier. Block-books, or books printed from solid engraved blocks of wood, were in existence long before. The great invention, however, was that of movable types which could be used over and over again in various combinations. First of all there must have come to someone—perhaps to more than one person—the idea, and then must have followed the carrying out of the idea—no easy matter, even if the first movable types were made of wood. Much ingenuity must have been needed to make even the simplest form of type-founding plant, before it passed to the perfection of the punch, the matrix and the mould. Further, the composing stick, the chase and the press all had to be devised. Unfortunately we know but too little, in fact almost nothing, of these various steps. One story goes that Laurenz Coster, who was a block printer before he became a printer with movable types, while walking in a wood cut some letters in the bark of a tree, and with them, reversely impressed one by one on paper, he composed one or two lines as an example for the children of his son-in-law.

Remember, then, that the chief part of the invention of printing lay in the mobility of the types. As to the press, we know equally little of how it came into being. But presses of some kind must have been already in use. The principle of impression had long been used for the making of playing cards, pictures, seals, stamps, etc. Again, there is the question of ink. Here, probably, the use of oils for paints came in usefully, a recent invention of the fourteenth century. As to binding, there was nothing to invent here, for it had long been in use.

The Early Printer's Plant.

Let us assume, then, that having learnt his trade a man desired to start as a printer We must remember that down to 1477, that is for about the first thirty years, there is no instance known of such a man carrying away with him or being able to buy any type. He had to make it all for himself, and naturally he used to copy the style of handwriting in fashion in his own country, i.e., Gothic or black letter in Holland, in Germany, and in England, and Roman in Italy. Further, in order to copy MSS. exactly, he had to cut all the combinations—which were many—of letters used, so that the early compositor's case was very much larger than that in use to-day. On the other hand, he probably cast a very small amount of type, as the early printers rarely printed more than one page at a time. So small, indeed, was their plant, that it must have been easy to pack up and transport. Let me remind you of the account in that most fascinating of romances, "The Cloister and the Hearth," of Sweynheim and Pannartz.

The early printers imitated closely, not only the handwriting, the contraction, the combination of letters, but all the peculiarities of the MS. Thus scribes were naturally unable to make the ends of each line exactly even, therefore early printers left their lines unjustified. They rarely had title pages, or numbered the pages, or had headlines. They left initial letters to be coloured by hand.

Gradually the printed book took on the new features which it possesses to-day. It dropped the illuminated initials, it placed the information contained in the colophon on the title-page—apart from the imprint—it dropped the contractions, except the ampersand, it dropped most of the combinations of letters except some of those with "f" in front of them, it made use of headlines and pagination, it introduced "j," it dropped the long "s," though only about a hundred years ago, it introduced and then dropped catchwords, it invented the half-title, and the order of the dedication, the preface, the contents, etc. Indeed, the modern printer in trying, as he sometimes does, to do something different, seems reduced to placing the headline or the page number in some fantastic position.

I should like now to say something as to a few of the great men who have been connected with printing. In the first place, there are the great "printing dynasties," as they are sometimes called, such as that of Aldus Manutius, the Elzevirs, the Etiennes, the Plantins, the Didots, and the like, where you get families carrying on the art during centuries, with the founder usually a man of great distinction. Wonder has sometimes been expressed at the duration of these businesses, but Mr. Updike has pointed out that in an age when most industries were carried on at home a printing office represented one of the earliest forms of a modern factory, and contained plant of such considerable value that it was difficult to dispose of satisfactorily, or at any rate that made it natural and desirable for descendents to "carry on." Furthermore, if a printer left no sons but only daughters, in addition to the usual advantages of an apprentice aspiring to his master's daughter, the apprentice found means thereby to enter into the jealously-guarded circle of master-printers. Evidence that the circle was small may be found in the fact that until 1693 no more than twenty master printers were by law allowed in London, and until 1793 only thirty-six in Paris.

With regard to the families mentioned above, Aldus Manutius began printing at Venice, in 1495, and occupied himself mainly with the classics. To him we owe the italic type and the celebrated Aldine editions, with their famous device of the dolphin and the anchor, and the motto, "Festina Lente." Three successive generations carried on the press until 1597. When Aldus died, in 1515, he lay in state with his books grouped around him.

The Elzevirs were of French extraction, but carried on printing first at Leyden, and then at Amsterdam, between the years 1583 and 1712, producing their handy and popular volumes largely devoted to the classics.

Similarly, the famous French printers who have been called the Eternal Honour of French Typography, the Etiennes, carried on their work in Paris from the year 1500 for a century and a half. As a singular compliment, Paul Etienne allowed John Norton, Queen Elisabeth's Printer, to make use of his device—the tree of knowledge, in 1594.

The Plantin "Palace"

Even more wonderful is the life of the Plantin Press in Antwerp. Founded by a Frenchman, Christopher Plantin, in 1555, it passed through his daughter to the Moretus family, who continued the press till the year 1875, when it was handed over to the city of Antwerp. Christopher Plantin lies buried in Antwerp Cathedral, and the inscription on his tomb states that, whereas he was "King's Printer," he himself was the "King of Printers." His printing office, which has been fitly described as "more a palace than a printing office," and as "probably the most beautiful building—both inside and out—dedicated to the uses of printing in the world," is interesting beyond words to the student and lover of the art, by reason of the fact that nearly all the presses and type of the original Plantin have been preserved in it.

Of later dynasties the chief are perhaps the Didots of Paris, who began to work in 1713, and are "still running."

(*To be Concluded.*)

Printing Crafts Guild.

The sixteenth annual general meeting was held in the Municipal College of Technology, Manchester, on Saturday last, Mr. Charles W. Gamble, O.B.E., M.Sc.Tech, being in the chair, having the support of President John Taylor and a good company of members.

Mr. H. Holme, secretary, read the minutes, which were afterwards confirmed.

The annual report for Session 1922-1923 stated: "In addition to the re union concert and a full syllabus of lectures and visits, two very successful social evenings were arranged, both of which were self supporting, and resulted in the sum of twenty pounds being handed to the general fund of Ancoats Hospital. From the Guild funds a donation of three guineas was sent to the Printers' Pension, Almshouse and Orphan Asylum Corporation. The membership has fallen considerably during the year, attributable probably to the great depression in trade and the fact that Rochdale and District Printers have now a Guild of their own. The figures for the year are as follows:—Honorary members, 12; adult members, 242; junior members, 80; making a total of 334. The balance sheet shows an income of £49 19s. 7½d., and an expenditure of £33 16s. 5½d., leaving a favourable balance of £16 3s. 2d. The Committee tender thanks to the following for their valuable assistance during the year:—Mr. B. Mouat Jones, M.A., and the House Committee for the use of rooms for meetings; Messrs. Travis Burton, F. S. Sinnatt, M.B.E., M.Sc.Tech.; John Taylor, M. R. Leeming, Olive and Partington, L. S. Palmer, T. J. Cunane, J. J. Phelps, M.A.; E. Fisher, J. Robertson and Co., Manchester Ship Canal Co., and the Cloister Press.

The balance sheet was submitted by Mr. C. Doughty, treasurer.

Mr. J. Begg, auditor, said he had examined the accounts for various sessions, and found the work of the secretary, assistant secretary and treasurer were a valuable help to the success of the Guild, and he moved a hearty vote of thanks to those officials, coupling with them the other officers of the Guild.

This was carried unanimously.

The report and balance-sheet were then adopted.

The election of officers resulted as follows: President, John Taylor; chairman of committee, Charles W. Gamble, O.B.E., M.Sc. Tech.; hon. treasurer, C. Doughty; hon. auditor, J. Begg; assistant hon. secretary, A. Edwards; committee, Miss E. Dust, Miss A. Lodge, Messrs. J. E. Cass, J. Crook, E. Fisher, G. H. Lodge, E. McVay, W. M. Menzies, H. J. Phillips, J. T. Shelmerdine, A. Trickey, J Worthington. District Representatives—Altrincham: E. Ashton, 5, Lynton-road, Chorlton-cum-Hardy; Ashton-under-Lyne: H. Holme, Moss Bank, Richmond-street; Bolton: E. Boardman, 142, Mornington-road; Bury: F. Roscow, 15, Malvern-avenue, Walmersley-road; Hyde: H. W. Wallace, 10, Newtonhurst, Victoria-road, Newton; Oldham: G. H. Rider, 36, Trinity-street; Rochdale: Wm. Ingham, 31, Mackinnon-street; Stockport: R. F. Singleton, 113, Turncroft-lane; honorary secretary: F. J. Hughes, 424, Moston-lane, Manchester.

The ordinary business being over, a lecture entitled "Colour" was delivered by Mr. Charles W. Gamble, O.B.E., M.Sc.Tech. For one and a half hours the lecturer instructed the audience in the value of light and the formation of colour, showing numerous experiments and examples of colour photography.

On Friday evening, November 23rd, by kind permission of the Lanston Monotype Corporation, Ltd., the members will be admitted to a demonstration of Monotype and Miller Machinery at 42, Albert-street, off King-street, Manchester, at 6.30 o'clock.

WEE MAC.

IT speaks well for the activity in carton manufacture that all the available female labour in Newbury has been absorbed by the Colthorp board and paper works at Hatcham.

MR. WILLIAM C. HAMILTON, papermakers' agent, The Old Mansion House, 73, Cheapside, London, E.C.2, in addition to the well-known Dutch mills he represents, has now been appointed sole agent for the United Kingdom and for the Colonies for the N.V. Export Papierfabriek "Nijmegen," makers of all classes of crêpe papers, serviettes, etc.

Paper Merchant's Forgery.

Sentence of Nine Months' Imprisonment.

Sentence of nine months' imprisonment in the second division was passed by the Recorder (Sir Ernest Wild, K.C.), at the Old Bailey last week on Frederick William Skelton (38), a paper merchant, of Temple-chambers, London, E.C., who pleaded guilty to forging an order with intent to defraud.

Mr. Eastwood, who prosecuted, stated that the defendant, by altering an order for two tons of paper into one for twelve tons, obtained from a Mr. Head about £600, promising him "half the profits of £20 a ton." He paid back some of the money, and then bolted at the beginning of the year. A warrant was issued, to which he surrendered on September 23rd.

It was stated that Skelton obtained four other sums of £100 each in a similar way. Mr. Head said he parted with £800 altogether, and had had about £400 back.

The defendant declared that he only had £600 from Mr. Head, and that he had returned £531. "All the money went into my business," he added. "It was a question of getting from Peter to pay Paul. The state of the paper trade at the time was very wobbly."

The Recorder told the defendant that but for his previous excellent character he would have gone to penal servitude.

Mr. H. C. Wilson has recently severed his connection with the Atlantic Press Ltd., Albion-street, Graythorne, Manchester, and has commenced business on his own account as a paper merchant, at 4, Finghall-road, Urmston, near Manchester. Mr. Wilson joined the Atlantic Press, Ltd., 17 years ago to open and manage their paper department, eventually becoming joint managing director of the firm. Mr. Wilson is a well known figure in Northern paper trade circles and his many friends will wish every success in his new undertaking.

Paper Orders Declining.

News the Only Bright Spot According to Norway Report.

The tendency in the paper market is somewhat weaker, and on the whole the general outlook is not so good as a couple of months ago, as the number of orders which the mills have on hand is declining.

As regards news, says *Farmand*, the mills are being kept fairly busy, as many of them have disposed of their production for the current year at an early date, while quite a number of contracts for 1924 have also been closed. Of late, however, new orders have not come to hand as freely as formerly, and prices have therefore shown a somewhat uncertain tendency, possibly giving way to a certain extent.

During the first half of this year the position as regards kraft was exceedingly good, and prices kept firm until only a month ago, when the market suddenly broke. Later on the market has continued slack, as buyers have remained very reserved.

Prices for greaseproof have declined somewhat during the last month.

As regards the finer brands of paper, the mills keep working, but they have only few orders entered on their books. Prices, however, are more or less unaltered.

For tissue the number of orders is restricted, and prices have been on the downward trend. Neither China nor South-America has been in the market lately with new orders of any importance in this line, and India has kept away altogether. With regard to the latter country business is difficult to arrange, as competition from Australia, Czecho-Slovakia and Germany is being felt very keenly.

Statistics are published of the value of Norway's exports. From these it is seen that in August the value of paper sent overseas was 10 million kr., comparing with 12.2 million kr. in August last year. During the period January-August paper exports reached 68.6 million kr., as against 73.7 million kr. in the corresponding period of 1922.

Pulp exports in August were of the value of 16.4 million kr., and in the eight months 105.5 million kr., the corresponding figures for 1922 being 9.7 million kr. in August and 88.4 million kr. for the eight months.

News-Print Price.

Consideration is being given in Canada to the question of the contract price for news-print which should operate next year.

It is understood that some of the plants in Canada are in favour of a $5 advance on the present contract figure of $75 a ton, while others believe that, in the existing state of trade in other lines, it would not be good policy to take such a step at this juncture. Just when the annual reports of various companies show a gratifying gain in earnings, there might be quite a feeling on the part of consumers against such a projected course.

There are many considerations to be taken into account. The chief consumers of Canadian paper are, of course, the United States, and Canadians in that market have to meet the competition of European mills. The chances, it is suggested on the other side, are that Europe will send little, if any, more than at present, while Canadian mills, with the advantage of proximity to the sources of pulp wood supply and cheap electrical power, have proved their ability to more than hold their own in competition with American mills, particularly those who are dependent upon Canadian wood.

The circumstances favour a higher price for news-print in 1924, it is asserted, although it must not be overlooked that the policy of the big American mills exercises a strong influence in this connection. Having regard to the advance in operating costs and to the fact that pulp wood is almost certain to go up next season, the probabilities are that American and Canadian mills will fall in line as far as the new price is concerned. Many companies are working on a small margin and would welcome a higher price.

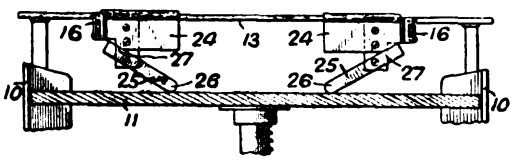
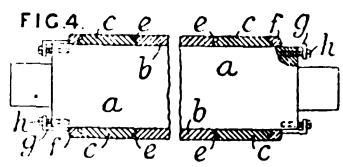
New Inventions

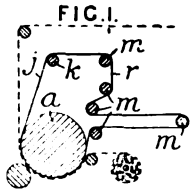


Bed Reciprocating Apparatus.

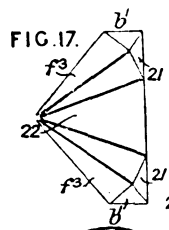
In this invention a cylinder machine more especially of the kind in which the bed and cylinder have relative vertical reciprocatory motions is constructed with a driving arrangement between the bed and cylinder comprising a gear wheel geared to racks on the bed and cylinder carriage and arranged between said racks. The bed 16, Fig 1, is reciprocated in vertical guides by means of a pair of connecting-rods 20 connected to pins 19, Fig. 2, on brackets 17, secured at each side of the bed and to which are connected racks 18. These



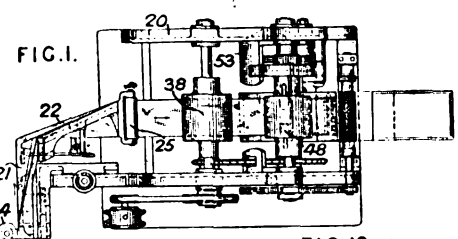
racks gear with pinions 12 which engage racks 28 secured to a cylinder carriage 25. The cylinder is thus reciprocated in a direction opposite to the bed, and the strains incident thereto are not transmitted through the type bed. The rods 20 are spaced widely apart and their arrangement allows the bed to be reciprocated in good alignment, and thus the bed keeps good register and enables the machine to be used for multi-colour work. The arrangement of the rods 20 enables a delivery table 29 to be placed between them and to be lowered automatically without



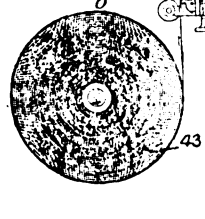
interference. The throw of the delivery gripper arms is thus reduced. The invention is patented by the Miehle Printing Press and Manufacturing Co., who have also patented a delivery apparatus in which the rear and side gauges of delivery table mechanism for printing machines are provided with pivoted fingers which rest in contact with the delivery table and follow its vertical movement during the early part of its descent so as to prevent displacement of the sheets when the pile is being started. The table 11 is confined between guides 10 on a frame provided with a rear transverse bar 13, on which are adjustable brackets carrying forwardly extended bars 16 having the rear gauges 24 adjustable thereon. Fingers 25 with rounded ends 26 in contact with the table 11 are pivoted to the gauges 24 and ensure correct positioning of the first delivered sheets whilst the pile is being started. When the top of the pile reaches the level of the gauges the movement of the fingers is arrested by inclined stops 27. Side gauges with similarly pivoted fingers are also provided on the side bars 16.

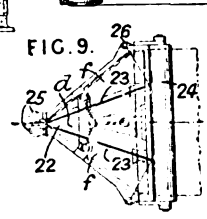


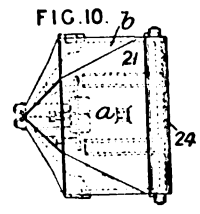
Printing Different Widths of Web.



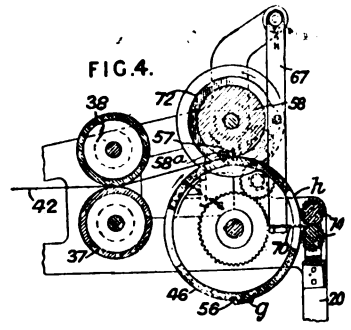
To obviate the necessity for providing a new covering for the impression cylinder of a printing machine when a fabric of different width has to be dealt with or when borders only have to be printed, the cylinder *a* is provided with a central boss or enlarged portion *b* of the same length as the smallest width of fabric to be printed, and the central boss may be lengthened for printing a fabric of greater

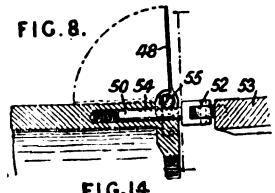


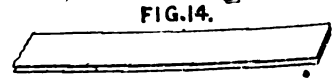




width by one or more separate bosses *c*. The central boss *b* may be integral with the cylinder *a* or removable. The bosses are preferably formed of two semi-cylindrical portions stepped at the ends *e* to interlock and secured







to the cylinder by means of stepped rings *f* clamps *g* and set-screws *h*. An endless rubber, etc., blanket *j* passes round the bosses on the cylinder and is supported by an adjustable tensioning roller *k* and guide rollers *m*. For printing bordered fabrics end bosses of larger diameter than the central boss are employed. The blanket may be kept clean by suitable washing and drying means conveniently applied to a vertical portion *r* between a pair of the guide rollers. The patentee is Mr. J. H. Wallis.

Paper Folding Machines.

An application under this heading has been made for a British patent by the Independent Paper Mills, Inc. (Assignees of C. Arelt.)

A paper web is drawn by feed rollers from a supply roll through a device which provides it with a plurality of longitudinal folds, after which it may be cut and folded transversely for the production of paper napkins, &c.

The longitudinal folder, arranged between the supply roll 43 and the feed rollers 37, 38, comprises two members 21, 22. The member 21 consists of a central part *a*, Fig. 10, and side parts *b* at an angle thereto. The other member 22 consists of a central triangular part *d*, Fig. 9, and side parts *f*, spaced from the part *d* to provide slots 23 and pivoted at 26 so that they may be swung away from the part *d* to facilitate the insertion of the web at the beginning of the folding operation. A guide roller 24 is mounted at the free end of the member 21, and rollers 25 for completing the folds are journalled at the converging ends of the parts *d*, *f*. This construction of the folding members causes the web to receive three longitudinal folds, as shown in Fig. 14. By providing two additional angled surfaces *b*' on the member 21, as shown in Fig. 17, and two additional spaced parts *f*³ on the member 22, the web may be provided with five longitudinal folds. For producing paper napkins, the folded web is cut transversely into sections, which are then folded transversely into the folding rollers 74, Fig. 4, by means of a blade 70 carried by an arm 67 oscillated by a cam 72.

The transverse cutting of the folded web 42 is effected by a cutting blade 57 carried by a roller 58, Fig. 4, coacting with grooves 56 in the drum 46.

With regard to the gripper mechanism, the front end *g* of the web section *h* being cut, and the end of the web immediately behind the cutter 57, are held against the drum 46 by grippers such as 48, Fig. 8. These grippers are mounted on pins at the edges of the drum, the pins carrying pinions 55 engaged by racks 54 on spring plungers 50 fitted with runners adapted to engage stationary cams 53 on the machine framing 20, whereby the grippers are moved to their open position. A rubber, &c., strip 58*a* may be provided on the roller 58 to press resiliently on the grippers 48 so as to hold the web more securely during the cut.

U.S.A. Paper in Britain.

Competition from the Home Market.

Severe competition from both English and Continental mills has prevented the United States, during normal times, from developing any large volume of business in the British market, according to Mr. Maurice C. Pierce, U.S. Consul in London, in a report to the Department of Commerce, Washington.

Aside from the war period and the boom period following it, business has been confined almost exclusively to specialty lines, such as cover papers, photo-mount boards, high-grade bond papers, etc., for which a demand has been created through constant solicitation among the high grade printers and large consumers. These grades, however, are practically all high-priced and consequently the demand is limited. While these papers are imitated to a certain extent by the European mills, thus rendering it more difficult to compete, American papers, it is asserted, have a certain distinctiveness which appeals to the discriminating buyer, and it is believed that an aggressive sales campaign would tend to increase the demand.

Other grades in which the American products excel those of the European mills, according to Mr. Price, are clay-coated boards and banks used for post card and multi-colour work, and patent and clay-coated box boards. The latter grades are far superior to the European makes, he says, because of their better bending qualities, this being the principal essential in a box board. There is a large demand in England for such grades, but, as in the case of the high-grade papers, the cheap European substitutes offer keen competition. This is particularly true in respect to box boards.

American mills are practically shut out of the market for printing papers, with the exception of the higher grades, such as antique wove and laid papers, and the special deckle-edge antiques. The same is true in regard to American wrapping papers.

As a means of increasing the demand for American high-grade papers, it is advised that attention should be given to the requirements of the market, particularly in respect to sizes and weights required. While American consumers in London can be induced to use American sizes, the British wholesale houses can not be expected to buy and stock American stock sizes and weights when their principal demand is for English specifications. This has been one of the principal obstacles in the path of success in selling American lines.

British Paper in Cuba.

European Manufacturers Gaining a Firm Footing.

In a report to the Department of Overseas Trade Mr. G. D. N. Haggard, H.M. Consul-General at Havana, says the market in the past has been to a great extent in the hands of the Americans, who by nature of the preference accorded to the goods by the Reciprocity Treaty of 1903, mounting to 30 per cent. on paper, and also largely due to their proximity to Cuba, were able to obtain and maintain this position against competitors.

With the gradual return of normal trade conditions in Europe, the paper trade appears to have recovered its stability, and in a remarkably short space of time European manufacturers have not only gained a very firm footing in this market but have shown every sign of ultimately displacing American producers to a very considerable degree.

Germany has long been a regular contributor in certain lines of paper, but the partial paralysis from which her industrial districts have suffered, renders buying from such a source impracticable, and it is thought that this loss of supply could be replaced by United Kingdom manufacturers.

European prices to-day are strikingly low, when compared with American quotations, whilst the quality of European papers is everywhere admitted to be unquestionable.

In this market noticeable dissatisfaction with American exporters and manufacturers' methods has been shown lately, as a result of which, where European prices are reasonably competitive, Cuban buyers are only too ready to turn in that direction for their supplies.

Statistics are practically non-existent, only importations from the United States being so-defined, and even as regards that country no very accurate information is available, since much of the paper exported to Cuba from the United States, is said to have been originally imported from Europe. Probably a fair estimate of the value of Cuba's annual consumption would approximate to 15 million dollars, of which 6 to 7 million are derived either directly or indirectly from Europe, through Norway, Sweden, Denmark, Germany, Great Britain, and perhaps mention might be made of Spain; the latter country confines herself entirely to the supply of cigarette paper, and a certain grade of office note paper known to this market as "Spanish paper."

While Great Britain has not hitherto been so strongly represented in this market as she should and could be, it is at least gratifying to note that some effort is being made to bring her goods before the eyes of Cuban buyers; some representatives of United Kingdom exporters have lately visited this territory on their way from Central and South America, and it is understood that quite considerable business is likely to accrue from their efforts.

Nevertheless it should be realised that the market is ripe for British competition, and that the amount of business which could be done is by no means negligible, and seriously merits some effort on the part of British exporters.

Samples of certain classes of paper have been forwarded with the report and can be seen on application to Mr. Webster Jones, Department of Overseas Trade, 35, Old Queen-street, London, S.W.1.

MR. WM. STANSFELD, 82, Queen street, London, E.C.4, has been appointed sole agent for Great Britain and Ireland by Verkaufs-Vereinigung Deutscher Pappenfabrikanten G.m.b.H., an association of German board mills manufacturing wood pulp, leather, grey and hard boards, as well as various other kinds of boards.

13 IS THIRTEEN AN UNLUCKY NUMBER ? WE SAY **NO** 13

? CURIOSITY ?

is a human failing. It is also a commercial asset. Curiosity is, in fact, one of the secrets of modern commercial success. It keeps you in touch with every modern development of the trade in which you are engaged.

It is a commonplace to say that the printing trade covers a range of activities greater than most.

Obviously, therefore, you haven't the time personally to gather the information to keep thoroughly in touch. This is done for you by the *British and Colonial Printer and Stationer*.

You probably have many friends in the trade, however, who are not keeping in touch.

CO-OPERATION

You can help your friends and us by introducing to them the *British and Colonial Printer and Stationer*.

Let us have their names and addresses : we will do the rest.

THE

British & Colonial Printer & Stationer

has been established for nearly 50 years. The more important features are :

Reports of Trade Associations, Societies, etc.,
Latest Commercial Intelligence
Technical Articles
Trade Notes
etc., etc.

A monthly issue contains a section devoted to the **Bookbinder** with notes and news and market prices.

The monthly **Lithographic** issue contains special litho matter including litho notes and news.

The **Quarterly Export** issue deals with colonial and foreign markets and provides a general review of the home trade.

COST

The yearly subscription to the *British and Colonial Printer and Stationer* is **Thirteen Shillings** including postage. Is it not worth it?

Send us your friends' names and addresses **To-Day**.

13 THIRTEEN SHILLINGS WELL SPENT 13

THE TRIUMPH OF Modern Offset Lithography

By JOSEPH GOODMAN, F.R.P.S.,

City and Guilds of London Honours Silver and Bronze Medallist, Lithography and Photo-Mechanical Processes. Author of "Practical Modern Metalithography," etc.

"Relief Image Offset Lithography," although a descriptive title, is a somewhat misleading one, as lithography is a "planographic" process, *i.e.*, a method of printing from a common plane, or flat surface, in contradistinction to the other forms of printing methods in which the printing surface proper is either *above* or *below* the common plane, whereas with lithography there does not exist this differential condition, the lights and printing image being on the *one* plane. Now with this relief image offset lithography, the actual printing surface is in relief, yet the printing is done by the rubber transfer method as in the planographic operation, hence it becomes necessary to use the above lithographic nomenclature to associate it in description.

Relief Offset Lithography.

This "ringing" of the terms of description has justification by the precedent established by typographers themselves, when one recalls the fact that some twenty years ago letterpress printers termed a special colour printing process by the name of "Wharf Lithography," because the inventor, a lithographer, had devised a method in which a chromo-lithograph job in any number of colours could be printed from a typographic letterpress machine. The method of procedure was for a lithographic transferrer to pull transfers from his chromo job—say a ten-colour calendar; each colour from yellow to the finishing colour grey would have as many transfers pulled from it as there were to be units in the printing sheet, usually four-up. These transfers of each colour were "patched up" or stuck up into the correct position which they had to occupy upon the printing sheet for the working-off of the run. Usually the transfers were taken from litho stone, and run down to zinc plates of about 18 s.w.g. Each plate was then treated in a special manner to a peculiar etching process, which whilst slightly raising the image into relief by decomposing the plain portions of the surface, at the same time produced a remarkable physical surface there, which was likened to a mass needle-like structure surface, said to be so peculiar in action as to resist the taking-up of any ink from the inking rollers as they passed over the forme when inking up the raised surface proper of the design during printing.

The Process Explained.

Really the action was similar in character to the normal lithographic one, inasmuch as the actual printing image surface was not in any way affected by the etching procedure, but the portions that remained plain and free from any portion of the printing image, were rendered unable to pick up and retain the printing that was imparted to the other printing portions of the same surface; that is, they were changed chemically and physically by the etcher and varnish spray that were used in the treatment.

What really happened in the actual printing was, these several colours, each upon a separate zinc plate were mounted upon a wood block type high, each colour in precise registering precision to each other. The first colour was placed in any wharfedale machine, in similar manner to a forme of type, and printed off, using the regular composition rollers, in which no damping was necessary; hence no water was employed at all, thereby ensuring freedom from expansion or contraction of the printing paper, as is so frequently the case with a large proportion of printing papers used by the lithographer. It was also claimed for the process, that the work did not deteriorate or wear away, nor was there any thickening or bunging-up of the finest texture of the design. At that period the flat-bed letterpress machine was run at a much greater speed than the flat bed litho machine, hence there was an additional advantage in that respect. Certain it was that a large number of jobs were printed by this process in as many as ten colours; and jobs that were hitherto done by the lithographer solely. Yet despite this, the process was but short lived, and as it had to depend largely upon the lithographer in one form or another, such as the actual drawing of the design, the transferring and the special etching, and in large measure the mixing of the colours, the sequence of printing, the transgression of interests and border lines of trade demarcation, has to-day left us nothing but the few specimens of the process to keep its memory alive. We have preserved a few of these as milestones in the road of colour printing methods. On no occasion, however, so far as we know, was there any attempt made to apply the offset principle to this process, hence in that respect it differs entirely from the above mentioned relief image offset lithography. The main features of the process owe their origin to Mr. G. Hildyard with whose name it was mainly associated.

Right View of Relief Offset.

In returning, therefore, to the relief offset method, we shall now clearly see the true perspective of both methods and their differing features of attainment and application, yet at the same time justify the use of lithography for relief design printing, and explain the rather contradictory term of relief lithography.

This new method of relief offset lithography then consists in first making up a repetition design of any pattern, floral, figure, or ornamental, and from the accepted unit preparing the large printing plate for the machine. Invariably zinc plates are used. The duplication of the design to fill the agreed size, may be made either by the usual lithographic transferring method, or by the photo-mechanical process of the Lithotex "step-and-repeat" transferring.

The sensitising of the zinc plate to receive the photo image of the design may be done with either the bichromated albumen sensitiser, or by the fish glue enameline procedure. In any case, it must be remembered that once the design is placed completely upon the zinc plate, it has then to be etched up into relief, therefore it is more a matter of convenience and reliance which method is adopted. With the fish glue method, provided a really reliable formula is employed which will give a good anchorage to the zinc without "lifting" or peeling, or crumbling, this affords the best resist for the etching. Unlike the ordinary zinc line block, the etching required for this work is not nearly so deep as in that. Hence the straight cut machine etch is far preferable to the rocking etch as followed by the hand bath, or machine rocked bath. Fine lines are

Digitized by Google

thus saved the risk of undercutting or breaking away.

Plates and Rollers.

It is remarkable what shallow etching this process will permit of, and yet give good results from the rubber blanket. The shallower the etching, the less the risk of damaging the design in the actual preparation of the machine printing plate; particularly as regards the thickness of plate.

These plates, when etched, are affixed upon the cylinder of the offset machines, and in place of the usual litho rollers of the "nap" or "glazed" varieties, composition rollers similar to the letterpress rollers are used. Rubber rollers have been tried, and will at first give most satisfactory results, but the susceptibility of this material to quick deterioration due to atmospheric and temperature influences, renders them soon patchy and uneven.

There is also a new material composition made from special treatment of linseed oil, etc., and the rollers therewith produced are far more durable in formation and rotundity, although frightfully dear in comparison with the letterpress treacle and glue rollers. However, the choice of these is left to the actual user; what does matter is that a good set of uniform and even rollers of the composition kind are employed, so that they can be set to great nicety of adjustment. It will be remembered that they are only required to ink up the slight relief surface with a very small film of printing ink, without getting down into the depths of the etching; the rubber will do the rest so far as the actual impression of the design upon the printing paper is concerned.

The natural attraction of the rubber and its resiliency will carry either body colour or tint to the paper, so that any colour may be used and any class of paper employed, and no damping is permissible, which means that the machine minder of the offset removes his dampers from the machine altogether, and carries out his inking up on the plate in the purely mechanical manner of the letterpress printer.

Special Work Accomplished.

It may be as well to remark that in the etching procedure there is a margin left all round the design for the assistance of the rollers or bearers in the inking in. In practically all the classes of work in which this relief offset method is employed, such as the protective and fugitive sensitive cheque printing, book end-papers, box cover designs, and similar work, these margins are cut off the sheets after printing, so that the whole surface of the sheet is alone covered with the cheque pattern or the design. Therefore the introduction of this relief margin is immaterial and no detriment, as the sheets would in any case have to be trimmed.

With regard to the ink for the cheque work, a special sensitive ink is used, which will reveal at once any tampering with either acids or alkalis or even moisture, thus the offset method is here employed to print special work that hitherto was done by the intaglio process in very large measure. Some of this class of work has been done typographically, but when compared with the same work done from the offset machine in the manner described above, there are no two opinions as to the quality and excellence of the result. Hence the offset process has shown its utility for printing in the relief manner in addition to the planographic.

L&M

LITHO ROTARIES

THE PRESSES WITH SPECIAL FEATURES.

THESE LITHO ROTARIES have now been in use for many years, and have fully demonstrated their value to practical printers on all classes of work. When designing and developing these presses, our engineering experts collaborated with practical printers in order to give to the lithographic trade the best machines for direct and offset printing.

We specially invite those houses who at present are engaged solely in letterpress printing, and are considering the possibilities of litho machinery in their own business, particularly offset printing, to permit us to advise them in the matter. We shall be pleased to arrange for one of our experts to discuss the matter with any printer who writes us accordingly.

General printers who intend to extend their lithographic departments by installing Litho Rotary Presses should send for full details of the

L&M Direct Litho Rotary

L&M Offset Litho Rotary

L&M Two-Colour Offset Litho Rotary

The L&M Litho Rotaries are made at our Works in Altrincham, Cheshire.

A Revolution in Lithography.

Leading Principle Abandoned.

By Charles Harrap.

After years of studying the subject and of practical work, an old student of the St. Bride Institute Lithography School has, it is gratifying to know, accomplished a change in lithographic practice which dispenses with what has hitherto been considered an integral part of the business. He has, in fact, found a means of printing without the use of the damping apparatus.

The adoption of this discovery is followed by incalculable advantages. At first sight the magnitude of the discovery is not fully apparent, but upon reflection the revolution effected will be more perceptible.

Putting aside for the moment other considerations, the outstanding feature of running a litho machine without damping apparatus must appeal to the craft as one of the greatest boons which could have been conferred upon it. Such a change eliminates repairing and cleaning damping rollers—material and time saved—and removes any wear and tear on the printing surface due to dampers. Further, it renders the paper less liable to stretch in register work.

Perhaps the next important feature is that printing by the machine is rendered much less trying. The pressure is reduced to what is usually called "no pressure" at all, but is actually just the nip of the cylinder on the stone or plate. In consequence of this, there should seldom be a broken stone, and the liability of paper creasing is reduced to a minimum. Other results of this decrease of pressure are perceptible in the longer life of the blanket, with absence of scum on the printing surface and little or no wear on the work arising from the running of the machine, thus ensuring a much longer life to the printing surface. Coupled with these advantages it may be safely stated that the time of making ready can be shortened at least 25 per cent.

Taking other aspects of the matter, the vital question is solved in the ink. It may be stated at once that its composition was not a mere accident, but is the result of research assisted by the advice of an experienced chemical expert. Although the ink has a special composition, it has no injurious effect upon the stone or plate, the work or the paper: on the contrary the same amount of ink (from the tin) used in the ordinary way with dampers will become capable of doing 25 per cent. more work, as more varnish can be used. The apparent reduction in the quantity of "colouring matter" does not make the print any lighter, but actually results in a fuller and richer tone; probably one of the extraordinary features of the ink so prepared is that the fugitive inks for cheques can be printed from lithographic stone.

All these matters are accomplished facts, and this method is in daily use. Considerable quantities of work have been printed in black and colours by this means, while further experiments are in progress.

It is contemplated that it will be possible to print from plain (planished) zinc, and that owing to the absence of grain the screen of photo-mechanical work can be much finer. It is further anticipated that as the ink prints so much fuller a better three colour print should be obtainable by lithography.

"Some" Paper.—In all journalism there is nothing quite so voluminous as the Sunday edition of an American daily paper. The New York *Times* of October 7th eclipsed all records in this respect. Its issue for that date consisted of twelve sections, comprising a total of 192 pages. It included 501 columns of news, special features, and pictures, and 862 columns of advertising. The total weight of paper used for the entire edition of 565,000 copies was 877 tons. This exceptional size, says the *Manchester Guardian*, was possibly due in part to an accumulation of unused matter—other than news of the moment—that had been set up in the office during the pressmen's strike, when only a skeleton of the normal paper could be printed off.

An Advertisement is always working.

A New Offset Press.

Prints Six Colours on One Job.

From "National Lithographer," New York.

A trip to the factory building at 124, White-street, New York City, disclosed an entirely new kind of lithographic press, which is on exhibition on the fifth floor, in the office of the Fowler Bottling Co. This machine is the invention of Mr. A. Zwoboda, an engineer at one time in the employ of R. Hoe and Co., and also the inventor of several practical labour-saving machines now in use.

The name of the company which is handling this press is the Univeral Rotary Flat-bed Printing Press Co., Inc. Among the officers appear the names of some well-known lithographers and mechanics. The company has an authorized capital of $500,000. The only machine completed is a model in size about 4 by 6 ins. which works perfectly. A machine of commercial size is being built and is expected to be ready for installation some time this winter.

The little machine which is now being exhibited is a most remarkable one. It has six flat beds which revolve and come in contact with a cylinder which carries a rubber blanket. The blanket takes the impression from the forme or plate on each bed, carries it forward to the impression cylinder which carries the paper and the image to be printed is transferred to the paper and the sheet is either retained until six colours are printed or is delivered, as the operator elects.

We have on exhibition in this office some prints which we saw made—both six colour finished work and six prints separately—all of which appear to be perfectly made both as to impression and register. The machine does not appear to be cumbersome and is no larger, in proportion to the size of the sheet printed, than any two-colour or multi-colour press now on the market.

One of the peculiar features of this machine is the fact that it may be used either as a direct rotary litho press, an offset litho press or a type press without any change in the general construction of the machine. It may be used for dry lithography without any change at all except to drop the water fountain and high etch the plate.

There are a lot of other things that it seems possible to do with this press, but lack of space prevents their enumeration here. We suggest that those interested take a trip up to 124, White-street, look the model over and draw their own conclusions. It is well worth looking at anyway, and any practical lithographer will find food for thought in a visit to the plant and an inspection of the machine.

Statistics are printed in the *Ministry of Labour Gazette* of the membership of trade unions, comparing the position at the end of 1922 with that of 1921. In paper, printing, etc., there were 25 unions at the end of 1922. The total membership is given as 179,878, made up of 131,287 males and 48,591 females. The total membership at the end of 1921 was 194,391, of whom 137,002 were males and 57,389 females. Comparing the figures at the end of 1922 with those at the end of 1921 there is a total decrease of 7.5, males being responsible for a decline of 4.2 and females for a drop of 15.3. The membership of trade unions affiliated to Federations was 82,000 in 1913, 193,000 in 1921, and 178,000 in 1922. The percentage proportion of federated membership to total membership is given as 98 in 1913, and 99 in 1921 and 1922.

Gold Inks
(LETTERPRESS)

IF you have never yet tried Gold (Letterpress) Inks or are familiar only with those hitherto obtainable, Lorilleux and Bolton's gold inks will be a revelation to you.

No modern printer keen on cutting costs and speeding up production can possibly afford to ignore the handiness and economy they offer.

The following points show the great superiority of Lorilleux & Bolton's gold inks:—

1. They do not clog or harden on the rollers.
2. Need no specially skilled operator.
3. Are suitable for either platen or cylinder machines.
4. The machines can be run at normal speed.
5. Retain their brilliance for long periods.
6. Print the type thoroughly and heavy solids without difficulty.

Available in light and dark shades of gold as well as silver.

Write for specimen prints and generous sample tin to-day.

Lithographic Trade Review.

NOTES AND NEWS.

Developments in planographic printing methods are at the present moment coming to light in various directions, and some of them promise to have very far-reaching effects. The most interesting, perhaps, is one relating to "dry" litho. In a humble London printing office we have seen an old litho machine printing miscellaneous jobbing work in a manner that is going to make the litho printing trade open its eyes in astonishment. An ordinary litho stone is being used, not etched in relief and not specially prepared in any way; damping apparatus is entirely dispensed with, and the machine is run for hours at a stretch with no attention at all beyond the giving of an occasional stir to the ink in the duct. In Peter-lane, which runs into St. John-street, where the Smithfield atmosphere is more than ordinarily thick with the reek of bacon and such-like commodities, a small hanging board indicates the upper storey where Mr. W. P. Price is practising this new way of printing which would seem to be destined to make history in the near future.

With next to nothing in the way of capital, and working under desperately trying conditions, Mr. Price, with the true ardour of the pioneer, has struggled through to success. In a disconcertingly simple fashion he is doing what, but for ocular demonstration, one might have said to be impossible, and the machine on which this "dry" litho process is being carried out is a decrepit double demy litho machine with a single spur wheel, a piece of apparatus which some eleven years ago a well-known London printing house threw out as obsolete. Mr. Price can apparently use any stone or plate, and is turning out to customers' requirements a variety of respectable work in the way of ordinary commercial letter heads, memorandums, invoices and so forth. Trouble with rollers as commonly used is, at the moment, preventing application of the method to the production of litho work on a Wharfedale machine, but the transition would now seem to be an easy one. We commend to our readers the article in another column in which the process and its advantages are dealt with by Mr. Chas. Harrap, the well-known litho specialist and author.

An interesting new development which will soon be a subject of discussion in the trade is what is known as the "Wincor" process. This is the invention of a Swiss firm which already has a commercial plant in existence doing the whole of their laying down of work upon the plates by this film process. The method is only applicable to facsimile reproduction of existing matter, no camera being employed. The process consists essentially in the use of a ready sensitised celluloid film, which seems to keep indefinitely, and which is commercially prepared expressly for this purpose. A piece of the film is laid, coated side down, upon the printed matter to be reproduced, and placed in a vacuum printing frame, being then exposed to arc light for about three minutes. The result is that the celluloid bears an image which is not visible, but which becomes so after development, being then the equivalent of a photographic film negative which can be employed in the usual way for printing down on to sensitised zinc plates for offset or direct lithographic printing. After being thoroughly tested commercially by the Swiss firm, the process has now been taken up by an English house which will shortly be putting it into commercial operation. It will be observed that the main feature which distinguishes this process from the Manul is that here a ready-made sensitive film is employed —and this can be produced in uniform quality—whilst in the ordinary process, we understand, the glass plates have to be coated as required.

There has for some time been talk of the possibilities of a new material known as Zellon, and this, we hear, will soon be to the fore in this country. The material is a special cellulose film which is transparent, non-inflammable, very flexible, and can be printed upon almost as easily as paper. Proofs can be taken on this material from type or stone or plate, good black ink being used, the ink being afterwards dusted with bronze powder and the result being a perfect positive for photographic use. This positive can be printed on to a sensitised zinc plate to produce either etched blocks or lithographic printing surfaces. The process, we understand, is suitable for the reproduction of half-tones of not too fine a screen, but for finer work spaces can be left in the text matter for the transferring of films from ordinary half-tone negatives. The whole sheet can then be printed down at one time. The result is a negative image on the metal, readily transformed into a positive image by a method analogous to that known as the Vandyke. The process is particularly suitable for preparation of plates for newspaper or periodical printing, and has the advantage that sheets of film as large as the formes can be printed down if desired, instead of having to make up a plate with a number of separate negatives. We understand that the process is being handled, and the film produced, by Messrs. Penrose and Co., a licence for its use being obtainable.

Mr. Frederic T. Corkett, F.R.P.S. writing in the American *Photo-Engravers' Bulletin* decries gloomy expectations as to the supersession of typographic printing by photogravure "Regarding photo-offset, however," he writes, "this is a horse of quite another colour. Here we have extremely simple means of printing plate production, coupled with the real charm of offset effect, particularly in the realm of colour; photo-offset must capture much, very much that letterpress otherwise can do. This photo-offset is doing here every day, as we know. This is a much more rapid transit of method and the extraordinary ease by which the printing surface is made accounts for much. Mr. Oscar F. Kwett says he knows of a concern that prints at 1,800 impressions per hour. Well, I know of a dozen at least who print offset at 2,500 per hour, automatically fed of course, and I have just seen a rotary lithographic cylinder printing at 7,000 revolutions per hour, that is 7,000 impressions from the reel, of course, and I really must say at this speed the impressions were clean, fully inked and in every way satisfactory. Every photo-engraver, it seems to me, should keep his eye on photo-litho offset, and I cannot see why photo-engravers should not also supply lithographers with photo-litho plates."

The Amalgamated Society of Lithographers met the Federation of Master Printers in conference on Tuesday, when the important subject of rules relating to working conditions was fully discussed. It was agreed that certain procedure for dealing with this matter should be recommended to the executive of the Society and the Federation Council for adoption. The question of an additional rate for flat-bed offsets was considered, but no agreement was reached, it being decided that further inquiries should be made. The Federation agreed to recommend to employees that men transferred from rotary to flat-bed machines should not be reduced without the usual notice.

The first concert of the season to be held under the auspices of the Lithographers' Auxiliary is to take place at Anderton's Hotel, Fleet-street, on November 9th, when the chair will be occupied by Messrs. R. A. Bartlett, A. E. Earl and F. H. Howe. A good start is to be made with an excellent programme of musical artistes, and with the co-operation of Mr. R. Andrew Spottiswoode (the new president), the Auxiliary's efforts this coming season should meet with more than the usual amount of success.

The London Branch of the Amalgamated Society of Lithographic Printers are circularising their members with a view to raising money for the War Orphans' Fund of the Printers' Pension Corporation. Though the Society is co-operating with the rest of the printing trade in the Flag Day appeal, this effort is quite independent. Messrs. C. Alexander (the president of the London Branch of the Society), Woodgate Stevens, and A. J. Dowden (the secretary and assistant secretary respectively), and a strong committee have the matter in hand.

The capabilities of British offset printers and the special charm of offset in certain types of portrait work can be well seen in the *Picturegoer*, the popular monthly cinema journal printed and published by Odhams Press, Ltd.

In the lithographic section of the trade, business is only moderate. As far as unemployment is concerned, a much better state of things exists to-day than was the case this time last year, although contrasted with a couple of months ago conditions are not quite so good. This latter feature is, moreover, looked upon with some surprise in view of the approach of Christmas.

Employment in Allied Industries.

Reports and statistics alike confirm the poor state of the paper industry. For the month of September employment in the paper trade was moderate on the whole, and showed a slight decline, though some improvement was reported in the hand made section. With letterpress printers employment also showed a slight decline in London, while it was generally fair and rather better than in August in the provinces, though a slight decline was reported at Manchester and Aberdeen. With electrotypers and stereotypers in London it continued very good. In the lithographic printing trade employment was generally moderate. In the bookbinding trade it continued slack, but showed a slight improvement in London.

Unemployment Figures.

The figures of unemployment in the paper and paper board making trade at September 24th give a total of 4,755, comprising 3,456 men, 1,059 women and 240 juveniles. The increase compared with August 27th was 482. In the manufacture of cardboard boxes, paper bags and stationery, total unemployment reached 4,165, of whom 1,107 were men, 2,743 women and 315 juveniles, the increase in the month being 16. Printing, publishing, and bookbinding accounted for a total of 13,012 unemployed, made up of 8,444 men, 3,779 women and 789 juveniles. In this case there was a decrease of 194. Wall-paper-making and paper staining had 230 unemployed, namely, 144 men, 70 women and 16 juveniles, an increase of 7. The only other section of this group of trades to show a decline in unemployment was stationery and typewriting requisites (not paper). The total of 255 was distributed among 107 men, 108 women and 40 juveniles, a decrease on the total of 42. According to returns furnished by trade unions in the printing, bookbinding, and paper group of trades, out of a membership of 98,148 at the end of September, 4,614 were unemployed, a percentage of 4·7. There was a decrease of 0·3 compared with a month before, and of 1·6 as against the figure a year ago.

During the first half of the present year Russia imported paper, etc., to the extent of 10,500 tons, of the value of 2,372 (1,000 gold roubles at 1913 prices). The corresponding figures for 1922 were 31,200 tons and 7,060 (1,000 gold roubles, 1913 prices).

Printers and Direct Mail Advertising.

Address by Mr. Arthur Chadwick, Chairman and Managing Director, Amalgamated Publicity Services Limited.

Addressing the Association of Master Printers of the London Central Districts at Stationers' Hall last week, Mr. Arthur Chadwick (as we have already briefly reported) spoke on "Printing: Its Relation to Direct Mail Advertising (American Methods)."

Mr. Chadwick prefaced his remarks by expressing his friendly attitude towards the printing trade and his wish to see closer co-operation between printers and direct mail advertising people. Printers, he said, had been too apathetic, and had failed to appreciate the possibilities in the field of direct mail advertising; incidentally, there was also a need for bigger vision among advertising people in this country. In his opinion British printers must wake up to the possibilities before them. By the substitution of co-operation and good will for jealousy and suspicion, untold mutual benefit would result to printers and advertising men alike. As an advertising man he believed that every phase of advertising was good; that each in turn had its place in the publicity armoury. He wished it were possible for all British printers, advertising men and other workers in the allied trades to visit America and realise for themselves the spirit of co-operation, good will, far-sightedness and broad vision which characterised the craft on the other side of the Atlantic. He was as proud to be a Britisher as any American was to be an American, but he personally had benefited greatly by contact with the advertising men of America, and he wished to pay honour where honour was due.

What D.M.A. Stands For.

It might be said that anything carrying a postage stamp was direct mail advertising of a kind—or, as commonly known in this country, postal publicity. He wished to controvert the idea, too prevalent to-day, that direct mail advertising meant merely the dispatching of circulars. D.M.A. (Direct Mail Advertising) included ideas, plans, copy, sketches, blocks, print, stationery, envelopes and mailing lists, also addressing and mailing to the right public. It took the form mostly of printed matter of the following kinds: Blotters, booklets, calendars, circulars, catalogues, form letters, folders, broadsides, illustrated letters, house magazines, leaflets, stores news, etc. D.M.A. did not supersede Press advertising. Newspapers and magazines had their recognised uses in modern advertising; so had posters and other forms of publicity when properly applied. Newspapers and magazines were used for reaching the masses; D.M.A. for reaching the classes. Whilst Press advertising was the principal medium for mass selling, D.M.A. was the ideal and most economical method of selling to a *selected limited public*. D.M.A. was an adjunct to the Press, and almost everything that could be sold could be sold by D.M.A.

Growing Importance of D.M.A.

The latest figures available showed that the amount of money spent in America on advertising in the year 1922-23 totalled $1,300,000,000. It was interesting to note the relative position held by all forms of advertising in America from figures compiled for 1920. These were: Newspaper advertising, $600,000,000; D.M.A., $350,000,000; magazines, $150,000,000; business papers, $70,000,000; electric and painted signs, $30,000,000; novelties, calendars, etc., $30,000,000; farm papers and periodicals, $27,000,000; sampling work, $24,000,000; window displays, $20,000,000; bill posting, $12,000,000; street car advertising, $11,000,000; programmes, $5,000,000; motion pictures, $5,000,000. Since 1920 D.M.A. had substantially increased, and it was estimated that for the year 1923 it would stand at over $500,000,000. Some idea of the importance attached to D.M.A. in the U.S.A. could be gained from the fact that the Direct Mail Advertising Association were holding a three days' convention and exhibition at St. Louis, Mo., beginning on Wednesday, October 24th, when 3,000 delegates were expected to attend. A large proportion of them were men and women directly representing the printing trade of America. A few of the many items on their programme were: "Overcoming the Distribution Problem," "Mailing Lists—Graveyards or Live Selling Fields," "Direct Mail Advertising—From Pulp to Prospect," "Follow-up Methods that Bring the Reply You Want," "Editing House Organs for Customers and Prospects," "Keeping Presses Active in the Dull Months," and "How to Turn Inquiries into Sales."

D.M.A.—Its Functions and Uses.

Mr. Chadwick affirmed that whereas Press Advertising provided for reaching the greatest number of people at the lowest cost, D.M.A. was personal, and enabled the advertiser to reach at minimum cost a selected public. There was scarcely an advertiser but could profitably use D.M.A., whether he were a manufacturer, wholesaler, factor, dealer or retailer. Some of its uses were: (a) to interest prospective customers; (b) to pave the way for travellers' personal calls; (c) to sustain interest and maintain confidence; (d) to hold customers against competitors; (e) to secure repeat orders.

Turning next to direct mail advertising as known in this country, Mr. Chadwick said he spoke with some knowledge of the matter, inasmuch as he had for 25 years been connected with advertising, and mostly with direct mail advertising. He recalled his start in London as a young man in 1898. With the exception of one or two outstanding houses, what were at that time known as "addressing agencies" consisted mainly of a few directories, some of them out-of-date. A back alley address was usual, and men and women or girls worked under the most appalling conditions at sweated rates of pay. Between 1905 and 1914 postal publicity in the British Isles made great headway, but with the outbreak of war in August, 1914, it, of course, experienced a severe set-back. Since 1918, however, things had greatly improved. One factor in that improvement had been the concessions in postal rates which the Post Office had granted after insistent and praiseworthy agitation.

Selection of Public.

In respect of the selection of public, Mr. Chadwick said that America was miles ahead of this country. The mailing list was one of the most important factors in this connection, and our directories left very much to be desired from the point of view of direct mail advertising. So far as he knew, there was not a directory in England to-day that one could take, and use a series of headings in the classified trades' section as a mailing list, without from 5 per cent. to 25 per cent. duplication. The only official list available was that of shareholders in public limited liability companies at Somerset House, consisting of millions of names—the use of which—in its entirety—was impracticable for general purposes because of the cost that would be entailed in the work of classification. In America one could buy for the equivalent of a few pounds a classified list of, for instance, the 750,000 automobile owners in California, and one could readily obtain lists of traders in particular lines of business, whose credit was good for a specified sum of money.

Another point stressed by Mr. Chadwick was the superior status of the American advertising man. He remarked that one advertising corporation in New York had 110 'varsity men amongst its 300 employees, and no less than seven of these were university professors, who had resigned their professorships in order to take up advertising work. American printing houses made great use of direct mail advertising. Examples were shown of the admirable publicity matter used by the R. R Donnelly and Sons Co., and their great advertising resources were described.

Penny Post Required.

In conclusion Mr. Chadwick again urged the paramount need for closer co-operation amongst all those directly or indirectly interested in advertising. One direction in which united effort should be exerted was in regard to postal rates. The return of the penny post would give an immense impetus to direct mail advertising, and, as Mr. Kellaway had recently pointed out, there were strong grounds for claiming it to be a practicable reform. The opportunities to-day for direct mail advertising were greater than ever before, particularly as there was much dissatisfaction in respect of the conditions attaching to existing high Press advertising rates. The Advertising Convention in connection with the British Empire Exhibition of 1924 would provide a supreme opportunity and a supreme test for the British advertising man. If printers of the Old Country would wake up and apply themselves whole-heartedly to the utilisation of direct mail advertising, not only would D.M.A. benefit, but printers themselves would be the greatest gainers.

Paper on the Railway.

The New Schedule and Classification.

A comparison of the present maximum powers and the proposed standard charges reveal the fact that, unless a vigorous fight is made, the allied trades stand to be called upon to pay even higher charges than at present in operation.

When the proposed classification was under review it was reasonable to suppose the sub-division of the existing classification would provide an opportunity to incorporate in the schedule some provision for continuation of Exceptional Rates. It is now generally known that the continuation of Exceptional Rates will be by agreement between the railway company and the trader concerned, or, failing such agreement, by appeal to the Rates Tribunal.

To make the position clear a comparative table is given of the old and new maxima put forward by the London, Midland and Scottish Co., for Classes 11, 12 and 13, all of which are of importance to the industry. To make the position still more plain, some reference to the classification is necessary.

The present classification is divided into 8 classes.

The new classification is divided into 21 classes.

Old Class No. 1 is now 11, 12 and 13.

No condition is attached to Class No. 1, but in the new classification Class 11 must consist of consignments of 2 tons and upwards.

COMPARATIVE MAXIMUM RATES BASED ON NEW SCHEDULE AS SUBMITTED BY L.M. AND S. RAILWAY AND PRE-WAR BASIS.

Miles	Pre-war Class 1	Proposed new Maxima for the new Sub-Division of Class 1 Class 11	Class 12	Class 13
	s. d.	s. d.	s. d.	s. d.
10	5 11	8 6·5	9 10	10 1·5
20	7 9	11 8	13 1	13 8
30	9 3·5	13 9·5	15 4	16 1
40	10 10	15 11	17 7	18 6
50	12 4·5	18 0·5	19 10	20 11
60	13 6 5	19 9·5	21 8·5	23 0
70	14 8·5	21 6·5	23 7	25 1
80	15 10·5	23 3·5	25 5·5	27 2
90	17 0·5	25 0 5	27 4	29 3
100	18 2 5	26 9 5	29 2 5	31 4
120	19 10·5	29 2 5	31 10·5	34 3
140	21 6·5	31 7·5	34 6·5	37 2
150	22 4·5	32 10	35 10·5	38 7·5
200	26 6 5	38 10·5	42 6·5	45 11
250	30 8 5	44 11	49 2·5	53 2·5
300	34 10·5	50 11·5	55 10·5	60 6

NOTE.—The above table provides for service terminals only, and not for cartage, as when the new rates come into operation the railway companies will make a separate charge for cartage, presumably sufficient to cover the cost of the service performed.

MESSRS. GEORGE HARRISON (AGENCIES) LTD., are the sole selling agents for the Backhammar and Nol Tingstad paper mills. Backhammar is one of the oldest established paper mills in Sweden, making only M.G. sulphate kraft. They make in the largest range of designs of felt marks in a variety of colours, paper particularly suitable for making into carrier bags or any other purpose where great strength is required. Nol Tingstad is the largest mill making fibre boards in a variety of grainings and colours, particularly adapted to manufacturing into suit and attaché cases, motor car panels, etc. They also make plain fibre for bookbinding, where the weight per sheet in a given size and substance is approximately 40 per cent. lighter than ordinary millboard.

THE Belgian paper mills generally have orders and German competition is not so harassing as it was last year.

Degenerate Reading?

SIR,—In the excellent lecture, "The Romance of the Printing Craft," as reported in your issue of October 18th, there occurred the following passage: "It is questionable, however, whether the 'reading' of books is anything like as good as what it was, and to some extent this may be attributed to the regulation of late years adopted by the trade unions, that all readers shall have been compositors." It may or may not be true that book reading is not "as good as what it was" —it is impossible to substantiate either assertion—yet in any case blame must rest on the shoulders of the proprietors of book houses. While such persist in allowing book reading to be executed at the cheapest possible rate, deterioration from a high standard is bound to ensue. The obvious remedy is for employers of book readers to pay such remuneration as will attract a highly educated class of craftsman. Another reason is that, owing to the changed conditions that have taken place in the reading department, owing to typewritten copy, readers are not allowed the time to devote to their work in these days, as any reader of 30 years' experience can corroborate, that they used to be. The assertion that trade unions possess a rule that "*all* readers must have been compositors" is entirely erroneous.

Caxton Home, Limpsfield.

The sixth annual concert on behalf of this institution was held at the Central Hall, Westminster, S.W., on Saturday afternoon, when a large and enthusiastic audience were entertained with an excellent programme of music and song. Mr. Wm. Rayment Kirby, F.R.C.O., presided at the organ, and also accompanied Miss Edith Davies in a fine rendering of her song, "Glory of the Sea." The Misses Ethel and Mary Williams sang the duet "The Venetian Boat Song," and met with well merited applause. Miss Biddy Doyle's Irish songs were also much appreciated, and Mr. Kenneth Park gave three violoncello solos with fine effect. Other artistes included Miss Mabel Greatwood (contralto), Mr. Vincent Healey (tenor), Mr. Clay Thomas (baritone), with Messrs Bret. Hayden and Walter Montagu (entertainers). Messrs. G. D. Prince and Mr. Godfrey Cons, together with the Bedford Singers, added much to the enjoyment of the afternoon.

The concert was under the direction of Mr. Percy Newport, and the accompanists were Miss Mollie Mercer, Miss Olive Stephens, and Mr. H. F. Daines.

The hon. secretaries (Messrs. G. Chapman and W. F. France) are to be congratulated on the success of their efforts, the proceeds of which will be devoted to the reduction of the building debt of the Home.

AN old and valued servant of Ed. Lloyd, Ltd., Sittingbourne, has passed away in the person of Mr. Thomas Miller, who died suddenly following an operation for acute appenticitis.

South London Caxton Musical SOCIETY.

Members and friends of this society, prior to the opening of their weekly concerts in aid of the Caxton Home, were entertained to dinner on Saturday evening, at the London and Brighton Hotel, Peckham, under the presidency of Mr. H. Murch (*Daily News*). The company present included Mr. C. W. Bowerman, M.P., and Mr. and Mrs. T. E. Naylor. "Success to the South London Caxton Musical Society" was eulogistically proposed from the chair, and, in responding, Mr. S. J. White referred to the thirty years' work of the Society for the Caxton Home, during which period nearly £5,000 had been raised. This amount had been mainly used for the extension and improvement of the building, and recently a pair of entrance gates had been added to many other gifts.

Mr. T. E. Naylor submitted the toast of "The Home," which was responded to by Mr. C. W. Bowerman (treasurer), who stated that he hoped early steps would be taken to raise funds for the completion of the building by the addition of a further wing. At the call of the chairman a collection was taken up for this purpose, resulting in £8 8s. being promised in the room.

The musical arrangements, in the hands of the musical director, Mr. Will White, were ably carried out.

The Society is opening its 1923-24 season on November 3rd, when representatives of the various departments of the *Daily Telegraph* will take the chair.

THURSDAY, NOVEMBER 1, 1923.

The Printers' Flag Day.

THE great event of this week-end in the printing trade is the Flag Day on behalf of the War Orphan Fund of the Printers' Pension Corporation—on which there is a deficit of £14,000. Flags are being sold in every printing and newspaper establishment in the United Kingdom on pay day, *i.e.*, on Thursday, Friday, or Saturday, as the case may be. We hear there has been a big demand for the flags, and hopes are high that the cause which the industry has at heart will benefit greatly. In some offices the workers have all agreed to give an hour's pay each for their flags, whilst in many offices the employers have promised a sum equivalent to that given by the workers. The need of the printing trade's orphans is a call which merits the consideration of us all, and the industry will doubtless act up to its well-established reputation for generosity. The result will be announced at the annual festival of the Printers' Pension Corporation to be held on November 13th.

* * *

Lost Time.

IT is interesting to note from figures appearing in the *Ministry of Labour Gazette* that much less time was lost in the printing, paper, etc., group of trades during the first nine months of this year than was the case in the corresponding period of last year. In the former period there were 11 disputes altogether, involving a total of 19,000 workpeople and representing an aggregate duration in working days of 323,000. This year, although there were 12 disputes, only 6,000 workpeople were involved, and the aggregate duration in working days of all disputes was only 169,000. Unfortunately, what is gained by the absence of labour disputes is now lost by trade quietude.

* * *

Railway Rates.

IN another column we give a concise statement of the position with regard to railway rates and their bearing on the paper industry. It should be remembered that in the existing classification paper is carried on Class 1 rates. This class, however, is now represented by classes 11, 12 and 13 of the new classification, paper in lots of two tons and upwards being placed in class 11, the grade carrying the cheapest rate of the three. In lots below two tons, paper is placed in class 12, while paper bags are in class 13. From the comparative table which appears on another page it will be seen that even in two-ton lots there is a very appreciable increase on the pre-war rates, and it is necessary that every body should co-operate in placing before the Railway Rates Tribunal full evidence of the burden which is to be placed on industry.

* * *

Slump in Coated Paper.

THE esparto mills specialising in coated papers are finding a very slow market for their product and here again prices very favourable to the buyer have been quoted. The demand for coated art papers has never really revived since the war. Doubtless the reason is that advertisers have been compelled to economise in their consumption of paper and print. The conditions in which many printing offices find themselves is a sufficient indication of the dearth of publicity matter. At the same time, it is necessary for manufacturers of coated paper to observe very closely the evolution of printing methods now in process.

* * *

Paper for Offset Litho.

QUITE an amount of catalogue and booklet work is being produced by the offset litho process on uncoated paper, and in colour work there is a rapidly growing preference for the more artistic effect secured by the same means. Taking into account this encroachment and the fact that the shippers ticket business is almost dead for the time being, it must be recognised that the position in regard to coated paper is serious enough to to warrant reflection. Ultimately, when normal conditions of trade have been restored, and by this we mean when Europe has soundly re-established itself as a whole, there should be a sufficient consumption of coated paper to keep all our mills busy; but there will certainly be an even greater consumption of suitable uncoated paper by users of the offset process. The fundamental question is, how many mills will survive to see Europe trading under normal conditions.

The 'Pall Mall's" Decease.

The *Pall Mall Gazette* closed its individual career as one of London's evening papers on Saturday, and on Monday the paper was merged into the *Evening Standard*, now controlled by Lord Beaverbrook. It is understood that Sir John Leigh, M.P., has sunk his interest in the *Pall Mall Gazette* with the *Evening Standard*, and joins the re-organised board.

The *Daily Herald* stated on Friday: "The number of *Pall Mall Gazette* workers who will lose their employment is between 300 and 400, including journalists, compositors, foundrymen, machinemen, distributors, and clerical employees. A tiny proportion of these may be retained on the new enterprise, but unemployment will be the fate of the great majority." On behalf of Sir John Leigh and the directors of the *Pall Mall*, however, it was replied: "Arrangements had been made for payment of all salaries to the members of the staff up to December 1st, and that efforts were being made to find appointments for them. If, however, such efforts were not successful, the company would certainly recompense the employees for any financial loss up to the period recognised as customary by the Institute of Journalists and the National Union of Journalists and the Newspaper Proprietors' Association."

Trade Notes.

ABOUT 3,000 women employed in London are affected by an award of the Industrial Court under which there is to be a reduction of 2s. a week in the wages of female workers in envelope making and stationery manufacture. The Employers' Federation of Envelope Makers and Manufacturing Stationers asked for a reduction of 4s. weekly, and this was opposed by the National Union of Printing, Bookbinding and Paper Workers.

DAMAGE estimated at between £2,000 and £3,000, was done by fire last week at the shop premises, 15 and 17, New Market-street, Blackburn, occupied by two brothers—Messrs. Fred and Frank Sellers, who carry on the business of wholesale stationers and fancy goods dealers.

IMPORTANT correspondence is passing between the Joint Industrial Council of the Printing and Allied Trades and the Postmaster-General, and it is hoped that a deputation will shortly be received by the P.M.G.

"PHOTO-MECHANICAL TYPESETTING" is the subject of a lantern lecture which Mr. W. B. Hislop (managing director of Hislop and Day, Ltd., Edinburgh), will deliver at Stationers' Hall on Friday, November 9th, at 6.30. Mr. T. E. Naylor, J.P. (secretary, London Society of Compositors), will preside at the meeting, which is arranged by the Stationers' Company and Printing Industry Technical Board.

MR. E. G. COLE, president of the S. W. L.M.P.A., is sending out a personal invitation to the meeting of the branch next Tuesday at the Buckingham Palace-road Library, Westminster (near Victoria Station), 7 o'clock. Mr. J. D. Wise will lead off on the local costing campaign, supported by Mr. Simnett, Mr. Walmsley and other members of the committee.

DENIAL has been made of a report that the Rothermere newspaper combine is negotiating for the purchase of a controlling interest in *The People*.

PROVINCIAL READERS' GUILD.—There has recently been formed, under the secretaryship of Mr. W. E. Fursland (39, Judd-road, Tonbridge, Kent), what is known as the Provincial Guild of Printers' Readers. This is intended to fill the want in the provinces of an organisation corresponding to the London Association of Correctors of the Press, but we understand it is not a trade union, has nothing to do with strikes, and has only honorary officials. It has issued a printed "Quarterly Notice Paper," which shows that the Guild already has branches in the Home Counties, East Anglia and Newcastle-on-Tyne.

TYPEFOUNDERS AND CAXTON HOME. — A most successful concert was held on Saturday, October 20th, at the Shoreditch Town Hall, the object being to endow a Typefounders Bed at the Caxton Convalescent Home, Limpsfield. Mr. H. Bullen Sanders, acted as musical director, and arranged a programme of first-class artists. In addition to this, he gave a very fine rendering of "The Prologue," from the Grand Opera "Pagliacci." Other artists were: Miss Muriel Stevens, Miss Edna Florence, Miss Nancy Nenshaw, Mr. T. Bennett Griffin, Mr. Eric Kemp, Mr. George A. Fox, Mr. William Parkyn, Mr. E. Hubbard, Mr. Fred Montague, Mr. Leslie Edwards and Messrs. King and Jack. All very highly distinguished themselves and deserved the appreciation extended to them by the very large audience, encores being given in almost every instance. Mr. S. H. Caslon presided, supported by Mr. R. H. Stevens and Mr. J. Shanks. At the interval, the chairman made the gratifying announcement that sufficient funds had been raised for the purpose.

AT A sale of Baxter prints by Messrs. Puttick and Simpson, Leicester-square, on Thursday, "The Launch of the Trafalgar," was purchased by Mr. Etheridge, Birmingham, for £115.

FLEET-STREET is suffering from a plague of rats. Thousands of rats have been rendered homeless by the pulling down of the ancient glassworks in Tudor-street, and they are forcing their way into fresh quarters.

THE death occurred last week of Sir David Duncan, second son of Mr. David Duncan, founder in 1857 of the *Cardiff Times*, from which subsequently sprang the *South Wales News* and *South Wales Echo*. The Southern Federation of Newspaper Owners owed its formation largely to Sir David's initiative, and from 1909 till 1920 he was annually elected chairman, then being appointed permanent honorary chairman.

THE week-end meeting of the Midland Alliance of the Federation of Master Printers at Church Stretton was a distinct success. Lieut.-Col. Rivers Fletcher and the secretary of the Federation attended the business meeting and discussed a large number of topics of current interest.

COMPLAINT was made at a meeting of the Associated Falmouth Advertisers that the official guide to Falmouth had been published in another town, and the chairman expressed the opinion that this was unfair and that local printers and publishers ought to have received first consideration. It was reported that the Association owed the Great Western Railway Co. £130 as its share in regard to a Falmouth poster.

WHEN complaint was made at the L.C.C. on Tuesday that printing was being done at Plymouth, it was explained that £400 was saved thereby.

A CINDERELLA and fancy dress dance will be held at the Shoreditch Town Hall on Monday, November 5th, in aid of the Vellum Binders' and Machine Rulers' Pension Society. An admirable programme has been arranged. Tickets, price 2s., and further information can be obtained from Mr. F. C. Peacock, 100, Beresford road, Harringay, N.8.

Trade Union Matters.

THE Conciliation Committee of the Federation of Master Printers was to meet yesterday (Wednesday) afternoon to deal with the question of compulsory piece scales as proposed by the London Society of Compositors.

INSUBORDINATE T.A. MEMBER.—At a recent meeting of the Executive Council of the Typographical Association the secretary of the Liverpool branch reported that a firm in his area had lodged a complaint against a member for neglect of work, the member failing to appear for work after each week-end until about the Tuesday. The Council, after hearing the circumstances, decided to punish the offending member by suspending him temporarily from the Association benefits

T.A. AND STRIKE PAY ASSISTANCE.—The Executive Council of the Typographical Association have had before them a statement of a claim for £23,886 strike benefit, for submission to the Printing and Kindred Trades Federation consequent on the dispute of 1922. The statement was approved by the Council, and has been forwarded to the Federation for their consideration.

WARNING FROM SOUTH AFRICA.—Mr. Ivan L. Walker, general secretary of the South African Typographical Union, writing to Mr. Skinner, of the T.A., warns the members against taking up situations in South Africa before full inquiry. He further states that the position is very strained, and difficulty is being experienced in negotiating another national agreement acceptable to the South African Typographical Union.

From the London Gazette.

PARTNERSHIPS DISSOLVED.

W. H. Masters, J. Lawton and G. J. Coleman, printers and stationers, at Exchange-street West, Liverpool, under the style of J. Mawdsley and Son.

T. Ellis, G. Aukland and C. Yates, advertising contractors, at Central-buildings, St. Petersgate, Stockport, under the style of the General Advertising Co.

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDERS.

J. Hewitt, 7, Lancaster-place, Wellington-street, Strand, late of 88 90, Chancery-lane, London, printer and stationer.

B. P. Carr, 12, Aberdeen park, Highbury, advertising agent.

S. Jacobs, Galeston, 60, Eton-avenue, Hampstead, advertising manager.

Personal.

A COMPLIMENTARY dinner given on Monday night at the Savoy Hotel to Mr. T. P. O'Connor, M.P., "Father of the House of Commons," in celebration of his seventy-fifth birthday, was the occasion of a notable gathering of representatives of the Press, the diplomatic services, both Houses of Parliament, and the law.

ON Monday, at their country residence, Whitethorn, Hythe, Kent, Sir Henry and Lady Lucy celebrated their golden wedding day. In commemoration of the event, Sir Henry has forwarded a cheque for £50 to the treasurer of the Institute of Journalists' Orphan Fund, being the first instalment on account of royalties received from Mr. Murray, publisher of third volume of "The Diary of a Journalist."

SIR ALBERT SPICER is to formally open the new organ at the City Temple on November 3rd.

MR. CHAS. DAVIDSON presided at the autumn dinner of the Stationers' Social Society held on Friday evening at the Holborn Restaurant, and members and friends enjoyed a pleasant evening.

THE Society is arranging a social evening at Stationers' Hall on December 5th.

MR. J. GOMER BERRY has left this country for a month's visit to the United States.

MR. A. BROWNING LYNE, editor and proprietor of the *Cornish Guardian* series of newspapers, has accepted the mayoralty of Bodmin for the ensuing year.

MR. JAMES ARCHIBALD, the editor of the *Lancashire Daily Post*, has been presented by the literary staff of that journal with a handsome rose bowl on leaving to take up the managing editorship of the *Reading Standard*.

TRIBUTE to the valuable and public-spirited work rendered by Mr. E. W. Carter, editor of the *West London Observer*, was paid by the ratepayers of Hammersmith and Shepherd's Bush, who gave a dinner in his honour on Thursday at the Clarendon Restaurant, Hammersmith.

MR. R. M. LANCASTER, J.P., Leeds, the ex-secretary of the Leeds Branch of the Typographical Association, has been elected vice-president of the Yorkshire Centre of the Industrial League and Council.

REV. DR. J. WARSHAW, M.A., leaves a popular Congregational pastorate in North Shields to become literary editor of *Health and Efficiency*.

The Alexandra Palace Lodge.

Printing and the allied trades were strongly represented at the installation meeting of the Alexandra Palace Lodge, No. 1541, which took place at the Café Monico on Saturday last, when Mr. Arthur Green was installed in the chair by Mr. Alec Henly, the outgoing Master. Officers were appointed and invested as follows:—S.W., Mr. W. L. B. Pitman; J.W., Mr. H. Gordon; treasurer, Mr. C. F. Sach, P.M., L.R.; secretary, Mr. C. J. Drummond, P.M., P.A.G.D.C.; D.C., Mr. Norman Scorgie, P.M., P.A.G.S. of W.; S.D., Mr. J. W. Wood; J.D., Mr. C. Wolstencroft; Almoner, Mr. H. P. White, P.M., L.R.; Organist, Mr. W. Wright, P.P.G.O. Middlesex; assistant secretary, Mr. W. A. Perkins, P.M.; A.D.C., Mr. T. W. George, P.M.; I.G., Mr. H. G. Alldis; stewards, Mr. F. W. J. Foster and Mr. W. R. Adams; tyler, Mr. F. J. Stinson, P.M.

Among the visitors and members present were Messrs. G. F. Wilbraham (I.P.M. of St. Bride's Lodge), Arthur O'Connor, J. T. Moore, P.M., W. H. Christopher, R. L. Randall, Joseph Goodman, F. H. Newton, P. E. Newton, W. A. McMurray, A. J. Flaxman and J. O. Hughes.

DIVIDENDS AND REPORTS.

EYRE AND SPOTTISWOODE.—After providing £12,975 for depreciation and writing £1,000 off cost of issue of Debenture stock, accounts for year ended March 31st, 1923, show loss of £5,223, which increases debit balance to be carried forward to £18,666.

LINOTYPE AND MACHINERY.—Net trading profit to June 30th, after deducting reserves and depreciations, was £115,701. After providing for Debenture interest, guaranteed dividend on leased company's shares, etc., credit balance of £308,144 brought forward was increased to £352,462.

NOVELLO AND CO.—Profit for year ended June last, after deducting depreciation and adding £10,764 from last year, was £63,406. Directors recommend dividend of 30 per cent. on ordinary shares (same as previous year), placing to reserve £340, leaving to be carried forward £9,905.

NEW COMPANIES.

R. WADDINGTON (KETTERING), LTD.—Capital £2,000; stationers, printers, publishers, dealers in leather, fancy and other goods, etc. Private company. First directors: F. R. Waddington, T. Waddington and A. M. Lee. Registered office: 7, High-street, Kettering.

THE GENERAL PRESS, LTD. — Nominal capital £12,000; to acquire the business of stereotypers, printers and press agents, carried on as "Cassell's General Press" at 32, Fleet-lane, E.C., and to adopt an agreement between Cassell and Co., Ltd., of the one part and W. H. Biggs of the other part. Private company. First directors: W. H. McNamara, W. Sherren, G. H. Brierley and W. H. Biggs. Registered office: 32, Fleet-lane, E.C.4.

W.D. SYNDICATE, LTD. — Capital £1,100; agents, brokers, merchants, business organisers, printers, stationers, publishers, newspaper agents, advertising experts, organisers of exhibitions, etc. Private company. Subscribers: H. F. Perry and F. W. Sitch.

COMMONWEAL PRESS, LTD. — Capital £2,000; proprietors and publishers of the monthly periodical known as "The Commonweal." Private company. First directors: Mrs. H. D. Howell and Miss B. J. Sinclair. Registered office: Grosvenor Mansions, 82, Victoria-street, Westminster.

KNIGA (ENGLAND), LTD.—Capital £3,000; book sellers and book purchasing agents, general printers, etc. Private company. First directors: A. Bogdanoff and S. Hermer. Registered office: 68, Lincoln's-inn-fields, W.C.2.

EPICURE PRESS, LTD. — Capital £2,000; proprietors and publishers of newspapers and journals, printers, advertising agents, etc. Private company. First directors: J. S. Harvey and L. Vermont. Registered office: 20, Cullum street, E.C.3.

BUTCHERS' ADVOCATE, LTD. — Capital £5,000; newspaper proprietors, etc. Private company. Subscribers: P. Long and F. Long.

HALFORD CO., LTD.—Capital £2,000; manufacturers' agents, dealing principally in paper, etc. Private company. First directors: H. J. Forder and G. E. Peeke. Registered office: 61-2, Chancery-lane, W.C.2.

C. MOUNTFORD AND SONS, LTD.—Capital £1,000; to acquire the business of C. Mountford and Sons, carried on by C. Mountford and H. W. Smylie at 30 and 36, Gourley-street, South Tottenham, N.15, and to carry on the business of box manufacturers, stationers, printers and pattern card makers, etc. Private company. First directors: Elizabeth Mountford and H. W. Smylie. Registered office: 32, Gourley-street, South Tottenham, N.15.

BENNADS, LTD.—Capital £3,000; to acquire the business carried on at 24-28, New Oxford-street, W.C., as "J. Bennett," advertising specialists, to carry on the business as advertising contractors, etc. Private company. First directors: J. Bennett, H. W. J. Peterson and J. H. Whitfield. Registered office: 24, 26 and 28, New Oxford-street, W.C.2.

BUCHAN TELFER AND CO., LTD.—Capital £1,000; advertising agents and publicity experts, etc. Private company. First directors: B. F. S. Telfer, G. M. Smith, N. S. Wilkinson and R. A. Newton. Registered office: Temple Bar House, 23-28, Fleet-street, E.C.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

WILLIAM GILL AND CO. (PRINTERS), LTD. (Leeds).—Particulars filed of £500 debentures authorised by resolutions of May 9th and June 4th, 1923, charged on the company's property, including uncalled capital, the whole amount being now issued.

PRESS PRINTERS, LTD. (London).—Particulars filed of £10,000 debentures authorised August 31st, 1923, charged on the company's undertaking and property, present and future, including uncalled capital (subject to existing mortgage or charge for £25,000), the amount of the present issue being £1,000.

F. AND E. PHILLPUT, LTD. (booksellers, stationers, etc., Weston super-Mare)—Second debenture dated October 10th, 1923, to secure all moneys which the debenture holder may be called upon to pay under a certain guarantee to company's bankers, not exceeding £2,100, charged on the company's undertaking and property, present and future, including uncalled capital subject to £5,000 prior debentures. Holder: D. Quilliam, "Ravenswood," Bristol-road, Weston super-Mare.

H. OSBORN AND SONS, LTD. (die sinkers, engravers, etc., Leeds).—Debenture charged on the company's undertaking and property, present and future, including uncalled capital, dated October 5th, 1923, to secure £200. Holder: R. C. Hoyle, Dewsbury.

EDWIN JONES AND SONS (LONDON), LTD. (relief stampers, printers, etc.).—Particulars filed of £2,000 debentures authorised October 19th, 1923, charged on the company's property, present and future, including uncalled capital, the whole amount being now issued.

JOHN HORN (LONDON), LTD. (publishers, etc., London).—Debenture dated September 28th, 1923, to secure £46,000 charged on the company's undertaking and property, present and future, including uncalled capital. Holder: R. C. J. Goodrich, 13, Queen-street, E.C.

LEES PAPER STAINING CO., LTD. (near Oldham).—Debenture charged on the company's undertaking and property, present and future, including uncalled capital dated October 6th, 1923, to secure all moneys due or to become due from company to the Union Bank of Manchester.

WORKSOP BILLPOSTING CO., LTD.—Mortgage on certain lands in Worksop, dated October 15th, 1923, to secure all moneys due or to become due from company to the L.J.C. and Midland Bank.

BANKRUPTCIES, etc.

BRITISH STATIONERY CO., LTD., 10, THAVIES-INN, HOLBORN, E.C.—A compulsory winding-up order has been made against this company upon the petition of John Dickinson and Co., Ltd., paper manufacturers, Old Bailey, and on October 11th the statutory first meeting of the creditors and shareholders was held at the Carey-street offices of the Board of Trade, Lincoln's-inn, W.C. Mr. G. D. Pepys, official receiver, reported that the company was incorporated as a private company on December 21st, 1920, with a nominal capital of £3,000 in £1 shares, and was formed to carry on the business of wholesale stationers formerly carried on by Mr. Oscar Robert Clarke under the style of the British Stationery Co. Mr. O. R. Clarke attributed the failure of the company to lack of capital and the trade depression, it being unable to stand the heavy expenses of canvassers and travellers demanded by the nature of the business. The accounts filed under the liquidation showed unsecured debts, £1,392; preferential claims, £29; and debenture bonds, £950, against assets valued at £804. Mr. Clarke, the receiver, said he had realised nearly all the assets and the amount obtained would fall short by about £100 of the amount of the directors' estimate of their value. The stock, which had cost £600, and was expected to yield £200, had been sold for that sum to Mr. Thomas, one of the directors. He (Mr. Clarke) had put the matter in the hands of Mr. Ruddock, trade valuer, and the best offer that gentleman could obtain was £185, so that he thought it desirable to accept Mr. Thomas's offer of £200. The liquidation was left in the hands of the official receiver.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

BELGIUM.

A Belgian firm of wholesale importers at Liege desires to secure the representation of British manufacturers of note paper, printing paper, packing and fancy paper. Correspondence in French. (Reference No. 420.)

SWEDEN.

A lady in Stockholm desires to be placed in touch with British exporters of stationers' sundries and office requisities. (Reference No. 431)

EGYPT.

The British Commercial agent for Egypt has forwarded to the Department of Overseas Trade samples and particulars of a call for tenders for the supply of paper, bristol boards and greyboard required by the Egyptian Government Press during the year 1924-25. Sealed tenders on the proper form addressed to the Superintendent Government Press, Bulaq, Cairo, will be received up till noon on November 24th, 1923. The samples, together with a copy of the specification and conditions of contract may be seen on application to the D.O.T., Room 41.

PAPYRUS.—Under this style a new French company has been formed for construction, purchase, renting, sale of mills, and plant for manufacture of all kinds of packing paper. The capital is 1,500,000 francs. Offices: 175, Rue St. Honore, Paris.

Becker and Co., Ltd.

Receiver and Manager Appointed.

In the Chancery Division on Friday, last week, Mr. Justice Tomlin appointed a receiver and manager of Becker and Co., Ltd., well-known pulp merchants and shippers, on the application of National Provincial and Union Bank, Ltd., trustees for the debenture holders and the holders of the secured notes.

Mr. H. C. Bischoff (instructed by Simmons and Simmons for the applicants) said there had been no default at present in the payment of either principle or interest, but the debentures and secured notes became enforcible in the event of the company being unable to carry on business. The company had large pulp interests, and a crisis had been reached in their affairs owing to the failure of a Canadian company to meet its liabilities.

The respondent company was well known in the paper trade and had large contracts to fulfil and there would be great disturbance in the trade unless steps were taken to protect the business.

Mr. R. Peel (instructed by Wordsworth, Mar, Johnson and Shaw for the company) said he could not oppose the application.

The following communication, signed Wm. Carter, secretary, and dated October 26th, has been made by Becker and Co., Ltd.:—

"I enclose a copy of a circular letter issued to-day by the receiver and manager of this company. Having regard to the difficulties which are being experienced by many of the paper mills owing to the great trade depression and their consequent inability to meet accounts promptly, my directors are of opinion that the action taken is in the best interests of the creditors and shareholders.

"My directors wish to state that with the return next (now this) week from America of our Chairman and managing director, Sir Frederick Becker, they have every reason to anticipate a scheme will be found practicable whereby the company can be satisfactorily reconstructed.

"Having regard to the great confidence imposed in the company in the past, we feel it is due to those who have had business relations with us that this explanation should be given. We trust that during this period of difficulty customers will favour the receiver and manager with the continuance of their orders and support."

The enclosed letter from Sir Basil Mayhew reads:—

"By an Order of the Court, dated to-day, I have been appointed receiver and manager of the assets and property of the above company on behalf of the first debenture holders and of the seven per cent. five-year secured notes. The business will be carried on by me with a view to reconstruction, and it is hoped that the creditors will eventually receive payment.

"Please note that payment of any moneys which may be owing to the company, as well as payment for any future supplies, should be made direct to me in the ordinary course of business at the above address. Should you hold any documents, scrip or other security on behalf of the company, I should like to receive particulars, and in the meantime they should be held to my order. Orders for goods in future should be signed by me or an authorised representative, and payment for goods so supplied will be made by me in the usual course of trade."

A letter from the secretary of the Esparto Paper Mills reads as follows:—

"In connection with the appointment of a receiver and manager for the debenture holders of Becker and Co., Ltd., the name of the above company has been mentioned in the Press. I am instructed by my Board to say that Esparto Paper Mills, Ltd., is not involved or connected with Becker and Co., Ltd., nor affected in any way by the aforesaid appointment. The finances of this company are in an entirely sound position."

Mr. Justice Tomlin, in the Chancery Division on Wednesday, on the application of the National Provincial and Union Bank of England, trustees for the debenture holders, appointed Sir Basil Mayhew receiver and manager of Charles Marsden and Sons, Ltd., paper manufacturers.

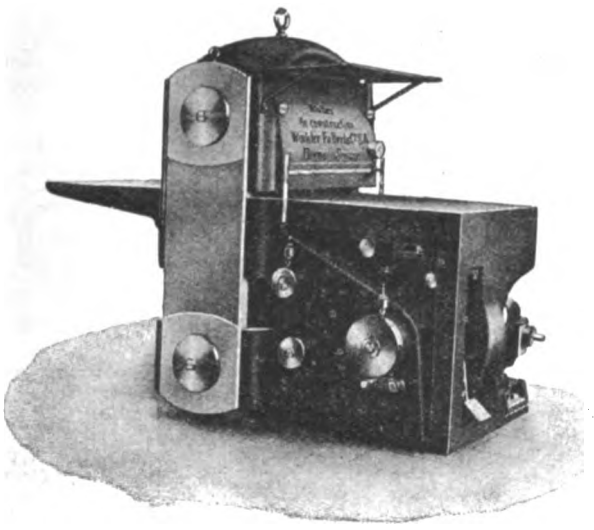
WIPES
- for -
STAMPERS

(PILGRIM MAKE).

For the Waite & Johnson Presses

Stocked in all the usual widths, with diameter 9", Core 2" round.

Pilgrim Wipes have stood the test of many years, and the special features that made them the most economical are still maintained at pre-war standards.



Pilgrim Wipes can only be obtained through:—

M. W. RAGGETT

23, Holborn Viaduct, London, E.C.1

And BEECHEN GROVE, WATFORD.

Telephones:
London—City 4105. Watford—Watford 900.
Telegrams:
"Paprika, Cent, London," "Paprika, Watford."

WINKLER

Automatic Moulding and Drying Press

For Fine Art and Newspaper Moulds, Dry and/or Wet Flong—Hot or Cold, with Electric or Steam Heating.

Equals in capacity 3 Pneumatic Presses.

The Matrix is moulded and dried in one operation, the drying taking place under reduced pressure (*patent*).

The Moisture is extracted by a suction pump.

Automatic Temperature Control and Time Switch.

Produces, in conjunction with Light's "Photo-Tone" Fine Art Flong, Half-Tone Matrices of finest screen so accurate that Stereos cast therefrom are facsimile to originals.

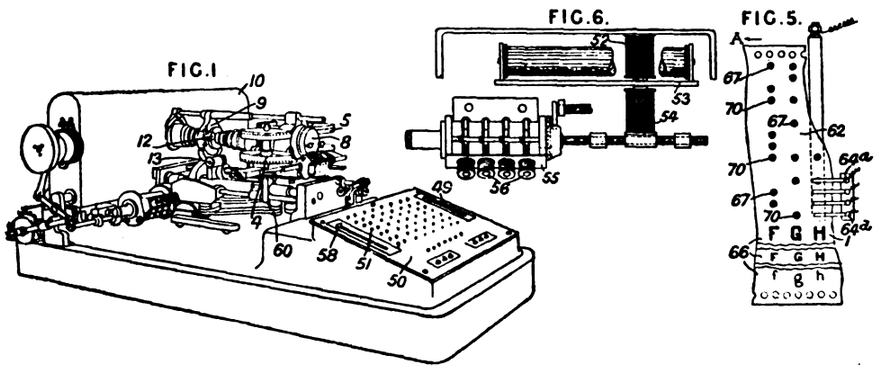
Saves type, time, labour, power and fuel.

Write to-day for Prospectus.

British Agents: W. J. LIGHT & CO., LTD.,

36/38, Whitefriars Street, Fleet Street, LONDON, E.C.4.

Telephone: CENTRAL 3839.



Telegrams: Winkolight, Fleet, London.

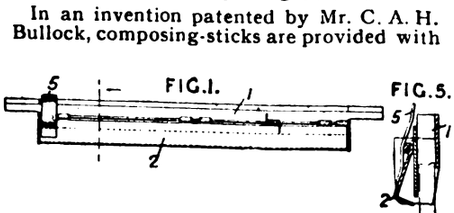
New Inventions

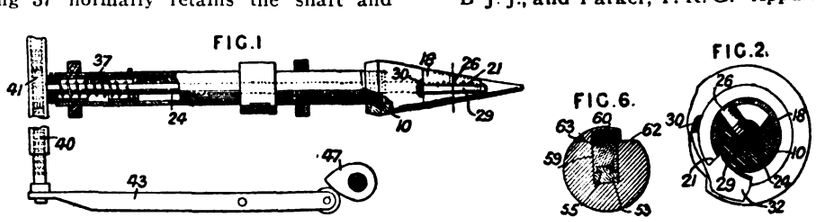
Photographic Type Composing.



In photographic apparatus for composing letterpress and like matter, of the kind comprising means for projecting selected characters on to a sensitive surface, and strip controlled devices for imparting differential letter spacing feed to the sensitive surface, in an invention patented by Mr. E. K. Hunter, the strip perforations are arranged to determine the spacing movement when the corresponding characters are brought into position for projection; the spacing movement may occur in two steps, each equal to half the width of a character, or, in some cases, equal to half the width of the character presented and the following character. The stencil film 1, Fig.

5, described in Specification 195,104 is formed with an extension 62 having spacing perforations 67 . . . 70 corresponding to the characters 66 in register therewith, and co-operating with contact 64^a . . . 64^d controlling the spacing mechanism. The sensitive surface is supported on a carriage 53, Fig. 6, normally locked by an electro magnet 52 which is de-energized when the selected character has been positioned. The carriage is then locked to an electro magnet 54 on a longitudinally movable rod which is moved to a position determined by stop mechanism 55, described in Specification 200,127, comprising electro magnets 56 in circuit with the contacts 64^a . . . 64^d. The spacing movement occurs in two half-steps, the circuits of the electro magnets being opened and closed twice at each operation. The apparatus comprises a keyboard 50, Fig. 1, a casing 10 for the carriage 53, a light source 8, a lens system 9, and a shutter 12 operated by an electro magnet 13. The stencil film passes over spools 4, 5, associated with the stop mechanism described in Specification 200,782 for determining the travel of the film to select a fount and a character. The keyboard comprises keys 51 and a lever 49, controlling the character and fount selecting stops respectively, and a lever 58 operating focussing mechanism 60 for enlarging or reducing. Instead of operating the apparatus directly, the keyboard may be employed for perforating a strip for controlling the stencil film and the spacing mechanism, the extension 62 of the stencil film being dispensed with. In this case, the spacing movement of the carriage may occur in two steps equal to half the width of the character presented, and the following character respectively, the perforations of these two characters being employed to determine the spacing movement.

Printers' Composing Sticks.



In an invention patented by Mr. C. A. H. Bullock, composing-sticks are provided with

a movable bottom which can be retracted to permit the composed lines to fall into the chase. The stick consists of a channel 1, which is open at the top and bottom and closed at the ends, and has hinged to it at one side an angle-piece 2, which is held by a spring in position to close the bottom of the channel. The angle-piece can be retracted by means of a finger-piece 5.

Making Paper Cones.

According to an invention by the Southern Novelty Co., conical paper tubes, especially for use in the textile industry, are made by winding paper blanks on a mandrel provided with means for gripping the central part only of the front edge of the blank. In one construction, a slotted sleeve 18, Figs. 1 and 2, is let into the middle part of the mandrel 10. One edge 21 of the sleeve is bevelled inwardly so as to facilitate insertion of the paper 32 between this edge and a flattened part 29 of the mandrel. Beyond the ends of the sleeve this flat portion merges into curved recesses 30 allowing the end parts of the edge of the paper to lie on the surface of the mandrel. The sleeve can be turned into or away from the gripping position shown in Fig. 2 by means of a radial pin 26 and axial shaft 24. A spring 37 normally retains the shaft and

sleeve in the gripping position. Release is effected by means of a rack 40 and pinion 41, operated by hand or by a cam 47 and lever 43. When the shaft is rotated to free the paper, the second bevelled edge of the sleeve wipes the pasted edge of the paper against the interior of the cone tube, so as to produce a smooth inside surface. The ends of the tube may be trimmed while on the mandrel. In another construction, the mandrel is made with a recess 59, Fig. 6, and an overhanging lip 60 against which the paper, inserted over a flat surface 62, is clamped by a radially-sliding block 63. This is actuated by a longitudinally-sliding bar 53 the wedge-shaped end of which is connected to the block by tongues and grooves 55.

"PAPERS FOR EVERY-DAY USE," is the caption that appears on the front cover of another sample book and price list showing many of the latest productions of Messrs. John Dickinson and Co., Ltd. The sample book contains an extensive range of papers, together with the prices of the various grades and qualities offered. The present issue is a supplementary one to the firm's Standard Red Sample Book.

OWING to the high cost of wooden coffins in Germany, a patent has been taken out for folding paper coffins, the parts being fastened together with hooks and eyes.

A MESSAGE from Melbourne, Australia, states that a fine of £200 for evasion of payment of Customs duty was imposed upon the Nestle and Anglo-Swiss Condensed Milk Company (Australasia), Limited, by Mr. Knight, P.M., in the City Court. The article concerned was brown paper used by the company for wrapping tins of milk, and by declaring that the paper was printing paper, the company had not been required to pay duty on it.

THE TENTH BRITISH INDUSTRIES FAIR·1924

THE WHITE CITY SHEPHERD'S BUSH, LONDON, W.12

APRIL 28–MAY 9, 1924

"For us, therefore, the vital problem is the problem of markets, the restoration of old markets, but still more, the development of new markets."

Sir Philip Lloyd-Greame (President of the Board of Trade), Imperial Economic Conference, 2nd Oct. 1923.

"We must seek to develop our markets to the fullest extent possible. The more we can develop them within the British Empire the better."

Mr. W. L. Mackenzie-King (Prime Minister of Canada), Imperial Economic Conference, 2nd Oct., 1923.

"I have tried to indicate that it would be a serious thing to British Trade if the position they have at present in the Dominion markets were lost to them."

Mr. S. M. Bruce (Prime Minister of Australia), Imperial Economic Conference, 9th Oct., 1923.

FOR PARTICULARS APPLY TO THE SECRETARY, BRITISH INDUSTRIES FAIR, DEPARTMENT OF OVERSEAS TRADE, 35, OLD QUEEN STREET, S.W.1.

Romance of the Printing Craft.

By R. A. AUSTEN-LEIGH, M.A.

(*Concluded from page 304*).

Let us pass from the dynasties to one or two examples of successful printers, first of all Bodoni, an Italian, who lived between the years 1740 and 1813, and whose fame was such that he became printer to the King of Spain, received pensions from Napoleon and from the Viceroy of Italy, was especially relieved of all taxation, was complimented by the Pope, had a medal struck in his honour by the city of Parma, and since his death has had a statue erected to his memory in his native city.

Or consider the wonderful career of Benjamin Franklin, whose composing stick is one of the prized possessions of the Stationers' Company, starting life as a humble journeyman, and becoming before the end of it ambassador for the United States in Paris, but who never lost his interest in the craft. So much so, that his will opens: "I Benjamin Franklin, of Philadelphia, printer, late minister plenipotentiary from the United States of America to the Court of France." Some of you may remember the epitaph written for him but not used on his tomb: "The Body of Benjamin Franklin, printer (like the cover of an old book, its contents torn out, and stript of its lettering and gilding) lies here, food for worms But the work shall not be lost, for it will (as he believed) appear once more in a new and more elegant edition, revised and corrected by the Author."

Incidentally, this reminds one of the lines "On a Printing-house, by Francis Quarles, in 1632":—

> The World's a Printing-house: our words, our thoughts,
> Our deeds are characters of sev'rall sizes:
> Each soul is a compos'tor; of whose faults
> The Levites are Correctors; Heaven revises;
> Death is the common Press; from whence, being driven
> We're gathered Sheet by Sheet, and and bound for Heaven.
> Francis Quarles: Divine Fancies, 1632, lib. iv., p. 164.

Tragedies of Print.

I wish I had time to tell you more of the famous men who have cast lustre on our craft. Let me pass on to some of the tragic figures—to Etienne Dolet, the printer of Lyons, who was hanged at Paris in 1546 for his heretical opinions, and his body and books burned together, but who now has his statue in the streets of Paris. Let me record the fate of John Twyn, master printer of London, who was hanged, drawn and quartered in the year 1663 for printing treasonable literature, and of John Matthews, an unfortunate London apprentice, who was executed in 1720 at Tyburn, for printing a political tract. Again, the French Revolution supplies us with the tragedy of Momoro, not only a printer but author of a Manual of Printing; though he was an ardent supporter of the revolution, so much so that his wife, who was the grand-daughter of Fournier le jeune—also a printer—was chosen to represent the Goddess of Reason in the Latin Quarter in 1793, yet he was guillotined on 20th March, 1793, through the machinations of Marat.

Printing as Pastime.

Let me take yet another aspect of the romantic side of printing by recalling to you some of the great men of the world who have dabbled in printing—played at printing, if you will. In particular the French kings seemed to have had a strange bent for it. Thus, we read that Louis XIV., as a child of ten, paid a visit to the Royal printing house recently established by Richelieu, and "helped" to produce the first page of a book. His great-grandson, Louis XV., had a small printing place set up for him, and as a boy of eight printed some lessons in geography. Even Louis XVI., whom we associate more with the trade of making locks, was taught printing as a boy, and produced 25 copies of a book of maxims at the age of twelve. I am not aware that the great Napoleon found time among his numerous activities for learning our art, but at any rate he gave a pension to Bodoni, he made one of the Didots director of the Imperial Printing House, and he took Pope Pius VII., when he was in France for the Coronation of the Emperor, to visit the same house, in order to see a Latin address printed in honour of the Pope, in 150 different languages, from type almost all plundered from the Pope's own printing office in Rome. Mr. Updike tells us that in this address the printer took care always to set up Napoleon's name in large capitals, but small capitals were often good enough for the Pope!

If there is less direct knowledge of printing to be claimed by our Royal House, we can at least point to the interest displayed by King Edward IV. and his Queen to the early attempts of Caxton, to the fact that Henry VIII. gave what may have seemed in those days the princely pension of £4 a year to "Richard Pynson, Esquire, our printer," who ever after made use of the title "Esquire," in the colophon to his books, and to the record that a printing press was once set up at St. James's Palace for the Duke of York and some of the princesses to work.

Nor must we forget to mention the interest that our Royalties of the last three generations have displayed in the charities connected with our trade.

But apart from Royalties, printing has exercised a strong attraction to many who are under no compulsion to gain their living thereby. The private presses that have been installed are far too numerous to record, but I must just mention that of Horace Walpole at Strawberry Hill, and also that William Cowper, the poet, had his private press, while the influence on what is called "the renaissance of printing," by presses such as the Kelmscott, the Doves, the Ashendene, to name but a few, will be known to most of you.

Let us now consider some of the old customs of printers that have almost entirely fallen to oblivion.

Old Trade Customs.

Moxon says that "every printing house is by the custom of time out of mind called a chapel; all the workmen that belong to it are members of the chapel, and the oldest freeman (i.e., journeyman) is father of the chapel." They possessed customs and bye-laws, and the penalty in old days for a breach was called a "solace." Some of the following crimes earned a solace—swearing, fighting, abusive language, being drunk, leaving a candle burning at night, if a man dropped his composing stick, etc. These solaces could be bought off for various sums, varying from 1d. to 1s. If the delinquent would not pay up, the workmen "solaced" him. Now the manner of solacing was thus: "The workmen take him by force and lay him on his belly athwart the correcting-stone, and held him there while another of the workmen, with a paper board, gave "£10 and a purse, viz., eleven blows on a certain portion of the body."

Special houses had special solaces, *e.g.*, playing at quadrats. This was the game: The comps. took five or seven-em quadrats and holding their hands below the correcting stone, shook them in their hands and tossed them on the stone, and scored according to the number of "nicks" lying upwards. If, however, a workman incurred this "solace," it was generally bought by the master-printer, because it hindered work, besides spoiling the quadrats.

Solaces were even inflicted on strangers coming into the house, who were sometimes primed by unkind outsiders to ask questions involving solaces. Thus it was a solace for a stranger to come to the King's Printer and ask for a ballad, or to come and enquire of a compositor whether he had news of such a galley at sea.

"And such strangers were commonly sent by some who knew the customs of the chapel and had a mind to put a trick upon the stranger."

"Benvenue." Every new workman paid 2s. 6d. to the chapel.

If a journeyman "smout" more or less on another printing house, half a benvenue.

Moxon says: "It is now customary that journeymen be paid for all Church holidays that fall not on a Sunday, whether they work or no—proportionately to their usual earnings.

When a man's wife comes to the chapel, she pays sixpence, and then all the journeymen join their 2d. a-piece to welcome her.

Compositors are jocosely called galley-slaves—pressmen horses, because of the hard labour they go through all day long.

The following custom suggests what one hopes may have been true, that masters and men were occasionally a very happy family party: "The printers of London, masters and journeymen, have every year a general feast, which, since the rebuilding of Stationers' Hall, is commonly kept there. This feast is made by four stewards, viz., two masters and two journeymen, which stewards with the collection of a half-a-crown, defray the charges of the whole feast. . . . It is commonly kept on or about May-day: when about 10 o'clock in the morning they meet at Stationers' Hall and from thence go to some church thereabouts (here they had a sermon, and then returned to the Hall, were greeted with music and sat down to a feast). The Master, Wardens and other Grandees of the Company (although perhaps no printers) are yet commonly invited, and take their seats at the Upper Table." After dinner healths were drunk, new stewards for the next year chosen. The proceedings wound up with songs, dancing and acting.

The reason for holding this festival about May-day was either because the charter was granted to the Stationers' Company on 4th May, 1557, or because 6th May, the feast of St. John before the Latin Gate was the recognised festival of printers, certainly on the Continent.

The "Wayzgoose."

Lastly, in this connection, let me refer to one practice which I think is not yet entirely defunct, viz., that of the "Waygoose" or "Wayzgoose." Moxon says: "It was customary for all the journeymen to make every year new paper-windows, because that day they make them, the master printer gives them a waygoose, *i.e.*, a good feast, and not only entertains them at his own house, but besides gives them money to spend at the alehouse or tavern at night. And to this feast they invite the corrector, founder, smith, joiner, and ink-maker, who all of them open their purse-strings—except the corrector—and add their benevolence (which workmen account their duty because they generally choose these workmen) to the master printer's. But from the corrector they expect nothing, because the master printer choosing him, the workmen can do him no kindness."

Moxon gives the following explanation of the word "Devil."

"Devil." The press-man sometimes has a week-boy to take sheets, as they are printed off the tympan. These boys do in a printing house commonly black and daub themselves; whence the workmen do jocosely call them "Devils," and sometimes "Spirits" and sometimes "Flies."

In bringing to a close these desultory remarks on the Romance of Printing, I am conscious I have but touched upon the fringe of the subject. Perhaps you will say that the title which I have selected is hardly the right one—that it is too grandiose a one. Yet I cannot help feeling that there is a real romance to be found in the subject, however inadequately I may have dealt with it. Indeed, I cannot do better than quote the concluding paragraph from Mr. Updike's monumental work on printing types, to which I owe such a deep debt.

"The practice of typography, if it be followed faithfully, is hard work—full of detail, full of petty restrictions, full of drudgery, and not greatly rewarded as men count rewards. There are times when we need to bring to it all the history and art and feeling that we can, to make it bearable. But in the light of history, and of art, and of knowledge, and of man's achievement, it is as interesting a work as exists—a broad and humanising employment which can indeed be followed merely as a trade, but which if perfected into an art, or even broadened into a profession, will perpetually open new horizons to our eyes and new opportunities to our hands."

THE END.

New Linotype Features.

Model 4 Development.

The latest step in Linotype evolution has to do with the development of Model 4, and consists of the addition of an auxiliary section, so that the one machine will now set all faces and bodies from 5 to 36 point. We are able to publish herewith an illustration of a model so equipped.

The new linotype has one keyboard only (the regular standard keyboard of 90 key buttons), which controls all the matrices within the scope of the five magazines from 5 point to 36 point, and its action is fully automatic.

The regular equipment of the machine consists of three main magazines and two auxiliary magazines; additional magazines can quickly be substituted for those on the machine. The three main magazines may each contain two complete founts of upper and lower case, or as many as six different founts of capitals. The capacity of each pair of auxiliary magazines is a full fount of large display characters, upper and lower case, up to full 36 point. The magazine control handles are so arranged that the operator does not need to move his hands from the single keyboard to obtain any character that runs in the machine.

New Model 4 Linotype.

Advantage has also been taken in designing this new model to include several other special features which have for some time past been undergoing close test, whilst at the same time its general construction has been simplified so that it is now claimed that any Linotype operator can make himself familiar with this new model in half an hour.

Composition from the auxiliary magazines is as rapid as from the main magazines, because all are controlled by one power-driven keyboard and from the same keys and the same position to which every operator is accustomed.

The assembler has been entirely remodelled to accommodate more easily the rapid assembling of the wide range of matrices from 5 point to full 36 point. This new assembler is driven direct by shaft and spiral gear.

All magazines are interchangeable. Any one of the main magazines can easily be removed without disturbing the others, and the auxiliary magazines are just as easily removed. The working positions of the main magazines are changed instantly at will and without touching the auxiliary section in any way.

THE NATIONAL Association of Wholesale Stationers AND PAPER MERCHANTS.

Meeting of National Council.

The fortieth meeting of the National Council was held at the Council Chamber on Thursday, October 11th, Mr. A. Dykes Spicer (the president) being in the chair.

Full particulars with regard to the recent conferences with the Federation of Master Printers were given to the meeting, and the communications which had been circulated to members on both sides were fully discussed. The steps taken by the Committee dealing with the matter were fully endorsed by the Council.

A report was laid before the members of the conference which had been held on the subject of standardisation, in consequence of which a questionnaire had been issued to the important white houses in the kingdom. A further meeting of the Committee which has this matter in hand will be held at an early date, when the general secretary's analysis of the replies to this questionnaire will be considered prior to a further conference.

The position arising with regard to the abolition of German export licences, as affecting the export of paper, was fully considered.

The correspondence which has passed between the Postmaster-General and the general secretary on the subject of printed paper rates was read to the meeting.

The consideration of the meeting was given to the proposed standard charges put forward by the railway companies under the Railways Act, 1921, it being agreed that the objections on behalf of this Association should be lodged with the Railway Rates Tribunal on October 13th.

The meeting was fully informed with regard to the correspondence which had recently passed on the subject of the Norwegian and Swedish General Trade Rules.

Instances where the Association had been successful in settling certain disputes between members and third parties were reported to the meeting.

The election of certain new members was duly confirmed.

The next meeting of the National Council will be held on Thursday, December 13th, 1923.

Brusewitz Directory.

The English edition of the Brusewitz Directory of Paper and Pulp Makers of Sweden, Norway, Denmark and Finland (1923) is to hand. This directory occupies a unique position among such publications, its scope and accuracy rendering it indispensable to all who are concerned with the paper and pulp industry. The work is edited and published by Hugo Brusewitz A.B. and is well done in every way. Divided under the headings of the various countries, and in alphabetical order, reference is made easy. In the directory to the mills, details are given as to owners, capital, machinery, production, officers, English agents, trade marks, etc. In addition there is an index to the mills in Sweden and Norway, arranged according to the nature of the paper, board or pulp produced. Again, the register of names is a helpful feature. Then we have that particularly useful section—the index of trade marks, with reproductions of the various devices employed. This section is valuable in helping to identify the origin of particular brands. The map, which is a feature of the book, not only shows the situation of the mills in the four countries, but has an index which indicates by numbers and letters the exact position of the plants. It will therefore be seen that the Brusewitz Directory is a very complete reference to the paper, board, and pulp plants of Scandinavia and Finland. The volume is a handy size (8¼ in. by 5¾ in.), runs to 280 pages, is clearly printed, and is bound in stout boards.

Co-operation in Paper Trade.

An important plan of co-operation between the national box manufacturers and the manufacturers of glazed and fancy papers in America has been worked out for the simplification of the distribution to the box manufacturers of the product of the glazed paper mills. Still further steps toward the accomplishment are under consideration, with the result that there has been an elimination of opportunities of differences between buyer and seller. The first step was the adoption by the National Paper Box Manufacturers' Association and the Glazed and Fancy Paper Manufacturers' Association of a basic size of 25 by 40 (1,000 sq. ins.) for pricing and billing glazed and fancy papers for the box industry. Other proposals are under consideration.

PRINTING paper, undyed or dyed in the pulp, may be exported from Germany without an export licence as from October 9th.

RUBBER LATEX IN PAPER.—Referring to this subject at the meeting of the Beranang (Selangor) Rubber Plantations, Ltd., Mr. W. R. Davies, the chairman, said this prospect of an increased outlet for raw material had not developed as rapidly as was hoped; nevertheless, about two dozen paper mills in this country were making latex paper under licence, and this must be considered reasonably satisfactory, especially with a nation which was slow to take up new ideas.

QUARTERLY EXPORT ISSUE—DECEMBER 6, 1923.

PUBLICITY AND PRINT

are inseparable. One could not exist nowadays without the other.

Newspaper Publicity is a necessity to the modern business. Publicity must, however, be undertaken systematically with the right journal or journals—journals with a recognised reputation.

The selling power of space depends upon a reputation backed by results, and these results must tell every time. Reputations are, however, not made in a day.

It has taken some forty years to establish the present-day reputation of the **Quarterly Export Issues** of the

British & Colonial Printer & Stationer

At the present time this Journal is the recognised overseas medium of the Printing and Allied Trades.

It circulates among buyers in the following markets:

Australasia	**China**	**South America**
India	**Japan**	**Canada**
East Indies		**United States**
West Indies		**South Africa**

RESULTS

One of the most sussessful of our advertisers says:—

"It will no doubt interest you to learn that during the past few years we made considerable additions to and have extended our Export Dept. We thank you for the assistance that your journal has contributed towards this export business."—C. B., Ltd.

The next issue will be published on Dec. 6.

Can you afford to neglect this opportunity of extending your export trade?

Forty Years of Photo-Engraving.

By LOUIS FLADER,

Commissioner American Photo-Engravers' Association.

Much older than printing, engraving made printing possible. Gutenberg, who is credited with the invention of movable type, did nothing more or less than to engrave the letters of the alphabet singly and as units. This enabled him to "set up" or assemble text matter, after which printing, as we now know it, came into vogue. Printing itself has always been restricted by the ability of individuals to engrave type and illustrations, and has progressed only as these methods progressed. Printing from type only, even though it be the vehicle that conveys the knowledge and learning of the world's master minds, could not and did not satisfy the masses until it was augmented by the use of decorations and illustrations. These have always been the handiwork of the engraver, and the progress of printing itself is so interwoven with the progress in engraving that they are one and inseparable.

Printing received a great impetus in the middle of the nineteenth century, when wood engraving came into vogue, and developed greatly during the thirty years that followed, simply because wood engraving was at that time the latest development of the engraver's art. It was then the most serviceable method of interpreting art into printing plates, allowing the original subject to be multiplied to any number, thereby making these reproductions, which were broadcast through the medium of the printing press, available and accessible to the people as a whole.

Birth of Photo-Engraving.

The printing industry, however, began to reach its present development only after photo-engraving was born. March 4th, 1880, the day on which the New York *Daily Graphic* printed its first half-tone of a picture entitled "Shanty Town," marked the beginning of a new era in engraving and printing circles. It was on that day that photo-engraving as it is now known first came into commercial use, and on that day and date were born the present revolution and evolution of the printing industry and of the business world itself.

Just what is photo-engraving? And why should it be credited with being the yeast that leavened the entire lump? Photo-engraving is a photo-mechanical process, capable of reproducing any subject or article that can be photographed, drawn or painted, and faithfully interpreting the tonal values of the original into relief plates suitable for printing on the letterpress. That's all it is, and that's all there is to it. The difference between photo-engraving and all other methods of engraving lies in the fact that photography is the underlying principle in photo-engraving. The application of photography in connection with engraving insures, first of all, a faithful reproduction, which is a prime factor to success in this instance. With photography as its base, and with the major results and effects obtained by the aid of chemicals, we arrive at the second essential to success, speed. The third important factor is adaptability. Thus the outstanding features which separate photo-engraving from all other illustrating methods are faithfulness to the original, speed of production and a wide range of usefulness. Add to these factors the element of price, and you have the reason for the popularity of photo-engraving and its displacement of practically all other illustrating methods.

Printing can only be accomplished when there is something to print from and with. Printers could always print, but as long as they had nothing but type to print from there was no great demand for printing. When illustrations were introduced, they served to make printing more popular, the demand for printing expanded, and the evolution was on. Up to the invention and introduction of photo-engraving, all methods of engraving were painstaking and time consuming, and having nothing more than the individual skill and artistry of the engraver as a foundation, they did not satisfy the public's desire. With the introduction of photo-engraving came an unprecedented demand for illustrations, and all that was required of printing was to keep pace with the developments in photo-engraving.

Old-time Difficulties.

To realise what the printing industry had to go through in the last forty years, it is necessary to visualise the equipment and methods in vogue in printing offices of that day. It is also necessary to compare the printing of forty years ago with the printing of to-day. No doubt some will be found who will rave over the beauties of the wood cut and the printing of forty years ago, and who will insist that the individual skill of that period resulted in far better printing than does the mass production of to-day. This is tommyrot and has no foundation in fact. The artistic printer of forty years ago could express his skill only through the medium of the equipment, tools and materials available at that time. Compare those with the same elements available to-day, and you will find your answer. Printing, instead of being a lost art, is just beginning to come into its own.

When the half-tone was introduced, there was no paper manufactured suitable for half-tone printing. The paper manufacturer was the first to feel the effects of this new method. He was compelled to learn his trade all over again, and the various coated and enamelled papers of to-day are the results of his efforts. The inkmaker was the next to feel the spurs of progress, and he had to revise his ideas on the subject of printing inks and to-day applies the science of chemistry to his calling. The press builder was the next to swing into line, and he has made a good job of it. With the application of science, mechanics, inventive genius and skill, focussed in this direction, he has made remarkable progress and stands to-day on the threshold of great possibilities. Even the type manufacturer could not escape the process of evolution, as he soon found it necessary to devise new faces and new methods to keep up with the pace set by photo-engraving. Typesetting machines were made necessary partly by the development in photo-engraving, the photo-engravers being able to produce printing plates much quicker than the hand compositors could set type.

To get a complete idea of the development in photo-engraving during the last 40 years, and its importance to business and even to civilisation itself, one needs only visualise the situation and the conditions that would arise if photo-engraving were suddenly discontinued and no longer available. This would call for a readjustment that would overshadow the present-day world problems. The situation that would follow is simply unthinkable.

Development of the Art.

The development of photo-engraving has been modest and gradual. It has been constant and never-failing. There are some who will say that no improvement has taken place in photo-engraving in the last 20 years, while others express impatience at the thought that photo-engravings are made to-day in much the same way that they were made 20 or 30 years ago. It is true that the process is virtually the same, but the methods of procedure and the results are widely different. The process is the same because it is solidly grounded on correct fundamentals. To change these fundamentals would mean to change the entire process, and up to this time nothing has appeared that promises even a remote possibility of improving the service now rendered.

The equipment, materials and means employed by photo-engravers to obtain the results with which all are familiar, are of no great interest to anyone outside the craft. Results alone count, and results in this case speak for themselves. Everything points to rapid progress in immense production of colour process engraving, which bids fair to do as much for photo-engraving and printing as did the invention of photo engraving itself. We are, jointly with the printers, on the threshold of a new era. Forces are at

Digitized by Google

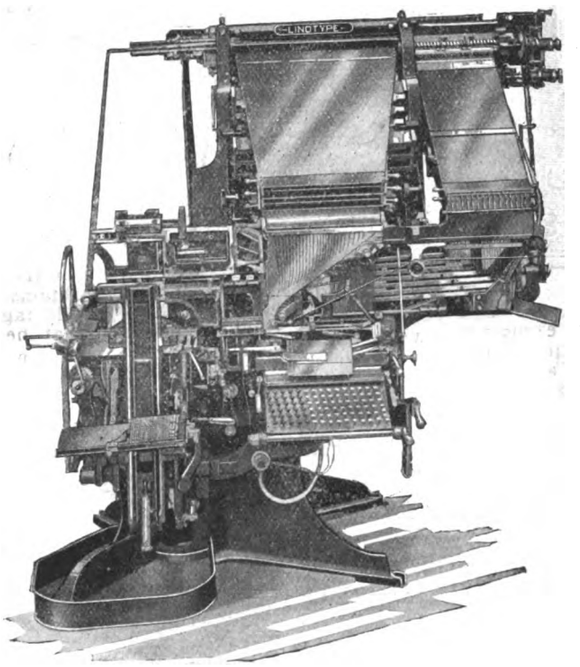
work which will greatly expand the graphic arts, particularly photo-engraving and letterpress printing. The exceptional of yesterday will become the commonplace of to-morrow. The public wants pictures, and photo-engravers and printers will produce them for many years to come, and until better methods are found.

Progress and development may be measured by many standards and indicated by various symbols. Applying the yardstick of public service to the photo-engraving industry, its development has been wonderful indeed. It has been the means of creating a new set up not only in the graphic arts, but in the business world. This in itself is a record of progress and development of which the photo-engraver may well be proud. Add to this the element of speed, and it becomes marvellous, indeed. Pictures are now transmitted by telegraph, both by wire and wireless. This method of transmission, linked up with photo-engraving, makes it possible to reproduce pictures of current events, in different parts of the world, simultaneously with their occurrence.

Now we come to the last and greatest development, the production of colour process plates in three or four colour printings. This marvellous invention and process has been refined and improved to a point where a set of colour process plates can be made complete in less than one day. Not that this is a regular procedure and a common occurrence, but it can be done and has been done. On top of that, colour photography has progressed so far that colour record negatives can now be made from any object or scene and reproduced by the photo-engravers.

This progressive step gives promise of newspapers illustrated in colours—Sunday editions to begin with, of course. It requires no great stretch of the imagination to predict that if newspapers can be illustrated in colours one day in the week, they can be illustrated in colours every day. They can and they will.

Verily, photo-engraving has made progress during its short life of 40 years.—*Inland Printer.*



Paper Consumption.

An estimation of consumption of paper per capita in the United States gives the following figures: 1899, 57 pounds per capita; 1904, 75; 1909, 93; 1914, 106; 1918, 118; 1920, 138; 1922, 127.

One reason given for the increase is the very large expansion of the use of boxes made of pulp material, which have so largely replaced other forms of shipping, and which use pulp at a very rapid rate.

In 1921 the production of boards in U.S.A. reached 1,739,801 tons, while the figure for news-print was 1,326,638. Book paper represented 806,876 tons, and wrapping paper 703,788. The total production, according to the U.S. Census of Manufactures, was 5,428,265 tons in 1921.

A PRESS cuttings service is being formed by Mr. Alfred Sloman, who for a long time has acted as a director of Romeike and Curtice.

Price Cutting in Difficult Times.

Important Points for Printers.

It appears to be a growing usage for associations in cities and large towns to include an address on a specific subject in the agenda of the quarterly meeting, and at the recent meeting of the Bristol Master Printers' Association, Mr. Frank Colebrook gave one of his unconventional talks, taking for subject "Price Cutting in Difficult Times." Mr. W. T. Bodey presided over a good attendance.

Mr. Colebrook urged emphatically that printers should foregather more than ever when times were bad. After reviewing some of the reasons or excuses that were allowed to interfere with active M.P.A. membership, he pointed out that in a bad time printers, coming together more regularly and earnestly than in a good time, might revolve special possibilities. Collective advertising was one such possibility. Some joint effort could be made for the better enlightenment of the printing purchasing public.

Salesmanship Essential.

The chief thing that Mr. Colebrook emphasised was the immense importance of salesmanship, particularly suggestive salesmanship. Printers had allowed the advertising agent to do what perhaps they could have done. A printer could work in association with a good copy-maker. Probably, however, the average printer had some good publicity notions of his own. It was worth while, for instance, to find out when certain firms, societies or institutions reached interesting anniversaries, for they might then be expected to be peculiarly amenable to persuasion. Printers might produce house organs for themselves, and suggest something of that character to their customers. They might perhaps prepare a common form house journal; one page or two pages to have special matter of the customer's, like the partly-printed parish magazine. It was advisable in dull times to look over old correspondence and any old records telling of the nearly persuaded or the persuadable. They might also look over the plant, which was often excessive. What of getting rid of this machine or that and using the proceeds, however small, as business-seeking seeds sown to keep the other machines busy? Perhaps the cutting most required might be the cutting of the printer's own domestic expenses. From being a poor rich man he might change to being a rich poor man.

Unconscious Cutting.

Cutters often enough cut unconsciously. Some thought a small rent made miracle working possible. But the largest printer paid the lowest rent and rates—per journeyman. Mr. Colebrook believed there was less difference than was commonly supposed between the costs per given unit of product of printers of different scales and equipment. There seemed to be some equalising factor tending to minimise this differentiation.

Some seeming cutters were not cutting. He had been a printer himself until about twenty-five years ago, when he sold his business. He remembered doing a few items of work for which he was quite inadequately equipped in comparison with other houses, so that his competitors might well have seemed monstrous cutters.

Monthly balance sheets might be very helpful, and, whatever they showed, would probably be stimulating to the printer. They at least would discourage his cutting to make bad worse. Staff heart-to heart talks might in some cases be good.

The "filler" job might perhaps be warrantable where it absorbed an amount of overhead expenses which were not otherwise immediately reducible, and where the amount so absorbed greatly exceeded any loss made on that particular filler. The printer would say to himself that his whole return for the month would have been more profitless had not that one job—profitless "on its own"—been taken. But was the printer sure that these conditions obtained? And did he allow for probable damage in the future? Did he forget, too, that the repeat order was commonly the order that paid? Did he overlook the possibility of using his slack time to better account by printing some posters to advertise that he was a printer? Or in other ways printing for himself? Might not printing for himself be a better use of a slack time than printing profitlessly for others?

Variant Estimating.

Mr. Colebrook gave a number of instances of recent very discrepant divergent estimating which occurred at a meeting of the Printers' Managers' and Overseers' Association. That company in a sporting spirit, which did them all honour, agreed then and there to tackle a certain estimate, with the result that computation of the time required for certain composition varied from 30 to 80 hours, and time for make-ready from one to eight hours.

He wondered if compositors sometimes docketed not the exact time occupied on a piece of work but the time the chapel or its chief authority thought the work "would stand." If so, why did they do this? We should try to get at causes.

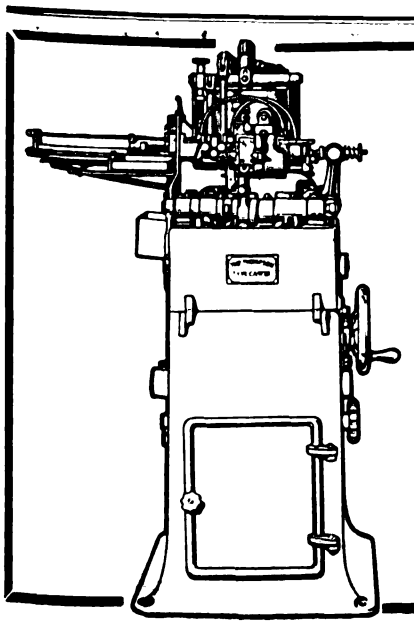
Mr. Colebrook spoke of some good work that was now being carried forward by a certain group of master printers. It asked its members if they would be willing to estimate for three jobs—a hand-set pamphlet, a machine-set pamphlet, and an auction poster—the estimating to be of the ordinary kind, and not done under special scrutiny, the firms were to be indicated only by numbers, and only the secretary to know who was who. About 60 firms, representing nearly as many towns, and very various equipments, competed. They filled in in detail the operational times. They told what machines were used and whether power or hand in small work, and as a two revolution was charged at a higher hour rate than a Wharfe, such information as to the machine used was of course helpful.

An analysis of the estimates showed that one man allowed 14 hours for some guillotine work for which another allowed 1¼ hours, the average time being 4½ hours. For some folding and inserting, one man allowed 46 hours and another only 11½ hours; the average time being 23½ hours. One man proposed to band 5,000 pamphlets (in fifties presumably) in half-an-hour. The average time was 2¾ hours and the highest 6¼. For parcelling 5,000 pamphlets, the average time was 1¼ hours, the highest 4½ hours, and the lowest 40 minutes. For certain composition, the average time was 45 hours, the highest 70 hours and the lowest 30 hours. For getting a machine proof, the average was 1½ hours, the highest 5 hours and the lowest ½ hour. For the working of 2,000 pamphlets on Wharfe, the average time was 5 1-5th hours, the highest 7 hours and the lowest 3½. For a certain 5,000 on a Wharfe the average was 9 hours, the highest 12 hours, and the lowest 6 hours. For guillotining 5,000 pamphlets, the average was 4½ hours, the highest 14 hours and the lowest 1¼ hours. These operational times were turned into cash values at uniform rates, with the result that the average price quoted for 2,000 of the pamphlets was just over £13; the highest was about £18 5s., and the lowest price was £9 16s., very little more than half the highest. The average price for 5,000 pamphlets was £16 14s.; the highest was £22 7s. 6d. and the lowest £12 17s. 6d.

Mr. Colebrook thought it would be found on the analysis that in some cases those who quoted very high figures for operational times in one part of the work, quoted rather low figures for other parts; otherwise more striking discrepancy in the money totals might have been shown.

One printer had confided to the secretary how he came to estimate that 26 would be the number of pages at which a pamphlet would work out, whereas about 48 was really what it needed. He had divided the number of ems by two to turn it into ens, and, having forgotten that he had done this, had repeated the process. He meant not 26, but 52 pages. "But," he said, "apparently I should have made the same mistake had it been for an ordinary customer." Another who confided that it was he who quoted 32½ hours for the composition of the pamphlet, whereas the proper allowance would be about 45 hours, said afterwards that he had put down 32½ hours for composition and 10 hours for make-up and imposition, and had omitted to add in the 10 hours make-up and imposition.

Mr. Colebrook ended by a strong appeal not to fail through lack of hope and lack of care to meet the challenge of these difficult and epoch-marking times.



Mr. E. W. Allen moved, and Mr. G. H. Holloways econded, thanks to Mr. Colebrook.

The "World's Art Service."

Messrs. Raphael Tuck and Sons' admirable selection of Christmas and New Year cards, post cards, gift books, etc., is again brought to our notice by the receipt of a packet of samples representing some of the many lines comprised in what this eminent house terms with justifiable pride the "World's Art Service."

We recall that the attractive cards which the house of Tuck is producing for the Royal family take the lead in a wonderful variety comprising some 3,000 different designs. These are supplemented by a fine range of picture post cards carrying appropriate greetings for the festive season, for birthdays and for other occasions. Art calendars and daily block calendars comprise a remarkable collection, good alike in its art and its literary effects, whilst it is claimed that the "Raphael House Library" of children's books, toy books, painting books, annuals, etc, has never offered a finer selection than this year.

The "World's Art Service" is maintaining its high reputation, and the new series of "Tuck" products can be heartily recommended to all interested.

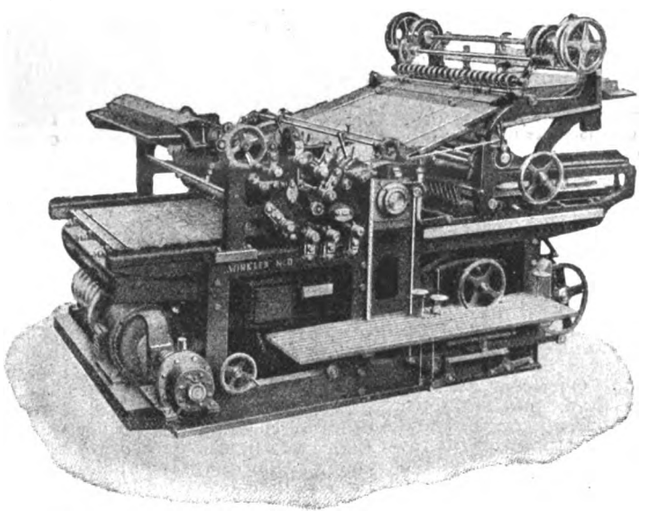
THE

THOMPSON TYPE, LEAD & RULE CASTER

Reliability of a typecaster consists of the high quality of its product at a cost low enough to make non-distribution economical.

Thompson quality is a standard of accuracy not surpassed even by typefounders.

Simple, complete and compact, using Linotype, Intertype and its own matrices interchangeably, the Thompson produces more type than any other typecaster on the market and equals the out-put of two of some other makes.



Type in all languages from 5 to 48 point, leads, slugs and rule 2 to 12 point, accurate in every detail, are produced on the Thompson Type, Lead and Rule Caster.

THOMPSON TYPE MACHINE CO. 223, W. Erie St., Chicago, Ill., U.S.A.

The "WINKLER" High Speed Automatic Art Press.

With Oscillating Cylinder and Printed-Side-Up Delivery Without Sticks.

Discriminating printers recognise it to be the ideal machine for producing Fine Half-Tone and Multi-Colour Work.

Unequalled for Dead Register, Rolling Power, Impressional Strength, Speed, Absence of Gear Marks and Noiseless Running.

Occupies only about half the floor space of a two-revolution machine for the same size of sheet.

The middle inking roller is of smaller diameter, thus eliminating any possibility of circumference marks on solid surfaces.

The forme is supplied with **fresh** ink from **all** inking rollers both during the forward and backward space movement of the bed.

To prevent "picking" when printing difficult work on art paper **electric heating** of the bed is provided, the inking rollers being specially **water-cooled.**

Automatic Cylinder Check, Throw-off of inking rollers and Slow Motion.

SWISS MANUFACTURE.

Trade Notes.

The week's partnerships dissolved include those between: J. Webb, A. Webb, W. Wier, and A. J. Bowles, printers and stationers, 1, Gothic-arcade and 31, Snow-hill, Birmingham, under the style of J. and A. Webb and Company; H. Morris, A. Anderson, and C. N. G. Walker, printer, 33, Whitmore-road, Small Heath, Birmingham, under the style of Morris, Anderson and Walker; J. T. Huddlestone, C. H. Askwith and M. Miller, under the style of the Thanet Publicity Service, at 17, Chapel-place, Ramsgate, printers, stationers, and advertising agents.

A call for tenders for the supply of general store requirements of the State Electric Light Works, of Montevideo, Uruguay, includes stationery—paper blocks, copying, etc., pencils, rulers, notebooks, sealing wax.

Flag Day Success.—The printing trade's Flag Day held on the pay day of last week on behalf of the War Orphan Fund of the Printers' Pension Corporation was widely supported and is believed to have been a great success. It is too early yet to give any indication of the result, but it is evident there has been a very gratifying response.

London Co-operative Printing Society employees held an enjoyable annual dinner on Saturday night, amongst those present being a large number of trade union representatives. A handsomely-produced souvenir programme was prepared for the occasion.

Liverpool P.M. and O.A.—The first Bohemian concert of the season of the Liverpool centre of the Printers' Managers and Overseers' Association was held at the Angel Hotel on Saturday evening, the president (Mr. Charles Mackie) in the chair. The large audience was delighted by the excellent programme of music contributed, and a pleasing feature of the evening was the presentation of a silver tea service to Mr. S. H. Hannah, the late treasurer. A vote of thanks to the artistes was proposed by the Rev. A. E. Wykes, seconded by Mr. H. R. Caldwell, and carried with applause.

A newspaper machine assistant, Mr. Robert F. Miller, 30, of Aylesbury, was found dead in a train that reached London from Aylesbury on Wednesday evening, last week. It is believed that Mr. Miller was killed through striking his head against some obstacle while looking out of the window.

A remand on bail was ordered at Bow-street Police-court in the case of Cuthbert Charles Cracroft Rice, age 25, son of the vicar of Tywardreath, Cornwall, charged on Friday with attempting to forge a page of the *London Gazette*. The story of the prosecution was that Messrs. Harrison and Co., previously printers of the *London Gazette*, had been invited by Rice to re-print a page inserting a passage announcing cancellation of a conviction for theft.

Penny Post Demand.—A resolution has been sent by the London Chamber of Commerce to the Dominion Premiers and the Postmaster-General urging the reintroduction of Imperial penny postage. Pointing out that the body is representative of the whole of the trade and industry of the City of London, it insists that this step would do much to reinvigorate business, and urges that every day's delay is of importance.

Fashion Papers for France.—H.M. Commercial Secretary at Paris reports that an Order of the French Director-General of Customs, dated October 3rd, provides that fashion papers which are published in France but printed abroad must bear, in sufficiently apparent type, on the front page the words "imprimé en . . .," whilst those which are published and printed abroad must bear the words "edité en . . ."

St. Lucia.—The Customs Duties Amendment Ordinance, 1923 (No. 13 of 1923), assented to on September 14th, makes various amendments to the Customs Tariff of St. Lucia. Printing machinery and parts of printing machinery are to be admitted free under the British Preferential Tariff, but are subject under the General Tariff to a duty of 7½ per cent. *ad valorem*.

Employees' Study Circle.—Under the auspices of the National Alliance of Employers and Employed, the Bemrose Study Circle (composed of the employees of Messrs. Bemrose and Sons, Limited, printers, Derby), is to meet frequently on Tuesdays throughout the winter for the study of economics.

A large gathering—numbering close upon four hundred—attended an excellent cinderella and fancy dress dance on Monday at the Shoreditch Town Hall in aid of the funds of the Vellum Binders' and Machine Rulers' Pension Society. Prizes for the best original fancy dresses were given by Mr. Harold V. Gibbs, while the spot prizes (ladies and gentlemen) were given by Messrs. Chris. W. Atkins and F. C. Peacock. Captain F. A. Garrett, M.C. (Messrs. R. T. Tanner and Co., Ltd.), and W. G. Watchurst (Messrs. Boyle, Son and Watchurst, Ltd.), acted as judges.

Papyrus Book Discovered. — Hitherto only single sheets of papyrus have been known; but a discovery at Edfou, Egypt, by M. Henne, of the French Institute of Oriental Archæology, has brought to light a regular book, of which 106 pages remain. This papyrus book belongs to the eighth century of our era, when Egypt had long been under Arab rule. The book contains a number of traditions dating back to the time of the prophet Mahomet or his disciples.—*La Papeterie.*

The *World's Work*, which has appeared under that name for 23 years, is altering its title, from December, to *The World To Day*.

The directors of the Southern Railway have appointed in the General Manager's Department Mr. F. V. Milton to be chief of publicity section, and Mr. G. H. Dennis to be chief of advertising section.

A famous advertising house in Cape Town has asked the Women's Advertising Club of London to choose for them a copywriter from amongst London's brightest women advertisers.

A novel collection of over 3,000 matchboxes and matchbox labels is owned by Mr. C. C. Fagg, of Palace-square, Upper Norwood.

Latest Wills.—Mr. A. Wadham, Stroudgreen, N., and Keswick, Cumberland, founder and chief proprietor of the *Machinery Market*, left £62,009. Alderman David James Davies (53), of Llanelly, Carmarthen, editor and proprietor of the *South Wales Press*, left £2,142.

Mr. William Henry Thomas, of Linthorpe, Middlesbrough, chairman and managing director of Jordison and Co., printers, who died August 18th last, aged 66 years, left £17,917 (net £16,400).

The board of directors of *Y Tyst* ("The Witness"), the official organ of the Welsh Congregational Union, announce that Mr. Beriah Gwynfe Evans has accepted the post of editor in succession to the Rev. H. M. Hughes, Cardiff, who has resigned after 31 years' service to the paper.

Book Edges.—"Some publishers seem intent on bringing back the paper knife as a common object of the drawing room table," says a writer in the *Daily Chronicle*. "They are issuing books with uncut edges. That may be all very well for an edition de luxe on hand made paper, but for the ordinary volume which one wants to read as easily as may be uncut edges are merely an irritation and invitation to violence with a forefinger."

We understand that Messrs. Oscar Friedheim, Ltd., of 7, Water-lane, Ludgate, E.C., have secured the sole agency of one of the largest Continental bag-making machine manufacturers, in addition to their existing agency for the whole of the combine of the principal envelope machinery manufacturers.

British Pencil Making.—The European War revolutionised many trades and industries, and in the process a new era in the manufacture of pencils has been opened out to British producers. It is now possible to make in large, instead of limited, quantities a pencil which is all-British from the mining of the raw material and cutting of the special trees needed for the process down to the sale of a single pencil across the counter. The whole process will be demonstrated by our manufacturers at the British Empire Exhibition. A wholly British pencil can now be made up from Kenya cedar wood, graphite mined in Canada and Ceylon, fats and waxes produced in India and Australasia, gums from Egypt, India and the new mandated territories, and British dyestuffs.

A series of eight annual awards for the best newspaper and periodical advertisements in the United States and Canada has been founded by Edward W. Bok, late editor of the *Ladies' Home Journal*. The awards will be known as the Harvard Advertising Awards and will be administered by the Harvard Business School. They will consist of a gold medal and £1,750 (approximately) in prizes.

Advertising Convention, 1924.—At a meeting held at Glasgow, in connection with the Advertising Convention, 1924, Mr. H. Thomson Clark, *Glasgow Herald*, made a statement as to the progress of the movement in London, and discussion followed. It was ultimately decided to form a corporate body, and to get in touch with the other centres in Scotland, and to hold a weekly meeting until further notice. Mr. H. Thomson Clark was appointed chairman, Mr. W. L. D. Yule, vice-chairman; and Mr. H. W. Dick, interim secretary.

The *Zululand Times* (Eshowe, Zululand), has been successful in defending itself in an action for alleged libel brought in connection with comments relating to a local planters' association.

Wages of German papermakers in August was at the rate of 0.77 gold marks, as compared with 0.55 pre war.

French journalism has suffered a serious loss by the sudden death of M. Phillippe Millet, foreign editor of *Petit Parisien*.

During 1920-21 the value of the output of the printing, publishing and bookbinding group of trades in New Zealand is stated to have reached 3½ million pounds.

Trade Union Matters.

Piece Work on Periodicals.—The second conference between the London Society of Compositors and the London Master Printers' Association on the subject of piece work in periodical houses took place on Monday. After a long sitting it was found impossible to come to any agreement. Several suggestions and counter suggestions were made, and were to be referred back to the executives. Yesterday (Wednesday) the matter was to be considered at a meeting of periodical house employers and at a delegate meeting of the L.S.C.

Mr. Thos. Sproat (secretary, Amalgamated Society of Lithographic Printers), and Mr. John Riddell (Glasgow), were the British delegates to the International Conference of Lithographers held at Lucerne in September. This gathering, which is held triennially, embraces some eighteen nations, and is an organisation at which representatives of lithographic trade unions meet in order to discuss questions affecting their mutual interests. The United States is not yet affiliated to the Congress, but it is hoped that country will shortly fall into line with the other nations.

T.A. Executive.—The resignations of Mr. F. Dunn (representative from the Birmingham Branch) and Mr. H. Portch (machinemen's representative from the Southern Division) have caused two vacancies on the Executive Council of the Typographical Association and nominations are now asked for to fill the vacancies. The members of the Birmingham Branch are entitled to elect their own representative and therefore have the right of nomination. For the election of machinemen's representative, each branch in the Southern Division has the right to nominate one candidate. Nominations are to be forwarded to the general secretary, not later than November 27th.

T.A. and Unemployment Insurance.—The secretary of the Unemployment Insurance Section of the Typographical Association states that while very few unions are able to make ends meet with the amount allowed by the Government to cover administration, the T.A. is in the happy position of having no adverse balance, although it is urged that the grant of 6d. for each full week's benefit paid is inadequate and compares badly with the previous rate of 1s. When the grant was 1s. the branch secretaries of the T.A. were allowed 10d. for each £1 disbursed. With the present reduced grant it is not possible for the Executive Council to allow more than 5d., but the branch secretaries have accepted that sum as being in the best interests of the members.

Permanent successes are made by men who have plugged away, tried, failed, and then tried again.

British Industries Fair, 1924.

Its Value to Manufacturers.

Since its inception in 1915 the British Industries Fair has grown enormously in size and reputation. In its first year the Fair scarcely filled the Agricultural Hall; last year, as was the case in the previous year, it again filled the White City, London. This is sufficient proof, if such had been needed, that the Fair serves a useful purpose to the manufacturer in giving the world's buyers an opportunity to inspect, in the course of a single visit to the United Kingdom, the products of British manufacturers in some 60 or more trades. The commercial value of the Fair is also attested to by the fact that many of the firms participating in the first Fair have exhibited in each of its successors since without a break.

Examining in detail the precise services and opportunities which the Fair offers the British manufacturer, we find, first and foremost, that it brings him into direct touch with the buyer, and presents an ever-recurring opportunity for him to show his wares to new buyers, both home and overseas. Even if immediate orders are not received the buyer takes away with him notes of special lines and all particulars necessary for opening business at the moment favourable to his own market. The fact that admittance to the Fair is confined to the bona fide buyer by special invitation means that everyone passing the turnstiles is a potential customer. Thus participation is a form of specialised publicity of the very highest value, secured at a moderate cost.

As opposed to the ordinary means of obtaining orders, necessarily spread over a considerable period, successful participation in the Fair gives pronounced advantages. An exhibitor booking substantial orders at the Fair—it has not infrequently happened that a firm booked its entire output for the year—is able to make considerable savings in production costs. His needs in raw material and labour are clearly defined, and his programme of production can be worked on the most economical lines.

Nor are the possibilities of new business resulting from participation confined to the period of the Fair alone. The dispatch of "follow-up" letters by the Department of Overseas Trade to thousands of overseas buyers on the Department's index and culminating in a personal invitation card has, in the past, brought hundreds of enquiries from overseas buyers requesting to be put in touch with British firms in a specified trade. In many cases this is known to have resulted in substantial orders, and it is fair to assume that in others, orders, of which the Department has not been notified, have also been received.

The inclusion of his name, address and details of his products in the Fair catalogue, gives the exhibitor the further benefit of having a perpetual reminder put before the overseas buyer. The catalogue, carrying a circulation of some 40,000, is issued broadcast throughout the world, and, containing a classified trade index in eight languages, forms an invaluable work of trade reference. The Department of Overseas Trade is, in fact, in receipt of constant requests for copies, together with letters appreciating the utility of the catalogue as a scientific guide to British production.

Part of the propaganda, in addition to the extensive distribution of the catalogue, consists of the circulation throughout the world of a tastefully got up brochure describing the scope and character of the Fair. It will be distributed to the extent of 90 thousand, and in nine languages, including English.

The presence in each trade group at the Fair of the Department's officers, who are able at short notice to supply him with particulars as to methods of payment in special markets, the activities of overseas firms, Customs and shipping conditions, and other points on which the salesman may be in doubt, is also of considerable benefit to the exhibitor.

Lastly, but by no means least, the exhibitor secures all the advantages of participation at cost price, as the Department run the Fair on a self-supporting basis.

STAND IN THE STATIONERY SECTION OF THE 1923 FAIR.

A number of organisations identified with the paper, printing and allied trades are advising their members of the importance of the Fair, especially emphasing the advantage of its being held at the same time as the British Empire Exhibition.

Advertisers who are taking space at the White City should mention this fact as early as possible in their advertisements, so that the attention of foreign visitors may be called to the fact. The stand number should be made a feature as soon as it is available.

A certain amount of space will be available for the display of posters, etc., similar to that arranged in connection with the 1923 Fair.

It is indicative of the enterprise of the Department of Overseas Trade that they have prepared an initial device, of which we give an illustration, which may be used by exhibitors and others. On the left of the picture showing the stands is that of Spicers, Ltd.

American Type Founders Co. Sheet feeding mechanism for printing presses. 194,295; 194,296.

Electric Paper Tester.

A new electric paper tester is announced by Messrs. E. J. Cady and Co. The machine weighs 95 lbs. and is clamped down to a heavy wooden base. The electric motor is at one end, that opposite the paper clamp. When the wire connection is made, the small crank near the clamp works the machine. This crank makes only one complete cycle. When the paper is placed under the kunckle clamp, the handle is turned until the clamp rests on the paper. From then, the handle is shoved down forcibly until it stops. This holds the paper absolutely tight, no matter how thick or thin it may be, with a uniform pressure, and starts the electric motor. As soon as the paper breaks, the handle is reversed as far as it will go, and 14 seconds after the machine starts it automatically stops. This makes it possible to test four times a minute.

The tester works on the cycle principle. When it has completed a cycle, it turns off automatically. It is claimed to have absolutely uniform pressure.

POROUS BOARD WANTED.—Paper manufacturer requires small quantity of very porous board, something like mechanical pulp, but without the holes punched in it. Should be about $\frac{1}{8}$ in. thick and any size between 18×23 and 24 square. Pale grey colour preferred. Present requirements about 5 cwts., but it is a repeat line.

Books that Count: A Dictionary of Useful Books; 2nd edition. Edited by W. Forbes Gray. Pp. xx., 250 xl. Demy 8vo. A. and C. Black. 1923. 7s. 6d. net.

"Of making many books there is no end" wrote the author of the Book of Ecclesiastes in the days when books were comparatively few. To-day there pours from the printing press a veritable cataract of books; last year no less than 8,754 new books were published in this country, as well as 2,088 new editions of other books. There are numerous special bibliographies for the specialist, the advanced student, and the librarian, and for them there are also such comprehensive works as Sonnenschein's "Best Books," Nelson's "Standard Books," and the "Catalogue of British Scientific and Technical Books," published by the British Science Guild, though, alas, the two former urgently require to be brought up to date. The ordinary reader and the young student are not well provided for in the matter of guides to books. The first edition of "Books that Count," published in 1912, was a most welcome guide for such persons, and we are confident that this new edition will be equally welcome and valuable. The volume "takes note only of works (1) that are in English (together with outstanding foreign books, of which good translations exist); (2) that furnish briefly and pointedly the vital aspects of their subjects; and (3) that are modern in aim and outlook, easily accessible, and purchasable at a moderate price." The work embraces 6,000 books—500 more than the previous edition—and each entry gives the following bibliographical particulars: author's name (in clarendon type), title of book, size in inches, number of pages, illustrations, date of publication, publisher's name and price. These are followed by concise descriptive notes which are expository rather than critical, the compiler's object being to enable the reader to ascertain at a glance the scope and distinctive features of a particular book. The arrangement of this handbook is more or less alphabetical by subjects. There are the following 17 main sections, each of which has many subdivisions, also in alphabetical order as a rule: Agriculture, Biography, Domestic Economy, Education, Engineering, Fine Arts, Geography and Travel, History, Industries, Literature, Medicine, Music, Philology, Philosophy, Religion, Science and Sociology. We are pleased to note that the omission of a technical section in the first edition has been remedied. The several new sections include "Engineering" and "Industries." About "500 technical books have been included under these headings, all of them selected by experts." We naturally turned with much interest to the sub-sections on Printing, Papermaking, and Bookbinding, with which this periodical is most intimately concerned. On papermaking the inquirer has a choice of five books, but on the larger industry, printing, which has a much greater literature, particulars of only two books are given—Jacobi's "The Printers' Handbook," and his "Printing" (6th edition, 1920). More unsatisfactory still is the portion on "Bookbinding," under which heading the translation of Paul Adam's German book entitled "Practical Bookbinding" is the only work noted. This book was published about 20 years ago, and, so far as machine bookbinding is concerned, has been quite superseded. "Books that Count," valuable as it is, could be made more valuable still, and we suggest that when the preparation of a third edition is begun the compiler might with advantage enlarge his list of expert advisers, and also try to secure the services of two or three progressive public librarians whose knowledge of modern books would be of great assistance to him. The book is well printed, and is exceedingly cheap.

The Library Bureau, Ltd., specialists in filing systems, etc., have vacated their temporary premises at No. 2, Ludgate-hill, E.C 4, and are now at 125, High Holborn, W.C 1.

The largest single grant made by the trustees of the Carnegie United Kingdom Trust at their recent meeting was one of £15,000 to the National Library for the Blind, for the extension of the premises in Westminster.

Welsh Master Printers.

Organising Activity.

In continuance of the organising campaign with North Wales Alliance of the Federation of Master Printers, a special meeting of the Merioneth and South Carnarvonshire Association was held in Barmouth on Monday of last week. The area includes Barmouth, Dolgelly, Criccieth, Portmadoc, Pwllheli, Blaenau, Festiniog and Bala.

Capt. Lewis Davis (Blaenau Festiniog), the chairman of the Association, presided. Many matters of great interest were discussed and the principles of the Federation Costing System were explained.

It was agreed that a deputation from that meeting should wait upon all the printers of Portmadoc and Pwllheli and endeavour to arrange a sectional meeting preliminary to a further meeting of the Association.

At the first meeting of the newly-formed Carnarvon Association on October 19th, Mr. O. R. Owen presided. Messrs. E. Lloyd Williams and A. Vaughan Evans were elected to the executive. It was agreed to hold meetings of the Association fortnightly in future. It was also resolved to take steps to form a District Committee of the Joint Industrial Council and to approach the Typographical Association to this end before the next meeting of the Association on November 2nd. Mr. W. G. Williams, the secretary, is throwing himself heartily into the work of firmly cementing the Carnarvon Association. The North Carnarvon and West Denbigh Association (which includes the coast towns from Llanfairfechan to Abergele, together with Conway and Llanvwst), held its quarterly meeting at Llanvwst on November 3rd.

Mr. A. Moy (Llandudno), chairman of the Association, presided, and the meeting was also addressed by Mr. H. Powlson (president of the Alliance), Mr. H. Tomkinson (Colwyn Bay), Mr. L. J. Cumner (Federation official) and Mr. W. Edwards (Alliance secretary).

In addition to the next quarterly meeting of the Association, which is to be held at Penmaenmaur, it was agreed to hold a special meeting of the Association in Conway on December 10th.

Amalgamated Press.

Opening of Sports Ground.

The Amalgamated Press Athletic Club's new ground at Lower Sydenham was officially opened on Saturday last by Brigadier-General W. F. Mildren, C.B., C.M.G., D.S.O. The occasion was a charity football match in aid of the funds of the Lloyd Memorial Seaside Home, Deal, between teams representing the Sumner-street Works and the Lavington-street Works.

A 12-mile road walk was also held, in which 19 competitors took part. The scratch prize was won by Mr. F. Moore. After kicking off, General Mildren watched the game with interest, and at the conclusion of the walk presented the scratch prize. The other prizes wilt be given at a later date.

In response to a warm vote of thanks, proposed by Mr. Jones (chairman) and seconded by Mr. Mould (secretary), General Mildren said he was happy to be present and hoped that the Sports Club would flourish. He was particularly interested in the younger members and looked forward to seeing the ground being used to its fullest extent. He assured the members that they could count on his interest and asked them to support their officers.

The U.S. Commercial Attache at Prague states that the annual report of the Oleschauer paper mill, recently made public, shows a net loss of 2,300,000 crowns for the year 1922. This concern had been capitalised at 9,000,000 crowns in the previous year, when it made a net profit of 3,200,000 crowns, but during the year 1922 it was consolidated with the Prague Paper Works and the capital increased to 21,000,000 crowns. The unprofitable business was attributed entirely to a sharp appreciation of the Czecho Slovak crown in the latter part of 1922, which necessitated the entire closing down of the mill.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies, Machinery for Sale and Wanted, Businesses for Sale and Wanted, Partnerships and Investments, Miscellaneous.

One Insertion 3/0
Three Insertions 6/0

For every line exceeding three lines **6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion 1/6
Three Insertions 3/0

For every line exceeding three lines **6d**

Sales by Auctions, Tenders, Patents for Sale, Legal and Financial Announcements

Per line 1/0

Replies may be addressed to Box Numbers, Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C.4, for which a fee of 6d. is charged to cover Postage of Replies.

Cheques and Post Office Orders to be crossed and made payable to STONHILL & GILLIS.

Telegrams: Stonhill, Lud, London.
Telephone: 8407 City.

Situations Wanted.

EXPERIENCED and Highly Qualified Printer requires Position as MANAGER or OVERSEER, or Responsible Staff Appointment; Costing Expert (M.P.F.), Keen Estimator, Buyer, Organiser and Disciplinarian; 8 years Assistant and Works Manager; highest credentials; interview London.—Box 14273.

OPPORTUNITY desired in Estimating Department of progressive house, by Practical LITHOGRAPHER and SALESMAN; capable, ambitious, wide experience; highest integrity and references.—Write, Box 14269.

OVERSEER, conversant with Machine Ruling, Envelope Cutting and Folding, Relief Stamping, Die Press Work, Numbering, Perforating, Eyeletting, Letterpress Folding, Label Punching, Guillotine Cutting seeks re-engagement.—A. H. Smith, 33, Devereux-road, Wandsworth Common, S.W.11. 14276

PRACTICAL PRINTER, with wide experience all departments, desires Post as MANAGER or GENERAL OVERSEER, or place of trust; good class work.—Box 14272.

Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, NOVEMBER 8, 1923.

Colour Printing of Periodicals.

ARE we on the eve of a widespread application of colour printing to the production of periodicals, and even of the daily newspaper? In the interesting article which we print this week from the pen of a prominent representative of the American photo-engraving industry the daily newspaper in colours is definitely predicted, and it is suggested that Sunday editions will lead the way in this important advance. It is interesting to note that what is claimed to be the first weekly magazine in colour is about to be issued in America. The *Chicago Tribune* is arranging for the production of such a journal with the use of rotary machines, and the machinery is in course of construction. It is stated that the particular process used has been developed in the *Tribune* plant, and, if successful, will mark an important forward step in printing trade evolution.

Joint Industrial Council Lectures.

IT is a matter of happy augury for the printing trade that district committees of the Joint Industrial Council are now being formed here and there throughout the country, and a wider basis is thereby being given to the beneficent activities of which the J.I.C. in its more centralised form has already proved itself capable. One of the functions that various district committees are performing is the very useful one of arranging for lectures to be delivered in their particular localities, thus assisting the spread of technical knowledge and of the get-together spirit, for which the J.I.C. stands. We are not surprised to hear that Mr. J. R. Riddell, the well-known principal of the London School of Printing, has been called upon to inaugurate some of these series of lectures, and has already visited Cambridge and Cardiff and has other engagements booked. His practical industrial experience, combined with an intimate knowledge of educational matters, peculiarly qualify him to advocate and assist the extension of technical education, and the industry should be the gainer by his praiseworthy efforts in this direction. The London District Committee are awake to the opportunities which lectures afford, and we understand they have secured the services of Mr. E. H. Lee, the newly-elected chairman of the Health Committee of the J.I.C., to lecture at Stationers' Hall on the 10th of next month. District committees everywhere will do well to secure for their own areas the enlightenment and inspiration of which such lectures can well be made the medium.

The State of Trade.

THERE are perceptible signs of a very slight improvement in the paper trade and some indications of a more hopeful outlook. In certain sections of the printing trade there are better and bigger inquiries moving, but they have yet to materialise. For the time of the year we are far behind our normal schedule and it is extremely unlikely that the lost ground will be regained. Users of print have reduced their requirements to inordinately low levels as a part of their policy of economy. Bad trade is helping and compelling consumers to subsist on a very small paper allowance. It is the improvement in industry and trade generally that we are waiting for. As this is commonly held to be dependent upon the restoration of order and harmony in Europe, we are in the hands of what are termed Statesmen. It is not exactly a testimony to their qualifications for that appellation that conditions should have been worsened to such an extent in five years. It will be in spite of and in the face of international statesmanship, or, more aptly, statecraft, that normal relationships and normal inter-trading will be resumed.

Small Demand for Paper.

THE chief concern at the moment with the paper trade generally is the serious condition of the home demand. Apart from the newspapers, which keep up their consumption of paper wonderfully well, there is nothing like the bulk of paper going into printing that there should be under normal conditions. Of course, conditions are abnormal; and with industrial and commercial business bad generally, there is no incentive for actual users of paper to depart from the hand to-mouth policy which by now has established itself as a habit. Neither printers nor paper merchants are carrying anything like their full weight of stock, but in most of the mills there are accumulated supplies of paper that have been run off to keep the machines going.

Overseas Trade Survey.

THE Federation of British Industries has undertaken a work which should be an immense contribution to the solution of the problem of inter-trading within the Empire. While remaining quite clear on the fact that England is equally dependent for her prosperity on foreign inter-trading relationships, it yet remains that there are unexplored and undeveloped sources of trading development within the countries that constitute the British Empire. The Colonial Conference is one means by which the ideal of Empire inter-trading development can be attained; but if this represents the administrative side of the matter, there is as great a need for scrutinising more closely the practical details essential to development. This is the aspect from which the F.B.I. is working in preparing a comprehensive survey of the resources and possibilities of the Empire. The project is one of ambitious dimensions, for it aims at supplying and classifying all the information relative to raw materials, foodstuffs, manufacture and requirements. It is hoped that the series of four volumes will be ready for issue as a contemporary to the British Empire Exhibition in the spring of 1924.

Mr. Sydney Herbert Caslon.

We sincerely regret to record the death, at the age of 56, of Mr. Sydney Herbert Caslon, which occurred suddenly at his residence, Old Orchard, Rustington, near Angmering, Sussex, on November 1st. He was apparently in his usual health on Monday, October 29th, when he put in his customary strenuous day's work at the office in Chiswell street, and on the following Thursday afternoon his staff received the painful and unexpected intelligence that he had passed away.

Mr. Sydney Caslon was a prominent figure in the printing industry, not merely because he was managing director of the historic letter foundry of H. W. Caslon and Co., but also because of the fine uses to which he had turned the opportunities which that position gave him for rendering the industry true and laudable service; and, not least, because of the beautiful urbanity and the high integrity with which he punctiliously discharged all the obligations, great and small, of that peculiarly onerous and exacting position, as well as certain social duties which, while extraneous to it, were in a sense dependent on it—as, for instance, his keen interest in the welfare of his workers.

Mr. Sydney Herbert Caslon was a son of the late Thomas White Smith, a captain of industry who, by his energy and ability, had rescued the fine old typefounding firm from the delicate position into which it had been allowed to slip owing to the protracted ill-health of the late Mr. H. W. Caslon. Mr. Smith infused fresh vigour into the firm, and the famous Caslon Letter Foundry, saw a great renaissence and expansion, becoming, under Mr. Smith's guidance, more prosperous and even more renowned than ever before. In 1895, Mr. Smith became its sole proprietor, and in the following year took into partnership his sons Albert, Sydney and Harold, who then took the name Caslon-Smith, which was afterwards shortened to Caslon. Mr. Sydney Caslon inherited no small share of the abounding ability and uncommon energy and intuition that had distinguished his father's noteworthy career. Mr. Thomas White Smith might justifiably have taken "Thorough" for his family motto. He was convinced from his own experience that a typefounder would be all the better for a really practical knowledge of typography. Accordingly he apprenticed his three sons, Albert, Sydney and Harold, to the printing business—a fact of which Sydney in particular was mightily proud. With his father's passion for thoroughness, Sydney was amply endowed. He would not tolerate the slightest imperfection in workmanship, nor any kind of slovenliness. Type, paper, material, handicraft, must always be impeccable in every jot and tittle. In this respect he might sometimes have been thought a martinet. In point of fact, printers ought to be, as in many instances they certainly are, profoundly grateful for the stimulus and promotion he gave to their craft. This he gave by his steady encouragement of whatsoever things he found good in our industry, by his conscientious and persevering provision of the means of advancement, whether by the recurrent production of beautiful types, such as, to name but a few, Cheltenham, Carlton, Kennerley, Nicolas Cochin; by persevering unfalteringly with his prime favourite—everybody's prime favourite—Caslon Old Face, and by showing this and the others finely printed, and by constantly keeping an alert outlook for every kind of improvement in mechanism, method, labour-saving or health-preserving device, and promptly adopting what was indubitably worth while. Under his management, too, occurred a distinct revolution in the design, construction, and finish, of printers' joinery, and he was prompt to adopt every novelty that made for betterment, economic or hygienic.

In matters of printing polity his influence was no less pervasive and beneficial. But for Mr. Sydney Caslon's counsel and encouragement, for instance, the late Mr. W. W. Fox might never have developed the costing campaign which master printers have since taken up with such energy and enthusiasm; nor (somewhat ante-dating this movement) would the American point system have been so quietly and so firmly established in this country but for the decisive measures Mr. Sydney Caslon took to promote that object.

Through his death the printing industry suffers the grievous loss of one who did it yeoman service, and who, adding dignity to diligence, and fine old-world courtesy to remarkable business acumen, charmed all sorts and conditions of men. Everybody always felt better for meeting "Mr. Sydney." He had attained to high degree in Freemasonry; and it speaks volumes for his lovableness of character that his staff and his workpeople worshipped him.

Sydney Herbert Caslon was laid to rest on November 5th in the graveyard of the beautiful old church of St. Peter and St. Paul, in the village of Rustington in Sussex; a large concourse—about 300—of friends attending the most impressive choral service.

The duty of maintaining the high and honourable traditions of the House of Caslon now devolves on his co-directors—his brothers, his son, and his nephew—who, inspired by his example, feel it doubly incumbent on them to uphold the prestige of the firm.

His elder brother Albert and his younger brother Harold survive him. They are co-directors of the Caslon Letter Foundry. So also are Mr. Ralph Sydney Caslon (eldest son) and Mr. Chris. A. Caslon (son of Mr. Albert), who were appointed directors in 1920. Mr. Sydney is also survived by his widow, and by a married daughter and two sons, one of whom is a lieutenant in the Royal Navy.

Mr. Laurence H. Blades.

We regret to learn of the death, on Wednesday of last week, of Mr. Laurence Blades, formerly of the firm of Blades, East and Blades, Ltd. Mr. Laurence Blades' name will be long remembered among lithographic workers for very valuable services he rendered the Lithographers' Auxiliary to the Printers' Pension Corporation, an organisation of which he was a vice president. Apart from charitable work undertaken for this Auxiliary, he was successful in creating a pension that was named after himself.

Personal.

Lady Aberdeen has become chairman of Women Publishers, Ltd., the all-woman publishing firm in London, with branches in the provinces, founded by Miss Evelyn Gates, M.A., and financed, directed and staffed by women.

Sir Charles Higham, speaking at the Lyceum Club Publicity dinner on Monday evening, stressed the value of Press advertising.

Mr. C. W. Bowerman, M.P., has been re-elected a director of the Co-Operative Wholesale Society.

A luncheon in honour of Mr. John W. Dafoe (editor of the *Manitoba Free Press*) and other Overseas Press visitors was given last week at the Hotel Cecil by the Empire Press Union, Viscount Burnham presiding.

Mr. J. D. Wise, Mr. Walmsley, Mr. R. B Simnett, Mr. Williamson (headquarters), and others took part in an interesting discussion on costing at the meeting of the South-west London Master Printers' Association on Tuesday.

Much regret was felt at the absence of Mr F. H. Cole (hon. secretary) owing to the illness of Mrs. Cole.

Mr. Frank Colebrook addressed a well attended meeting of the Bartholomew Club at Cannon-street Hotel on Tuesday evening, when he spoke on "London's Great Newspapers: Their Men and Their Methods." Mr. G. H. Wilkinson, C.C., presided, and Mr. Harry Becker, M.P., was amongst those taking part in an interesting discussion.

Mr. John Acton addressed the Printers' Managers and Overseers (Parent) Association on Tuesday, describing the excellent organisational methods adopted in connection with the Braille printing of the National Institute for the Blind.

Mr. E. A. Clifford, honorary solicitor of the Printing, Bookbinding and Kindred Trades Overseers' Association, gave an interesting talk on "Legal Oddities" at the monthly meeting of this society on Tuesday at the St. Bride Institute.

Mr. T. G Newland, the general secretary of the National Union of Printing, Bookbinding and Paper Workers, is recovering from a nervous breakdown.

Mr. T. Timberlake, the chairman of the London Society of Compositors, who has now left hospital, is making satisfactory progress towards recovery.

Mr. T. H. Cunane, of Messrs. A. M. Peebles and Son, Ltd., has been appointed on the permanent staff of the Manchester University, Faculty of Technology. He is lecturing on paper problems to fourth year students in Typography, Machine and Press Work, and Bookbinding, and to third year students in Lithographic Printing. The summer course appears to have been very successful, as there is a very large increase in the number of students for the winter course, now commenced.

Mr. J. E. Brown, ex-president of the National Union of Journalists, will lecture at the University of London on Tuesday next (November 13th) on "Free Lance Journalism."

Mr. S. S. Campion, who has been presented with the freedom of Northampton, is a past president of the Institute of Journalists.

Mr. James Lawton, of the editorial staff of the *Warrington Guardian*, has been presented with a case of Treasury notes on completing 50 years' service with that paper. The presentation was made by Mr. J. C. Coppock, the managing director.

Mr. J. M. Glover has purchased the *Concert World*, and will take up the editorship of the paper from the commencement of 1924.

Mr. John Shaw, for many years representative of Messrs. Hugh Adair, Ltd., Belfast, and well known in the Irish printing trade, has transferred his services to Messrs. David Allen and Sons, Ltd.

Sir W. Berry & a New Evening Paper.

Sir William Berry on Saturday evening entertained at the Manchester Hotel the members of the teams of the London Welsh and Cross Keys Rugby football clubs, which had met in the afternoon at Herne Hill.

Mr. G. Simon, president of the London Welsh Rugby football club, proposing the health of the chairman, referred to Sir William Berry's connection with journalism, and said the public mind had been perturbed over the purchase of Sir Edward Hulton's group of newspapers. Sir William Berry's name had been mentioned as a possible purchaser of Sir Edward Hulton's papers, and for the moment he (the speaker) was at a loss to know whether he should offer him his sympathy or his congratulations. Might he suggest, he added, "that you give us a strong independent London evening paper on democratic lines. There is a demand and certainly room for such a production. You have the initiative, the capacity, and the power to give it a name."

Sir William Berry, briefly replying, said he would like to start a paper if he could have a sufficient overdraft to set the business going

A New Appointment.—Mr. J. Walker, who has occupied the position of overseer of the binding department of Messrs. McCorquodale and Co., Ltd., Cardigan-street, N., for a period of nearly ten years, has been appointed works manager of the Fisher Bookbinding Co., Ltd., Herne-hill, S.E. The occasion was marked by a presentation that took place at the works on Wednesday of last week, of a solid silver tea service from the whole of the employees. Many expressions were also made for his future success. An adjournment was made in the evening to the "Orange Tree," Euston-road, where further tributes to Mr. Walker's sterling character were made by several of his late fellow-overseers. The proceedings were enlivened by musical items, the singing of Mr. Ogilvie being especially pleasing.

DIVIDENDS AND REPORTS.

LONDON "EXPRESS" NEWSPAPER.—After deducting £5,000 for depreciation of plant, machinery, etc., accounts for year ending June last show profit of £21,222, which reduces debit balance to be carried forward to £29,068. No dividend on either class of shares was paid last year.

MANSELL, HUNT, CATTY AND CO.—Directors have declared interim dividend at 9⅜d. per share (4 per cent., same as a year ago).

NEW COMPANIES.

TURNER, ROUTLEDGE AND CO., LTD.—Capital £30,000, in £1 shares (10,000 6 per cent. cumulative preference); to acquire the business of Turner, Routledge and Co., printers, publishers and lithographers, as carried on in Tithebarn-street and The Albany, Liverpool, and elsewhere. Private company. First directors: R. Turner, J. Dempster and E. E. Grimshaw. Registered office: 9, Tithebarn-street, Liverpool.

WILLIAM BROWN (PRESTON), LTD.—Capital £2,000, in £1 shares; to acquire, as from October 1st, 1923, the business of a printer, engraver, lithographer, bookbinder, artist, etc., carried on by W. Brown, at 20, Glover's-court, Preston. Private company. First directors: W. Brown and M. Whittaker. Registered office: 20, Glover's-court, Preston.

LINCOLN PRESS (LONDON), LTD.—Capital £3,000, in £1 shares (2,500 7 per cent. cumulative preference and 500 ordinary); to acquire the business carried on as the Lincoln Press in London, to adopt an agreement with L. F. Hunt, and to carry on the business of manufacturing and general stationers, proprietors and publishers of newspapers, journals, magazines, books and other literary works, etc. Private company. First directors: L. F. Hunt, R. C. Vernon and A. C. Doo. Registered office: 126, Elthorne-road, Upper Holloway, N.19

WELLINGTON WEEKLY NEWS, LTD.—Capital £4,000 in £1 shares (2,000 5 per cent. cumulative preference); to acquire the business of a bookseller, printer, stationer and newspaper proprietor now carried on by J. H. Jackson at Wellington, Somerset, as "J. H. Jackson" (L. Tozer and Co.). Private company. Directors: J. H. Jackson and Mrs. Elizabeth J. Jackson. Registered office: 3, South-street, Wellington, Somerset.

WESTERN METROPOLITAN NEWSPAPERS, LTD.—Capital £2,500, in £1 shares (700 7 per cent. non-cumulative preference and 1,800 ordinary); to take over the business carried on at 561, Fulham-road, Walham Green, S.W.6, as Fulham Gazette Series, and to carry on the business of newspaper proprietors and publishers, printers, advertising agents, etc. Private company. Subscribers: S. L. Soester and W. N. Standage. First directors: S. L. Soester, W. N. Standage and C. T. Catling. Registered office: 561, Fulham-road, Walham Green, S.W.6.

ROBERT CAMPBELL AND SON (GLASGOW)' LTD.—Registered in Edinburgh October 26th. Capital £7,000, in £1 shares (3,500 preference and 3,500 ordinary); wholesale and retail booksellers, newsagents, stationers, printers, etc. Private company. Subscribers: R. Campbell and R. R. Campbell. Registered office: 123, Crown-street, Glasgow, S.S.

F. KELLETT, LTD.—Capital £1,000, in £1 shares; advertising specialists, consultants, contractors and agents, newspaper proprietors, printers, publishers, stationers, etc. Private company. Directors: Fred Kellett and Frank Kellett. Registered office: 25, Wellington-street, Sheffield.

COMPLETION SYNDICATE, LTD.—Capital £5,000, in 1s. shares; bankers, newspaper proprietors, printers, advertising agents, etc. Private company. Subscribers: H. A. Cooper and A. C. Shaw.

GOODMAN RAVEN AND CO., LTD.—Capital £1,000, in £1 shares; advertising contractors and agents, etc. Private company. Subscribers: M. Lurin and Mrs. L. Ravech. First directors: M. Goodman and L. Ravech. Registered office: 19, Charing-cross-road, W.C.

SHORT AND SENIOR, LTD.—Capital £1,000, in £1 shares; advertising contractors and agents, etc. Private company. Directors: J. A. Short and F. Senior. Registered office: 20, Corn Exchange, Leeds.

ADREMA, LTD.—Capital £2,000, in £1 shares; manufacturers of and dealers in addressing, typewriting and printing machines, stationers, printers, etc. Private company. Subscribers: E. Unwin and J. H. P. Green.

PUBLISHERS AND ADVERTISERS, LTD.—Capital £1,500, in £1 shares (1,000 cumulative preference and 500 ordinary); to acquire the business carried on at Abbotsford road, Blundellsands, by F. J. Cox, and to carry on the business of advertising agents, publishers, newspapers and magazine proprietors, etc. Private company. Subscribers: W. R. Clayton, G. Whittle, W. H. McGuinness, T. Kilburn, H. W. Byrne Hely and F. J. Cox. Registered office: Abbotsford-road, Blundellsands, near Liverpool.

NEW BRITISH ADVERTISEMENT CARRYING CO., LTD.—Capital £1,000, in £1 shares; advertising contractors and publicity agents, builders of or utilisers of structures for the exhibition of advertisements, carriers, etc. Private company. Subscribers: R. C. V. Williams and C. Morgan. Registered office: 50, Bedford row, W.C.1.

GEORGE BROWN CITY, LTD.—Capital £1,000, in £1 shares; sign and board writers and makers, billposters, advertising agents and contractors, etc. Private company. Subscribers: D. Farnworth and L. R. Binns. Registered office: Balfour House, Finsbury-pavement, E.C.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

WILLIAM GILL AND CO. (PRINTERS), LTD. (Leeds).—Satisfaction to the extent of £150, on May 29th and £450 on October 6th, 1923, of debentures dated May 22nd, 1913, and April 22nd, 1914, securing £1,000.

ELD AND BLACKHAM, LTD.—Mortgage on 63-66, Moor-street, Birmingham, dated October 18th, 1923, to secure all moneys due or to become due from company to Lloyds Bank, not exceeding £2,500.

AINTREE PRINTING CO., LTD. (printers and stationers, etc.).—Debenture dated October 22nd, 1923, to secure £400, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: R. E. Edwards, 5, Cook-street, Liverpool.

VICKERY PRESS, LTD. (London).—Issue on November 17th, 1922, of £150, and on September 7th, 1923, of £250 debentures, part of a series already registered.

ELD AND BLACKHAM, LTD. (stationers, printers, etc., Birmingham).—Satisfaction in full on October 18th, 1923, of charge dated March 21st, 1916, securing all moneys due or to become due.

BIGSBY'S (MITCHAM), LTD. (printing ink and varnish manufacturers, etc.).—Debenture dated October 12th, 1923, to secure £4,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: T. O. King, 55, Manor-park, Lee, S.E.

SOPER AND WHEELER, LTD. (stationers, printers, etc., Brighton).—Second debenture dated October 6th, to secure £205 1s. 11d., charged on a lease dated May 16th, 1923, and the company's other property, including any uncalled capital. Holder: A. Willmot, 14, Old Jewry-chambers, E.C.

CHANDOS PUBLISHING CO., LTD. (London).—Particulars filed of £5,000 debentures authorised August 21st, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the amount of the present issue being £2,000.

GRAFTON PUBLISHING CO., LTD. (London).—Debenture dated October 19th, 1923, to secure £250, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: H. H. Wolfenden, 5, Laurence Pountney-hill, E.C.

GLOUCESTER GALLERIES, LTD. (fine art publishers, etc., Bishopston, Bristol).—Issue on October 19th, 1923, of £500 debentures, part of a series already registered.

FORD AND BRANCH, LTD. (manufacturers of paper bags, envelopes, wrappers, etc., Gloucester).—Satisfaction to the extent of £300 on October 1st, 1923, of debentures dated March 9th, 1912, securing £1,600.

ROBERT NIXON, LTD. (paper merchants, Manchester).—Debenture dated October 19th, 1923, to secure £321, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: R. Nixon, 314, Lower Broughton-road, Salford, Manchester.

BARTON WAREHOUSES, LTD. (furniture manufacturers and dealers, timber merchants, papermakers, etc.).—Mortgage on freehold premises, Nos. 4, 5 and 6, St. James' Barton, Bristol, dated October 18th, 1923, to secure all moneys due or to become due from company to the Westminster Bank, Ltd.

BANKRUPTCIES, etc.

Re THE LEADER PUBLISHING CO., LTD., 367, Strand, W.C.—Under a compulsory winding-up order made against this company last May, accounts have been lodged showing unsecured debts, £1,532; loans on debentures, £1,100; assets valued at £1,428; and a deficiency of £2,203 with regard to contributories. Mr. E. T. A. Phillips, official receiver and liquidator, reports that the company was formed in October, 1922, with a capital of £1,000, to acquire the business carried on by Mr. Frederick Reader as publisher of sporting periodicals, and promoters of sporting competitions, etc. The purchase included the *Racing and Football Leader*, the *Football Leader*, the *Stable Lad*, *White and Foster*, and the Leader Stationery and Printing Co. The consideration for the sale was £98 in shares of the company. A receiver for the debenture holders was appointed last April; he has proceeded to realise the company's assets, and it is understood from him that it is improbable that any surplus will become available for the unsecured creditors. The failure of the company is attributed to the cost of publishing and distributing the *Racing and Football Leader* exceeding anticipation, and to the inability of the company to obtain advertising. In the opinion of the official receiver the failure was also due to insufficient working capital.

LETTER FILES, LTD., 17, Almond-road, Southwark Park-road, S.E.—A compulsory winding up order was made against this company last June, on the petition of W. J.

Digitized by Google

Saville and Co., Ltd., wholesale and export stationers, creditors for £161. The first meeting of creditors and contributories were held on November 1st at the Carey-street offices of the Board of Trade, Lincoln's-inn, W.C. Mr. J. Barwick Thompson, official receiver, reported that the company was formed in August, 1922, with a capital of £500 in £1 shares, to acquire and carry on a business of makers of letter files and office sundries previously carried on by Wm. Henry and Alfred John Smith, the purchase consideration being £500, which was satisfied by the issue of fully paid shares. The company had no working capital, and the business was financed by loans. The trading for the ten months of the company's existence resulted in a loss of £500 10s. 5d. Debentures were issued, but they appeared to be for part consideration, and were absolutely washed out. A private meeting of creditors was held in May, when an offer of a composition of 7s. 6d. in the £ was submitted, but it was not entertained, and these winding up proceedings followed. The accounts filed under the liquidation showed liabilities £794, against assets valued at £66, and a shareholders' deficiency of £1,247. In the absence of a quorum, no resolution was passed, and the liquidation will remain in the hands of the official receiver.

Bridge Paper Mills, Ltd.

Meeting of Creditors and Shareholders

A compulsory winding-up order has been made against the Bridge Paper Mills, Ltd., of North Staffordshire, and 1, Wellington-street, Strand, the statutory first meetings of the creditors and shareholders were held last week at the Carey-street offices of the Board of Trade, Lincoln's-inn, W.C.

Mr. J. Barwick Thompson, official receiver, reported that the company was promoted by Mr. Edmund Eaton, a gentleman somewhat notorious as a company promoter and to whose name was frequently attached the prefix Colonel. It was promoted on his behalf by the British and Colonial Property Investment Trust, Ltd., and was registered in August, 1920, with a nominal capital of £25,000, divided into 23,000 preference shares of £1 each and 40,000 ordinary shares of 1s. each, its objects being to continue as a going concern the business carried on at the Bridge Paper Mills, North Staffordshire, for the manufacture of paper, paper boards, and leather substitutes. Prior to the incorporation of the company the British and Colonial Property Investment Trust, Ltd., had entered into an agreement to purchase the Bridge Paper Mills for £2,200. In September, 1920, the Trust granted to the company the option of taking a lease of the mills (with the power, machinery, water rights, plant, process and goodwill, with additional land for extension) for 35 years. The consideration to the Trust was 20,000 fully-paid ordinary 1s. shares and the option to subscribe at par for the remaining 20,000 ordinary shares. The rent of the mill was fixed at £500, increasing to £1,000 per annum.

On September 13th, 1920, an agreement was entered into between this company and the Fairservice Circular and Prospectus Issuing Co., Ltd., for the payment to the latter of £4,500 for services rendered and expenses incurred in relation to the promotion of the company. That payment was in respect of the expense of issuing the prospectus of the paper mill company. So far as could be ascertained some 200,000 prospectuses were issued, so that the Fairservice Co. appeared to have been very handsomely rewarded for its services. The Fairservice and the British and Colonial Property and Investment Trust, Ltd., were connected with Colonel Eaton.

In October, 1920, a prospectus was issued and advertised inviting subscriptions for £23,000 9 per cent. participating preference shares of £1 each and 30,000 12 per cent. short-term profit-sharing bonds of £1 each. There were also other invitations issued from time to time to subscribe for the shares and bonds. As a result of the advertisement and issue of the prospectus and the subsequent invitations to subscribe for shares and bonds, applications were received for 3,084 preference shares and 6,032 bonds. The actual cash received by the company was £8,959, of which £8,095 was paid for preliminary expenses, which included about £6,200 paid to the Fairservice Co.

"It was apparent," said Mr. Barwick Thompson, "that the company should not have gone to allotment in the first instance, but it would seem that the sole reason for its doing so was in order that the Fairservice Co. should not lose the £4,500 agreed to be paid for issuing the prospectus."

The company acquired no property and no assets were disclosed in the accounts filed under the liquidation. The liabilities were returned at £15,399, and the failure was attributed by Mr. Rees, a director, to insufficient capital to meet the preliminary expenses and to provide working capital.

Mr. R. G. Harley, in reply to the chairman, said he was one of the first directors of the paper mills company, but resigned his directorship in September, 1920, and subsequently acted as secretary. He had acted as a director of Mr. Eaton's company since 1911, and had been associated with that gentleman in a casual way for many years.

The Chairman: Do you agree that you were, in fact, a "tame cat" director for Mr. Eaton?—If you put it so, yes.

Did you think it a proper act for the directors of this company to go to allotment and issue invitations to the public to subscribe for these preference shares and profit-sharing bonds?—I was not a director at the time the company went to allotment.

Why did you not resign your position as secretary?—Well, one always has hopes, and one has to look after one's bread and butter.

A creditor asked whether there was any hope of criminal proceedings being instituted in this case, which surely came within the class of fraud.

The Chairman said there would be a most careful investigation into all the circumstances. Mr. Eaton's name did not appear on the prospectus, but was hidden behind the British and Colonial Property Investment Trust, Ltd. If the official receiver were satisfied that the facts justified him in alleging fraud against any person concerned in the promotion of the company or conduct of its business, the creditors could rest assured that any action possible to be taken would be taken.

Mr. H. J. Vicars Rees, who acted as a director, said this was the first and last of any Eaton company of which he had been on the board. He did not know Colonel Eaton from Adam until he was introduced to him by the solicitor to the company, who was his own solicitor. His connection with the Bridge Mills Co. was due to the fact that Hardwick's Gothic Press, Ltd., of which he was the principal shareholder, printed the paper mills company's prospectus. He accepted the ordinary director's responsibility for statements appearing in the prospectus.

The liquidation was left in the hands of the official receiver.

Inveresk Paper Co. (1922), Ltd.

The first report for the period September 20th, 1922, to September 30th, 1923, shows that the gross profit amounted to £67,518, and after providing for depreciation, debenture interest, income tax, etc., the balance available is £36,315. The directors recommend the payment of a dividend of 10 per cent. on the ordinary shares, and the transfer of £10,000 to the reserve fund, leaving £11,368 to be carried forward. In September, 1922, Messrs. G. Haswell, Veitch and Co. offered £150,000 6½ per cent. first mortgage debenture stock at 95, and £125,000 8 per cent. cumulative preference shares of £1 each at par. The report points out that after charging the reserve account with the preliminary expenses and discount on the debenture stock issue, the directors have transferred the whole balance in reduction of the value of the heritable property and plant and machinery. The report states that the buildings and plant have been maintained in an efficient state during the year, and the directors are of opinion that the results obtained are satisfactory under the present general trade conditions.

Our esteemed American contemporary, the *Inland Printer*, has jnst completed 40 years' service of the printing industry, and fitly marks the event by issuing a special anniversary number in which are many articles reviewing 40 years of craft development. Of special interest is the facsimile reproduction, by way of supplement, of No. 1, Vol. 1 of the *Inland Printer*, dated October, 1883.

Paper and Box Board Trade.

The conditions of the paper and boxboard trade continue to be very dull indeed as far as business in this country is concerned, says the official organ of the Norwegian Chamber of Commerce in London, although it is generally anticipated that, during the late autumn, there should be some more activity, particularly with regard to Scandinavian wrapping paper and bag paper. News-print is, of course, always in great demand, and, therefore, the mills making this class of paper are fairly busy.

There is, also, another factor to be considered, namely, the competition from German mills. Quite large quantities of German kraft paper, greaseproof paper, and M.G. sulphite have been bought from Germany during the last two years or more, but, as the German mills are now holding out for quite as high prices as those quoted by the Scandinavian mills, it is to be anticipated that these orders will now go back to Norway.

Some substantial orders have been placed with Norwegian mills for M.G. sulphite tissue, in substance D.C. 7 lbs., 480's at £31 per ton, and for substance D.C. 9 lbs., 480's at £28 10s. per ton. These prices are nett, c.i.f. London. Heavier substances in M.G. pure sulphite 20 by 30, 19 lbs. and upwards, have been sold at £21 per ton, also nett c.i.f. London. With reference to unglazed ordinary greaseproof in size 20 by 30, 17 to 18 lbs., 480's, orders are placed at £25 to £26 per ton, subject to 2 per cent. discount, c.i.f. east coast.

There is very little demand for friction glazed leatherboards, and ordinary white wood pulp boards, but lately some small contracts have been placed at prices varying from £15 to £15 10s. per 1,000 kilos, less 2½ per cent. discount, c.i.f. London and east coast.

U.S. News-Print Exports.

During July the exports of American news print were as under to the countries mentioned:—

NEWS-PRINT.

	Pounds.	Dols.
Canada	183,275	16,280
Central America	109,580	5,146
Cuba	990,931	45,149
Other South America ...	184,147	9,054
Japan	96,653	6,035
Philippine Islands ...	275,258	12,458
Other countries	120,137	8,439
Total, July, 1923 ...	1,959,981	102,561
,, ,, 1922 ...	4,277,144	190,527
,, July-June, 1923 ...	19,683,231	999,506
,, ,, 1922 ...	34,235,966	1,524,008

News-Print Price.

The Montreal correspondent of the *Paper Trade Journal* (N.Y.), states that it comes as no surprise to the industry there that contracts are now being made in the United States for news-print at the present price of $75 per ton for the first six months of 1924. No official announcement as regards prices in Canada has been put forward so far, but the feeling is that most of the Canadian mills will favour the present prices being maintained.

New Wrapping Paper.

In an invention by Mr. F. W. Emmerson, a material for wrapping-up bread consists of waxed paper perforated with any number of small holes in any position. The paper is perforated before the proofing process, and the holes become filled with the proofing material during coating. When the wrapper is placed around a hot loaf, the proofing material in the perforations becomes soft and allows the steam from the loaf to escape. When the loaf cools, the material solidifies in the perforations, thus making the wrapper waterproof.

German Printing Industry.

State of Trade in September.

The Commercial Secretary at Berlin (Mr. J. W. F. Thelwall) has forwarded to the Department of Overseas Trade a review of trade and industry in September, based on reports of the Prussian Chambers of Commerce.

Under the heading of paper industry, the following appears:

The position of the Berlin envelope industry became worse. Still fewer orders were received, and the number of workers, who had latterly been working only three days a week, had, therefore, to be again cut down. The shortage of money would not permit of any new purchases of raw materials. The available stocks, so long as they lasted, were, therefore, worked up. Wages rose very considerably. In consequence, it appeared doubtful whether it would be possible to continue work for even two or three weeks longer.

The entire German printing industry found itself in a serious position. All firms in the type-founding industry had been working short time since September 1st, the majority only 24 hours. The position of the newspaper printing works was the most difficult. That of the jobbing and book printers was similar; it was only with the greatest effort that they were able to raise sufficient money for the payment of wages, salaries, and for the purchase of printing paper. Orders from abroad came in sparingly, as the chief markets, Switzerland, Holland and Scandinavia, owing to the general dullness of business prevailing there also, were no longer very capable of purchasing. There is no prospect of an improvement in the situation. It is more likely that further considerable restrictions of work will have to be reckoned with in the immediate future, as, in view of the difficult economic conditions generally, firms are not in a position to work for stock. Zincographic works also have been working half time for weeks; besides the curtailment of hours, dismissals have also had to be resorted to.

British Paper in India.

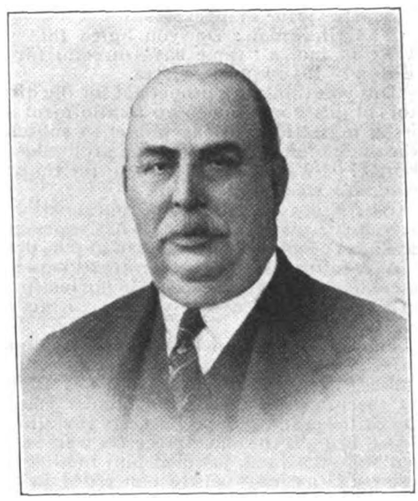
Mr. T. M. Ainscough, O.B.E., Senior Trade Commissioner in India, is now in this country and has been interviewing manufacturers at the offices of the Overseas Trade Department.

In conversation with a representative of the *World's Paper Trade Review*, Mr. Ainscough indicated that the prospects of the paper market in that country were better now that stocks are on a more normal level. During the boom period enormous stocks were built up, and this fact emphasised the depression which followed. These having been reduced, the outlook is more promising, but in the view of the Senior Trade Commissioner the improvement is likely to be gradual.

A good deal of India's prosperity depends upon the state of agriculture, and there are indications that this will improve as the result of bumper crops. The effect will be to stimulate the general prosperity of the country.

British paper is held in high esteem in India, and the attitude towards it has not changed in the last year or two.

Conditions as to competition in the Indian paper market are returning to normal. Thus Japanese and American rivalry is passing away, and our pre-war competitors are in the field again. Germany is seeking to recover her position; Norway is obtaining an important share of the custom, while Sweden is also prominent.



The United Kingdom continues to hold a leading position in packing paper. For the 12 months ending March 31st last imports from this country into India reached 58,927 cwts. out of a total of 156,000 cwts. In printing paper our contribution was 114,412 cwts. in a total of 386,804 cwts., but Norway's share was 138,539 cwts. Although beaten by Norway in quantity, the value of the printing paper received from the United Kingdom was higher. In regard to writing paper out of a total value of 62 lakhs of rupees, the amount credited to the United Kingdom was 42 lakhs.

The development of bamboo paper pulp appears to have been held up to some extent by the trade slump. A number of concessions were granted, but most of them, we understand, have not eventuated.

Retirement of Mr. John Kidd.

Well-Known in London Trade Circles.

Before going to Scotland some three years ago Mr. John Kidd was a familiar figure in London paper trade circles. As is well known to many of our readers, he was a successful and popular paper agent, and his many friends will learn with regret that, acting on medical advice, he is retiring from active business life. It is to be hoped, with a release from his strenuous work, that his health will improve and allow him for many years to come to fully enjoy that leisure which he has so well earned.

MR. J. A. KIDD.

A native of Norfolk, Mr. Kidd, at the age of 17, commenced his business career in London in 1882. He accepted an engagement with Messrs. Dunster and Wakefield, and was with that firm for eight years, where he obtained an excellent training which proved invaluable in his after life.

Mr. Kidd commenced business on his own account as a paper agent in 1891, when the field was a limited one as compared with the present time. He started with the agency of the Gordon's Paper Mill Co., Ltd., now the Donside Paper Works. Shortly afterwards he was appointed sole agent for the Ellangowan Paper Mill Co., Ltd.

An association of over 30 years with one mill, as in the case of the Ellangowan Paper Co., is very pleasing testimony of Mr. Kidd's energetic and successful service. He was always known as a hard worker, and did not spare himself in applying his energies and abilities to meet all demands made upon him. Mr. Kidd for about a quarter-of-a-century also acted as sole London agent for Messrs. Edward Collins and Sons, Ltd., Kelvindale, his business connections terminating when the mills were sold in 1918.

Appointed managing director of the Ellangowan Co., at the end of 1920, Mr. Kidd took up his residence in Scotland, and brought to bear his wide experience and keen commercial knowledge in the interests of this important undertaking. During the last three years he had the honour of being elected one of the three representatives on the Scottish District Committee of the Esparto Papermakers' Association.

Mr. Kidd is a past president of the Stationers' Social Society. He served the office of president in 1912, his popularity being well demonstrated on the occasion of the annual dinner, when there was a record attendance. His year of office was conspicuously successful.

A strong hobby of Mr. Kidd's is gardening, and having purchased a house at Brundall, Norfolk, he will now be able to give this full vent, interspersed no doubt with a little golf and yachting on the Broads. He will not break his business associations altogether as he remains a partner in the firm of Messrs. John A. Kidd and Son, Queenhithe, London, E.C., which has been carried on by his son, Mr. A. F. Kidd, during the last three years, the agency still being retained of the Ellangowan Paper Co., Ltd.

AN advertisement is always working.

Publications Received.

THE Victoria and Albert Museum, South Kensington, has issued (price 2s. 1½d. post free) a revised illustrated catalogue of the miniatures, leaves, and cuttings from illuminated MSS. in the Museum, precious relics gathered from many countries. The same museum sends us a copy of the new (5th) edition of Mr. Edward F. Strange's "Japanese Colour Prints," a most valuable handbook for those interested. The letterpress runs to 165 pages and it is supplemented with no fewer than 84 plates of monochrome reproductions of Japaness prints. The price is 3s. 11d. post free. Both books are in paper wrappers, measure 8½ in. by 5½ in., and are produced by H.M. Stationery Office.

20TH CENTURY ADVERTISING is the newest publication devoted to its particular subject and promises to serve a useful purpose in expounding and educating the fuller development of the advertising art. Printed by Messrs. W. H. Smith and Son, and edited by the proprietor, Mr. J. Murray Allison, the journal is well produced and freely illustrated. It is sold at 2s. 6d., and may be obtained only from the publisher, at Bush House, Aldwych, London, W.C.2.

"INCOME TAX SIMPLIFIED," by Arthur Fieldhouse and E. Ewart Fieldhouse, M.A., LL.B. (A. Fieldhouse, Trinity-street, Dublin, and Simpkin Marshall and Co., Limited, London—price 1s. 6d. net), has been issued in a new (the 7th) edition, bringing this valuable handbook up to date for 1923-4.

PRINTED by Hudson and Kearns, Ltd., London, S.E.1, and published by the *Studio*, Ltd., at 44, Leicester-square, W.C.2, the *Studio* is excellent in its numerous reproductions by various printing processes and in its typographic execution as well as being rich in artistic interest.

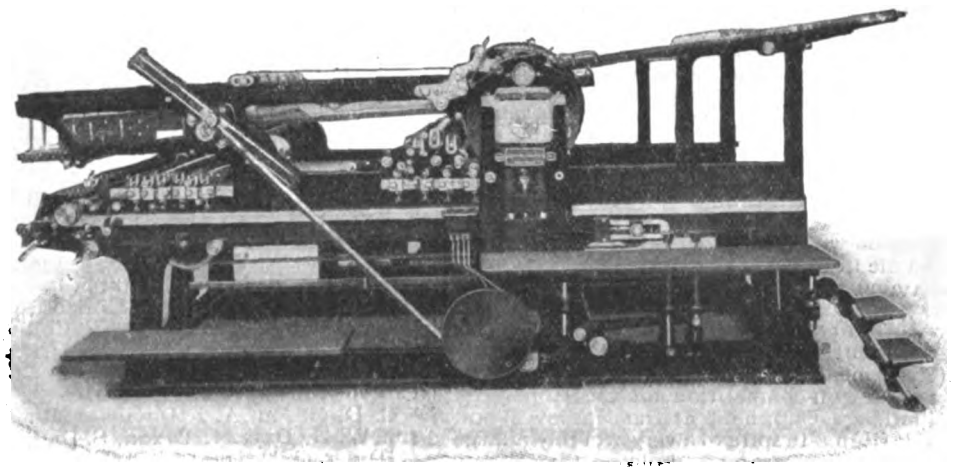
"THE Dawson Little Red Book" (Wm. Dawson and Sons, Ltd., Cannon House, Breams-buildings, London, E.C.), gives annual subscription rates of several thousand newspapers, periodicals and other publications.

THE sixth and latest of Messrs. Coates Bros. and Co.'s series of sample cards, "Coats of Many Colours," shows a colour used every day in the printing works, *viz.*, satin lemon chrome letterpress ink.

CONGRATULATIONS to our Dublin contemporary, the *Irish Printer*, which has contrived to double its size, appearing now as a journal of 36 quarto pages per month.

MESSRS. MAGGS BROS., of 34-5, Conduit-street, London, W., send us a small catalogue they have just issued listing books on printing, bibliographies, etc.

A Charity Sports Concert.



Under the chairmanship of Mr. R. Andrew Spottiswoode, the Miniature Rifle Section of the Printing and Allied Trades Charity Sports Association gave a most enjoyable Bohemian concert at Anderton's Hotel, Fleet-street, on Friday evening. A capital programme had been arranged, and the various items were much appreciated by the large audience, while the fact that the several artistes gave their services gratuitously was not allowed to pass unnoticed.

During the evening the many splendid challenge trophies and medals, which had been won during the year, were presented to the successful competitors. The *Sportsman* Competition (championship of the printing trade) was won by N. C. Headland, who received a gold medal, the runner up, J. G. Phillips, receiving a silver medal, while J. Gudgin was awarded a bronze medal for being third. G. F. Booth, the winner of the N.R.A. badge presented by the *Graphic*, won the Fry Cup Competition, while the massive *Field* Shield was won by John Dickinson and Sons (A team). W. H. Smith and Son (B team) secured the Haddon Cup and gold centre medals, and the John Dickson R.C. and the *Field* R.C. won the Telegraph Cup and Dewar Shield respectively, as well as gold centre medals. The Paper Workers' Cup went to W. H. Smith and Son R.C., and the Charles Roud Cup to F. Steel and Co. R.C.

PAPETERIES DE L'AISNE, a new French papermaking company, has a capital of 1,400,000 francs.

Disinterested Advice.

In "Notes for Buyers," the house organ of Messrs Spicers, Limited, "Ubique" writes: "By the way do you take in the weekly journal of the craft, the 'BRITISH AND COLONIAL PRINTER AND STATIONER'? I haven't a farthing of money interest in it, but fair's fair; and when I see this country producing a weekly printing trade paper which the craft in other great countries cannot produce, and when I see such plenty of good craft matter in it, I feel constrained to put in a word about it. You are surely not doing yourself justice unless you take it and regularly glance over it."

SUBSCRIPTION FORM.

Please send me weekly "The British and Colonial Printer and Stationer," at 13s. per annum (including postage) until countermanded.

Stationers' Social Society.

Another Successful Autumn Dinner.

The twelfth annual autumn dinner of the Stationers' Social Society, held on Oct. 26th in the King's Hall, Holborn Restaurant, recorded another successful achievement in the history of this virile organisation. Mr. Chas. W. Davidson (president), who occupied the chair, was supported by a large company, which was, as usual, representative of the paper and allied trades. The attendance and the entertainment provided were quite up to the standard of former years, while the arrangements, which enabled the members and guests to engage freely in social intercourse, left nothing to be desired. From the commencement of the function in the handsome reception room to the conclusion of the evening, the proceedings were characterised by that note of good fellowship which distinguishes the Society. Mr. A. E. Mist (hon. secretary) and his committee again demonstrated how well they can organise a gathering of this size, while Mr. G. E. Oswick was once more in charge of the musical arrangements, a sufficient guarantee of the excellence of the concert. The artistes were: Miss Annie Rees (soprano), Miss Bertha Richens (mezzo-soprano). Mr. Ceredig Walters (baritone), Mr. Chas. Wreford (humorist), Mr. Rex Burchell and Miss Gladys Voile (humorous duettists), and Mr. Ralph Stanton (accompanist).

The President.

The loyal toasts having been duly honoured, Mr. J. T. Steele submitted that of "The President." In the past, said Mr. Steele, the Stationers' Social Society had been very fortunate in its presidents, and they had set a high standard for their successors. He felt sure they would all agree that their present president had lived up to that standard. (Applause.) When it came to the end of his year of office, they would find that Mr. Davidson had set a still higher standard for his successor—a standard which the Archangel Michael would have a difficulty in living up to, and even that famous commentator, Mr. Matthew Henry, would have a difficulty in finding anything to equal. (Laughter.) With regard to the president's duties that did not come into the limelight, they had been excellently performed. His native friendliness and inborn good humour had enabled him to carry through committee meetings in the ablest manner. Every committee man who had sat under him would say that the business had been transacted effectively, and that Mr. Davidson had lived up to the standard of his predecessors in that respect. (Hear, hear.) Regarding matters that came into the limelight on the social side, their president had taken a great part. With the bowlers he had "kissed the jack" (laughter); with the "whistlers" he had played his cards, and Mr. Steele believed he had never trumped his partner's ace the first time round. (Renewed laughter). With regard to golfing he had been a little diffident, perhaps because past presidents had been such expert exponents of the game. Nevertheless, their president was a Scot, but he was not to blame for that. (Laughter). Mr. Steele thought if his forbears had known that he was to have been the future president of their Society and had known also that he (Mr. Steele) would have been called upon to propose his health, they would have taken greater care he had been born in Cumberland. Well, their president was a generous Scot, and in that he had only himself to blame. (Laughter.) In spite of all his virtues and because of his faults, they were glad and proud to have him as their president. They would see from the pithy and witty speech that he would make when he rose to reply to the toast what an excellent president they had. Long might his "lum reek." (Cheers.)

The toast was accorded full musical honours.

The Year's Activities.

Mr. Davidson, who received an ovation on rising, expressed thanks for the very kind way they had responded to the toast. It was very nice to hear all the fine things said about himself, and it would have been nicer still to have felt at heart that he deserved them all. Certainly he did not deserve them. He considered he had been able to do very little for the Society, but what he had done had afforded him great pleasure. They all knew the work of the Society had been done by their admirable secretary, Mr. Mist, assisted by his committee. Still, he was very proud to be the president of the Society, and it was a great pleasure for him to feel that he had the goodwill of the members. Mr. Steele had said so nothing about him being a Scot, and he was glad of the fact. Mr. Davidson thought the Society had a great leaning towards Scotsmen, judging from the large number of presidents who hailed from that country. Mr. Steele apparently expected a witty reply, but he was afraid the only witty part of it would be its brevity.

At that function, continued Mr. Davidson, it was the custom to say something about what the Society had done during the past year. The first item was the winter dinner in February, when they had a very good number present. Judging by the remarks he had heard from both members and guests, the occasion was a great success. Many people had mentioned to him the fine musical programme then arranged by Mr. Oswick, and he (Mr. Davidson) would like to take the opportunity of expressing to him how much they appreciated his efforts in that direction. (Hear, hear.) The next event in their year was the golf competition for the Horsburgh Challenge Cup, held at the Hadley Wood Golf Club. In spite of a very wet day a large number were p-esent and played their round, and they even went so far as to play an extra round. Another event was the bowling competition at New Malden for the Woollacott Challenge Cup, which was held in lovely weather conditions. He would like to remind them that they were holding their last social evening of the year on December 5th.

"The Visitors."

Mr. W. E. Green, who presented this toast, offered on behalf of the Society a hearty welcome to the visitors. He recalled that the Society was started in the year 1885 and had for a few years a very varied career. In 1889 the late Mr. Henry Green became president and managed to pull the Society together. About this period the Society seemed to become the nursery for Lord Mayors of London, and the first of these was the late Sir F. Green, followed by Sir Vezey Strong and then Sir T. Vansittart Bowater. An important event in the Society's history was the invitation in 1908 to attend the banquet of the Boston Stationers' Association of America, at which Mr. Cayzer and the late Mr. Johnston were present. From this brief history, said Mr. Green, the visitors would realise that it was no mean Society at whose tables they were dining that evening. (Applause.) He coupled with the toast the names of Mr. Jas. Tullo and Mr. Wm. Rowlandson.

Mr. Tullo, in reply, expressed great pleasure at finding himself seated on the right-hand of Mr. Chas. Davidson, and said he appreciated very much the honour of being asked to reply for the visitors. As one who travelled much about the country, Mr. Tullo spoke of the friendly feeling that prevailed among those who engaged in the paper business. He found also that the reputation of Mugiemoss stood very high.

Mr. Rowlandson, who also replied, was honoured that his name should have been associated with the toast. The atmosphere prevailing that evening, he said, represented good, sound, friendly feeling. He was pleased to see present so many cheering faces, especially considering the difficult times through which stationers, wholesalers and papermakers had passed during the past year or two. It was also a source of much satisfaction to see at the gathering not only the heads of large concerns, but the juniors, dining together in social fellowship. That evening he had come in contact with men whom he first met when he entered the trade forty years ago.

Presentation of Golf and Bowling Cups.

The chairman then gracefully presented the Horsburgh Challenge Cup to Mr. R. Scott Prideaux, the winner of the golf competition, and the Woollacott Challenge Cup to Mr. M. Relph, the winner of the bowls competition. Both gentlemen were greeted with enthusiastic applause as they received the trophies.

Mr. M. Relph, who was asked to say a few words, said he felt proud to be the winner of the bowling cup. His task had been a difficult one as he had come up against some eminent bowlers. He would like to see more recruits for the bowling section of the Society and hoped in the coming year their numbers would be doubled. He could assure them that he would have a jolly good try to repeat his success. However, he hoped some better bowler would take off the cup next year.

Mr. R. Scott Prideaux, who was also called upon to speak, said the solid base of the Horsburgh Cup represented a splendid example for them all. It was typical of the business character of Mr. Horsburgh. Mr. Prideaux thought it was infinitely easier to win the cup than to make a speech, and concluded by heartily thanking the company for the reception they had given him. (Cheers.)

The singing of "Auld Lang Syne" followed by the National Anthem brought the proceedings to a close.

Australian Notes.

Cumberland Board Mills — Substantial Profit—Favourable Prospects—Coating Plant to be Installed—Pressman Entertained—New Company—Postage Reductions—Advertising Australia.

(From Our Sydney Correspondent.)

THE report of Cumberland Paper Board Mills, Ltd., for the year ended June 30th shows a net profit of £30,164, compared with a loss the previous year, after paying income taxes, of £14,521. The debit balance brought forward was £14,663, and the directors recommend that the profit now shown be used in extinguishing this debit, in paying £9,790 on account of a pulp contract, in applying £2,007 to preliminary expenses, and writing off orders in hand, leaving £3,702 to be transferred to a reserve for taxation account.

THE report states that for the current half-year favourable prospects continue. Improved business forecast in the interim report issued in January has been fully realised. The directors have decided to extend the business of the company by the installation of a complete modern coating plant, which will enable the company to meet the call for higher grade boards.

MR. T. M. SHAKESPEARE, whose work on behalf of the Country Press Association is well known, has been entertained to dinner at the National Club in Sydney in recognition of his election to the Legislative Council. A large number of public men attended in his honour. Of the guest it was stated that his initiative and his unsparing exertions had radically changed the outlook and the prospects of an entire profession—the country press.

IN his reply to the toast of his health, Mr. Shakespeare said there was to-day no co-operative concern in Australia so real as the Country Press Co operative Co. There were 235 newspapers, 18 of them well-equipped dailies with the latest machinery. The organisation had now extended to all the States. Mr. Shakespeare went on to speak of the establishment of the Australasian Provincial Press Association, and of the part that he had been able to play in helping to form, not only associations, but Press co-operative companies in all the States of the Commonwealth. To-day they had linked up with the organisation throughout Australia 850 country newspapers, including 45 dailies.

A NEW company has been formed under the title of the H. H. Watson Printing Co., Ltd., with a capital of £10,000. The object is to acquire and take over as a going concern and to carry on and develop the business of printers, bookbinders, paper and stationery merchants, now carried on by the H. H. Watson Printing Co., Sydney.

THE inauguration of new postage rates is suggested as a fitting opportunity of advertising Australia by sending post cards to the old country at the new postage charge of a penny. Some effect, it was thought, would be produced if 100,000 Australians adopted this idea. The other rates embodied in the Federal Bill are: Letters, 1½d. an oz.; newspapers, 1d. per 10 ozs.

First Asiatic Paper Mill.

The first paper mill of the Dutch Indies was recently built at Padalarang for an annual production of 3,000 metric tons of paper, without wood, for printing and the Record Office. Packing paper will also be made from the waste records paper which the local government supplies in large quantities. Rice straw and waste agave and manilla fibres will be utilised as raw materials. Other local plants, rietampas, serehn, alang-alang, etc., are to be tested. Native kaolin and rosin had already been subjected to experiment. It is said that this production will suffice for the actual needs of the local government and other consumers.—*Industria della Carta.*

Papermaking at Wembley.

Facts About the Machine to be Shown at the British Empire Exhibition.

Arrangements for the erection of the 30-in. papermaking machine, which is to be erected at the British Empire Exhibition at Wembley next year, are now well in hand. Ninety-six feet in length, the machine will give a perfect demonstration of the operation of papermaking. Messrs. Chas. Walmsley and Co, Ltd., will provide the machine itself and all the necessary piping, while others who will be responsible for other details of the exhibit are: Messrs. Bentley and Jackson, Ltd., two beaters, small refiner and shafting; Harland Engineering Co., Ltd, interlock drive; Watford Engineering Works, Ltd., strainer; Mather and Platt, backwater pump and stuff chests; Vickery's (1920) Ltd., doctor and felt washers; General Engineering Co., Ltd., Ratcliffe, vacuum pump, stuff pump and reeler; Herbert Morris, Ltd., lifting crane. The contribution of Messrs. Masson Scott and Co., Ltd., has not yet been decided upon.

QUARTERLY EXPORT ISSUE—DECEMBER 6, 1923.

ANNUAL SUBSCRIPTION (52 ISSUES) THIRTEEN SHILLINGS.

PUBLICITY AND PRINT

are inseparable. One could not exist nowadays without the other.

Newspaper Publicity is a necessity to the modern business. Publicity must, however, be undertaken systematically with the right journal or journals—journals with a recognised reputation.

The selling power of space depends upon a reputation backed by results, and these results must tell every time. Reputations are, however, not made in a day.

It has taken some forty years to establish the present-day reputation of the **Quarterly Export Issues** of the

British & Colonial Printer & Stationer

At the present time this Journal is the recognised overseas medium of the Printing and Allied Trades.

It circulates among buyers in the following markets:

Australasia	**China**	**South America**
India	**Japan**	**Canada**
East Indies		**United States**
West Indies		**South Africa**

RESULTS

One of the most successful of our advertisers says:—

"It will no doubt interest you to learn that during the past few years we made considerable additions to, and have extended our Export Dept. We thank you for the assistance that your journal has contributed towards this export business."—C. B., Ltd.

The next issue will be published on Dec. 6.

Can you afford to neglect this opportunity of extending your export trade?

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.

2.—It occupies a space of only six feet on the run, and is quite noiseless.

3.—The power required is such a small amount that it can be driven from any existing shafting.

4.—Centres of any kind or width can be worked on the machine.

5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.

6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

MACHINES SUPPLIED FROM STOCK.

Gold Inks

(LETTERPRESS)

IF you have never yet tried Gold (Letterpress) Inks or are familiar only with those hitherto obtainable, Lorilleux and Bolton's gold inks will be a revelation to you.

No modern printer keen on cutting costs and speeding up production can possibly afford to ignore the handiness and economy they offer.

The following points show the great superiority of Lorilleux & Bolton's gold inks :—

1. They do not clog or harden on the rollers.
2. Need no specially skilled operator.
3. Are suitable for either platen or cylinder machines.
4. The machines can be run at normal speed.
5. Retain their brilliance for long periods.
6. Print the type thoroughly and heavy solids without difficulty

Available in light and dark shades of gold as well as silver.

Write for specimen prints and generous sample tin to-day.

Photo-Mechanical Typesetting.

By W. B. HISLOP,

Managing Director, Hislop and Day, Ltd., Edinburgh.

Within the last two or three years the printing trade has been stirred by the announcements of various machines which were said to threaten the prosperity of letterpress printing by placing the litho-offset and the rotary-gravure printer on an equal footing as regards composition. I am not going to deal with these prophetic subjects, but, believing that the time has come when we may profitably attempt to sum up the situation, I wish to place before you the facts as I have been able to ascertain them, and then see what deductions we can legitimately make.

Two of the most important questions to be settled with reference to any new invention are the extent of the field in which it can be utilised, and, further, how completely that field is filled by present processes or appliances. So far as letterpress is concerned I think we may agree that, unless we alter our methods considerably, the Monotype, Linotype, and other typesetting machines fill our requirements in a wonderfully complete manner. Letterpress is, however, only one of three methods of producing printed matter, and the field for photographic composition lies primarily with the other two methods which have had hitherto to seek the assistance of the typefounder and the letterpress printer in order to produce type matter, although the type never comes near their finished product.

We shall therefore be justified in looking on these inventions as attempts to do for lithography and gravure what mechanical composing machines have done for letterpress, with the difference that, as these processes have no equivalent of the typefounder in their own sphere, the perfecting of such a machine would be the equivalent, in letterpress, of a jump from the use of types produced by engraving each singly to the modern Monotype. The problems to be solved vary to some extent with the nature of the work to be done, and in reviewing the various patents which have been taken out on this subject, I find they fall into two classes.

Two Classes of Machines.

The first class aims at the production of lettering varied in size, style, and spacing, with the intention of executing display work, letter-headings, cheques, cinema titles, and so on. This class of machine attempts to replace by photography the work of the letterer, litho-writer, and display expert. The second class endeavours to do by photography all that is done by the mechanical typesetting machine of to-day, including that most difficult problem of all—justification. It will be convenient for us to call the first class the "artist's" machine, and the second class the "compositor's" machine.

In all these machines we shall find the same distinction as we are familiar with in letterpress typesetting machines, and no further explanation will be necessary if I refer to a machine which assembles all the letters necessary to form a line and then photographs them, as belonging to the "Linotype" class, while a machine which photographs the letters singly we shall consider in the "Monotype" class. There are certain advantages inherent in a photographic process of composition which we may consider, along with the disadvantages.

The first advantage is the ease with which images widely varying in size can be produced from one master by optical means. Against this great advantage we must set the statement made by the typefounders that an exactly pantographic, or photographic enlargement or reduction of a letter is not satisfying, and that the relative proportions of the parts of the letter have to be altered to satisfy the eye. This is a point which I have not investigated, but would suggest that although the point is an aesthetic one, its truth might be decided by a scientific analysis of the various factors. The ink impression of a letter is always slightly wider than the actual type surface, and although this thickening may not vary between the thick and thin parts of a letter, yet the proportion of the thickening to the true size of the various parts of the letter, or the same part of the same letter in different sizes, obviously varies very much, a hair-line might be trebled while the thick body of a letter might only gain a small fraction. Is this the chief factor in the problem, and if so what can be done to effect it photographically? Another advantage of the photographic method is that there is no wear and tear of the master as there is of the matrix in typecasting, although there would be wear and tear of the film. The photographic positive will keep indefinitely, and is easily stored, it can be readily cut up and patched together, as it is in the form of celluloid film as a rule, so that, while single letters cannot be altered as in the Monotype product, a paragraph can rapidly be redone and patched into place.

The disadvantages are chiefly that it involves principles and processes of which the printer has had no experience.

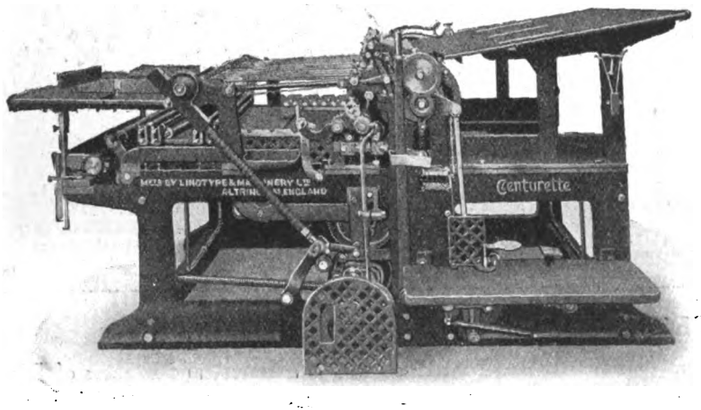
Author's Corrections.

With regard to the type of machine which aims at covering the same ground as the Monotype, one objection which is at once raised, especially by book-printers, is the difficulty of dealing with "author's corrections." This is a difficulty which, I am inclined to believe, will lessen as we gain experience with these new machines, and, obviously, much will depend on the speed and ease of operation of the machine.

In regard to the efforts which have been made towards photo-mechanical composing, the first suggestion dates as far back as 1856, and is for a machine with the alphabet arranged round a disk.

The first interesting scheme—Patent No. 14,525 of 1894, by Professor Eugen Porzsolt, of Budapest—is for a "Monotype" compositor's machine with a keyboard operating electrically. When a key is depressed it closes first an electrical circuit which brings the master letter into position, and then a second circuit which makes the photographic exposure. Immediately behind the keyboard is the holder for the sensitive plate which can be moved vertically and horizontally so as to bring any part of the surface opposite an adjustable aperture through which the image of the letter is projected by a lens immediately behind. The use of electrical control and inter-relation of different operations embodied in the machine is very interesting in so early an invention, but nothing appears to have come of it.

No. 7,099 of 1895: W. Friese Greene, London. It is not surprising to find that this inventive genius, who was early in the field with patents and devices for cinematographs, inkless printing, and other ideas in advance of their time, had also turned his attention to photo-composing. He fully realised the importance of solving the problem of justification, and adopted the "Linotype" method. The machine was a compositor machine which operated a series of long strips of suitable material, each carrying a complete alphabet arranged from top to bottom in the order of their width, and having the width of the strip, or else the width of a raised longitudinal rib on the back, proportionate to the width of the letters at that part.



The Bawtree Patent.

No. 105, 1915: A. E. Bawtree. This is a patent for a letter-by-letter or "Mono" type of machine, in which the master alphabet is arranged in one or more rings on a disk in such a way that the letters come into correct alignment when the locating pin drops into

Members of the Association of British Manufacturers of Machinery for the Printing and Allied Trades

the notch belonging to the desired letter. A spacing cam connected to the disk provides for the correct amount of movement of the sensitive material according to the width of the letter just photographed. There is no attempt at justification in the machine, and it is proposed to effect this by cutting up the finished photograph, so provision is made for registration marks and numbering each line. Means are also provided for the introduction, in the optical system, of suitable rulings or stipples, so that the letters can be made with the corresponding texture instead of being solid. The machine is clearly of the "artist" type, and we shall return to this machine presently.

No. 17,233, 1915: Siemens and Natski. Is for the recording of images on a continuously moving film by electric spark.

No. 117,282, 1917: I. S. Bunnell, printer, U.S.A. Another "artist" machine, for this inventor makes it clear that his aim is the production of ornamental and displayed work rather than close-set type matter so that justification is not considered. The details are worked out fairly fully, but the scope of the machine is so limited that we need not consider it further on this occasion. The method of spacing, etc., is very similar to that used in the Universal Engraving Machine used by copper-plate engravers, and the machine is really an attempt to do photographically what the engraving machine does by pantograph mechanism.

No. 174,621, 1919: Correx Müvek Filmipara Gépgzár Czakó László, of Budapest, Hungary. This is another disk machine for a special purpose—the production of titles for cinema films, etc., and no justification is attempted. The general arrangement reminds one of a well-known type of time recorder. There is a choice of three sizes, or styles, of each letter, but this is obtained directly from the master disk, and no provision is made for variation in size by optical means. A printed impression of the character is made on a paper ribbon just before the actual photographic exposure, and a simple mechanism provides for the variable movement of the sensitive film according to the width of letter just photographed. There seems no reason why this machine should not do its particular work quite well, but I do not see how it is going to be better or faster than a smart ticket writer would be.

The Broadbent and Robertson Inventions.

No. 182,887, 1922: Walter Broadbent. This is a machine of the "Mono" class, which has provision for justification. The specification is very sketchy, but there are one or two interesting points. Each letter of the alphabet has its own little lens and pneumatically operated shutter, also a deflecting prism, which is intended to make the images of all the letters fall on exactly the same spot. It is suggested to use a perforated paper strip made on an adapted Monotype keyboard to control the pneumatic shutters and also the justification, as the paper strip has the two justification perforations at the end of each line and is run backwards through this photographic equivalent of the caster. It is proposed to gear the paper strip and the sensitive film together so that both drive continuously and the variation of spacing to effect justification is to be obtained by bringing into play one of a series of cams which alters the gearing ratio of a friction drive. There are a number of points which seem to be impracticable, notably the construction and adjustment of the complex optical

system, and the production of a sharp image on a continuously moving film.

No. 186,255, 1921: Robertson, Brown and Orrell. This patent has been widely discussed throughout the trade and was the first attempt at photo-composing to attract serious attention. The idea is that a machine, exactly similar to a linotype without the mechanism for casting and subsequent operations, will deliver the matrices, in the form of small photographic negatives or positives, justified by the use of wedges as in the linotype, to a camera mechanism which will photograph this line on to the sensitive film, then clear and redistribute the matrices while the next line is being dealt with. I do not wish to be unfair to the inventors, but so far as I know this machine only exists on paper, and it would be very difficult, if not impossible, in my opinion, to make it workable, at least in the form suggested, so that I consider it rather unfortunate that so much publicity was given to it about a year ago.

The remaining and most recent patents are a number in the name of E. K. Hunter and J. R. C. August, covering the various points in the Hunter-August machine, and as I shall deal with this machine in being, we need not trouble about the patents. I give the patent numbers for reference and the chief points in each:—195,104: Flexible film strip for master letters, which are brought automatically into position for photographing; size altered optically, use of punched strip to secure time interval; visible record of keys operated.

200,046 and 200,047: Arrangements for perforated record, justification and correction of keyboard errors. 200,127: Electro-magnetic control of minute and accurate movements. 200,532: Displacement of sensitive surface by half the width of last letter plus half width of next letter. 200,782: Improvements and additions to machine embodying the above. It is a much more simple matter to obtain a patent than to construct a useful and workable machine, so I shall now try to put before you what is being done practically. So far as I can learn, there are three different machines producing type matter by photography in this country, and I can show you something done by each of them. In the last issue of *Penrose's Annual* there were some examples of work done by Mr. Arthur Dutton's photo-line machine or process. Mr. Dutton has apparently no patents, and consequently, perhaps, does not make his methods very clear, but he has written an article for the next *Penrose's Annual*, from which my friend Mr. Gamble has kindly given me some extracts, which the inventor has supplemented.

The Dutton Patent.

Mr. Dutton says: "The complete photoline outfit actually consists of two separate parts, one an automatic letter-setting machine and the other a specially designed camera. The letter-setting machine automatically sets up or assembles letters or characters, inserts spaces between the words, justifies all these things into a definite line width, and afterwards returns or distributes everything back again into storage cabinets for like repeated use. The camera is constructed to secure varied control over the movement of an unexposed plate or film, and this in conjunction with a sliding adjustment to almost any degree of measurement all of a more or less automatic character. The product from these two machines is then developed into a photographic negative or positive, and, as such, can be introduced in the scheme of things common to printing. A good idea of the size of the letter-setting machine may be imagined if the printer will take a broadside poster setting-stick, and a 72-point or 6-line fount, as a like scale upon which operations are conducted. Of course, the Photoline letters are not in the nature of types, but simply printed copies dealt with in a special manner. In addition to letters and figures, borders, ornaments, illustrations, odd sorts, signs, and many of the expensive things used by printers to secure typographic effects can be secured in a simple fashion. It will do tabular work with the same facility as though it was straight run-on matter. Spaces equal in usefulness to the en and em are used to keep vertical alignment, and brass rule is substituted by a simple drawn line. Any number of separate faces or styles of letters may be had on one machine. Single words in italic or black letters may be placed in a line of roman. Script, copper-plate or round-hand style of letters may be secured and all the unsightly joining between letters removed, indeed there is every reason to believe that much of the work now done by the lithographic writer can be captured by this process, and even plates made for intaglio printing may be considered possible."

Mr. Dutton has submitted a number of specimens to me which I am not at liberty to show you, but it seems to me that his method and apparatus hold considerable possibilities towards doing by photo-mechanical processes a very great deal of the ordinary run of hand-lettering without sacrificing any of the artistic qualities of the letter. I must make it clear that I am judging by the specimens submitted to me, and, not having seen the apparatus, I cannot estimate the speed of working compared with typesetting by hand or with hand-lettering.

Of the remaining two machines I can speak much more definitely, as I have examined both very closely, and gone over them with their inventors.

Possibilities of the Bawtree Machine.

We shall take the simpler machine first, but I would like to make it quite clear that the two machines cannot be fairly compared, as they set out to work in rather different fields. Here we find the classification with which we set out proving very handy, for the Bawtree machine is what I have called an "artist" machine, and its work is directly comparable with that of litho-artist or writer. Both the artist and the machine could do pages of close type-matter, but in both cases it would be extremely slow, inefficient, and less regular than ordinary typesetting. The special field of both artist and the Bawtree machine is script, linked, or over-hung lettering, set in curves or fitting into scroll borders, combined with fancy tint grounds and so on. The machine was invented in 1915, but its construction and development were delayed by the war. The machine I have examined cannot be called more than an experimental model, and requires a considerable amount of modification and further work before it is ready to be placed on the market. Mr. Bawtree says that the speed of working is much the same as can be attained on the aluminium strip nameplate machines seen at the railway stations, and the comparison is an apt one for the action of the two machines is very similar.

To operate the machine a disk is turned until the desired letter is opposite the pointer, then a handle to the right front of the machine is swung in one direction, which makes the exposure, then swung in the opposite direction which moves the sensitive film along by an amount equal to the width of that letter; the next letter is then brought into position, and so on. The amount of movement after each letter is automatically adjusted according to the amount of enlargement or reduction for which the camera is set at the moment, but the shift can be altered in amount by hand. The normal amount of shift necessary varies according to the width of each letter and is determined by a spacing cam belonging to each alphabet disk, which contains this measurement in the depth of the notch corresponding to each letter. At the end of each line a graduated disk to the right of the sensitive film-holder is turned to bring fresh surface into position.

Mr. Bawtree states that though celluloid film can readily be used, bromide paper is quite suitable and much more economical as the positive photograph produced in the machine can be treated by the Bromoil process and so converted directly into a litho. transfer which can be put down in the ordinary lithographic manner. This is perfectly practicable, but I would prefer "printing down" on to the machine-plate photographically, using a reversing process such as the Douglagraph or Vandyke. Provision is made in the machine for the introduction of small illustrations, ornamental initials, etc., as well as the breaking up of letters by ruling as mentioned in the patent claim. The machine is quite a small affair, and its mechanism is very simple, and seems capable of development in the direction of composing music.

(To be Concluded.)

Trade Notes.

ACCORDING to the British Consul at Helsingfors, there is a steady demand in Finland for special kinds of leather required for bookbinding, pasteboard work and for the manufacture of pocket books, note books, leather pouches, etc.

AT a meeting on the 7th inst. of trade associations (which included the Association of British Manufacturers for Printing and Allied Trades) held under the auspices of the National Union of Manufacturers, a resolution was adopted cordially welcoming Mr. Baldwin's announcement for dealing with the unemployment problem by safeguarding home industries.

THE important subject of "Efficiency in Industry," as an alternative to lower wages, is the subject of an article by Mr. W. Howard Hazell, in this week's issue of *The Times* (Trade and Engineering Supplement).

THURSDAY, November 22nd, is the date of the "Specimen Exchange" arranged by the West and North-West London Master Printers' Association. The Westbourne Park Lecture Hall has been engaged for the occasion, so that ample space will be available for the exhibition of members' work.

AT the Lloyd Memorial (Caxton) Seaside Home, Deal, the ceremony connected with the laying of the foundation stone to the Printers' Peace Memorial Wing dedicated to the memory of those members of the printing and allied trades who fell in the Great War, 1914-1918, will take place on Saturday, December 1st. Lady Violet Astor has kindly consented to lay the foundation stone at 3 o'clock, the Bishop of Dover conducting the service. Major the Hon. J. J. Astor, M.P., will be present, being supported by his worship the Mayor of Deal, and members of the Corporation, and by representative employers and employees of the printing and allied trades.

IN aid of the funds of the Lloyd Memorial (Caxton Seaside) Home, Deal, a special grand matinée will be held at the Kingsway Hall, on Saturday, December 8th, 1923. The chair will be taken at 2 o'clock prompt by Major the Hon. J. J. Astor, M.P., and leading artistes from the principal London theatres and music halls have volunteered their services, and will appear, by kind permission of their respective managements. The proceeds of this concert will be devoted to the rebuilding of old property purchased for the extension and improvement of the home, by erecting self-contained flats, one half to be let to retired London printers and the other half to townspeople. Full particulars and tickets (1s. 3d. and 2s. 6d.) from H. F. Parker, secretary of the Home, 80, Blackfriars road, S.E.1.

A VERDICT of "accidental death" was returned on Monday on Mr. Harry Fieldhouse, of Westcliff, who was knocked down by a motor cyclist and died from his injuries. Mr. Fieldhouse was the proprietor of the *Midland Daily Tribune* and other papers.

MR. JOHN MITCHELL, J.P., F.J.I., for many years editor of the *Dundee Courier*, and president of the Institute of Journalists for 1910-11, died on Wednesday of last week.

THE death is announced at Carminnock of Mr. John Fleming, who for 28 years was with the *Glasgow Herald*.

MR. JOHN CASTELL HOPKINS, a prominent Canadian writer, and for many years editor of the *Canadian Annual Review*, died suddenly last week at Toronto.

THE late Mr. William Pickering, Corbridge-on-Tyne, Northumberland, for some time editor of the *Newcastle Courant*, left £6,755.

NEARLY all the Berlin newspapers ceased publication on Saturday owing to a sudden strike of printers, who are demanding stable wages. Work also ceased on the bank-note printing presses.

MR. T. E. NAYLOR, secretary of the London Society of Compositors, writes us to point out that the Linotype and Monotype Piece Scales have not been under consideration by the London District Committee of the J.I.C. The point upon which, some weeks ago, the London District Committee decided against the L.S.C. was in respect of a suggestion that the Society was entitled to prevent certain firms from changing their system of working from piece to 'stab.

REPRESENTATIVES of many branches of sport attended the sports dinner at the Press Club on Saturday.

Personal.

VISCOUNT BURNHAM, Viscount Leverhulme, and the new Lord Mayor of London have consented to act as presidents of the International Convention of the Associated Advertising Clubs of the world, to be held in London in July of next year.

AMONG those attending the Lord Mayor's banquet on Friday were: Alderman Sir Geo. W. Truscott, Sir T. Vansittart and Lady Bowater, Sir John and Lady Baddeley, Sir Rowland and Lady Blades, Sir Wm. A. and Lady Waterlow.

SIR PHILIP H. WATERLOW, having resigned the chairmanship of Waterlow and Sons on the 0th ult., a position which he had occupied for forty-four years, the board have elected Sir William A. Waterlow chairman of the company.

ALDERMAN SIR CHARLES STARMER, managing director of the *Westminster Gazette*, is expected to be the Liberal candidate at Cleveland against the sitting Unionist member, Sir Park Goff.

ALDERMAN ARTHUR H. MOODY, newspaper proprietor, has been re-elected Mayor of Stourbridge for the third year.

CAPTAIN E. G. BAKER, assistant secretary of the London Master Printers' Association, was married on Thursday last week to Miss Elsie May Holman at Harrow Presbyterian Church.

IN token of the hearty good wishes of his colleagues, the staff at 24, Holborn presented him with a canteen of cutlery, which was supplemented by a personal gift from Mr. and Mrs. Wm. Whyte.

MR. HARVEY MARSON, of the literary staff of the *Liverpool Courier*, has been presented by his colleagues with a Chippendale eight-day clock on leaving that journal to take up the editorship of the *Shrewsbury Chronicle*.

MR. GLYNN RICHARDS, of the *Cambrian News*, stationed until recently at Pwlheli and Portmadoc, has been appointed editor of the *Romford Chronicle*, London. He is twenty-two years old.

Trade Union Matters.

ANOTHER WAGES MOVEMENT?—At a recent meeting of the Executive Council of the Scottish Typographical Association, a circular letter was read from the Liverpool Branch of the Printing and Kindred Trades Federation asking for support in a national movement by the printing trade unions for an increase in wages. After some discussion on the letter, it was decided to give general approval to the proposal.

LEVY PROPOSAL DEFEATED.—The ballot of the members of the Typographical Association on the proposal to impose a levy of 1s. per week on all fully-employed members for a period of six months for the purpose of creating a fund for the maintenance of prevailing conditions of wages and conditions has been rejected by 9,457 votes against 7,907 in favour, the adverse majority being 1,550.

T.A. DELEGATE MEETING.—At a meeting of the Executive Council of the Typographical Association, the secretary reported that resolutions had been received from thirty branches of the Association requesting that a ballot should be taken on the question of deferring the triennial delegate meeting, which in the ordinary course should be held next year, until the funds of the Association were in a more satisfactory condition. The Executive Council, however, re-affirmed a previous decision that the meeting should take place.

THE "Celebration Dinner" to mark the 75th year of the existence of the London Society of Compositors is to be held at the Hotel Cecil on Saturday, December 1st, and is assured of enthusiastic support.

CARDIFF J.I.C.

Discusses Training of Apprentices.

At a meeting arranged under the auspices of the Cardiff and District Committee of the Joint Industrial Council of the Printing and Allied Trades held on Friday November 2nd at the Technical College, Cardiff, the speaker was Mr. J. R. Riddell, principal of the London School of Printing. The chair was taken by Councillor G. Fred Evans, chairman of the Cardiff Education Committee, and there was a good attendance of master printers and operatives. The address was given in conjunction with the printing trade classes run at this Institute.

Mr. Riddell, in a rousing address, remarked that the present methods of training young apprentices were in many ways unsatisfactory and out-of-date, and this did not all augur well for the printing industry. He laid stress on the selection of boys entering the craft, and made the suggestion that local committees of masters and workpeople could arrange this to the ultimate benefit of the industry. Mr. Riddell also suggested that the local masters' Association and the trade unions should get together and advise the local Education Authority of what was wanted and he felt sure that any up-to-date Education Committee would be pleased to fall in with the suggestions and provide facilities for the training.

Selection and Training Committee.

In the discussion that followed, Mr. Frank Murrell urged that Cardiff should set up the committee suggested to get suitable boys to enter the industry and to superintend the training of them both in the school and in the shop. Mr. Baker, secretary of the South Wales Alliance said that recently we had heard objections to a fourth party being brought in to the question of apprenticeships. He thought that if this joint committee idea was adopted it would meet this objection, and give some guarantee to both sides that proper training was given and received.

Mr. Charles Coles, principal of the Cardiff Technical College, gave some comparisons of the various trades of the city as dealt with by the Technical School, and complimented the Cardiff master printers in taking the initiative in getting the printing trade classes started there a few years ago.

Mr. Powis, secretary of the Cardiff T.A., said that, so far as his side of the trade was concerned, they quite agreed with all that had been said on the need for efficiency. The selection of apprentices was at present a blot on the trade, and the committee's suggestion would no doubt meet this point and benefit the industry as a whole.

Votes of thanks to the speaker and the chairman brought a very interesting and helpful evening to a close.

DIVIDENDS AND REPORTS.

HAZELL WATSON AND VINEY.—Interim dividend of 3 per cent., free of tax, on ordinary shares, payable December 1st.

HUGH BAIRD.—Profit of Hugh Baird and Sons for year to August 31st, 1923, shows a profit, after allowing for management and depreciation, and charging repairs and maintenance against revenue and including balance brought forward, of £21,753. Directors recommend dividend of 8 per cent. for year and bonus of 2 per cent. on ordinary shares, both less tax, carrying forward £10,653.

"IRISH TIMES."—The profit earned during the year ended September 30th, 1923, £39,380. Deduct taxation, £12,170, and add balance brought forward, £9,067. The directors have written off depreciation on premises, plant, machinery, furniture and fittings, horses and vans, £4,950. An interim dividend has been paid on the preference shares, which absorbed £5,671. An interim dividend has been paid on the second preference, which absorbed £2,559. The directors propose placing to general reserve account, £1,000; a final dividend on the preference shares, which will absorb £5,671; a final dividend on the 2nd preference shares, which will absorb £2,559; and a dividend on the ordinary shares for the years ended September 30th, 1921, 1922, and the present year, 1923, at the rate of 5 per cent. per annum (less income tax), which will absorb £7,875, leaving a balance to be carried forward of £6,195

EMPIRE PAPER MILLS (1922).—Report for the year to July 31st, 1923, shows a profit of £38,738. The directors write off £8,707 from the sum representing preliminary expenses and discount allowed on the issue of the debentures, and after writing off other amounts there remains £17,137 to be carried forward. The directors point out that the mill properties appear in the balance-sheet at a figure of £612,011. As stated in the prospectus offering debentures for sale these properties were valued by Messrs. Rushton, Son, and Kenyon at £805,125. Good progress has been made with the installation of the new paper-making machine, and it is anticipated that this will be completed and running during the current financial year.

NEW COMPANIES.

SHUREY'S PUBLICATIONS, LTD.—Capital £5,000, in £1 shares; publishers and printers, carried on by H. Shurey at 17, Tudor-street, 2 and 3, Hind-court, Fleet-street, and 11, Gough-square, E.C. Private company. Directors: H. R. Shurey and G. L. Shurey.

THE "EVENING STANDARD" CO., LTD.—Capital £25,000, in £1 shares; newspaper and, magazine proprietors, newsagents, journalists literary and advertising agents, printers, publishers, etc. Private company. Subscribers: A. H. Smith and S. A. Sharpe. Subscribers appoint first directors.

"BRITISH WEEKLY," LTD.—Capital £50,000, in £1 shares; to acquire the publication known as the *British Weekly* and to carry on the business of publishers, etc. Private company. Subscribers: J. R. Pakeman, and H. M. Cordrey. First directors: Sir Ernest Hodder Williams, C.V.O. and R. P. Hodder Williams.

SAFETY PACKINGS, LTD.—Capital £200, in 1s. shares; to adopt an agreement with J. F. Kebbell and J. S. A. Wilkes, and to carry on the business of papermakers, cardboard, strawboard and millboard manufacturers, paper bag makers, and makers of tubes, cartons and boxes of paper, cardboard, wood and other materials, printers, stationers, publishers, etc. Private company. First directors: J. S. A. Wilkes and J. F. Kebbell.

A. A. EDWARDS, LTD.—Capital £100 in £1 shares (10 per cent. cumulative preference and 95 ordinary), to adopt an agreement with Mrs. F. Edwards and to carry on the business of stationers, newsagents and publishers, as formerly carried on by the vendor at 125, High-road, Chiswick, W. Private company. First directors: Mrs. F. Edwards, C. Edwards and Mrs. H. Knight. Registered office: 125, High-road, Chiswick, W.4.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDERS.

G. P. Chace, Red Lion House, Red Lion-court, Fleet-street, London, lately residing at "Mowbray," Ferndale-road, Horsell, Surrey, commercial and colour printer.

A. Marshall (alias Dick Hart), 37, Sherwin-street, Nottingham, card box manufacturer.

Plea for Cheaper Post.

Mr. A. E. Goodwin, secretary of the Federation of Master Printers, addressing members of the printing trade at Welshpool on Saturday on the question of unemployment in the trade, said the restriction imposed by the postal authorities on printed matter was seriously hampering the industry.

Representations had been made to the Postmaster-General regarding the use of envelopes for printed matter. The quantity of foreign printing now entering the country was also of serious moment. It was absurd, Mr. Goodwin added, that a letter could now come from Australia to England for a penny, whereas it still cost a penny halfpenny to send a letter to Australia.

SIR LAMING WORTHINGTON EVANS, the Postmaster-General, speaking at the Mansion House on Monday, on the penny post, emphasised the cost of restoring the penny post, and said: "There is nothing I should like better than to introduce penny postage while I am Postmaster-General, but you are bound to take into account the general finances of the country. So while we live in hope, I cannot make any more definite promise."

POST CARD POSTAGE.—The Federation of British Industries recently obtained a ruling from the General Post Office on the application of the inland printed paper rate. The firm in question used two types of post card bearing requests for samples, the first of which was printed and the second multigraphed, and whereas cards of the printed type always went through the post at the ½d. rate, post cards of the other type were in many cases surcharged. The postal authorities have now decided that such post cards, when appropriately completed in writing or typewriting, are admissible at the inland printed paper rate of postage. The cards of the multigraphed type were apparently surcharged because it was thought that the printing of them was in imitation of typewriting. Instructions have been issued that such cards should not be surcharged in future, but there is less likelihood of their being questioned if they are printed in ordinary type rather than multigraphed.

"NOL" Board, of which an announcement appears on page 355, is the result of very many and costly experiments on the part of Nol Tingstad Mill, and represents the last word in bookbinding boards. As compared with other classes of board made for this purpose, the makers claim that the Nol product is extraordinarily flexible, waterproof, and, above all, at least 40 per cent. lighter in specific weight than the general standard of boards at present in use.

PROCESS

Engravers and their Unemployed.

Mr. Colebrook Speaks of a Statemanlike Scheme.

It is some years now since General Bemrose of Derby, speaking with all the prestige of an ex President of the Master Printers' Federation, urged his fellow printers to consider whether the printing craft could formulate and sustain a scheme for dealing with those who were ordinarily considered to be workers in its ranks, and who had become unemployed. It may be remembered, too, that the printing craft did give notice to the Government of the day that it desired to be excepted from the general provisions of the Unemployment Insurance Act, because it preferred to consider ways and means of dealing with its own unemployed, and of relieving its working staffs while they were working from the anxiety which ordinarily attends upon insecurity of employment. The War and related events caused the abandonment or modification for the time being of the projects which the whole printing craft had formed. While, however, the great craft of printing is so far unable to cope with this problem, at a time of such an unusual degree of slackness, the art and craft of the engraver is endeavouring to do this very thing.

At the Hotel Cecil on November 9th, the Process Engravers' Club had their first annual dinner., Mr. A. Dargavel presiding. There was only one toast after "The King"; this, the toast of "The Process Club," was proposed by Mr. Frank Colebrook, and incidentally he alluded to this effort by the craft to assist its unemployed. He said that a proposal was put forward, and had already secured the signed assent of all photo-engraving houses in Scotland, and of an important proportion of the craft elsewhere, and the indications were that it would find favour throughout the Kingdom. The proposal was that each firm should pay one shilling per week for each journeyman whom it employed, and therewith provide a fund for increasing the amounts which workers in the craft, when unemployed, receive weekly during their unemployment. It might be said, he remarked, that the problem was not extremely urgent, as the number of photo-engraving journeymen now unemployed was not very large. That cuts both ways. If the number had become reduced, the burden of coping with this extra provision was correspondingly smaller. In any case, unemployment was always urgent. If the craft by large majority agreed to accept this voluntary burden, it might mean a substantial sum per week added to the amount which the unemployed worker in the craft received through his trade union or through the unemployment insurance payments. Further, it was proposed that as far as practicable, opportunities should be given to any unemployed worker to obtain some further training while he was out of work; and that training might possibly be in a particular section of his craft, differing from the one in which he was ordinarily occupied. A line etcher, for instance, might receive some training in tone etching, and possibly might as a tone etcher find the employment which at the moment was not available for a line etcher.

Mr. Colebrook strongly commended this statesmanlike proposition. Although nearly forty years had passed since he for a short time was unemployed, he had never forgotten how miserable it was to feel oneself to be unwanted, ineffective, a kind of irrelevance in the universe. The Club had a very important part to play, in that it tended to create and foster the spirit, and promote the relationship in which statemanlike, and, he hoped, mutually beneficial, proposals of this kind, could be carried through.

Mr. Dargavel's name was coupled with the toast, he being president of the Club. He replied in a characteristic speech, full of dry humour. He quoted some curious letters which had been received from people to whom photo-engraving was very particularly an art, and mystery. He alluded to Mr. Colebrook's words as to their journeymen, and said that photo engravers had always prided themselves on the good and mutually sympathetic relationship of the employers and the employed in their fine craft.

Dinner was followed by a dance, and during the evening exhibitions of modern ballroom dancing were given by Miss Wendella Wallace and Mr. Gerald Thornton, and by Miss Geraldine Noel. Solo character and national dances were illustrated. The grace and skill of these performers were highly admired. The company were entertained by the singing of Miss Doreen Brightwell, soprano, and Mr. Fred. Gregory, baritone, with Miss Mabel Vaughan accompanying. Mr. W. Birmingham's Cecil Orchestra provided the instrumental music.

The Dance Committee consisted of Mr. Carl Hentschel (vice-president), Mr. F. E. S. Perry (vice-president), Mr. T. C. Eamer (hon. secretary), Mr. A. Knighton (hon. treasurer), and Mr. C. Coombs. Mr. Carl Hentschel, that past master in all such functions, acted as M.C.

Don't brood over the past or dream of the future, but use the instant and get your lesson from the hour.

THE BRITISH & COLONIAL PRINTER AND STATIONER PUBLISHED WEEKLY

FORTY-FIFTH YEAR.

Printed and Published EVERY THURSDAY by STONHILL & GILLIS, at 58, Shoe Lane, London, E.C.4.

Tel.: Stonhill, Lud, London. 'Phone: 8407 City

SUBSCRIPTION: Per Annum. 13s. (including Postage.

Charges for Trade Advertisements:

(Full Page 12 by 8 ins.)

Across Whole or Half-Width of Page:		In Single Column Form:	
Whole Page ...	£8 0 0	One Column ...	£3 3 0
Half Page ...	4 10 0	Half Column ...	1 17 6
Quarter Page ...	2 10 0	Quarter Column	1 0 0
One Eighth-Page	1 10 0	One-inch Column	7 6

An Extra Charge for Cover and Special Positions.
Discounts according to Number of Insertions.

All communications for the "BRITISH AND COLONIAL PRINTER AND STATIONER" should be addressed and Cheques and Post Office Orders made payable to—STONHILL & GILLIS, 58, SHOE-LANE, LONDON, E.C.4.

COPIES may be purchased at the Offices, as above, or from Messrs W. H. Everett and Son, Ltd., news-agents, 11, St. Bride-street, London, E.C.4.

Representatives:

London—Mr. STANLEY J. GILLIS 58, Shoe Lane, E.C.4
Lancashire and Yorkshire—Mr. W. C. FOSTER, 1, Duncan-street, Higher Broughton, Manchester.
Scandinavia and Finland—Mr. DAVID AAMO, 2, Hollænderdybet, Copenhagen. C.
France & Belgium—Mr. FELIX VANBUGGENHOUDT, 196, rue Gerard, Brussels.
United States—LOCKWOOD TRADE JOURNAL CO., 10, East 39th-street, New York.
Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, NOVEMBER 15, 1923.

The General Election.

THE imminence of a General Election is already beginning to create a liveliness among printers, papermakers and manufacturing stationers, all of whose product is largely used in a political appeal to the country. The fact, however, that the elections are all held on one day, and at very short notice, reduces the period during which political propaganda can be conducted, and therefore limits the expenditure of powder and shot in the shape of paper and print. Nevertheless the Election will stir things generally, and will clear the shelves of much stock that has been a bugbear for some time. The printing presses, too, will be largely occupied to the exclusion of ordinary work, which latter will thereby accumulate no doubt, and stand everyone in good stead when the election is over. Though the upheaval has its commercial disadvantages, the impetus given by a change of Government may just contribute that little leverage to trade that will send the whole machine along at a better pace. There are, of course, doubts in some minds as to the result of the Election, and it is possible that no party will receive a working majority, in which case there will be another appeal to the country at no distant date. In fact there are some people who see a prospect of innumerable elections for some time to come. It may be recalled at the last election that good work was done in that candidates were interrogated on the question of the postal rates, and as we are still without a penny letter post and a universal halfpenny printed rate, the opportunity might well be taken to press this matter once more before candidates.

Closing Paper Mills.

VERY definite evidence of the serious state of the paper industry comes from Yorkshire, where the mills of T. H. Bracken and Co., Ltd., Hunslet, have been closed down, throwing out of employment about 150 workpeople. Nor is this an isolated instance. The appalling state of trade is responsible for many other occurrences of the kind. According to the manager at Hunslet, "in the past two or three years huge quantities of German-made paper have been coming into the country, and many British firms have been unable to compete with the prices. Fourteen paper firms in this country have had to close down recently owing to the influx of foreign paper. Whether we shall re-open or not cannot be said at present." British industry is in a state of chaos and no branch is more seriously affected than that of paper. Whether the immediate cause of a mill's shutting down is want of financial support, lack of profits or the need of orders, the root cause is the state of industry throughout the country, a state of things having its origin in the situation on the Continent.

Printers' Pension Corporation.

Festival Produces £31,000.

A brilliantly successful 96th aniversary festival dinner of the Printers' Pension, Almshouse and Orphan Asylum Corporation took place on Tuesday evening at the Connaught Rooms, under the presidency of Sir William Berry, the attendance including as usual a great number of those most prominent in the printing and allied trades.

The total sum received as the result of the festival was £31,216, a total which, with the exception of the Prince of Wales' year, exceeded any other year in the history of the Fund.

The National Flag Day organised by the Joint Industrial Council realised £3,800.

Proposing the toast of "The Continued Prosperity of the Printers' Pension, Almshouse and Orphan Asylum Corporation" the chairman recalled the fact that the Fund was founded by two compositors, who eventually became pensioners of it. The Printers' Pension Corporation was the main fund of its kind in connection with the industry, and he thought it proper that some recognition should be shown to the men who made the Fund possible.

After paying a tribute to the zealous work of the auxiliary fund associations, the collectors, and stewards, Sir William Berry said that in the 96 years of its history the Corporation had distributed £500,000. (Cheers.) At the present moment 980 printers and widows were receiving pensions at a cost of nearly £20,000 a year. Two thousand members of the trade fell in the war, and to-day a thousand war orphans were receiving grants totalling £10,000 a year. Already £50,000 had been distributed by that fund, and if it was to continue—and he thought they must all agree that it must go on (cheers)—then another £50,000 was required to meet the obligations to maintain these children until they attained the age of 14 years. At present the Corporation's account was overdrawn by nearly £20,000, and it had been decided that the receipts of that festival should go to the War Orphans' Fund. (Cheers)

Referring to the high wages paid in some sections of the industry, Sir William remarked that he believed that the high wages could be maintained in the printing industry if they could remove some of the restrictions which were undoubtedly hampering the enterprise of the trade and doing serious injury to its development.

Mr. James Thompson, chairman of the council, acknowledged the toast.

Mr. R. A. Austen-Leigh, in the absence of the Lord Chief Justice, proposed the toast of "Literature and the Press."

Mr. Cecil Harmsworth responded, and Mr. Pett Ridge, who also replied, said that this would be a callous and hard world if it were not for its Press notices. Few joys were more acute than that of seeing one's own name in print; it made the dullest page sparkle and justified the inventiveness of Caxton. (Laughter.)

Mr. Joseph Mortimer, the secretary, having announced the subscriptions, Sir Joseph Cook, High Commissioner for Australia, proposed the health of the president, who briefly responded.

Record Gathering at Stationers' Hall

Keen Interest Shown in Photo-Mechanical Typesetting.

Under the auspices of the Stationers' Company and Printing Industry Technical Board a record gathering attended a lantern lecture given by Mr. W. B. Hislop on the subject of Photo-Mechanical Typesetting at the Stationers' Hall on Friday evening. It is estimated that close upon 500 were present, and a large number could not gain admission owing to lack of adequate accommodation. Mr. T. E. Naylor (secretary, London Society of Compositors) occupied the chair, and among those present were Mr. Geo. Eaton Hart, Rev. T. Walton, Mr. J. R. Riddell, Mr. W. Gamble, Mr. R. B. Fishenden, Mr. A. H. Mundey, and Mr. G. A. Eden.

Mr. Naylor, in introducing the lecturer, said that great meeting was evidence of the interest always taken in the work of the "chief department" of the printing office. Proceeding, he said the subject that evening must be interesting not merely to compositors, but to printers of all departments. The subject of that night's lecture was photo-mechanical composition. He understood that the new principle about which they were going to hear was going to leave typesetting very much behind, and was going to introduce something new to take its place. Those of them who had reached the age of the sere and yellow leaf had had opportunities of seeing all kinds of machines, and they could cast their minds back to many primitive forms of type-composing machines. Then came the linotype method of securing the solid line; also the introduction of the separate letter produced by the monotype caster and keyboard. Yet again they saw a further recent development in the Ludlow casting machine. That night they were to be informed of a more completely revolutionary process than any one of those he had mentioned. The mould and the matrix were to be supplanted by the camera and the lens. Lines of type and type moulds in all their forms were to disappear and straight from the keyboard of these new machines—for there were more than one—would be sent on to the photographic film all that required to be set, to be passed on to be developed, and then brought out practically ready to be placed on to the cylinder of the printing machine and printed as the letterpress formes are printed to-day. Mr. Hislop was a member of a well-known Scottish firm of process block-makers and was also connected with the J.I.C. of the process working trade, as well as an examiner of the City and Guilds of London Institute and consequently was well qualified to speak on the subject he had chosen for their consideration. (Cheers.)

Mr. Hislop—whose lecture appears in an earlier part of this issue—was given an enthusiastic reception, and was followed throughout with keen interest. At the conclusion of the lecture the chairman invited questions, and several were forthcoming. Mr. Hislop, who had with him several pieces of machinery, was able to demonstrate and satisfactorily reply to the questions asked.

Mr. Geddes and Mr. Fishenden spoke, and complimented Mr. Hislop on his address.

The chairman, in calling upon the Rev. T. Walton, the vicar of St. Andrew's, Lambeth, to propose a vote of thanks to the lecturer, invited him to tell them something about the type-composing machine with which he was experimenting.

The Rev. T. Walton in the course of his remarks said there were many aspects to the question of that night's subject, and one of them was the possible elimination of type metal from the printing trade.

Mr. George Eaton Hart, in seconding, said he had had particular opportunity of watching the Hunter-August machine, and he was firmly of the conviction that it was a machine, in spite of its intricate mechanism, that was going to produce wonderful results, and would very surely be placed on the market in a very short time. The subject of corrections had been mentioned as one of the difficulties of these machines. All he could say to that was "make no mistakes!" The lesson the student had to learn was that greater demands would be made upon the compositor in the future for even better work than at present.

Mr. W. Gamble, in supporting the resolution, said he had listened with great interest to the admirable summary of the various inventions that had been put forward towards achieving the future success of photo type-composing machines. However, he felt disappointed that the Rev. T. Walton's invention had not been mentioned, but that perhaps did not come into the same category, as the lecture seemed to be confined to photographic machines. He (Mr. Gamble) had been a good deal criticised because of a prophecy he made that within five years some invention of this kind would be introduced which at any rate would be the starting point from which they would proceed to solve this problem. Because of that statement he had been accused of striking a gloomy note. He did not desire the death of letterpress printing.

The vote of thanks to Mr. Hislop was heartily carried, and in replying to the vote of thanks Mr. Hislop moved a similar resolution on behalf of Mr. Naylor, who, in briefly responding, said he felt himself as representing that gentleman who had been referred to as the printer's devil. All he could say with respect to his future was "The printer's devil is dead. Long live the printer's devil!"

A very successful evening was then brought to a close.

Renewed Costing Propaganda.

South-West London Master Printers Take a Hand.

Some warm eulogies were passed upon the Federation Costing System at the meeting of the South-West London Master Printers' Association on Tuesday, November 6th, at the Westminster Public Library. In view of the offer of the Master Printers' Federation to instal without charge the costing system in the houses of two members in the area, the meeting was given over to a consideration of costing. Mr. E. G. Cole, president of the local Association, presided over an excellent gathering.

Why Every Printer Should Be a Coster.

Mr. J. D. Wise opened the discussion with a very effective paper, to which he gave the title "Why Every Printer Should Be a Coster." After giving a history of the movement, he showed that whereas 30s. a week was considered a good wage for a jobbing compositor some 10 years ago, wages and other benefits now amounted to about 57s. a week, which in pre-war values represented an increase of about 16s. a week. As to the benefits which the Costing System had conferred upon the employers, Mr. Wise pointed out that in spite of the set-back which industry had received, master printers had been able to pull through. In most cases their plants were larger and of greater value. He maintained that the charges based on previous reckoning would never have been able to bear the heavy expenses of the past few years.

Emphasising the knowledge which the Federation Costing System furnished, Mr. Wise put the following questions to master printers: Do you know the value of the work produced in each department and charged up to the customer during the last year? Do you know the cost of running each department exclusive of wages? Do you know how many productive or chargeable hours you obtain from each compositor? Do you know how many chargeable hours each machine gives? Do you know the total amount of your overhead or general expenses, and what percentage it is necessary to add to departmental costs and wages to recover?

Mr. Wise went on to say that some master printers only made guesses in answer to these questions. The Costing System, however, would enable them to answer accurately. Referring to criticisms of the System, Mr. Wise mentioned that the objection had been raised that the Federation System was built up on averages, whereas something more definite was required. The speaker went on to say, however, that practically everything was calculated upon averages. There was no doubt about the genuineness of the Federation System, and it was out of gratitude for the benefit he had himself derived from it that he was so enthusiastic in advocating its general adoption.

The president gave an instance of the value of the System from his own experience.

Mr. Walmsley maintained that while costing was not an exact science, nevertheless it was based on past experience. It did not necessarily follow, because they adopted the Costing System or because they adopted the rates recommended by the Federation, that their charges were excessive. He understood that the object of that meeting was not so much to recommend the Federation rates, as to induce each member to ascertain his own rates. (Hear, hear.) He could not help thinking that in such a great industry, where so much capital and so many employees were engaged, printers should rate their business more highly than they did. He had read somewhere that the capital sunk in the printing industry was equal to that in the coal-mining industry of this country, whilst in the United States the industry ranked as the sixth largest industry. From time to time particulars appeared in the *British and Colonial Printer and Stationer* of the number of unemployed in the printing trade in comparison with the total number employed. They would find that the number of workpeople in the printing trade approached something like a quarter of a million. When he had compared the profits in relation to wages he had been astounded with the results obtained in other industries as against those derived from the printing industry.

He was glad to know that the position of the working printer had been improved; that was only an argument for the master printer to do equally well. Mr. Walmsley remarked on the folly of a master printer assuming that he must work at a loss because some competitor did so. He believed that if the printer would only realise the value of his work, and stand up for a fair cost with a reasonable profit, things would be a great deal better in the industry. The speaker urged the necessity of keeping a record of the time occupied in each department, and comparing that with their estimate. If they occasionally found discrepancies, still the value of the experience gained was very great. It was absurd to say that a job could be made ready in three hours if they knew that in practice it took five. If a machine was capable of running 1,500 an hour, it could not always be assured of obtaining maximum output. His experience was that they could discount the running speed by 33 per cent., bringing output down to 1,000. It was possible by watching points to make their estimates agree with probable time in actual production.

Ideals to Aim At.

Mr. R. B. Simnett insisted upon the necessity for turning out good printing. He believed that customers were perfectly willing to pay the proper price for good work, and if master printers would only lift the industry on to a higher plane they could command that higher price. Such work would be a credit to the printer, besides drawing business. Master printers had got to improve their machinery and bring it up to date, just as they had to be modern with their ideas. Pointing out that there was a great deal of beautiful work being done nowadays, Mr. Simnett urged his fellow craftsmen to have regard to the type they used and to the style in which it was set up, holding that until they got well into the minds of craftsmen the importance of quality and style they would go on grumbling at the cutting competition.

Mr. A. Williamson, costing secretary from headquarters, said the justification of type and the registration of blocks were the everyday experience of the master printer. The Costing System sought to apply these principles in the daily work of the printing office. There was less trouble to justify the financial side of their business than to justify types and register formes.

Mr. Mizen (North London Association) spoke of the value of such gatherings, and urged master printers to insist upon obtaining a proper price for their services.

Mr. Spring strongly supported the Federation Costing System as being of vital importance to the life of the present-day printer. Whether they were large or small printers, it was necessary to have a costing system.

The president mentioned that only one application for the free installation had been received in answer to the circular he had issued, and it was agreed that any other master printer who desired to have the free installation should write to the president.

Mr. Williamson mentioned that absolute secrecy was maintained with regard to any information which the Federation officials obtained when installing the system. There were locked up in the Federation offices figures relating to some hundreds of installations, but never had there been a breach of confidence in respect of any one of them.

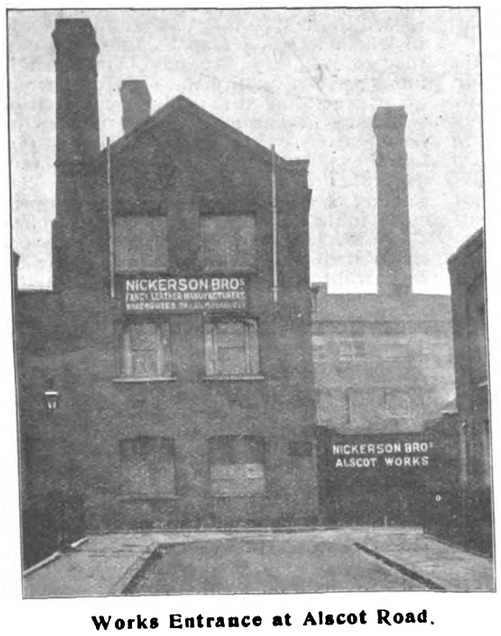
The Bookbinder

The Production of Binders' Leather.

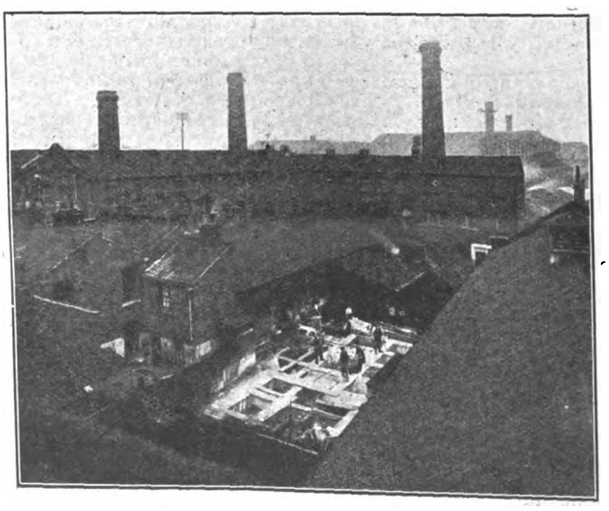
A Glance Over a London Manufactory.

Although the practical bookbinder has a close personal acquaintance with the moroccos, roans, skivers and other classes of leather that he handles in his daily work, he will probably find himself out of his depth if questioned closely as to the origin and the preparatory treatment of the various skins that go to provide him with book-covering material. We fancy many binders would find instruction as well as pleasure if permitted to inspect, as was our good fortune the other day, a large leather-making works, such as that of Messrs. Nickerson Brothers, at Alscot-road, Bermondsey.



Even apart from the extensive processes of cleaning and tanning, which form the earliest stages in the passage of skins from the animal's back to the cover of the book, there is a wide and important series of operations by which tanned skins in the rough are metamorphosed into the beautiful, highly finished material seen in the bindery. It was to these finishing operations that our attention was specially directed on the occasion of our making a tour of Alscot Works.

In the illustrations herewith there will be seen the entrance to the Bermondsey works, a bird's-eye view of the buildings, and yards which the works comprise, together with an interior view of one of the warehouses, whilst another illustration shows the front of the premises at 99 and 101, Worship-street, London, E.C., which constitute the firm's offices and show-rooms.

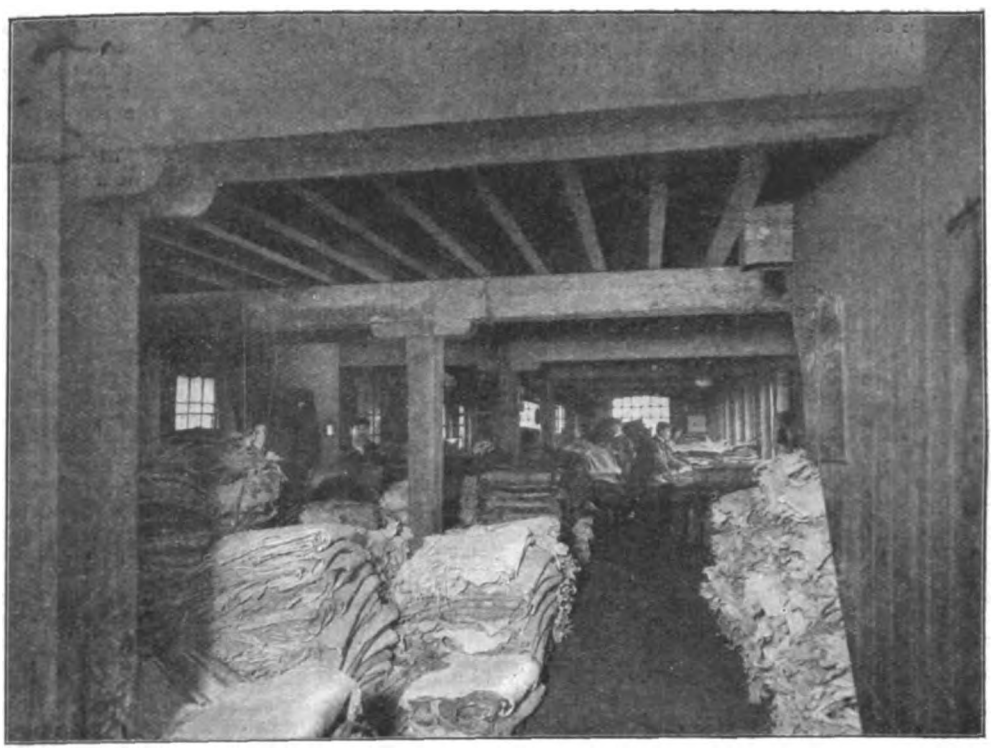


Looking first into the crust stock warehouse, we were confronted with an impressive array of tanned leathers of great variety, the range including most of those that are dear to the heart of the bookbinder, such as moroccos, Persian goats, Persian sheep, pig skins, calf skins, hides, roans, basils and skivers. The leathers are piled on the floor as seen in the illustration, and they are sorted out as required and sent on to the dye house to receive appropriate colouring.

The Worship Street Offices.

Works Entrance at Alscot Road.

A Bird's-Eye View of the Works.



In the dye house the skins first go into large revolving drums, known as "tumblers," in which they are thoroughly cleansed. They pass then into "paddles," which are large troughs containing the dyeing liquid and fitted with revolving paddles (reminiscent of the paddles of paddle steamers), by which the skins are thoroughly tossed and turned through the liquid, so that the dye is uniformly applied. From the paddles the skins are placed in large trays to await the drying process. Superfluous moisture is next removed by pressure, this being done either by machinery or by hand. The machines for the purpose might be roughly described as great mangles, with special toothed rollers, designed to scrape and press the skins simultaneously. The hand worker uses a scraper which he pushes forcibly over the surface of the skin, the scraper driving the moisture before it.

After the dyeing, the skins, still wet, pass to the shaving shop where any superfluous thickness is removed by machines in which are knives revolving at 2,000 revolutions per minute, the skins emerging cut down to the required thickness and freed from irregularities. They are now ready to pass to the "stoves," *i.e.*, large steam-heated rooms, in which the skins are tacked out on wooden frames. Messrs. Nickerson Brothers are proud of their up-to-date drying facilities, which comprise steam heating and electrically driven blowers, together with ceiling fans, to ensure the circulation of gentle heat that causes the skins to dry with a pleasing softness, not obtainable by harsher drying methods.

In the fluffing room leathers are given, if desired, a velvet finish, there being machines between whose rollers the skins pass and emerge with a nap surface. For the more general styles of finishing the leathers go elsewhere, there being separate shops for bright grain finishing, plain finishing, hard grain finishing and hide finishing. Wonderful skill has been attained in the art of preparing leathers in whatever finish may be desired—smooth or rough, glossy or dull, plain or grained in any conceivable pattern. The "printing" of leathers with grains to imitate the natural grain of morocco, crocodile or other skins is an interesting feature of the leather finisher's art. Besides doing a little hand-work in this direction, Messrs. Nickerson Brothers have a number of machines which quickly and most effectively put the desired finish upon the leathers. Specially remarkable are the embossing machines, by which plain skins are turned out with the most convincing markings of morocco, crocodile, hog, hard grain, seal grain, semi-levant, large levant and so on. The embossing plates used in these machines are electrotypes obtained from impressions of the real skins and adapted to produce the natural markings most faithfully. Besides making bookbinding leathers in all these finishes Messrs Nickerson Brothers turn out a large amount of leather for other purposes—for upholstery and for fancy goods, such as bag, case, purse, and pocket book making.

In the machine shop the engineer has a lathe and other tools to make possible the carrying out of repairs on the premises, as, of course is very necessary in a works that contains a great deal of machinery. A notable feature of the works equipment is the electrical driving that has long displaced the older method of driving from shafting with steam and gas engine. At the present time 11 electrical motors, with an aggregate of 100 h.p., are at work, and additional up-to-date machinery

Digitized by Google

A Section of a Crust Stock Warehouse.

is being installed in view of the increasing business which fortunately is coming along.

A remarkable machine to be seen in the dispatching department is an automatic measuring machine. This is more or less like a mangle in form, but carries at the top a large graduated dial. However irregular may be the shape of a skin, it has only to be passed between the rollers of this machine and its exact area is registered by the pointer on the dial. Another interesting piece of apparatus used for the same purpose is Connolly's areometer, a very ingenious machine having a projecting arm which carries a vertical pencil-like piece of steel, the point of which is passed completely around the periphery of the skin to be measured, and the dial then registers the correct area.

The business of Messrs. Nickerson Brothers was founded in 1848 by the late Francis Nickerson, the first works being situated at Rephidim-street, Bermondsey. The lease of those premises expired in 1891 and in the same year the firm purchased more extensive premises, which form part of their present accommodation. Rapid extension of business led to the purchase of adjoining premises in 1898, whereby the available floor area was practically doubled. Since the War further brick buildings have been erected and are now in full operation.

The present partners in the business are the four sons of Mr. Francis Nickerson, namely: Messrs. Francis, William, Henry and Albert J. Nickerson. These, with the aid of members of their respective families, are very successfully maintaining and extending the old-established business. The firm has a notable record of steady, consistent progress, and is happy also in the fact that the relations between Messrs. Nickerson and their employees are most satisfactory, amongst the workpeople being a number who can claim long service with the firm.

Notes and News.

The State of Trade.

There has been very little improvement, if any, in the state of trade so far as the bookbinding industry is concerned. The miscellaneous section, which caters principally to users of specially made account books is extremely quiet. Among manufacturing stationers there is a dearth of definite orders and too much making for stock. In many quarters cheap contract work is being sought where normally there is no desire for its intrusion. Along with private and public users of books, the Government, through the medium of the S.O., has restricted its requirements to the lowest limit. Some of the larger banks have placed acceptable contracts, but here again the general depression in industry is responsible for slow consumption of stationery.

Demarcation of Labour.

Following our observations on female labour in bookbinding and a more uniform standard of demarcation, we note that the discussion has been taken up in another quarter. Inside the industry there is no attempt to justify the condition of anomaly which prevails. In open competition for any class of work every establishment should have a fair chance, provided that union labour is employed. To escape the restrictions imposed by the inequality of treatment which is maintained by the binders' trade union some houses have reconstructed their departments on non union lines. Mostly they have reaped the benefit of the change, but such a policy is not one to be too lightly adopted. When the binders' union realises the falseness of its position in regard to conditions of labour, and how the anomalies that exist militate against its own advancement, steps will no doubt be taken to remedy the situation. Whether the employing side of the binding industry, or that part of it which loses orders through unfair treatment, will wait the pleasure of the officials is another matter.

The Materials Market.

The market for bookbinders' materials is keeping very steady, and there are very few changes in price to record. Strawboards are the most varying factor, for practically every week the lists show a different figure. At the moment quotations for boards delivered are round about £8 5s. per ton, with the usual £1 5s. per ton extra for substance 1½ lbs. and upwards. Stocks are fairly low at the stores, and agents are not buying forward in any quantity. The demand is mediocre, but it is unlikely that prices will fall below £8 per ton except for mill orders.

Wood Pulp Boards.

White wood pulp boards are listed at £18 per ton for 60's to 400's; £19 per ton for 450's and 500's, and £20 per ton for 600's. This standard has been unchanged for months past and business has been very quiet.

Other Boards.

First-grade glazed leatherboards are quoted £19 per ton, seconds £18 5s., and a lower grade £17 5s. per ton. Unlined Dutch reed boards are on offer at £7 15s. per ton. For those unacquainted with the reed board, it is an inferior grade to strawboard, of darkish colour, rather soft and made from rushes or reeds and straw.

The Market for Leather.

Leathers are steady in price but low in demand. Principally the tanners are depending upon the motor car industry and upholstering for their business in what we may term the fancy leathers. Among the special offers that have passed under our notice recently may be cited, pigskins at 6d. and 7d. per foot, large stout skivers at 7d. per square foot, fine rough sheep at 9d. per foot, ledger basils for full binding at 8½d. per foot, anglo hides at 1s. 6d. per foot and clearance skivers at 5d. per foot. Buyers of special offers should always take the precaution of either seeing a sample skin or buying on approbation. It is impossible to judge batch value from a cutting. Some of the cheap pigskins we have heard of have not the strength of a common basil, others are so flawed as to unfit them for many uses.

Calico and Gold Leaf.

Calico is quoted from 4½d. to 6d. per yard according to quality. A very reliable grade of fine calico for bookbinders' use may be secured for 5¾d. per yard. Gold leaf is offered at 47s. per 1,000 leaves 3¼ in. square and 59s. per 1,000 for 4 by 3¼. Imitation gold leaf of a very high quality, easy working on any material can be obtained at 23s. per 1,000 leaves, 5 in. by 5 in.

Other Materials.

Cottons, threads and tapes are firm in price; the last reduction in cotton threads took place in September last. Tapes and webbing have not altered in price since the commencement of the year. Bookcloths are in the same category with some inferior grades on offer at lower than the standard cloth prices. Our own experience with cheap bookcloths has driven us back to original standards. Union buckram is obtainable at 2s. per yard with a slight reduction for large quantities.

Imitation Bookcloths.

A new line in imitation bookcloth or leather paper came to hand recently, priced at 6d. per yard. There are innumerable grades of this type of product getting on to the market, some proprietary and some not. The parent is Duxeen, which has earned a good name and a good reputation. Manufacturing stationers and pattern card makers are applying imitation bookcloths in increasing variety. Marble paper is being used less than ever it was. The aim all round is to reduce costs to an extent which will permit popular lines to be produced and sold within very close reach of pre-war figures. To the same end the larger manufacturers are improving their equipment by adding new labour-saving machinery, which mostly comes from America.

Cheaper Book Covers?

Discussing the publishing situation with a representative of the *Westminster Gazette*, Mr. Walter Hutchinson, the publisher, was asked, "Why not paper covers?"

"English people are very conservative," was the reply, "and I do not think that they would readily take to paper covers. Besides, people usually borrow novels first and then buy those they wish to keep on the bookshelf. The public would not like paper covers; the libraries would find them impracticable.

"A flexible linen cover? Well, that is an idea certainly. But even with that I doubt if there would be so great a reduction in the cost as you imagine. Binding contributes one fraction only to the cost of producing a book."

Printing, Bookbinding & Kindred TRADES OVERSEERS' ASSOCIATION.

There was a very full attendance of members at the November meeting of the Association, held on Tuesday of last week at the St. Bride Institute, Bride-lane, E.C. Mr. J. Fleming (vice-president) occupied the chair in the unavoidable absence of Mr. H. Milton (president) who is at present indisposed, and is spending a period of rest at the Lloyd Memorial Home, Deal. After the transaction of some brief routine business Mr. E. A. Clifford, the Association's honorary solicitor, gave an interesting chat entitled "Legal Oddities."

The minutes having been confirmed, the secretary (Mr. A. Cox) submitted several items of correspondence. Among the letters was one from the daughter of Mr. F. Burroughs informing the secretary of her father's illness and that he was at present in hospital. Other letters were read from Mr. A. E. Goodwin (secretary, Federation of Master Printers), Mr. H. Milton and Mr. F. J. Hess.

In connection with the correspondence Mr. W. A. Hunt proposed that a letter of sympathy be sent from the Association to Mr. Burroughs, expressing a wish for his speedy recovery.

Mr. G. J. Hellery seconded, and the proposal was heartily agreed to.

Mr. G. A. Rutherford proposed that a letter of goodwill be also sent to Mr. H. Milton.

This was also unanimously agreed to.

New Members.

The following gentlemen were next elected to membership: Messrs. A. T. Peake (overseer—forwarding department), Fisher Bookbinding Co., Ltd.; H. T. Sparrow (overseer—case-making and blocking department), Fisher Bookbinding Co., Ltd.; A. M. Taylor (overseer—binding and despatching department), Lowe and Brydone; L. N. Velton (honorary membership—newspaper despatching department), W. H. Smith and Son, Portugal-street, W.C.

To the new members present Mr. Fleming, on behalf of the Association, extended a very warm welcome.

Mr. Fleming then explained that the executive had voted 10 guineas towards the War Orphans' Fund of the Printers' Pension Corporation, and asked the meeting for confirmation of their action.

Mr. R. Gardner then proposed that the sum as suggested be granted. This was seconded by Mr. Smith and heartily approved.

With the warm consent of the chairman Mr. J. Dixon then made a special appeal on behalf of the War Orphans' Fund for the support of the members to a concert at which he was to preside at the Horns Assembly Rooms, Kennington, on Saturday last. A collecting sheet was passed round the room, the sum of nearly £10 being realised.

Mr. Jones reported that the arrangements for the annual bohemian concert, to be held on Saturday, December 1st at the Talbot Restaurant, London-wall, were complete.

Mr. Fleming appealed strongly to the members to co-operate with Mr. Jones and the concert committee in making the event a huge success.

Mr. Clifford was then called upon for his address, which proved most interesting. Under the appropriate title of "Legal Oddities" Mr. Clifford dealt in humorous and reminiscent fashion with his subject. He first introduced to his hearers some very curious legal cases that came before a Birmingham Court in the 17th century, and then recounted many amusing anecdotes surrounding the lives of great personalities connected with the Bench and the Bar of to-day and also of former periods

Mr. Fleming moved a hearty vote of thanks to Mr. Clifford, which was seconded by Mr. Fox and very cordially carried.

Printers' Managers and Overseers (PARENT) ASSOCIATION.

Nomination of Officers and a Lecture.

With the president, Mr. S. M. Bateman in the chair, and a fair attendance of members, the November meeting of the Printers' Managers and Overseers' (Parent) Association took place at the Old Bell, Holborn, on Tuesday of last week. The salient features of the occasion were the nomination of officers and council for the new Association year and a lecture by Mr. John Acton, a member of the Association's council.

Two candidates were elected to membership, namely, Mr. J. Gemmell (Henderson and Spalding, Ltd., Sylvan-grove, S.E.), overseer litho department — proposed by Messrs. W. R. Torrance and R. F. Metcalfe; and Mr. C. R. Roberts (Sutley and Silverlock, Ltd., Blackfriars-road, S.E.), works manager—proposed by Messrs. W. W. Shaw and J. H. Whitworth.

The meeting readily gave its approval to a recommendation of the council suggesting that a sum of £10, the Parent Association's share of the allocations made by the delegate meeting in respect of the Association's journal, should be divided between the editor and the general secretary.

Prospective Officers and Council.

The next business was the nomination of candidates for the council and offices, and the following nominations were duly made: President, Mr. R. H. Berry (Chichester Press); vice-president, Mr. A. H. Wilson (H. J. Goss and Co., Ltd.), also Mr. F. W. Hume (Samson, Clark and Co., Ltd.); trustees (2), Mr. J. C. Pugh (Whitehead, Morris, Ltd.), Mr. G. Phillips (Odhams Press, Ltd.); treasurer, Mr. C. Durston (Roberts and Leete, Ltd.); general secretary, Mr. E. W. Whittle (Crowther and Goodman, Ltd.); financial secretary, Mr. W. H. Gill (William Reed); hon. technical secretary, Mr. A. E. Jarvis (Eyre and Spottiswoode, Ltd.); council (8), Messrs. S. M. Bateman (Newnes and Pearson Printing Co., Ltd.), E. G. Bausor (Newnes and Pearson Printing Co.), C. W. Brown (George Barber), T. G. Carne (Caledonian Press), C. W. French (Shield and Spring), T. B. Lapworth (*British Medical Journal*), L. C. Mennell (London School of Printing), A. T. Walters (Fleetway Press), W. H. Wicken (*Electrical Review*), the other (standing) members of the council being Messrs. J. Acton (Hygienic Bag Co., Ltd.), E. H. Campling (Avenue Press), G. H. T. Freeman (Chancery-lane Printing Works, (Ltd.), E. Hutchins, C. Northam (Ferrestone Press), R. Simpson (Centropress, Ltd.), and G. S. Waller (Haycock Cadle and Graham, Ltd.).

The vice-president, Mr. R. H. Berry, having moved into the chair as Mr. Bateman had to leave early, reminded the members of the whist drive to be held on November 27th to celebrate the thirtieth anniversary of the Association. He then called upon Mr. Acton to address the meeting on "The Braille Printing 'System' at the National Institute for the Blind: A Standardised Basis and its Advantages."

System in Braille Printing.

The subject of Mr. Acton's lecture proved to be, not the technical process of Braille printing, as some had thought from the title, but the organisational methods or working routine, whereby Braille work is ordered, put through the different departments, and charged out on completion, at the National Institute for the Blind. The lecture did not lend itself to an extended report, Mr. Acton's remarks being largely in the nature of detailed explanations in connection with printed forms exhibited to his audience. Some points, however, may be mentioned as of special interest.

The speaker's description of the Braille routine must have been rather fascinating to those of his audience who, as printers' managers, had been struggling for many years with the difficulties attending the effort to reduce labour and expense in a general printing office by the standardising of operations and materials. Of course, several factors conduce to make the organisation of Braille work a simpler matter; as a general rule only one standard class of paper in varying weights is employed, and there are no inks and colours to cause anxiety; moreover, the the styles of printing are very limited as contrasted with the vast range of styles and sizes of types with which the general printer has to deal.

Mr. Acton told of a very thorough and effective system of organising, and it was interesting to hear of the perfect precision with which one department co-operates with another, and how the recording and timing of all operations are accomplished with remarkable promptitude and uniformity. It was stated that the business manager is enabled on Tuesday morning of every week to have before him full details of the previous week's working, including labour costs, value of material used, value of production, and the percentage of labour and materials to the value of production. The manager is able also to foresee the exact effect which the curtailment of certain work would have on the balance-sheet. Departmental overseers know in the morning of any day what work is due to be done during the day, what further work could be undertaken, or what particular jobs would have to be put aside in order to accommodate any given piece of extra work.

Stress was laid upon the earnestness of the blind workers, as well as upon their skill and their willingness to adapt themselves in co-operating for the benefit of the community as a whole. Although the handicap of blindness doubtless has something to do with this characteristic, Mr. Acton urged the superior effectiveness of a spirit of co-operation and mutual helpfulness as against the spirit of competition and coercion.

At the conclusion of Mr. Acton's address the chairman expressed his appreciation of the interesting and informative character of the lecture.

Mr. E. W. Whittle discussed several points, emphasising the curiosity the speaker had aroused, and expressing a wish to see for himself the process of Braille printing.

Mr. S. A. Dawson cordially conveyed the thanks of the meeting to Mr. Acton, his motion being seconded by Mr. L. C. Mennell and heartily supported by those present.

The proceedings ended with a response from Mr. Acton, in the course of which he remarked upon the willingness of the National Institute for the Blind to allow public inspection of their work, and suggested that it would be easy to arrange for a visit to the institution by a party of managers and overseers.

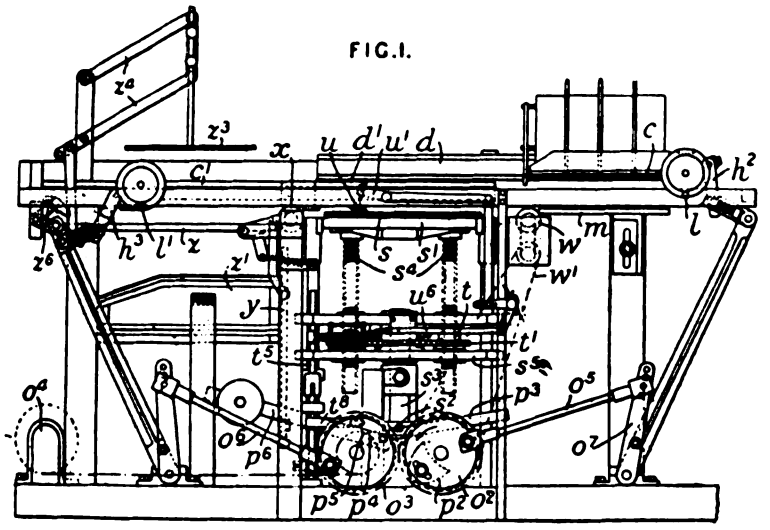
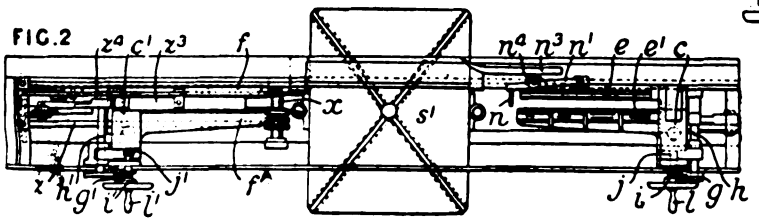
New Inventions

A Bookbinding Machine.

In a machine for fixing covers to the stitched or sewn copies of magazines, pamphlets, and the like, as patented by Mr. G. W. Young, two oppositely reciprocating carriages are employed, one carriage receiving the book and passing it back downwards over a glueing wheel and thence over a table where the cover is automatically applied, after which the book is received in the second carriage and passes over a smoothing roller before being automatically released to a conveyer. Means are also provided for automatically

FIG. 1.





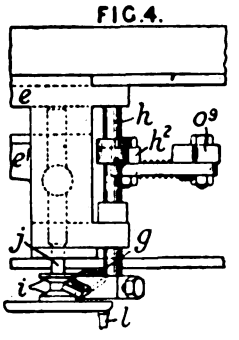


FIG. 2

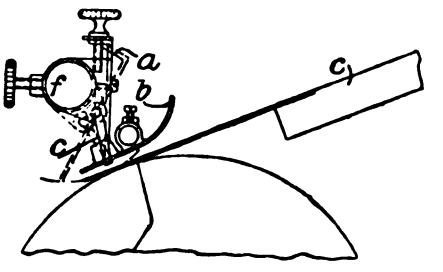

adjusting the height of the table carrying the covers, to compensate for the decreasing height of the pile as the covers are removed. The carrier c at the receiving end of the machine reciprocates along a horizontal guide bar d under the action of links h^2, o^9 which are actuated by a lever o^7 and connecting rod o^8 driven by a gear wheel o^2. The wheel o^2 engages a similar wheel o^3 operating the carrier c^1 at the delivery end through the link system o^6, h^3, the two gear wheels being driven by a motor o^4. The carrier c^1 reciprocates along a guide d^1 at a lower level than the guide d of the carrier c, the two guides overlapping above the table s^1 carrying the pile of covers s. Each carrier c, c^1 has a relatively fixed jaw e, f, Figs. 2 and 4, and a movable jaw e^1, f^1 which is opened or closed as necessary by a cam g, g^1 carried by a rocking arm h, h^1 and engaging a collar i, i^1 on a slidable spindle or rod j, j^1 connected to the relatively movable jaw. The spindles j, j^1 have a screw-threaded portion engaging a nut, and can be rotated by handles l, l^1 to adjust the amount of opening of the jaws for books of different thicknesses. When the carrier c returns to its receiving positions its jaws e, e^1 are open to receive a book, but as soon as its motion is reversed and it commences to travel towards the glueing roller w the link h^2 rocks the arm h causing the can g to close the jaws. A table m is adjustably mounted below the jaws at the receiving end in order to position the back of the book at the correct level in the feed carriage c. A positioning stop n, Fig. 2, carried by an arm n^1 pivoted to the jaw e, is disposed across the inner ends of the jaws when a book is inserted, being held in position by a roller n^4 carried by the arm n^1 and pressed inward by a curved rail n^3 against the action of a spring at the pivot. On the advance of the carrier the roller leaves the rail and the spring forces the lever n^1 and stop n clear of the jaws. The glueing roller w is rotated in a vessel of glue by a gear w^1 driven by the gear wheel o^2, the glue being kept liquid by a hot water receptacle. The movable table s^1 carrying the colours is adjustably supported by two screw-threaded spindles s^4 engaging nuts t in a crosshead s^5 and linked together by a chain and sprocket gear t^1, the table being progressively raised by the rotation of the spindles s^4 by a pawl and ratchet operated by a spindle t^5 and lever arm t^3 oscillated by a cam on the driving gear wheel o^2. The crosshead and table are raised as a whole when a cover is applied, by a cam p^2 on the gear wheel o^2 engaging a lever p^3 and thereby raising an arm p^5 engaging a collar s^3 on a spindle s^2 supporting the table. After applying a cover the table falls again under its own weight. In order to regulate the rate of compensating adjustment of the table when covers of different thicknesses are employed a finger u resting on the uppermost cover is connected through levers u^1, u^2 to a spring-controlled arm which prevents engagement of the feeding pawl when the rotation of the spindles s^4 is to be checked. After the cover has been applied the jaws e, e^1 open and the book is received in the jaws f, f^1 of carrier c^1 and passed over a roller x which presses the back and has adjustable side flanges to press the side portions adjacent to the back. To prevent creasing of the leading edge of the cover the roller and its supporting lever are momentarily depressed against the action of a spring by an arm p^6 on the rocking-arm p^4 engaging a rod y linked to one of the arms of the roller support. After the cover has been pressed the gripping jaws automatically open, and the book falls between a pair of cover-folding bars z on to an inclined and pivoted delivery table z^1. The discharge of the book may be assisted by a plunger plate z^2 supported by links z^4 actuated through a lever z^6 by the carrier-operating lever. The book may be drawn between creasing rollers before its release, to form a crease or groove in the cover adjacent to the back to facilitate opening. According to the provisional specification the book is delivered on to a revolving band or tape conveyer, and passing between automatic guides is deposited upon a base or support and clamped by a descending platen. Its edges are then trimmed by cutters before it is delivered into a hopper.

FIG. 4.

Quick Sheet Feeding.

To allow sheets to be fed by hand quickly to a printing-machine, patented by Messrs. E. and G. Schleifenheimer, the front stop a is used in conjunction with an auxiliary stop c which is projected through an opening in the

guide b when the stop a is moved by the movement of its shaft f to the position shown in dotted lines. As soon as a sheet is taken by the cylinder grippers, the next sheet can be registered against the stop c before the return of the stop a. Each sheet is finally registered by the stop a.

Esparto Paper Mills, Ltd.

Meeting of Debenture and Preference Shareholders.

At the invitation of Mr. Charles Diamond, a holder of £5,000 of debenture stock and 2,500 preference shares, a meeting of similar holders in the Esparto Paper Mills, Ltd., was held on Thursday afternoon at the Hotel Cecil, London, Mr. Diamond himself taking the chair. At first it looked as though there would be but a small gathering, but in the end the accommodation in the Grand Hall was well filled.

Throughout the proceedings were fairly amicable. Once or twice the chairman had a little argument with a speaker, but the breeze soon passed over.

Opening the meeting, the chairman explained his reasons for calling his fellow holders together. He was prompted by the fact that they had half a million or thereabouts at stake, and in view of circumstances that had arisen he thought it desirable to bring the holders together to see what could be done to account for the depreciation of the shares in the market and to relieve the situation if possible.

Mr. Diamond went on to pay a high tribute to the technical knowledge of Mr. Wallace, the managing director of the company, and described the mills as the best in the world for making esparto papers.

The telegraphic reply which Mr. Wallace had sent to the invitation to be present at the meeting was read, in which that gentleman said he considered the action in calling the meeting most prejudicial to the best interests of the company. At Cannongrove they were developing the property as anticipated ten years ago. The balance-sheet and report for the period ending October would be issued in four weeks time, and the general meeting would follow, when all legitimate inquiries could be fully dealt with.

Mr. Diamond proceeded to read a letter which he had addressed to the managing director, in justification of the action he had taken and asking one or two questions, which, he said, he had a right to ask.

He was strongly of opinion that there should be a body of independent directors to control the affairs of the company, and he mooted the suggestion that a small committee of representative men might be appointed to get at the facts.

Mr. Wright, who said he was a holder of ordinary shares in the company, described Mr. Diamond's action as premature, seeing the annual meeting was to be held in a month's time, when it would be found that everything was satisfactory.

In answer to Mr. Bruce, the chairman referred to a proposal of the company to go into the business of coating papers, which he appeared to think was a precarious undertaking and which if unsuccessful would be a great strain on the resources of the company.

The discussion then settled round the question of appointing a committee, some concern being felt at the thought that at the general meeting the powers of the debenture and preference holders would be nil.

The chairman remarked that if the directors gave private information to ordinary shareholders they would surely not refuse it to a representative number of men appointed at a meeting of that kind.

Eventually it was agreed *nem. con.* that a small committee be formed.

There was a widely expressed desire that Mr. Diamond should serve on the committee, although he expressed a wish that, if possible, having taken the original action, he should drop out.

Bowing to the wishes of the meeting, Mr. Diamond asked any gentleman present who had sufficient interest to communicate with him through his solicitors, Messrs. Calder, Woods and Pethick, Lincoln's Inn, and he would take steps to bring a few of them together with a view to formulating a few simple questions and communicating with the directors so that they might have something definite to do when the annual meeting took place.

This course met with the approval of the meeting, which terminated with a vote of thanks to the chairman.

In connection with the above meeting the directors of the Esparto Paper Mills, Ltd., caused the following statement, dated November 7th, and signed by the secretary (Mr. A. Carter), to be circulated to the shareholders:—

"The attention of your directors has been drawn to a circular which has been sent to debenture holders and shareholders in this company inferring that the appointment of a receiver for debenture holders and note holders in Becker and Co., Ltd., in some way prejudicially affects this company, Esparto Paper Mills, Ltd.

"I am instructed to say that this company is not under the management of Becker and Co., Ltd., and is in no way affected by the receivership above referred to.

"The business is in a thoroughly sound and prosperous condition, as will be shown in the first balance-sheet of the company for the period ended October 31st last.

"An addition is being made to the company's plant, which has long been in contemplation, and which it is confidently believed will add considerably to its profits when completed, and there is no question of the company being hampered for lack of capital, neither is there any question of experiments."

Irish Paper Mills Co., Ltd.

Receiver and Manager Appointed.

In the Chancery Division, last week, Sir Basil Mayhew was appointed receiver and manager of the Irish Paper Mills Co., Ltd., of Dublin. Mr. James Neville Marsden was co-defendant with the defendant company.

Mr. Bischoff, for the plaintiffs, the National and Provincial and Union Bank of England, said they were holders of debenture shares. Under the debenture trust the defendant company was required to make an annual provision for the redemption of the debentures. On July 1st the company should have expended £6,456 in this way, instead of which they had only purchased shares of the nominal value of £4,200. The plaintiffs' security had, therefore, become enforceable.

Mr. Harold Christy, for the company, admitted the default.

Mr. Justice Tomlin suggested that as this company was associated with the others already dealt with, it might cause difficulty if the same receiver was appointed, supposing some conflict arose between them.

Mr. Bischoff said Sir Basil Mayhew was engaged in investigating all these matters, and it was hoped that some form of reconstruction or arrangement would result. If, however, there were any conflict of interests, the Court would be asked to appoint another receiver. Counsel further explained that it would be necessary for the receiver to act also as manager, because the defendant company owned a mill that was only partly closed.

His Lordship agreed, and said it must be understood that the manager did not develop the business beyond what was now being done without permission of the Court.

Inveresk Paper Co., Ltd.

After having existed for more than half-a-century, the business of the Inveresk Paper Mills was turned into a public company in September, 1922. Its first accounts afford a very pleasant contrast to the difficulties that are having to be faced in the paper trade in other directions. One important fact that has operated in favour of the company, no doubt, is that, as was pointed out in the prospectus, contracts for raw materials since the end of 1921 have been entirely at current prices, the undertaking thus being free from the effect on values of the slump of that year.

The first accounts to be issued since incorporation cover a period of slightly more than twelve months to September 30th last. Gross profit was £67,500, and after allowing £10,000 for depreciation, net was returned at £36,300, which compares with £49,000 in 1921-22 and with an average of £24,700 for the four pre-war years. Thus the ordinary shares are enabled to receive 10 per cent., requiring £9,500, after £10,000 had been carried to reserve and £11,400 is left in hand. The £150,000 of 6½ per cent. first mortgage debentures, which were issued at 95 and stand now at 97, together with the £125,000 of 8 per cent. cumulative preference which were offered at par and are priced at present at 20s. 3d., were placed by Messrs. G. Haswell, Veitch and Co. —*Financial Times.*

Paper Contract Dispute Settled.

A settlement has been made in reference to the action of Henry Featherstone and William Harold Walbrook against William Penman for alleged breach of agreement, the accounts of the defendants being accepted as correct. It will be remembered the matter was referred to the Official Referee (Sir E. Pollock), and it is now ordered—"That all further proceedings in this action and reference be stayed, terms of settlement having been agreed between the parties as follows: (1) The plaintiffs paying to the defendants the sum of £384 13s., being the amount overpaid by the defendants to them as per the account rendered by the defendants to the plaintiffs. (2) The plaintiffs paying the further sum of £15 7s. to the defendants towards their costs incurred in the reference. (3) Each party paying their own costs of action."

Cropper and Co., Ltd.

Mr. Stephen H. M. Killik, J.P., chairman of Cropper and Co., Ltd., at the annual meeting last week, referred to the removal of the company's factory from London to Thatcham. In dealing with the accounts, the chairman said it was disappointing that a loss had been sustained, although the figures were substantially better than for the previous year. The preference dividend had been paid, which left a debit of £9,500 to be carried forward. As to their allied businesses they had the practical control of Colthrop Board and Paper Mills. An additional board machine of the latest and most efficient type had been installed. Containers, Ltd., which enabled the company to supply container boxes to their customers, had now turned the corner, and showed present working operations gave a satisfactory return on the capital. Some interesting particulars of the factory at Thatcham were given by the chairman.

Japanese Earthquake.

Effect on the Local Paper and Pulp Industry.

Destruction of Stocks and Future Demand.

Writing from Osaka, Japan, on September 21st, our correspondent says:—

By the recent disastrous earthquake many kinds of merchandise stored in the warehouses and "go-downs" of Tokio and Yokohama sustained serious loss. The destruction of paper was particularly serious, a considerable quantity having been stored in preparation for the customary fall demand. So far as can be gathered all paper stored in the warehouses of Tokio and Yokohama was totally destroyed, with the exception of that in one of the Sumitmo warehouses, where it is calculated about 1,000,000 lbs. of paper was stored at the close of July this year.

While it is quite impossible to give the exact figures of the total loss of paper, it can be stated that at the end of July the total quantity stored in the nine principal warehouses in Tokio and the six largest warehouses in Yokohama was estimated at 43,600,000 lbs., representing a value of 5,900,000 yen. This figure represented half of the total stocks of paper stored in all the business warehouses in the country.

In addition there has to be added the paper owned by paper dealers in Tokio and Yokohama, and it is calculated that out of 161 dealers in Tokio only 11 escaped the disaster. Assuming the loss in this direction to be 7,000,000 lbs., it is suggested that the total loss of paper sustained by the recent catastrophe would come to something like 55,000,000 lbs.

It might be thought that such a great destruction of paper would immediately affect the relation of demand and supply. However, it has to be understood that none of the paper mills located in the suburbs of Tokio sustained serious damage and that stocks of paper amounting to 10,000,000 lbs. remains intact. On the other side of the account, the recent consumption of paper in Japan amounted to 65,000,000 lbs. a month, Yokohama and Tokio taking 50 per cent.

The question which arises is to what extent the demand for paper will be reduced by the disaster. With regard to printing paper, only three of the houses consuming this class of paper escaped damage, the majority of printing establishments being demolished by fire. The calculated consumption, therefore, will be reduced by one-third. If these estimates are correct, it is thought the stocks of paper kept at the mills in the suburbs of Tokio can amply meet the supply for one month.

So far as the paper mills in the neighbourhood of Tokio are concerned, these were little damaged by the earthquake, while those at the foot of Mount Fuji and in the Hokkaido were not damaged at all.

It is the congestion of shipping which will particularly affect the transport of paper, but on the whole it is anticipated there will be no shortage of supplies by reason of the recent catastrophe.

Turning to the wood pulp situation, it is understood that stocks of pulp have largely been burnt. Total stocks stored at the business warehouses at the end of July were given as 21,010 tons in Tokio and 9,207 tons in Yokohama. It is calculated that about 96 per cent. of the total stocks in the two areas were destroyed, while compared with the stocks in the whole of Japan the quantity destroyed is estimated at 57 per cent. The high prices of pulp and paper in Japan, compared with those for overseas markets, were responsible for the exceptional quantity of stock being in hand.

Owing to the little damage sustained by the paper mills, the home demand for pulp is not likely to diminish to any great extent. However, two pulp factories—one in Korea and the other in Yalu—which had been out of operation for some time, are expected to resume manufacture very soon, the output representing 25,000 tons per annum. There is, therefore, no danger of the supply of pulp falling short of the demand.

Papermaking in Scotland.

In a lecture in Aberdeen on "The Production of Paper," Mr. James Strachan, of the Donside Paper Mills, referred to the present position of the industry.

The paper mills in Great Britain, he said, on full output, were capable of making about a million tons of paper per annum, which was much less than our consumption of the commodity. At the present time, he was afraid, they were not making half that quantity. The inflation of German currency had created a situation that enabled foreign competitors to dump paper in our markets cheaper than we could make it. Many mills were entirely shut down, and many more were on the verge of closing. He was glad to say that the largest consumers of paper in Scotland had stood by the home mills, and refused to buy foreign paper. The colonies also had stood by us, and Australia had given us a substantial preferential tariff.

Future Prospectively Good.

In spite of these difficulties, the future of papermaking in this country was prospectively good, and at the present time new mills were being built against future demands. The world could not do without paper, and Britain must hold her own and keep her reputation, wherein papermaking was of the best.

Papermaking could be classed as one of the national Industries of Scotland. We made about a fourth part of the total British production, and the Scottish papermaker was found all over the world. Aberdeen was one of the most important centres for Scottish papermaking. In this district we had five important mills, four on the Don and one on the Dee, making all kinds of paper, from newspaper and wrappings to fine printings and writings. Their combined output was over 50,000 tons per annum, and even at the present lower prices of paper, was worth approximately two millions sterling.

MR. J. CARLSJO has been appointed manager of Elof Hansson Agency Ltd. He had previously been connected with the firm, as well as with Mr. Elof Hansson's Paris office.

German Duties on Paper Goods.

By an Order dated September 29th, the Customs duties on the following paper goods (Category XI.) were increased by 50 per cent. as from October 25th. The figures represent the new rates of import duty in gold marks per 100 kilogs. (220·46 lb. avoir.):—

Wall-paper and borders for wall-paper of all kinds of paper, 72.

Manufactures of paper, cardboard, cartonpierre, wood pulp, cellulose, vulcanised fibre, papier-machie, so far as they are not included in preceding Tariff numbers, also hardened paper wares: not combined with other materials, or simply combined with wood or iron: Of the papers specified in Nos. 657 or 658 (picture paper, border paper, open-stamped paper, etc.), or wholly or partly covered with such paper; articles provided with applied, painted or galvano-plastic metallic coating, or with metal impression and finely painted wares; articles pressed or otherwise formed of paper-mache, also hardened paper wares, dyed, lacquered or varnished; lamp shades, lanterns and other fine or fancy articles (except flowers), 90; flowers (blossoms, petals and buds), 300; other manufactures, 45; combined (or wholly or partly covered) with yarns or textile wares of any kind, with wax wares, finely moulded, with semi-precious stones, mother-of-pearl, ivory, celluloid or similar moulding materials or gilt or silvered common metals; embroideries on paper or cardboard, 210; combined with materials other than those above-mentioned, so far as they do not become liable to higher rates of duty by reason of such combination, 72.

The duties on the following paper wares have been doubled, and are now as shown (in gold marks per 100 kilogs.):—

Impressions obtained by any process unless included under Category XII., also picture paper, including impressions obtained on paper or cardboard by the so-called copying process; border paper and cardboard, coloured or black or ornamented in any manner; of several colours, even stamped or bordered with colours, gold or other metals, 20.

Paper and cardboard, including those mentioned in No. 657, ornamented with hand paintings, pressed natural flowers, photographs or otherwise, 40.

Paper and cardboard wholly or partly covered with spun wares of any kind or with external or internal layers of spun wares of any kind, or of wire gauze, 48.

Playing cards of any form and size (in addition to internal tax), 600.

Letter paper, post cards and envelopes in receptacles of paper, pasteboard or wood: In receptacles entirely or partly covered with leather or yarns (wholly or partly of silk) or trimmed with such materials, 140; in other receptacles, 88.

Albums, wholly or partly covered with leather or spun wares of any kind, or trimmed with such materials, or combined with celluloid, or similar moulding materials, 32; other, 16.

MR. S. E. THOMAS (governing director of Edwin Thomas and Co., Ltd.), as the result of his recent trip to the Continent, has accepted the sole agency for London and district for Mr. G. H. Buhrmann, 28–34, Keizersgracht, Amsterdam.

BINDERS TO THE PRINTING TRADE.

PRINTERS who have the facilities for folding, sewing and casing up, can be supplied with cases made in Leather, Rexine, Pluviusin, Imitation Leather, Cloth, or any other material, blocked or embossed in Gold, Imitation Gold, White or Coloured Foil Leaf, ink in any colours.

Our staff consists of more than 300 capable workers, provided with the most up-to-date machinery

We shall be pleased to submit samples for Trade Catalogues, etc.

British Paper Survey.

News-Print the Only Bright Spot.

A survey of the paper industry in the United Kingdom reveals few bright spots. The only one, in fact, is that represented by the news-print mills, which, according to one view, have orders sufficient to keep them fully employed for the whole of the winter. So encouraging has been the position in this section of the industry that printing mills have, according to a writer in *The Times* (Trade Supplement), turned their attention temporarily to news-print.

The same authority observes that the esparto mills are less favourably placed than they were a month ago, when orders in hand provided good employment for two months ahead. The best mills are booked up for three to four weeks only, and some of the smaller makers are becoming anxious about the future. Esparto grass has hardened a little in price, despite which there are one or two mills cutting their prices an eighth of a penny per lb. in order to induce business.

Mills making wood pulp papers are experiencing great difficulty in keeping their machines in operation. There are exceptions, as in the case of mills with standing orders for special papers used for certain purposes. On the other hand, quite a large number of mills are working very irregularly or are on short time, while in at least three or four cases the situation is becoming critical in the extreme.

Fine Paper Section.

In the fine paper section conditions are rather better, but still far from satisfactory. Foreign and colonial demand is fair, but the home market is steady on a low level. Inactivity in the commercial sphere is responsible for the slow consumption of the better class papers. A general improvement in every class of trade is necessary to bring orders back to their original volume. Some of the larger manufacturers and wholesalers are performing very useful spade work abroad, some of the results of which are already being realised. Time will bring the fuller reward for the efforts that are now being made to extend our fine paper service in foreign and colonial markets.

Following reference to the serious condition of the wrapping paper section, we are told that among the hand-made paper mills, all of which are situated in the southern half of England, trade has fallen away slightly of late. Very few of the mills are keeping all their vats going, and some are at present closing down Thursday to Monday. The demand for account book papers is fairly good, but, as most of the mills have accumulated good stocks, it is merely a question of working these down. The hand made mills do not make sufficient use of publicity as a means of extending the scope of their business.

COPIES of the Brusewitz Directory, 1923, to the paper and pulp mills of Sweden, Norway, Denmark and Finland, are now ready, and may be obtained from the publishers of the *World's Paper Trade Review*, Stonhill and Gillis, 58, Shoe-lane, London, E.C.4, price 18s.

THE FUTURE OF SOUTH AFRICA

THE strong development and progress shown by South Africa, even during the depression of 1922, indicates in no uncertain fashion the measure of prosperity that country will enjoy in more normal times.

The trade outlook for the Union of South Africa in 1923 is extremely encouraging at the present moment, and the attitude of all in that wonderful country—from the Premier (The Hon. Gen. Smuts) down to the smallest Printer—is one of well-founded optimism.

Supply houses catering to the Allied Trades anxious to develop the South African market will be sent a post-free copy of

THE SOUTH AFRICAN PRINTER AND STATIONER

the only Journal printed in South Africa catering to the Printing Trade. Issued monthly.

Obituary

Mr. S. G. Hough.

The tragic death of Mr. Sidney George Hough in the hunting field last week removes a well-known and highly respected personality from the paper and allied industries. Mr. Hough, who was 60 years of age, resided at Springhouse Park, Theydon Bois, Essex, where he had an estate of some 400 acres. Mr. Hough was senior partner in the firm of Robert Hough, paper stock merchants, and chairman and managing director of the Limehouse Paperboard Mills, Ltd. For very many years he was associated with the firm of R. Hough which was established in London-street, Ratcliffe, London, E., by his father, the late Mr. Robert Hough, who passed away at the age of 84 years in September, 1920. The business was in 1909 removed to Hough's Wharf, Narrow-street, Limehouse, where in 1912 the board mill was erected, mainly through the initiative of Mr. Sidney Hough. The deceased gentleman was gifted with great business acumen; and although in recent years he had rather relaxed attendance at the offices in Limehouse, he continued to take a keen interest in the progress of the undertaking. With regard to the board mill, in which he took deep concern, there are at present on the way important extensions, which it is hoped will be completed by Christmas. These extensions to the existing plant and machinery aim to increase the output by 20 per cent. It is interesting to note that when the mill was first built the output was about 60 tons a week, and it has since then been increased to 150 tons. With the extensions which are now in progress it is hoped to raise this figure to 180 tons per week. While aiming at improvements with regard to production, the increasing demand for boards is also being met in other directions. In recent years, for instance, new pasting machinery was installed, which makes it possible to increase the caliper of the board from ·045 to 3/16ths of an inch. While these developments were taking place under the regime of Mr. Sidney George Hough, that gentleman was very greatly assisted in the practical working of the mill, as well as of the paper stock business, by his two sons, Mr. Sidney Harold Hough and Mr. Alan Dudley Hough, who will continue to carry on the undertakings as before. The third son, Mr. Cecil Hough, is concerned with the management of the estate at Theydon Bois.

THE LATE MR. SIDNEY GEORGE HOUGH.

Apart from being very widely known throughout the country through the Limehouse Paperboard Mills and the firm of Robert Hough, the deceased gentleman had a very big reputation in sporting circles. His chief interest lay in Arab horses, with which he took numerous prizes in all parts of England. Last year his stallion Shahzada won the endurance test for Arab horses. He was also a breeder of Jersey cattle, his herd being among the finest in the country. In his younger days he was an enthusiastic lacrosse player, being a pioneer of the game in the South and South-West of England. As captain of the Woodford Club, he led them to be champions of the South of England four years in succession. He was also a keen lawn tennis and golf player, at which games he won many distinctions. Mr. Hough took a great interest in the village in which he lived, and was chiefly responsible for the founding of the Theydon Bois Workmen's Club, of which he was president at the time of his death.

In all the circles in which he moved, Mr. Hough was held in the very highest esteem. He was a man of wonderful energy, and in spite of his three score years he rode regularly to hounds, besides playing tennis and indulging in other forms of sport. He thoroughly enjoyed his life, and his only regret was a little falling off in the dexterity which characterised his efforts in his younger days.

His untimely death came as a great shock to his relatives and friends, but to none more so than to his widow and three sons, the family tie being very intimate and real. The funeral took place on Nov. 3rd, at Theydon Garnon Church, the ceremony being attended by a very large gathering representative of the multifarious interests with which the deceased gentleman had been connected. The church, indeed, was too small to admit all who desired to attend, and it is calculated that some 500 people were present. The service was of a simple character, the bearer party being furnished by employees on the estate, while the majority of the workpeople at Limehouse also attended.

Mr. Thomas Hankinson.

Mr. Thos. Hankinson, secretary of the Falls Paper Mill Co., Ltd., Beetham, Westmorland, has died under distressing circumstances at the age of 66 years. He was found unconscious on the road near Lindal Hill, Cartmel, on Sunday week, with his motor-cycle on top of his body. At the inquest the medical evidence showed that the deceased gentleman, who had only been riding six months, had fatty degeneration of the heart, and was liable to expire at any moment. The doctor suggested that he had a seizure and fell from his machine. There was nothing on the road to cause an accident. A verdict of accidental death was returned. Mr. Hankinson was connected with the wood pulp trade in its early days, being for many years with Messrs. Thos. Newall and Co., Manchester.

Wm. Macintyre, Junr., & Co., Ltd.

On Friday evening, October 26th, the workers of the Blackhall Paper Mills, Paisley, met in the Royal Oak to do honour to Mr. Allan Kerr, manager, who had been in the employment of Wm. Macintyre, Junr., and Co., Ltd., for close on 50 years. Mr. John S. Allan, managing director, occupied the chair, accompanied on the platform by Mrs. Allan, Mr. and Mrs. D. S. Allan, Miss A. R. Joss, secretary, and Messrs. James S. Chrystal, Allan Kerr and Thomas Fulton.

Mr. Allan, in a short address, commented on the prosperous year which the firm had just completed, stating that while dull times were being experienced in most industries Blackhall Mills had been able to maintain full time during the past year.

During an interval in the programme, Mr. John S. Allan called upon one of the older employees, Mr. John Allan, to make a presentation on behalf of the workers, of a wallet of Treasury notes, and Mr. John S. Allan, in the name of the directors, also presented a writing bureau.

In a few words, feelingly expressed, Mr. Kerr replied, thanking the workers and the firm for their handsome presents.

Mr. Chrystal, the firm's Scottish agent, also took the opportunity of expressing his appreciation of Mr. Kerr, and, supplementing Mr. Allan's remarks, stated that the work being carried on in Blackhall Mills was an antidote to anything in the nature of "ca'canny e"

A varied programme of song was carried through, to which Miss Turner, Mr. J. S Barr and Messrs. John S. Allan and D. S. Allan contributed. Thereafter a very enjoyable dance took place into the early hours of the morning, Mr. Fred Holt performing the duties of M.C. very capably.

Striking testimony as to the value of the "British and Colonial Printer and Stationer":

"Please put us on your Subscription List for an additional 2 copies of the *British and Colonial Printer and Stationer*. We find the contents of such help andguidance that we feel that our representatives should each have a copy regularly each week."

QUARTERLY EXPORT ISSUE—DECEMBER 6, 1923.

PUBLICITY AND PRINT

are inseparable. One could not exist nowadays without the other.

Newspaper Publicity is a necessity to the modern business. Publicity must, however, be undertaken systematically with the right journal or journals—journals with a recognised reputation.

The selling power of space depends upon a reputation backed by results, and these results must tell every time. Reputations are, however, not made in a day.

It has taken some forty years to establish the present-day reputation of the **Quarterly Export Issues** of the

British & Colonial Printer & Stationer

At the present time this Journal is the recognised overseas medium of the Printing and Allied Trades.

It circulates among buyers in the following markets:

Australasia	**China**	**South America**
India	**Japan**	**Canada**
East Indies		**United States**
West Indies		**South Africa**

RESULTS

One of the most successful of our advertisers says:—

"It will no doubt interest you to learn that during the past few years we made considerable additions to, and have extended our Export Dept. We thank you for the assistance that your journal has contributed towards this export business."—O. B., Ltd.

The next issue will be published on Dec. 6.

Can you afford to neglect this opportunity of extending your export trade?

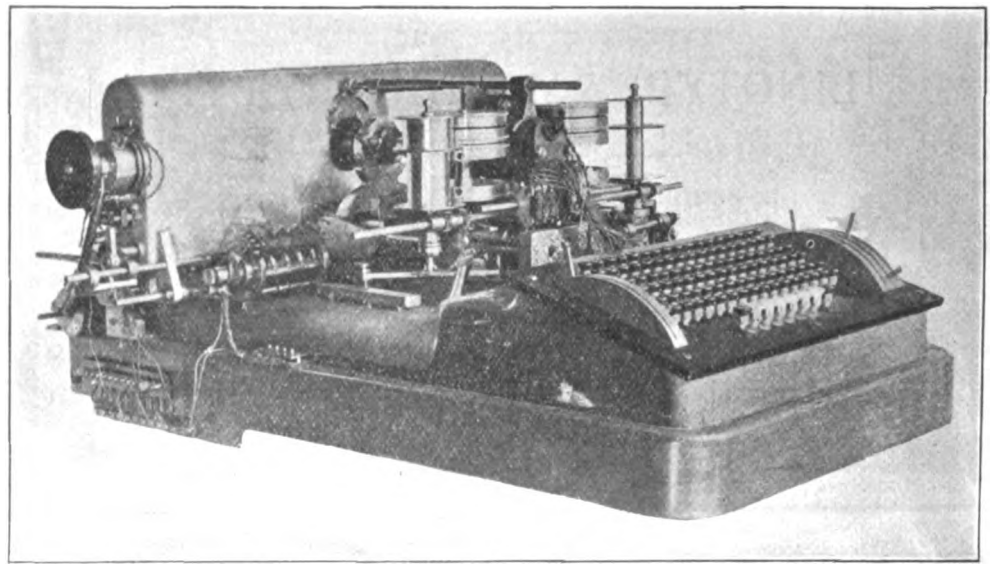
Photo-Mechanical Typesetting.

By W. B. HISLOP,

Managing Director, Hislop and Day, Ltd., Edinburgh.

(*Concluded from page 345*).

We come finally to the most interesting and by far the most ambitious of these machines—the Hunter-August. The inventors say that they will not be content unless they can put their machine on the market fit to compete with Monotype or Linotype on level terms as regards speed, scope, reliability, and cost. I think we shall all agree that there is no lack of courage at least, especially as existing typesetting machines of both classes are the product of years of concentrated effort, and rank among the finest mechanical achievements of the human race.



The Hunter-August Machine.

It is nearly a year since I first saw and described this machine and since then the time has been occupied by a thorough testing and improving of each part, as well as their adjustment to each other. There has been found no reason to alter any of the main arrangements, or ideas, so that the description already published still stands perfectly correct. When I first drew my diagram to illustrate the working of the machine I must have been inspired in some way, for I have been unable to improve it except by adding the position of the remarkable calculating mechanism. Time will not permit of us traversing again the ground which I covered in the description, which was given fully in the trade papers last spring (see the *British and Colonial Printer and Stationer* of March 15th, 1923), and I will, therefore, try to approach it from a different angle, in such a way that the one account will supplement and amplify the other.

The Hunter-August machine invites comparison with the Monotype, not only because they both set letter by letter, but because of some similarities in their operation, such as the use of paper tape perforated by the operation of the keyboard. Probably you will follow the action of this machine more readily if I first point out the chief differences between it and the Monotype. From the keyboard operator's point of view the chief difference is that the operations of calculating and checking, ingeniously simplified as they are by the drum indicator of the Monotype, are entirely absent. The size and style is directly controlled from the keyboard; a clearly printed record of the keys he has depressed is in front of him; he can readily and rapidly correct errors of mis-spelling and miskeying, by means of the keyboard itself, and he need not worry further about them. The keyboard has fewer keys than the Monotype, and its operation involves no more skill than the operation of an ordinary typewriter.

Use of the Paper Tape.

When we get beyond the surface of the keyboard the differences become too many to enumerate, but having mentioned that a perforated paper tape is common to both machines, I would like to point out the differences in its use. In the Monotype the perforations operate a pneumatic control, while in this machine they serve to open and close the circuits of an electrical control. In the Monotype the perforated record is completed, the justification perforations coming at the end of each line, and this record is run through the caster backwards, so that the machine gets the justification before the letters; in this new machine this apparently simple plan has been abandoned in favour of the calculation of the necessary justification space, line by line, by purely automatic mechanism and its transference not to the paper tape, but to a simple "storing," or, as I prefer to call it, "remembering" device, which sends it on to the spacing mechanism at the proper time.

The Hunter-August Photo-Typesetting Machine.

The paper tape is used to secure a brief time-interval between the keyboard operation and the actual photographic work. The operation of the keyboard controls three sets of electrical circuits; one actuating the tape printing mechanism which provides a visible record; one controlling the punching mechanism for the perforated record; and the one connected with the space-calculating and justifying mechanism. The visible record needs no further explanation; it plays no further part. The perforated strip travels into the contact box where the various circuits, completed through the perforations, actuate the mechanisms which bring the required letter into position for photographing, make the exposure, move the film carriage along, and bring into operation, as a space for that particular line, the value in thousandths of an inch necessary for justification which the calculating mechanism has worked out during the operation of the keyboard and stored till required.

Automatic Photographing.

The letters are thus photographed one by one on to the sensitive film, which is moved along step by step till the line is complete,

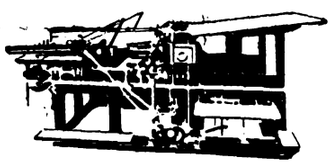
Economise by Installing



The Miehle

WHEN next you are in the market for letter-press printing machinery, fully consider the Miehle.

It may be a long time before you are again in a position to bring your press equipment up to date.

And when considering the Miehle, make a special note of the rapidity with which any job can be made ready for printing. In some cases this feature alone makes the Miehle worth two ordinary presses in actual production, but it does not cost the price of two.

Let us tell you how to economise by installing a Miehle.

LINOTYPE & MACHINERY LTD.

Members of the Association of British Manufacturers of Machinery for the Printing and Allied Trades

then run back and turned slightly to start the new line. All this is done in a perfectly automatic way by the machine, and the only reason why the operator need leave his seat at the keyboard is to change the spool of film, and that operation is exactly similar to changing the film spool of a Kodak camera—that is, it requires no dark-room.

The machine is designed to provide any size from 6-point up to 96-point by optical enlargement or reduction of the master letters carried on a long band of celluloid. This band is over thirty feet long, and carries thirty different styles of letter in three rows, capitals being at the top, lower-case in the centre, and figures, etc., in the bottom row. Any of these styles is brought into action in less than a second by moving the style letter at the left of the keyboard, while any of the ninety sizes is secured by setting one of the three levers on the right.

Before attempting to describe how the machine does these things, I wish to give you the novel principles which make this machine so interesting and, indeed, render its construction possible. The soundness of these principles is proved by the machine itself, for each principle is applied in several ways to obtain different results, as we shall see presently.

Electro-Magnetic Principles.

The first principle is that of coupled magnetic clutches. In a modern engineering shop you will find very accurate grinding machines, and when iron or steel is the metal being dealt with, the operator merely lays the pieces on the bed, turns a switch, and the pieces are instantly and immovably fixed ready to be ground. The bed of the machine is converted by the electric current into a powerful electro-magnet which attracts the iron pieces and holds them so long as the current passes. The instant that the circuit is broken the pieces are free and can be picked up or shoved to one side. Suppose now that we have this electro-magnetic bed, place on it an iron cube, and in contact with this cube but above it we arrange a second bed which has a to-and-fro movement of exactly one inch. We can easily arrange the electrical contacts so that the current is switched through the stationary bed at the end of the movement in one direction and diverted instantly through the moving bed circuit when it reaches the limit of travel in the other direction. This would cause our cube to stick firmly to the stationary and moveable beds alternately so that it would progress in steps of exactly an inch at a time. The change-over can be made instantaneous, and with the alternations succeeding each other very rapidly, I was unable to "catch it on the hop" so to speak, and make it slip.

The second principle is another electro-magnetic one in which a series of small electro magnets are used to obtain given degrees of movement either by direct magnetic attraction, or by bringing into action hardened steel cams.

I shall only instance one example, which is part of the calculating mechanism. A steel rod is required to be pushed along by small but very accurate amounts. On this rod is placed a series of small electro-magnets each kept an exact distance apart by a spring. When the current is sent through an electro-magnet, it at once attracts the one on either side of it, over-

Zinc and Copper Process Plates

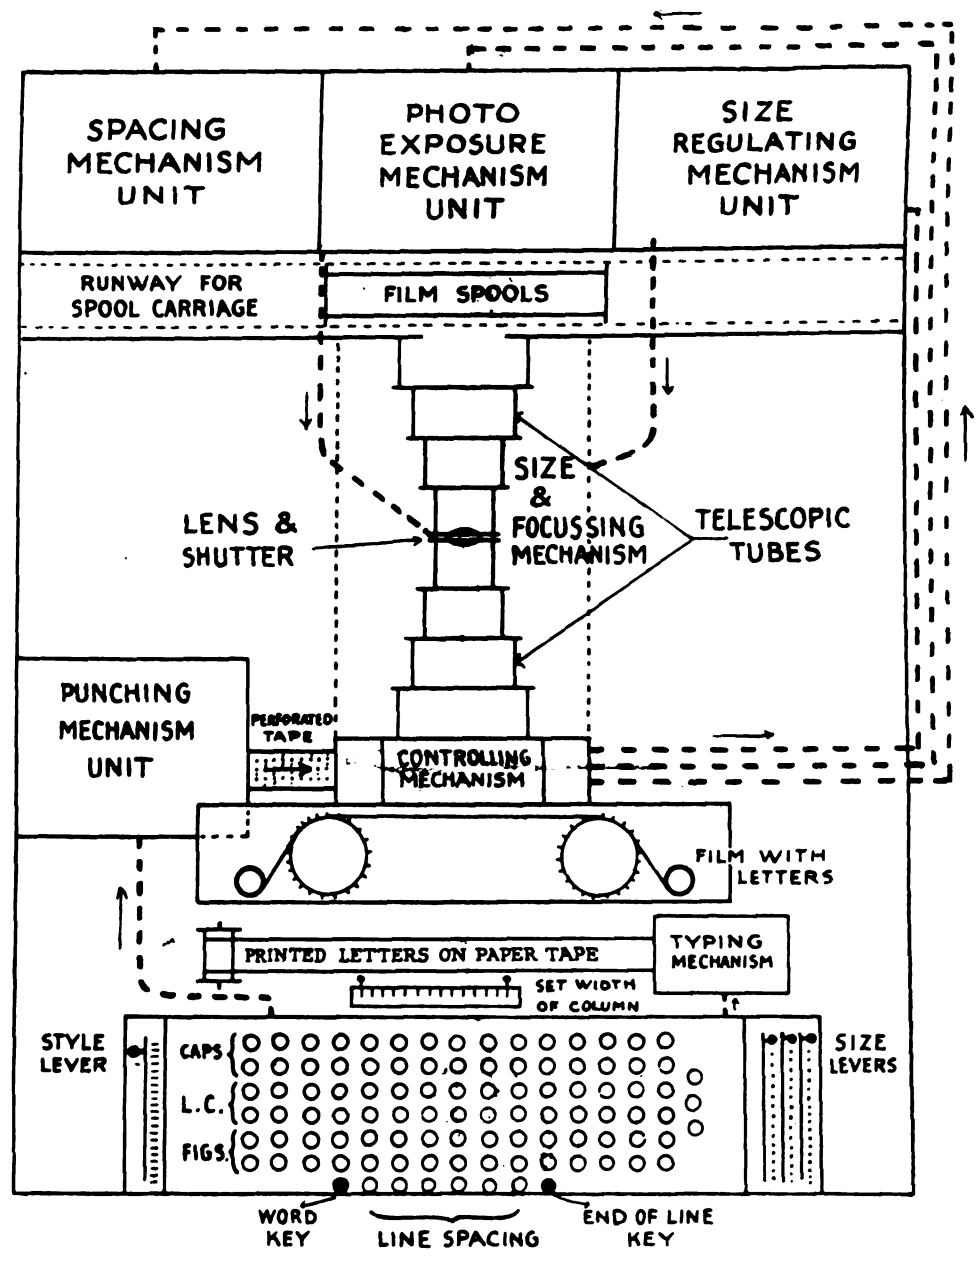
coming the spring, so causing the row of magnets to shorten by that amount, and this amount is transmitted to the rod by the action of another magnetic clutch. To follow this farther we must go on to the third principle.

Probably you are familiar with the unit system of the Monotype and obviously a similar arrangement is required for the spacing of this machine. The unit adopted is .001 of an inch (1/1,000), but the varying sums are obtained from combinations of a series of eight fixed standards having their values arranged in the geometric progression 1, 2, 4, 8, 16, 32, 64, 128. If the circuit of 4 alone is closed, we get a movement of .004; if circuits of 4 and 64 are closed, we get a movement of .068. You will see that by using these eight standards singly or combined, we can get a movement ranging from 1/1,000 of an inch up to .255 or over a quarter of an inch in steps of 1/1,000 of an inch. This code is applied along with the other two principles right throughout the machine, and makes it possible to construct the machine with relatively few parts compared with the ordinary typesetting machines.

Calculating Justification Spacing.

The only other point which I have time to touch upon is the extraordinary device for calculating the justification spacing, and for storing that result until the photographic apparatus is ready to use it.



You will remember that a linked series of electro-magnets encircling a rod is employed, so that as the key is pressed it closes the circuits of the electro-magnets which correspond to the width of that letter in 24-point, and cause the rod to move along that amount. (I may remark, in passing, that all the calculating and spacing is done in 24-point, and converted to the equivalent values for other sizes by a very simple arrangement working from the position of the camera parts, which, of course, determine the size of the image.) One end of the rod is coupled to a lever having at its other end a drum, carrying on its periphery perforations in eight rows, which give the whole sequence of contacts necessary to move the spacing bar from one to 225 thousandths. The fulcrum of this lever is movable, being controlled by a cam, and the fulcrum steps along one space towards the drum every time the space key is depressed on the keyboard.

The result of this movement of the fulcrum is that if, for example, we compare its action during the setting of two lines, each containing exactly the same number of letters, to be justified to the same length of line, but the first containing four spaces while the second has eight, we shall find that, after all the symbol keys have been pressed, when the end of line key makes contact, the drum is put into gear, the lever moves to the "end of line" stop, and so causes the drum to rotate. Then we find that the drum has turned so as to close the circuits giving the justification space divided by four in one case and by eight in the other. This information is passed on by the circuits to the storing mechanism, or "memory box" as I like to call it. The apparatus is extremely simple, consisting merely of four rows, each consisting of eight little electro-magnets, one for each row of perforations on the drum. When any of these magnet circuits is completed through the drum, it pulls down its armature and so switches in the circuit actuating the cam in the spacing mechanism, expressing that particular measurement as movement. This switch, or switches, remain down until the line whose justification it "remembers" has completely passed through the photographic apparatus, when it is cleared, and waits ready to take its turn after the other three, in remembering a line again. I wish to make it clear that although these switches remain down, the current only passes through them when a space perforation in the paper tape finally completes the circuit. This device allows the keyboard to get three full lines ahead of the camera, and this could readily be increased, if necessary, by increasing the number of rows of eight magnets.

There are many other extraordinarily ingenious, yet simple, devices I could describe, such as the automatic sizing and focussing, the adaptation of the three principles I mentioned to the control of the movements of the master film and the film carriage, the adding of half the width of the last letter to half the width of the next to get the correct amount of movement of the sensitive film, and so on; but, absorbingly interesting as these details are, I must leave them now, and draw a few general conclusions from these various inventions.

General Conclusions.

None of these machines is ready for general use as yet, but each of the three promises to fill a certain field. As we have seen, the Dutton and the Bawtree machines make it probable that photography will soon successfully invade yet another field—that of the artist. The machines are simple, comparatively inexpensive, and their product can be directly applied to existing

printing methods, letterpress, litho., or gravure, without any disturbance.

As to the much more ambitious Hunter-August machine, I do not wish to prophesy. At the moment its use would mean a considerable change-over, even for the lithographer, but things are moving rapidly, and if it can be carried along till it is successfully placed on the market, I anticipate that by then, even by this time next year, the application of photography to lithographic printing will have made such progress that conditions will be quite ready for it.

What about letterpress? Such machines as the Hunter-August have no application to letterpress as worked at present, for the cost of etching the matter into relief can never be reduced to, or below, the cost of machine setting for ordinary work. There is, however, a chance that future developments might make it possible.

Probably most of us have read the article by Mr. Louis Flader, in reply to Mr. Gamble's gloomy prophecies, and have heard of the work of Hacker, Claybourn, and one or two other American investigators, whose conclusions are that, provided our printing surface is perfectly flat and of correct height, and the cylinder perfectly true and correctly adjusted, we can not only dispense with elaborate make-ready, but will print perfectly with very little impression pressure. As Mr. Hacker wittily puts it: "The impression should be a 'kiss' without a squeeze, if you can imagine such a thing."

So far as I know, none of these gentlemen has studied the problem of inking with the same exhaustiveness, and if it is possible to get the press adjusted to the extreme degree of accuracy which Mr. Claybourn claims, it should be an easier matter to adjust the inking rollers similarly so that, as the printing surface must be perfectly flat, we could use rollers perfectly true, and possessing a small fraction of the resilience of those used at present. Such rollers would not "dip" at all, and we could therefore logically reduce the relief of our type faces and blocks to a corresponding degree.

If we follow this a little farther, does it not suggest that the next step, were a machine like the Hunter-August available, would be to cut out the trouble and expense of bringing a composite form of type matter and blocks up to a true surface, by starting out with one surface, say of a zinc or copper plate, only slightly thicker than the lithographer uses, photograph down all the matter, etch it into very slight relief (which would be vastly more simple than etching a zinco at present) or treat it by the amalgamating process of Mr. Ronald Trist, draw it taut round the drum of a rotary machine and compete in speed of running with the offset press on level terms?

I would like some further evidence before I go the whole distance with Mr. Claybourn, but there is no doubt that "make-ready" is the great handicap of letterpress printing, and I am perfectly sure that more careful adjustment of the machine, and a higher standard of accuracy in mounting, particularly of electros, would render most of the "make-ready" superfluous.

The letterpress printer must work with a higher degree of precision throughout, and with the greater efficiency which will certainly follow, I see no reason to doubt the continued vogue and prosperity of letterpress printing.

— SIMPLICITY —

The Keynote of the WINKLER Automatic Feeder.

Simplicity also means efficiency. Simplicity permits quantity production at moderate cost. The WINKLER Feeder, through its simplicity and absence of confusing adjustments has set a new standard of value, combining the utmost efficiency and reliability with a remarkably low price. Standard parts are used exclusively for the construction.

SWISS MANUFACTURE

SEPARATION of sheets by suction and blast.

Length of printing machine is not increased and access not impaired.

Feeds to register any stock from tissue to board.

Works in unison with the machine, and at any speed up to the maximum guaranteed by the press makers.

Rapid change of jobs, and therefore suitable for short runs.

No tapes or friction wheels, and therefore no marring of colours or setting-off when working colours or backing up.

The blast of air frees the sheet from dust and fluff before it is fed.

Adaptable to any type and size of sheet fed press; if desired, with a Stacking Arrangement.

East London Master Printers.

Enjoyable Evening with Mr. Colebrook.

The Association of Master Printers of East and North-East London has lately been arranging some specially interesting evenings for the discussion of trade subjects, and attendances have been steadily growing. Still further progress was shown at the November meeting, held on Wednesday of last week at the Langthorne Restaurant, Stratford, a record number of printers assembling to meet Mr. Frank Colebrook, who delighted his audience with the racy and informative fashion in which he tackled the subject of "The Small Printer—Problems and Opportunities."

Those present first spent a social half-hour round the tea-table, and then Mr. G. F. Tomkin, a vice-president of the Association, took the chair, and, after the dispatch of a few items of business, called upon Mr. Colebrook, whom he introduced as being known to every printer in London, and probably almost as well known in the provinces.

Mr. Colebrook accordingly addressed the meeting, and, after a short jocular preamble, settled down to his subject proper. Mr. T. D Hawkins, the energetic secretary of the Association, had issued an attractive synopsis of what the speaker was expected to say, and Mr. Colebrook bravely endeavoured to adhere thereto. In this he was for the most part successful, though his natural fertility of word and thought led him off into a by-path or two of classical citation and anecdotage, in which, however, he had his audience appreciatively with him.

The Small Printer.

Briefly referring to his own experience as a small printer more than a quarter of a century ago, when he was the proprietor of a local newspaper and used at times to take a hand at composing and the feeding of his quad royal perfector, the speaker went on to say that no disparagement was implied in the term "small printer." Some of the printing that had made the greatest name in the world had been done in quite small establishments. Caxton naturally started in a humble way, and so small were the beginnings of printing that in the first decades of the craft it was thought satisfactory if 25 sheets were properly printed in an hour. Improvement upon this low standard came only by degrees and after a long period of time. Printers all started small, he said, and he thought no one present could name any printer who had opened his printing house in a big way.

About the time when Caslon was cutting the types that made him famous, Witherby's started as quite small people. The earliest Waterlow, John Waterlow, was once employed at Witherby's; he started in business for himself as a law stationer near the Mansion House. He apprenticed his famous son, Sydney, to letterpress printing, and his other son, A. J. Waterlow (grandfather of Sir William Waterlow), to the then new craft of lithography. Taking the two sons into partnership the firm made a start as printers, and though the speaker did not claim exact knowledge as to just how that start was made, it was probably with only a hand press or two for letterpress and for litho.

Talking of the long hours and short pay of old times, Mr. Colebrook recommended to his hearers a perusal, of the preface particularly, of Watson's "Story of Printing," an octavo volume of 1723, of which there is a copy in the library of the St. Bride Institute. Deploring the shoddy printing that was being turned out in his time, old Watson drew attention to the bad conditions obtaining in the trade, and remarked that he would rather give a crown a day (evidently a prodigious wage for the period) to one who would take care of his types and do honour to his press, than eighteen pence a day (apparently something like the ordinary wage) to workers like some of those then employed. If a man would work 18 hours a day, he was reckoned a "choise" workman, said Watson, who protested that they worked their men too long and paid too narrow wages.

Another interesting example cited of small beginnings was Charles Whittingham, Mr. Colebrook telling the story of how the first Charles Whittingham was financed by his acting as a London agent to the provincial friend who sent cabbage and other seed to London for sale, and arranged a very long credit for his young printer salesman. A start was thus given to what later became the famous Chiswick Press, a printery that was responsible for the revival of the Caslon old face type and which won the signal honour of a costly and beautiful monograph by the Grolier Club of New York telling the story of the Chiswick. Some facts were recalled, too, of Benjamin Franklin's early days as a small printer before he became prominent in public affairs. The well known London firm of Cooper and Budd was also referred to, Mr. Colebrook relating that when the founders, two compositors, started with a capital of £50, with a platen and a small quantity of type, the first week's profits amounted to about 3s. 4d., but at the end of the second week they congratulated themselves on doing very well with a profit of about 37s.—the only little drawback being, however, that that money was never paid. (Laughter.)

Practical Suggestions for Difficult Times.

Coming down to practical suggestions of importance to the small printer of to-day, Mr. Colebrook first suggested that in difficult times like the present the small printer made a mistake if he thought he could not afford to attend meetings of his fellow printers. He would miss too much; moreover he might have to do singly things the Association would do collectively; so he might not even save time. A point stressed was the need for the delegating of work. Having found a man capable of responsibility as works foreman, the master printer should have a little pluck and allow him to gain his experience even possibly at some slight loss now and then. By having a reasonable amount of trust in the foreman, the employer would be free to act as traveller for the firm, and thereby provide a continuance of work.

Attention was next turned to the possibilities of suggesting to potential customers work that could be done with benefit to customer and printer alike. Remarking that anniversaries or other notable events in the history of business houses provide special occasion for publicity, the speaker instanced a striking example of a missed opportunity in the case of the North British and Mercantile Assurance Co. This great concern, after acquiring immense prestige by standing up like a rock in the San Francisco crash of 1907, celebrated its centenary in 1909. With this double story to tell, the time was ripe for a big advertising campaign, and the company, the speaker believed, was not indisposed to make big use of printer's ink. No printer, however, was alive to the opportunity with suitable suggestions, and so an occasion when thousands of pounds could have been profitably spent on publicity, was allowed to pass unutilised. Mr. Colebrook went on to advise local printers to watch for similar opportunities, and he indicated also the possibilities of suggesting the use of house organs and other printed matter where these would be to customers' advantage. The small printer, because of the personal service he could render, had special opportunities in this direction.

Value of Co-Operation.

The speaker put in an earnest plea for closer co-operation between printers, whereby one printing house could pass on to another work for which the other was better equipped. He had come to the conclusion, he said, that, on the whole, the mistakes that arose from too great confidence in one's fellow men were not so serious as mistakes that arose from too little confidence. A notable effort in the direction of co operation between prineers had been made at the start of the War. As the result of a suggestion of Mr. Colebrook's, arrangements were made at the headquarters of the Federation of Master Printers, whereby any printers finding themselves in difficulty in the discharge of work entrusted to them could appeal to headquarters and receive assistance in confidence from printers who had resources available, and whereby they might even receive other help. A warning was given against indiscriminate acquisition of plant "bargains," which at times had proved awfully dear.

Amongst other points touched upon were the advantages of keeping printing works clean and orderly; also the need for regular oversight of machines in order to guard against the development of faults which might be costly if neglected. A warning was entered against having too little furniture and too much standing matter. Mr. Colebrook closed with a rousing appeal for the facing of bad times with stout hearts and active minds, a fine passage of Milton serving well as a peroration.

The meeting being thrown open for questions and discussion, those taking part included the chairman, Mr. Buck, Messrs. Hawkins (senior and junior) and others. Further points of interest were mentioned, and the hearty thanks of the meeting were expresred to Mr. Colebrook, who was invited to address the Association on future occasions.

As a parting word the secretary reminded members of the visit to the East London District of Mr. W. Howard Hazell, president of the London Master Printers' Association, who is to address the East & North-East M.P.A. at the "Three Nuns" Hotel, Aldgate, on Tuesday, December 11th.

Electrotypers and Stereotypers at Dinner.

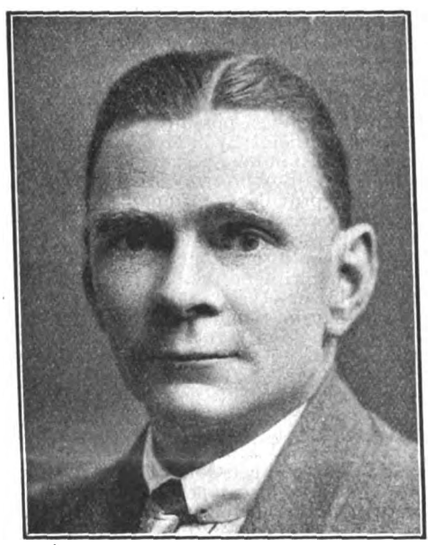
Presentation to Mr. A. Chadwell.

Conspicuous success marked the annual dinner of the Electrotypers and Stereotypers' Managers and Overseers' Association, held on Saturday at the Trocadero Restaurant, Piccadilly. The efforts of the stewards to secure the greatest possible comfort and enjoyment to a large gathering of members and visitors met with very warm approval. Mr. George J. Harrison was again in control of the musical arrangements, which was sufficient guarantee of the excellence of the concert. Added to this was a thorough friendly spirit which prevailed throughout the whole of the proceedings. Mr. A. Chadwell (president), who occupied the chair, was made the recipient of a presentation during the evening. Those present included: Messrs. W. Carlin (United Newspapers), J. Colmer (*Daily Chronicle* publisher), A. Cox (secretary, Printing, Bookbinding and Kindred Trades Overseers' Association), E. Cocks (*Daily Telegraph*), John Fry, C. E. Goddard (Monnery and Co), Geo. A. Isaacs, W. J. Light, A. H. Mundey, E. J. Sparks (United Newspapers), Glen Steel, W. C. Warren (general secretary, National Society of Electrotypers and Stereotypers), E. W. Whittle (secretary, Printers' Managers and Overseers' Association), Harry Williams.

During the dinner a number of musical items were rendered by the Salon Orchestra, under the direction of Mr. Harry W. Lodge.

The Concert Artistes.

Interspersed between the toasts the contributions made by the following well-known artistes were very much appreciated: Messrs. Geo. Bolton, Emil Clare, John Humphreys, Courtney Mayverne, Harry Speller, Bernard Turner, and the Misses Nora Blakemore, Evelyn Clifford, Lillian Hurry, Kate Mayes, the Three Scamps and Mr. Charles Hardy (accompanist).



Points from Mr. Warren's Speech.

After the loyal toasts had been proposed by the chairman, and duly honoured, Mr. W. C. Warren, in submitting the "Electrotypers and Stereotypers Managers and Overseers' Association," said he felt the fact that he was again asked to propose this toast was an indication of the good feeling pervading all classes of their trade. Speaking as the representative of the national organisation, he gave this toast with sincerity and goodwill. The twelve months that had elapsed since their last gathering had been difficult ones for most industries, and he thought they could congratulate themselves that their branch of the industry had not only escaped the general depression, but had met with a reasonable amount of prosperity. The secret of this state of affairs was not difficult to understand when it was remembered that the Trade Employers' Association, their own association, and those connected with the management of the Society, all realised that matters of mutual interest to the trade were more important than the magnifying of small points of disagreement. (Hear, hear.) Passing on to refer to the J.I.C., Mr. Warren said they in the electrotyping section of the trade had set up their own Industrial Council many years before Mr. Whitley issued his famous report, and no doubt a great deal of the prosperity they had enjoyed was a result of the efforts of that joint board. Two years ago they launched out in another direction, and formed a Joint Apprenticeship Committee, a step which at one time was viewed with cynical sarcasm as a utopian dream. It had fully justified its existence, and he believed it would be of the greatest advantage to their section of the trade in the days to come. (Hear, hear.) He wished to take advantage of that occasion to thank the members of the Association for the assistance they had rendered him with his festival list, which amounted to £780. Mr. Warren, on behalf of himself and those he represented, expressed also the great pleasure he felt on the recovery to health of Mr. Chadwell. They were delighted to see him there that evening. (Cheers.) Mr. Warren coupled with the toast the name of Mr. W. H. Longley.

Mr. Longley, in reply, returned thanks for the hearty way the toast had been received. To him the Association was one of his chief delights. It had been one of the happy mediums between employers and workmen, and it had been of inestimable benefit to many of the members.

The Presentation.

Mr. J. Black (vice-president), in making the presentation to Mr. Chadwell, alluded to the particular pleasure they all felt at having their president among them after his serious illness. Often the real worth of men was discovered after they had departed this life, but happily they had been given the opportunity of showing their appreciation to one they all admired while he was still among them. Mr. Chadwell's services to the Association and to the trade generally were urgently needed. For many years he had occupied his present

Mr. A. Chadwell.

position, and during that time he had brought their organisation from a very small institution up to its present standing, for he (Mr. Black) believed it had practically every foundry overseer in London and around it within its ranks. Mr. Chadwell was admired by everyone with whom he came into contact, and managers and overseers were proud to be in his company. (Cheers.)

Mr. Black then, on behalf of the Association, made the presentation to Mr. Chadwell, which consisted of a handsomely illuminated address, accompanied by a half-hunter gold watch (with fob), which bore the following inscription: "Presented to A. Chadwell, Esq., in recognition of his many sterling qualities, and as a mark of the esteem and regard with which he is held by his fellow overseers and friends."

Mr. Chadwell, who was received with enthusiastic cheering on rising to respond, thanked his fellow overseers and friends for the manificent gifts, and was all the more pleased to learn that the presentation had been supported by practically the whole of the membership. He felt the occasion to be another milestone in his life, and would always treasure the gifts. (Cheers.)

The Secretary Toasts the Ladies.

Mr. Bullett, in offering the toast of "The Ladies," said he had a pleasing but by no means easy task. It was pleasing because it was always a pleasure to dwell on a delightful subject. It was difficult because it needed the wisdom of a Solomon to do justice to the theme. Still, he would run the risk of being classed with those who rush in where angels fear to tread. He felt sure that he could say nothing in praise of the ladies that their hearts would not endorse, for to them they were indebted for everything that was comforting and gracious. Their high qualities had been summed up both by Shakespeare and Sir Walter Scott in two words: "Ministering angels." (Cheers.)

Miss K. Hennen replied in a neat little speech, remarking that it had been customary at their dinners for a gentleman to reply to this toast. Now that women were working side by side with men she thought it high time they should speak for themselves.

The chairman, who complimented Miss Hennen on the admirable way in which the toast had been responded to, said that it would be a reminder to them in future years that the ladies were quite able to undertake this task for themselves. (Hear, hear.)

"Our Visitors."

In offering this toast, Mr. Jas. Miller said they were a very serious body, but that evening's function gave them one night in the year at which members could show themselves to their friends in their true colours. Whether they were good or bad ones they must decide for themselves. On behalf of the Association he extended a very hearty welcome to visitors and friends, and associated with the toast the names of Mr. Geo. A. Isaacs—who was engaged in winning Gravesend—and Mr. E. W. Whittle.

Mr. Isaacs, responding, greatly appreciated the opportunity of being present at their festive board. He had many personal friends in the Association, including their genial president.

Overseers and Technical Education.

Mr. Whittle, who also responded, said the happy evening they had spent made them wish the year would roll on more quickly. They all looked with envy on the comradeship that prevailed in the electrotyping and stereotyping section of the industry, and they watched with interest the bond of unity existing amongst their employers, journeymen and overseers. He wished that state of things prevailed in other sections of the industry. Mr. Whittle said that the three overseer associations, their own, the Bookbinders and the P. M. and O. A., had each tried to stimulate interest in technical education. His own Association had endeavoured to secure representation on the Whitley Council, but had been informed by the Labour Minister that the Council, composed as it was of the trade unionist on the one side and the employer on the other, did not see where the overseer was to sit. This refusal to grant representation they felt to be a nasty blow, especially after all the energy they had displayed on behalf of technical education. The City and Guilds of London Institute had now passed on the work of arranging the syllabus to the Education Committee of the J. I. C. without giving the overseer a voice in the matter. They were not going to sit down under the conditions that faced them. He had spent a very enjoyable evening and was glad to see Mr. Chadwell back again. (Cheers.)

The chairman conveyed the gratitude of the company to Messrs. W. M. Forsyth and A. J. Latimer (stewards), and to Messrs. Bullett and Geo. J. Harrison for the excellent arrangements they had made.

A brief reply from Mr. Harrison brought to a close another memorable event in the history of the Association.

THE PENNY POST.—Mr. W. H. Burchell governing director of the Caxton Press Ltd., writes us with a plea for the early re-establishment of the penny post for this country, or better still, for the whole of the British Empire. He suggests that delay in this matter has been caused by the recent frequent changes of Postmaster-General, and points out that Messrs. Kellaway, Neville Chamberlain and Joynson Hicks all recognised the desirability of reducing postal rates. "It now remains," he says, "for our present Postmaster-General, the Rt. Hon. Sir Laming Worthington-Evans, to comply with the long-expressed demands of the public, the hopes of former Postmasters-General and the desires of our visitors, the Colonial Premiers, by re-establishing the penny post for Great Britain. . . . He has a surplus of £4,250,000 enabling him to make the concession, which might also include the half-penny post-card. . . . An appropriate date for the re-establishment of the penny post in this country would be December 1st, 1923. Should the concessions asked for not be made before the forthcoming General Election, every master printer in England, Scotland, Wales and Ulster, will be asked to obtain an assurance from every prospective Member of Parliament who asks his vote, that he will, if elected, urge upon the Government and the Postmaster-General the necessity of the reduction in high postal charges and the immediate re-establishment of the penny post in the interests of trade and commerce and the unemployment problem."

Printers' Managers and Overseers ASSOCIATION.

Meeting of Manchester Centre.

There was a large attendance of members at the Mitre Hotel, Cathedral Gates, Manchester, when Mr. F. E. Robinson took the chair at the November meeting.

Minutes having been read and passed, a letter from the general secretary, replying to a question on finance, was allowed to wait until he was able to present fuller details on his next visit to Manchester.

Officers for session 1923-1924 were then nominated.

The Ludlow.

Previous to the general meeting, Messrs. E. Hulton and Co., Ltd., had permitted the members to see the Ludlow machine for display composition and the Elrod lead, clump, rule, and border caster in actual operation.

After the general business had been concluded, Mr. J. H. Nuttall said the Ludlow was a machine casting type faces on slugs. The mouthpiece and alignment were perfect and the metal could be mixed according to the requirements of the office where it was installed. Some firms had the metal pot heated electrically and they were able to adjust the heat to a nicety. The machine was so simple that any compositor with a day's tuition could work it; therefore it was a great acquisition to any composing department. Since it had been placed in the office of Messrs. Hulton and Co. it had proved itself so valuable an aid to the compositors that all desired to use it at every opportunity, being assured there was no waste of time in looking for sorts. The machine did not interfere with the work of other mechanical typesetting machines—either slug or loose types—as it created a field of its own when placed in any sized jobbing office. The large sheet of big figured tabular matter, 36 ins. by 48 ins., exhibited on the wall of the meeting room, occupied just over 20 hours to set up and distribute the matrices, correct and make up. Owing to Ludlow slugs being accurate in height-to-paper, the pressman occupied only 45 minutes in make-ready. It was possible for any printer, large or small, with an inexpensive Ludlow equipment to produce jobs similar to the one displayed. One feature, which was hardly believable to the average compositor, was the fact that a man could set and distribute the matrices and produce the job in less time than he could with ordinary types, no matter what size of face was required. No firm having a large order in hand need be limited by the meagre capacity of any type fount, or the expense of enough founts to get the result. The Ludlow would give quickly and easily all the type faces needed in any size from 6-point to 60-point including bold and extended faces. The formes could be kept standing for an indefinite period without interfering with other work passing through the office. No matter what face was used all the matrices were of one size, and that was one of the reasons for the Ludlow way being quicker than the old way of hand type typesetting. The italic matrices were so perfect that serifs were always complete without fear of being broken off. The human element in the setting of the matrices was the success of the Ludlow, there being no changing of magazines and no time wasted in making adjustments. The floor space occupied was so small that the machine could be fixed in any convenient part of the office. Any width of line could be set and evenly spaced in stages, the compositor also having ease of mind in knowing that he was sure of obtaining all he wanted without the fear of picking for sorts which was the bugbear of the majority of composing rooms. Under the new system every compositor gloried in setting up book-work, whereas he found it irksome and monotonous by the old type method. All the spaces and letters being marked, he was able to read what he was setting, and pie was reduced to a minimum. Another important point was the smooth and silent running of the machine, there being no other sound beyond a slight click now and again when casting.

The Elrod lead and rule caster, another simple machine which casts leads and rules to an unlimited length, makes it possible to have a continual supply of new material. When a job was not required for further use, type, rule and leads could all be thrown into the melting pot, as the Ludlow and the Elrod lead and rule caster supplied new and accurate materials.

In the discussion which followed Messrs. E. Bennett, Chas. N. Knowles, R. Shaw, A. J. Gyngell, Thos. Rignall, F. E. Robinson, F. Scouler and others took part.

Some of the lithographic members had an idea that they could produce a 36 by 48 tabular sheet more cheaply than on the Ludlow, but it was explained that the job would have to be set up for them before they could attempt to enlarge, and it would be much cheaper to set the job the proper size on the Ludlow.

Mr. F. Scouler moved, and Mr. E. Bennett seconded, that a vote of thanks be tendered to Messrs. E. Hulton and Co., Ltd., Mr. J. H. Nuttall for his untiring efforts in demonstrating and explaining the possibilities of the machines, and Mr. Martin J. Slattery for literature showing the great range of type faces, etc.

WEE MAC.

City of London Printers' Musical SOCIETY.

Some 140 members and their ladies sat down to a Festival Dinner at Anderton's Hotel, Fleet-street, on Saturday last, to celebrate the establishment of two £30 pensions. Mr. Charles H. Roud presided, with Mr. William Watts, J.P., as vice-chairman, and were supported by Mr. J. Mortimer, O.B.E., the Right Hon. C. W. Bowerman, J.P., Mr. T. E. Naylor, J.P., Captain E. A. H. Walker, Mr. J. E. Shaw, Mr. H. F. Parker, Mr. Arthur O'Connor, Mr. H. Coombs, Mr. Geo. Jones, as well as His Worship, the Mayor of Deptford, Mr. George Tams. The menu was excellent, and the speeches short and pithy.

Mr. Chas. Roud proposed "Success to the Printers' Pension Corporation" in most eulogistic terms, Mr. J. Mortimer (secretary to the Corporation) suitably replying.

Mr. C. W. Bowerman seized the opportunity early in the evening to present Mr. Roud with a certificate from the executive for his services to the Musical Society, and Mr. Roud expressed his high appreciation of the honour done him.

The toast of the "City of London Printers' Musical Society" was most ably proposed by Captain E. A. H. Walker, who referred to the pleasure that he and the members of his family found in supporting the Society, whilst Mr. George Tams, in replying, recalled the many kindly acts the committee had received from the firm of Messrs. Usher-Walker.

In the course of the evening Mr. T. E. Naylor presented framed certificates to some 14 members of the Society for services rendered, and Mr. W. Watts, J.P., the genial chairman of the executive, very aptly proposed the health of "The Chairman" and Mr. Roud very happily replied.

During the dinner a pleasing programme of music was rendered by the "Ravenslea" trio, the vocal portion of the entertainment being in the capable hands of Mr. George Hardy, who presided at the piano. The artistes assisting him included Miss Lilian Duke, a sweet soprano, Miss Kitty Lackington, a capital contralto, Mr. Herbert Pearce, with some rousing baritone songs, while the humorous side was sustained by Mr. Arthur Melrose, with his wonderful whistling, Mr. Will Thorne, with several excruciatingly funny numbers, and the well-known Cockney humorist, Mr. Will Deller with his famous "Ops."

The committee of the City of London Musical Society are to be heartily congratulated upon the success of their festival and the good work they are accomplishing.

SCHOOL BOOKS FOR PANAMA.—The British Vice-Consul at Panama reports that a local commission agent is desirous of getting into communication with United Kingdom dealers in school books (readers, grammars, geographies, etc.) in English. Applications from United Kingdom firms for further particulars should be addressed to the Department of Overseas Trade, 35, Old Queen-street, London, S.W.1 (Ref. No. 8799/F.L./M.C. (2).

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies, Machinery for Sale and Wanted, Businesses for Sale and Wanted, Partnerships and Investments, Miscellaneous.

One Insertion 3/0
Three Insertions 6/0

For every line exceeding three lines 6d.

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion 1/6
Three Insertions 3/0

For every line exceeding three lines 6d

Sales by Auctions, Tenders, Patents for Sale, Legal and Financial Announcements

Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, NOVEMBER 22, 1923.

Printers and the General Election.

THE printing industry has good reason to know that the Election campaign is now in full swing. Printers as a class are, at a time like this, an important section of the body politic: they not only play, by virtue of their craft, a vital part in the circulation of political news and of party appeals to the public, but they are also as a whole, a very well-informed portion of the electorate, and wield considerable influence, whilst a number of public-spirited men from their ranks offer themselves for the responsible service of Parliamentary membership. Inquiry at the headquarters of the Federation of Master Printers elicits the information that the Federation regards the Election as an occasion calling for a special meeting of its council, and this meeting has been convened for to-day (Thursday). Many points of interest to the trade will there come under consideration. No difference of opinion will arise as to the need for questioning all candidates as to their views on the question of an early reduction of postal rates, and the removal of the postal restrictions on printed matter. This has an important bearing upon the problem of unemployment, as postal concessions would increase employment not only in the printing and allied trades but in commerce and industry generally. There will doubtless be unanimity, also, for pressing upon every candidate the objections to State trading in printing and the desirability of continuing the inquiry by the select committee into the results of the State printing works at Harrow and elsewhere. The fiscal issue is a more debatable matter, and we guess that this will not prove a question about which master printers will present a united front. Even apart from strong personal inclinations toward either free trade or tariff reform, printers find that self-interest gives no clear lead in this respect. Whilst many would favour a tariff on printed matter coming from abroad, it is feared that duties on paper and other requirements of the trade would increase costs and be a severe handicap to the industry.

* * *

Offset Printing and Paper.

WE were recently shown some very fine specimens of photo-litho work done on the rotary offset press. What we found chiefly interesting was a comparison of the results obtained on white and creamy papers. In point of tone contrast and general appearance, the results on the pure white paper were vastly superior to those obtained on the creamy paper. In view of the widening demand for photographic reproduction by rotary offset methods, that is so far as the higher grade advertising is concerned, paper-makers require to keep themselves conversant with the special characteristics in the paper that contribute to successful results.

Personal.

SIR GERVASE BECKETT, who will contest North Leeds at the General Election, is a director of the *Yorkshire Post*, and was formerly the editor and principal proprietor of the *Saturday Review*.

THE RT. HON. C. W. BOWERMAN has made a vigourous start with his Election campaign. He is again standing for the Deptford Division.

SIR ROWLAND BLADES, who has represented the Epsom Division of Surrey in the House of Commons, is again standing as Conservative candidate for the constituency.

SIR EDWARD ILIFFE, the Unionist candidate in the North Warwickshire (Tamworth) Division, is a member of the firm of Iliffe and Sons, publishers, of Coventry and London, proprietors of the *Midland Daily Telegraph*, Coventry, and for a long period connected with publications associated with the motor and cycling trades. He is president of the British Association of Trade and Technical Journals.

ALDERMAN JOHN BEDFORD BURMAN, the Unionist candidate in the Birmingham Division of Duddeston, is head of the printing firm of Burman and Cooper, Ltd., Birmingham, and was formerly a working journalist, being in turn reporter and sub-editor on the *Birmingham Mail*, *Birmingham Gazette*, and the *Sportsman*.

MR. T. E. NAYLOR, secretary of the London Society of Compositors, has been adopted as official Labour candidate to contest S.-E. Southwark. It will be remembered that, although not elected to the Bonar Law Parliament, Mr. Naylor represented Southwark in the previous Parliament, making his maiden speech on behalf of reduced postal rates.

MR. GEORGE A. ISAACS, general secretary of the National Society of Operative Printers and Assistants, is again Labour candidate at Gravesend, and looks like having a straight fight with the sitting member, Sir Alex. Richardson.

MR. T. OWEN JACOBSON (of Messrs. Jacobson, Welch and Co., Ltd.) is contesting the Kennington Division of Lambeth.

MAJOR DAVID DAVIES, who is connected with a number of newspaper and printing interests, is likely to be returned unopposed for Montgomeryshire.

MR. E. E. ALEXANDER, late M.P. for Leyton, is again contesting the seat in the Conservative interest.

MR. T. A. ROBERTSON, London representative of the Bradford printing house of W. N. Sharpe, Ltd., is again contesting Finchley Division.

Digitized by Google

Mr. Harry Becker, who carried the Richmond (Surrey) seat as an independent candidate at the last general election, afterwards securing Conservative recognition, will seek re election.

Mr. Hall Caine likewise will again contest East Dorset, where he had such a sweeping victory on the last occasion.

Mr. Ernest Winterton, of the *Daily Herald* staff, has accepted an invitation to contest the Loughborough Division in the Labour interest.

Mr. W. Llewellyn Williams, journalist, is Liberal candidate for the Northern Division of Portsmouth.

Mr. Willet Ball, editor of the *Railway Review*, will represent Labour in a three-cornered fight at Luton.

Mr. T. P. O'Connor is to be entertained to a complimentary dinner in London on Sunday next, by the Irish Literary Society, to celebrate his return to an editorial chair.

Mr. H. J. Rearden, compositor, is a candidate in the by election of a Councillor tor the Kent House Ward, Beckenham.

Mr. Ramsay MacDonald, M.P., leader of the Opposition in the House of Commons, and Mr. Arthur Henderson, M.P., have promised to attend the Jubilee Celebration Dinner of the London Society of Compositors.

Councillor W. B. Wykes, vice-president of the Federation of Master Printers, attended the annual dinner this week of the British Electrical Manufacturers Federation.

It will fall to Miss Coleman, of Norwich, who has had the honour to be elected the first lady Lord Mayor, to receive the members of the Federation of Master Printers when they assemble in Norwich next May for the Federation annual gatherings.

Councillor W. Gill-Smith, newspaper proprietor, is the new mayor of Evesham.

Mr. George Tams, the newly-elected Mayor of Deptford, is a compositor employed at the *Daily Mail* office. He is a trustee of the London Society of Compositors, a member of the Council of the Printers' Pension Fund Corporation, and secretary of the City of London Printers' Musical Society.

Mr. A. E. Holmes (secretary of the Printing and Kindred Trades Federation) and Mr. G. K. Naylor, whose names have for many years been included on the toast-list at the annual dinners of the Electrotypers and Stereotypers Managers' and Overseers' Association, were unable at the last moment to attend the gathering this year. Their absence, as well as that of Mr. S. W. Senior—a frequent and popular visitor to this function—was much regretted.

The returns of the examination in lithographic technology held under the auspices of the City and Guilds of London Institute indicate that Mr. E. G. Winders, of Northfield, Birmingham, has, in addition to gaining the premier position in advanced stage lithography, final grade, also succeeded in winning the Printers' Managers and Overseers' prize for best results at the 1923 examinations.

This is the first time that a Birmingham lithographic printer has succeeded in carrying the blue ribbon event for lithography with this additional prize to the City of Birmingham. Mr. E. G. Winders was a private tuition student of Mr. Joseph Goodman, of London.

Mr. T. H. Cunane, of Messrs. A. M. Peebles and Son, Ltd., is now on the permanent staff of the Manchester College of Technology—not the Manchester University Faculty of Technology, as inadvertently stated in an earlier issue. He is lecturing to printers, dealing particularly with the printer's paper problems.

Envelope & Stationery Manufacture.

Industrial Court Wages Award.

The award of the Industrial Court in regard to the wages of women workers in London in envelope making and manufacturing stationery, which sanctioned a decrease by 2s. per week, contains some important references to the industry.

Reviewing the evidence presented to the Court by the Employers' Federation of Envelope Makers and Manufacturing Stationers and by the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers, the award states:—"The envelope making and stationery manufacturing industry in its present form is a growth of the last thirty years, and its development has opened up a large new field of employment for women. The industry is largely dependent on the export of an appreciable portion of its products, more especially to the British Colonies. A substantial part of the industry in this country, possibly accounting for one-third of the product, is represented by the London factories."

It is pointed out that the reference to the Court concerned about 3,000 women employed in London, about 85 per cent. of whom were piece workers. While the work was mainly machine work, in the production of envelopes about 10 per cent. of the women were hand folders.

After remarking that the absence of organisation of the workpeople in the industry before the war was responsible for a lack of reliable statistics as to pre-war rates, the award goes on:—"Following the formation of the Employers' Federation of Envelope Makers and Manufacturing Stationers, the wages agreements between the Federation and the Union continued for a time to follow the course of wages in the printing industry, but an advance of 2s. per week given to women employed by master printers in the London area in December, 1920, was not conceded and the subsequent agreed falls of wages in the two industries have not been uniform. The 'peak' rate of 49s. per week in the envelope making and stationery manufacturing industry in London was reached in June, 1920; subsequent reductions included a special reduction applying to London only, of 2s. per week as from February, 1922, and resulting from the deliberations of a subcommittee of the Interim Industrial Reconstruction Committee, appointed on a request of the employers for a differential treatment of the London women's rate. The present rate of 38s. per week of 48 hours has existed since January 6th, 1923; in addition an annual holiday of twelve days on full pay is given, this making an addition to the employer's working costs of 4 per cent. on his annual wages bill."

The claim for a reduction of wages, it was pointed out, rested on the depressed state of the trade with its consequent unemployment.

On behalf of the employers, it was urged that the industry had to meet severe foreign competition, while London employers were further handicapped by the difference of 6s. per week, between the London rate and the highest provincial rate of wages. It was further contended that on a comparison with women's rates in other districts the proposed reduction would still leave women engaged in envelope and stationery manufacture amongst the most highly paid female wage earners.

From the employers' point of view, the most nearly analogous trades are the paper bag making and papermaking industries, the processes in paper bag-making being closely allied to those employed in the production of envelopes, whilst a number of the largest manufacturing stationery establishments have in fact grown from papermaking businesses, and have continued to be the property of, and to be operated by, papermaking firms. The Trade Board minimum rate in the paper bag-making trade is 30s. 6d. per week.

Not Comparable Industries.

Before the Employers' Federation was formed and for some time afterwards manufacturers of envelopes and stationery paid the current rates of wages of women in the printing industry, but the employers consider "that the manufacture of envelopes and stationery and the printing trade are not comparable industries in that the printing industry is essentially local; it is little subject to foreign competition; its products are not exported to the world's markets; and prompt delivery is frequently a deciding factor as against price. On the other hand, the manufacture of envelopes and stationery is a world trade, subject to intense foreign competition, more particularly from Scandinavia, Holland and Germany; and its methods of mass production depend upon its export trade and the production of stocks for retail distributors to await the convenience of the public."

Summarising the case of the unions the award mentions that the depression in trade was not peculiar to the London envelope-making and stationery manufacturing industry, but was felt by provincial manufacturers and by other trades. The union representatives contended that previous reductions of wages had been conceded with a view to stimulating trade, but had failed to do so; that the slump in trade arose out of the condition of foreign markets and a further reduction of wages would not only fail to stimulate trade but, on the contrary, would be likely to increase the depression, inasmuch as the continual reduction of the purchasing power of the workers must have a reaction on industry generally.

As to the excess of the London rate, it was submitted by the unions that the higher cost of living in London justified the difference. On the general question of comparison of rates of pay with those in other industries, the union point to the skilled nature of the work performed by women engaged in the manufacture of envelopes and stationery, and they take a comparison with the present rate of 42s. per week to women workers in the printing industry in London.

As already intimated, the Court came to the conclusion that the wages of the workpeople concerned should be reduced by 2s. per week, making the basic time rate for women in London 36s. per week, with a corresponding adjustment in the basic hourly piece rate.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

Egypt.

The British Commercial Agent for Egypt reports that the Government Press, Cairo, are inviting tenders for the supply of 4,000 kilogs. of linotype metal. Tenders must be made on the official form and despatched in sealed envelopes with the object of the tender indicated thereon, the outer sealed cover being addressed to The Superintendent, Government Press, Būlaq, Cairo. Tenders will be received in Cairo up to noon on November 30th. Tenderers are required to conform to the special and general conditions applicable to Egyptian Government contracts and to submit with their tenders a sample of not less than 200 grammes of the metal they would supply. A copy of the tender form, and special and general conditions is available for inspection at the Department of Overseas Trade (Room 49), 35, Old Queen-street, London, S.W.1. (Reference D.O.T. 11807 F.E./E.C.)

Canada.

H.M. Trade Commissioner at Vancouver reports that a local firm is desirous of purchasing the following supplies direct from British manufacturers:—Kraft wrapping paper (rolls and flat), printing paper bonds and wove (coloured and white), book paper, onion skin, cover paper, envelopes, writing pads, notepaper, papeteries, shipping tags and tickets, pencils, erasers, rubber bands, gummed labels, blank books, memo. books, school rulers, stenographers' notebooks, carbon paper, fountain pens. (Reference D.O.T. 12236/E.D./M.C./2)

Siam.

A call for tenders by the Ministry of Marine, Dhonburi, for the supply of naval stores, includes stationery (paper, etc.). Tenders in Siamese currency received up to January 17th. (Reference D.O.T. 11568/F.E./G.P.)

The Exchange Telegraph Co.'s Berlin correspondent states that foreign newspapers, no matter what their politics may be, have been authorised to be sold in Russia.

DIVIDENDS AND REPORTS.

"DAILY MIRROR" NEWSPAPERS.—Interim dividend on ordinary shares of 7½ per cent., actual; same as a year ago.

"SUNDAY PICTORIAL" NEWSPAPERS.—Interim dividend on ordinary shares of 6¼ per cent. actual.

ILFORD.—Dividend of 8 per cent. on ordinary share capital for year ended October 31st, 1923 (same as for previous year).

A. B. FLEMING AND CO.—Directors of this Edinburgh firm of printing ink and chemical manufacturers recommend interim dividend of 5 per cent., actual; same as a year ago.

STAR PAPER MILL CO. (1920), LTD.—The profits for the year ended October 31st, after allowing for depreciation, reserves for rates, taxes, etc., amount to £21,043, which, added to the amount brought forward, and after deducting interim dividend paid in May last, leaves a disposal balance of £29,956. The directors recommend the payment of a final dividend of 6d. per share, less tax, absorbing £9,687, leaving the sum of £20,269 to be carried forward.

NEW COMPANIES.

DALSTON PRESS, LTD.—Capital £1,000, in £1 shares; stationers, printers, lithographers, stereotypers, electrotypers, photographic printers, photo-lithographers, engravers, die-sinkers, etc. Private company. Directors: W. T. Abbutt and C. Forth. Registered office: 29 and 30, Ridley-road, Dalston, Middlesex.

DIRECTORY COVERS, LTD.—Capital £7,000, in £1 shares. (3,000 20 per cent. cumulative preference and 4,000 ordinary); advertising or publicity agents, contractors for advertisements and publications, circulating agents, agents for the sale and distribution of newspapers, directories, book covers, etc. Private company. Subscribers: A. A. Newman and T. M. Jones. Directors by subscribers. Registered office: Merton House, St. Bride's-avenue, E.C.4.

MODERN TRANSPORT PUBLISHING CO., LTD.—Capital £7,000, in £1 shares (4,000 ordinary and 3,000 8 per cent. cumulative preference); to adopt an agreement with F. C. Coleman, and to carry on the business of proprietors and publishers of newspapers, journals, magazines, books and other literary works, printers, lithographers, engravers, advertising contractors and agents, etc. Private company. First directors: F. C. Coleman and W. Black. Registered office: 10, Henrietta-street, W.C.2.

WHITELEY AND WRIGHT, LTD.—Capital £5,000, in £1 shares; proprietors and publishers of newspapers and other literary works, printers, advertising contractors and agents, etc. Private company. Subscribers: E. Whiteley and Miss N. Whiteley. Registered office: 30, Blackfriars-street, Salford, Manchester.

ACCOUNTS ORGANISATION CO., LTD.—Capital £1,000, in £1 shares; publishers, booksellers, printers, suppliers of office furnishings, etc. Private company. Subscribers: J. M. Cullen and M. H. Galloway. Registered office: 132, West Regent-street, Glasgow.

BRITISH PUBLISHING CO., LTD.—Capital £6,000 in £1 shares (4,000 ordinary and 4,000 7½ per cent. participating cumulative preference); to acquire the business carried on by H. Harmer and A. G. Earle, at Bell-lane, Gloucester, as the British Publishing Co., and to carry on the business of printers and publishers of residential guides and souvenirs for house and estate agents, official guides for corporations, town councils, and chambers of commerce, and trade, hotel tariffs and souvenirs, official handbooks for golf and bowling clubs, dock and railway companies, touring guides for motor transport and steamboat companies, advertising and publicity agents, contractors, experts and consultants, contractors for advertising space in newspapers and other publications and in railways, trams, buses, cars, walls, hoardings, theatre, music hall and cinema programmes, curtain slides and films, publishers, printers, etc. Private company. First directors: H. Harmer and A. G. Earle. Registered office: Crypt House, Bell-lane, Gloucester.

CLARKE BROTHERS, LTD.—Capital £300, in £1 shares; display and advertising contractors, advertising agents, show card, ticket and sign writers, printers, etc. Private company. First directors: A. H. Clarke, H. W. Sanders, and F. E. Parker. Registered office: 28, Portugal-street, Kingsway, W.C.

ANDERSEN AND MCVEIGH, LTD.—Capital £100, in 2s. shares; to acquire the businesses carried on by Mrs. A. Andersen, at 33, George-street, and by Messrs. Racine and McVeigh at 36, George-street, Portman-square, W., and all or any of the assets (except book debts), and to carry on the business of manufacturers of and dealers in lace, stationery, boxes, cabinets, playing and fancy cards, paper, etc. Private company. Subscribers: R. J. Cocks and C. W. Munn. First directors: C. E. M. Andersen, T. S. Chambers and Mrs. A. Andersen. Registered office: 33, George-street, Portman-square, W.1.

MISSIONARY EQUIPMENT AND LITERATURE SUPPLY, LTD.—Capital £3,000, in £1 shares; to adopt an agreement with A. W. Nott and C. H. Smith, and to carry on the business indicated by the title. Private company. Subscribers: A. W. Nott, C. H. Smith, and W. J. Hewitt.

H. R. BISHOP, LTD.—Capital £500, in £1 shares; to take over the business of a stamp dealer carried on by Mrs. M. E. Selby, at Kingsbury House, King street, St. James', S.W., as "H. R. Bishop," and to carry on the same and the business of printers, publishers, manufacturers of and dealers in albums, etc. Private company. Directors: Mrs. M. E. Selby and Laura E. Lowden. Registered office: Kingsbury House, King-street, St. James', S.W.1.

ALLAN'S ADVERTISING SERVICE, LTD.—Capital £2,000, in £1 shares (1,000 preference and 1,000 ordinary); to take over the business of an advertising contractor and publisher carried on by H. C. Allen, at 3, Queen-square, W.C.1, as the "Holiday Resorts Agency." Private company. First directors: H. C. Allen and A. G. Brown.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

ANCHOR PRESS, LTD.—Satisfaction to the extent of £13,000 on August 9th, 1923, of debentures dated December 2nd, 1921, securing £25,000.

WILLIAM POLLARD AND CO., LTD. (printers publishers, stationers, etc., Exeter).—Particulars filed of £5,000 debentures authorised October 9th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital (subject to £12,500 debentures, covered by trust deed dated August 27th, 1926), the whole amount being now issued.

HENRY GOOD AND SON, LTD. (stationers, printers, etc., London).—Satisfaction in full on October 27th, 1923, of second debenture dated March 13th, 1916, securing £1,000.

GLOUCESTERSHIRE CHRONICLE, LTD.—Particulars filed on November 3rd, 1923, of £2,000 debentures authorised June 26th, 1922, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

HENRY HUGHES NEWSPAPERS, LTD. (Pontypool).—Particulars filed of £1,500 debentures authorised October 18th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

TECHNICAL PUBLISHING CO., LTD. (London).—Satisfaction in full on October 31st, 1923 (a) of debentures dated October 30th, 1912, originally securing £2,000 and (b) of second mortgage debenture dated July 4th, 1913, securing £1,500.

ANGLO EASTERN PUBLISHING CO., LTD. (London).—Satisfaction in full on October 25th, 1923, of debenture dated May 1st, 1916, securing £450.

H. F. PIMM AND CO., LTD. (paper bag makers, stationers, printers, etc., London)—Issue on October 11th, 1923, of £100 debentures, part of a series already registered.

BANKRUPTCIES, etc.

Re JOHN HEWITT, printer and stationer, 7, Lancaster-place, Strand, W.C., and late of 88-9, Chancery-lane, E.C.—The first meeting of creditors was held last week at the London Bankruptcy Court. It appeared that the debtor commenced business in 1919 at 126, Bishopsgate, E.C., under the style of "Hewitt and Lewis," without any substantial capital, removing six months later to Chancery-lane and subsequently to Lancaster-place. In October, 1922, "Hewitt and Lewis, Ltd.," was formed and took over the assets and liabilities of the business, the debtor receiving 8,000 2s. 6d. shares and being appointed managing director. The company is still carrying on the business and no liabilities are outstanding in respect of the "Hewitt and Lewis" trading. While he was running the business, however, the debtor speculated in paper, and in order to finance those deals he borrowed at heavy rates of interest, and now owes about £12,000, against assets consisting of the beforementioned shares. The debtor attributes his failure to the adverse result of the paper speculations and to heavy interest charges. Mr. W. H. Payne, accountant, Martin's lane, Cannon-street, E.C., was elected trustee of the estate.

MUCH concern is felt among various agents in this country and by German manufacturers at the intimation of the German Government that they cannot continue to refund the 26 per cent. reparations payments deducted by the British authorities. If the threat is put into force, great inconvenience is likely to be caused.

WARRILLOWS.—Resolutions for reduction of capital in accordance with scheme approved in August last have been duly carried by shareholders. Under scheme capital is reduced from £700,000 to £270,000 by writing down preference shares of £1 each to 10s. each and ordinary shares of £1 to 1s. each nominal.

SWEDISH imports under the heading of wood goods, wood pulp, paper, etc., in the period January-August, 1923, were valued at 70 million kr., against 58 million kr. in the corresponding period of 1922. Exports in the first eight months of this year reached a value of 355 million kr., compared with 315 million kr. in the corresponding period last year.

Trade Notes.

THE week's partnerships dissolved include those between J. W. Hughes and F. J. Kinman, printers and wholesale stationers. 12, Dukes-road, St. Pancras, London, under the style of Hughes and Kinman; also S. A. Miller, D. G. Coates and H. E. Fordyce, price ticket and showcard machine and accessories manufacturers, 153 and 155, Edgware road, London, W.2, under the style of The Embosotype Manufacturing Co. (incorporating the Embosograph Co.), so far as regards S. A. Miller; also H. D. Beck and C. R. Fortlage, publishers' agents, 67-69, Chancery-lane, W.C.2, under the style of Prentice-Hall (Great Britain).

THE old established business, dating from 1750, of G. W. Lewis and Sons, stationers, of Broad-street, Worcester, now comes to an end. It was established by Mr. G. W. Lewis's great grandfather, and was carried on by successive sons until it came to Mr. W. G. Lewis, who is now retiring from business.

OWING to the growth of their business Messrs. Bowering and Co., printers and stationers, have sold their premises at 20, George-street, Plymouth, and purchased a large warehouse in Union-place, to which their works will be transferred in January under the name of the Bowering Press, while the head office and retail establishment is being moved to 1, Courtney-street. Considerable additions are being made to the plant at the works.

LEEDS PRINTERS AND PROTECTION.—The Leeds and District Association of Master Printers convened a special general meeting on Saturday, for the purpose of considering Mr. Baldwin's protection proposals in their relation to the printing trade. There was a large attendance of members, and representatives were also present from Scarborough and Dewsbury. The discussion was very open, and opinions were freely expressed both in favour of and against the proposed tariffs. In the end, in view of the division of opinion expressed in the discussion, it was deemed advisable not to take a vote on the question.

STATIONERS' COMPANY.—A Livery dinner of this Company was held in the Stationers' Hall on Tuesday, the Master (Mr. Edward P. Vacher, F.R.G.S.) presiding. The occasion was to meet the Lord Mayor and the Sheriffs, and the gathering was strongly representative of the paper, printing and allied industries.

THE proceeds of the Flag Day held on behalf of the Printers' War Orphan Fund have already well exceeded £4,000, and contributions are still being received at 24, Holborn.

THE Health Committee of the Joint Industrial Council is meeting on Thursday, November 29th, under its new chairman, Mr. E. H. Lee, amongst the topics to be considered being a new poster giving hints on health.

MANCHESTER Master Printers' Association is arranging a dinner, dance and whist drive for November 28th, and the Monotype Users' Association have a meeting of northern members in Manchester on the same day.

THE *Daily Chronicle* and *Lloyd's Sunday News* Circulation Departments held their eighth annual dinner on Friday night at Anderton's Hotel.

A VERDICT of accidental death was returned by the Manchester City coroner at the inquest on Wednesday of last week on Richard Calvert, 30, who was employed by Messrs E. Hulton and Co., Ltd., printers, of Manchester, as a labourer. Calvert was helping in placing in position a heavy printing press, and this dropped upon the toe of a crowbar, the other end of which sprang upwards, hitting Calvert in the face, and causing unconsciousness and subsequent death.

THE death occurred on Thursday, at Cambridge, of Mr. George William Garrett, aged 62, for 35 years on the staff of the *Sporting Life*.

THE net estate of the late Dr. Edmund Knowles Muspratt, of Seaforth Hall, Seaforth, Liverpool, for many years chairman of the *Liverpool Daily Post* Company, amounted to £434,842.

THE late Mr. Frank Cado Hawkins, of Redland, Bristol, a member of the staff of the *Bristol Times and Mirror*, left £14,300.

THE late Mr. Richard Hugh Pye, of Seven Sisters-road, E., cardboard box manufacturer, who died April 27th, aged 57, left £38,420.

THE late Mr. John Chalcraft Warren, of Midhurst, Sussex, retired paper merchant, left £8,118.

COMPOSITORS and others are putting in some strenuous overtime work (with no quibbles as to rules regarding maximum hours or minimum wages) on behalf of Mr. T. E. Naylor, whose committee rooms are at 124, Walworth road. A strong plea is being made by Mr. Naylor's supporters for the loan of motor cars.

IN the King's Bench, on Thursday, a settlement was announced of two actions for alleged libel brought by the Slough Trading Co., Ltd., and Slough Lorries and Components, Ltd., against the Temple Press, publishers of the *Commercial Motor*.

THE Secretaries' Association, Ltd. (Grosvenor Mansions, 82, Victoria-street), has reprinted a lecture, "Sixty Years of Company Registration," which Mr. Herbert W. Jordan, of Messrs. Jordan and Sons, delivered last week before the Association.

"THE Influence of the Press on the Development of Empire" was the subject of a paper read by Lord Burnham last week at a meeting of the Royal Colonial Institute at the Hotel Victoria, Northumberland-avenue. Lord Milner presided.

CONSIDERABLE discussion took place at a meeting of the Devon Main Roads Committee recently on the question of the rapidly increasing number of billposting stations and advertisement hoardings which flank the principal highways of the county. Eventually a sub-committee was appointed to go thoroughly into the question.

THE Baxter Price List will appear towards the end of December or early in January from the House of Sampson Low.

THE proprietors of the *Waterford News* paid their employees a full week's wages when unable to work owing to the recent fire.

NEW YORK's daily Labour publication, the *Leader*, has ceased printing "because of the high cost of production."

A BIG Graphic Arts Exposition is being planned in connection with the Fifth Annual Convention of the International Association of Printing House Craftsmen, at the Auditorium, Milwaukee, Wisconsin, August 18th to 23rd, 1924.

WITH regard to a report that the German industrial magnate, Herr Hugo Stinnes, has just started a newspaper in Switzerland, a correspondent of *The Times* states that Stinnes for months has tried to get control over already established Swiss newspapers, especially the papers at Zurich, but has repeatedly failed.

MESSRS. LIVINGSTONE, PAGE AND CO. have been appointed London agents for Henry and Leigh Slater, in addition to the export agency which they already held. Messrs. Henry and Leigh Slater, who recently established a new mill at Macclesfield for pasting boards, have a wide range of papers, including tin foils, box papers, enamels, art boards, etc.

MESSRS. E. H. SHARMAN AND CO., the established firm of papermakers' agents and merchants, of 20 and 21, Queenhithe, Upper Thames street, London, have recently added another mill to the number of agencies they hold. This is the Merseburger Buntpapierfabrik (Sebastian Heilmann, G.m.b. H.), manufacturers of flints and enamel papers. Their command of papers, therefore, covers a wide range, including news, glazed and unglazed, coloured printings, caps, krafts, vegetable parchments, tissues, transparents, etc. Messrs. Sharman and Co. have been established at Queenhithe since 1909, when Mr. Sharman, with 20 years of experience in the paper trade behind him, started on his own account. Two years later he was joined by Mr. F. E. Griffiths, who also had had many years in the paper trade. Both gentlemen have been accustomed to handling all kinds of foreign imported paper. With the recent addition, the firm represents some ten important mills in the United Kingdom.

WITH the current issue the *African World* reaches its majority, and the 21st birthday is marked by the issue of a special supplement.

THE *British and Colonial Printer and Stationer* circulates all over the world.

Trade Union Matters.

MACHINE COMPOSITION IN PERIODICAL HOUSES.—As the result of a conference between the London Master Printers' Association and the London Society of Compositors, at which the Printing and Kindred Trades Federation was represented, certain modified proposals were discussed, and these were to come up for consideration at a meeting of the L.M.P.A. Council on Tuesday, and at a meeting of the L.S.C. Executive on the same day. We understand there were hopes of a satisfactory settlement being reached.

JOURNALISTS' BENEFIT DISBURSEMENTS.—The National Union of Journalists publishes some interesting statistics showing the amounts expended on the various benefits of the union for the period 1909 to 1922. Unemployment grants accounted for £12,797, special unemployment grants £515, benevolent grants £2,817, widows' and orphans' grants £1,125, war distress grants £9,301, victimisation grants £1,621, the total being £28,167. In 1921 no less than £3,171 was disbursed for unemployment benefit.

LEEDS TYPOGRAPHICAL SOCIETY.—The report of the Leeds Branch of the Typographical Association for the quarter ended September 30th, states that during that period 74 members were drawing unemployment pay in the first week. From that time there was a gradual improvement in trade, and at the beginning of September the number was 29, a figure marking the lowest point reached since 1918. This position was maintained for three weeks, when the number again rose, and at the date of the report the figure had gone back to 74. The improvement is reflected in the accounts by a decrease of £250 in the amount expended on unemployment benefit.

Labour in Norwegian Paper Mills.

According to an Exchange telegram from Copenhagen, news from Christiania was to the effect that the Norwegian Employers' Union has decided on a lock-out to commence on November 15th throughout the paper industry. Permission was granted to the Central Executive to extend the lock-out, if necessary, in order to try and force a settlement of the prolonged wages conflict. From 14,000 to 16,000 workers would be affected.

Before any lock-out takes place, however, we understand from a Norwegian visitor that the Norwegian Government will, in all probability, appoint an arbitrator to deal with the question in dispute.

"PUNCH'S" ALMANACK for 1924 is, as usual, good value for the shilling that is charged for this special number of our leading humorous journal. Consisting mainly of entertaining illustrations, it has many pages in colour as well as a profusion of line illustrations.

IN *Pitman's Shorthand and Typewriting Year Book and Diary*, to the 1924 issue of which Lord Burnham contributes an important preface, special articles include "The Testimony of a Pitman Expert," "Unbroken Records," "Sayings of the Year," "Simple, Sound, and Speedy," "Why Pitman's Shorthand is Demanded," Typewriting in Commercial Offices," "Private Secretarial Work," "Foreign Language Study," "Degrees in Commerce," "Teachers of Commercial Subjects and their Qualifications," and "Starting a Commercial School." The price is 1s. 6d. net.

A SPECIAL souvenir edition of the *Quebec Chronicle* to mark the 75th year of that journal's existence was published on October 29th.

IPING PAPER MILLS, LTD.—Mr. Alex. Mackie has joined the Iping Paper Mills as manager. Mr. Mackie has had a long experience in papermaking. Serving his time with Messrs. Robert Craig and Sons, of Caldercruix, with whom he stayed 17 years, he became manager at Messrs. Chas. Marsden and Sons, remaining with them for nine years, leaving to take up sole control of the Abelheira Paper Mills in Portugal. After 12 years in Portugal he recently returned to this country, and has taken up the above position.

Intaglio Engraving.

BY C. MAXWELL JACKSON.

Two of the several types of intaglio engraving are etching and mezzotint. Both, when well done, give beautiful results, and are mainly used for the illustration of fine books.

An etching may be detected by its fine, wirelike lines; in appearance it may be not unlike a pen-and-ink drawing, and as a matter of fact, is produced on much the same principle. A plate of metal, usually copper, is protected with a thin coating of wax or varnish. Upon this the artist sketches his design in fine lines, using a needle-point to cut through the coating down to the surface of the metal. The sketched plate is immersed in a bath of acid, which eats away the metal only in those portions where the impervious ground has been cut away. Some care is needed in this operation to ensure the correct amount of "biting"; the operation includes the process known as "stopping-out." When the surface is cleaned away, the original design is found transferred to the plate in the form of incised lines. To print the etching these grooves are filled with ink, and the plate is brought into contact, under heavy pressure, with slightly dampened paper. The lines of the resultant print are in very low relief.

The mezzotint also is usually worked on a copper plate. The surface is first prepared by being uniformly roughened all over with a fine toothed tool known as a "rocker." The depth to which the teeth penetrate determines the durability and the depth of tone of the "blacks" of the mezzotint. If the velvety surface now presented were inked, an impression taken would show a uniform jet black. Upon this prepared surface the outline of the design is sketched; then with scrapers the artist cuts or burnishes down portions of the roughened surface in varying degrees according to the depth of tone each portion is to represent in the print. Thus, a portion that is to print white is scraped smooth on the plate; blacks are left untouched; middle tones are scraped more or less lightly in order to print different shades of grey. The method of printing is similar to that used for an etched plate. Mezzotint presents deep, velvety blacks, and beautiful graduations of middle tones; it is therefore easily distinguishable.

The measure of success of a printed engraving depends almost as much upon the printer as upon the engraver. Many proofs may have to be pulled before the prepared plate is to the satisfaction of the artist, but even then much depends upon the skill of the craftsman to whom it passes.

Owing to the etching and mezzotint being in intaglio, very heavy pressure is required to force the dampened paper with which the plates are brought into contact into the incised marks, where the paper picks up the ink. The essentials of the press used are two heavy iron rollers, between which moves a flat iron bed bearing the plate with the paper laid upon it. The plate is heated, while being inked, with a fine superior ink, in order to distribute the pigment, thinly and evenly. The paper is usually of bleached rag, with a spongy texture soft enough to force itself into the incised design.

The plate is carefully cleaned of all foreign matter with benzine or turpentine, wiped clean of the oil, and examined to see that there is no flaw. When warmed, it is inked all over by means of the ink-roller, the pigment being worked well into the incisions; then all the ink is wiped from the surface with rags, leaving only the marks of the design filled. The printer's hand, cleaned with a touch of chalk, passes over the plate to give it a final smooth polish, and the plate, with the engraved lines filled with pigment to the surface, is now ready to pass between the rollers bearing upon it a sheet of dampened paper.

The upper roller, coated with a thick blanket, forces the soft paper into the incisions, and the ink is transferred from them to the paper itself, which comes out showing an exact impression of the engraved design. An intaglio plate goes through this process for each print that is made.

The art in this printing process depends largely on the care with which the plate is inked, and on the amount of pressure applied. A careful printer can make a poor engraving print well (particularly in the case of the etching), while hasty workmanship will often cause a good plate to print badly—either too heavily and fuzzily, or too faintly and sketchily. By careful inking and adjustment of pressure, beautiful shades of tone may be obtained even when not actually provided for by the engraver. A perfect print demands artistic perception in both artist and craftsman.—*Publishers' Circular.*

Government Contracts.

Contracts were placed with the following firms during October:—

Stationery Office.

CLOTH, BOOKBINDING.—Winterbottom Bookcloth Co., Ltd., Manchester.

CLOTH, TRACING.—B. J. Hall and Co., Ltd., Manchester; Winterbottom Bookcloth Co., Ltd., Manchester.

PRINTING, RULING, BINDING, ETC.—Group 171 (1923)—Inland Revenue—Specified Items.—The *Hereford Times*, Ltd., Hereford, England.

Division III.: Letterpress Bookbinding, etc., Rebinding 296 Volumes *London Gazette*.—T. De La Rue and Co., Ltd., London, E.C.

Group 158 (1923): Various Offices—Specified Forms.—G. Hargreaves, Cheetham.

Calendars of Prisoners for Durham Prison—Contract for Printing—Durham County Advertiser and General Printing Co., Ltd., Durham.

Calendars of Prisoners for Exeter Prison—Contract for Printing.—A. Wheaton and Co., Ltd., Exeter.

500,000 National Savings Certificate Books; 1,500,000 National Savings 6d. Stamps.—Harrison and Sons, Ltd., Hayes.

North Wales Notes.

The organising campaign in the North Wales Alliance of the Federation of Master Printers is all but completed. The campaign was to have culminated with a rally at Chester this month, when a meeting was to be followed by lunch and a visit to Messrs. Grosvenor, Chater's paper mills at Holywell, but owing to the General Election the rally has been postponed and will now probably take place in January.

The last two Associations to be visited and re organised were the Oswestry, Welshpool and Aberystwyth Association and the Wrexham and District Association. In the former Mr. R. Read, of the *Cambrian News*, is making a more localised effort in Aberystwyth itself. A meeting of the Association was held at Welshpool on November 10th. This was preceded by lunch by invitation of the proprietors of the *County Times*. Mr. David Rowlands, supported by Mr. J. M. Pearson, both of the *County Times*, presided at the meeting. Mr. A. E. Goodwin, secretary of the Federation of Master Printers, addressed the gathering—the first meeting of master printers he had addressed in his native county of Montgomeryshire.

The holding of regular meetings of the Association was agreed upon, and the following officers were appointed: Chairman, Mr. J. Ellis, Llanidloes; secretary, Mr. J. M. Pearson, Welshpool; representatives on Alliance Executive, Messrs. W. P. Phillips (Newtown), R. Thomas (Oswestry), and R. Read (Aberystwyth).

Mr. W. Edwards, the Alliance secretary, has been appointed hon. secretary of the Wrexham and District Association. A full meeting of the Association has been postponed until an early date after the General Election.

A Printing Talk at Derby.

The Derby Master Printers' Association, in conjunction with the Joint Industrial Council, invited any members of the craft to attend in the lecture theatre of the Technical College on Friday last, when Mr. Frank Colebrook, F.A.I., had promised to pay another visit to the college and this time talk upon "Milestones in Printing Progress."

Although a good deal of overtime was being worked in the town under General Election pressure, and this did definitely mean the abstention of a number of printers, there yet was a very good attendance. Mr. J. H. Simpson, of Messrs. J. W. Simpson and Sons, Ltd., presided, remarking upon the pleasure with which the members of the Joint Industrial Council arranged meetings like these and found them so well responded to.

Mr. Colebrook in a comprehensive talk, dealt freely with the emergence of notable men in printing, the introduction of notable processes and machines—anything in fact, which represented a milestone of progress—and he carried the subject to the present development, so far as it has gone, of the photo type-setting machine.

Some slides were shown, Mr. Colebrook acknowledging, in the matter of preparing lantern slides, ready help received from St. Bride Institute and elsewhere.

Mr. C. E. Evans (Messrs. Bemrose and Sons) very warmly proposed a vote of thanks to the speaker. He said he had been intensely interested from first to last, and while the matter had been quite suitable for the apprentices and young printers present, he did not doubt that the older ones had learned a good deal. They must ask Mr. Colebrook to come and give them another talk.

Mr. Lockington seconded, remarking particularly upon the information Mr. Colebrook had given them re photo type-setting.

Replying to the thanks, Mr. Colebrook bore tribute to the distinction of Derby's printing product, and said he was glad to express his high sense of the debt the whole craft owed to General Bemrose. It had learnt to look to him for leadership in various very important matters. Particularly he had made his own in an especial sense the problem how the faithful workers in the craft could be freed from the over-shadowing fear of unemployment. Circumstances which General Bemrose could not control might have so far defeated his desire to see the printing craft, as a craft, guarantee its faithful servants against the old-time uncertainty. Nevertheless, it was greatly to his honour that he had put forward his conception of the right craft policy, and had undoubtedly been ready to bear his share in carrying it out. In conclusion, Mr. Colebrook appealed to the younger members to think highly of their noble craft and to help it to maintain its pride of place and leadership in the troubled world of to-day; and through its service to equip themselves to become great citizens of a great country.

THE late Mr. Harry Fieldhouse, founder and proprietor of the Nuneaton *Midland Daily Tribune*, the *Police Chronicle*, and the *Leamington Chronicle*, formerly practising as a journalist in Bradford, left estate of the gross value of £22,764, with net personalty £10,921.

The Affairs of "George Harrison."

Sympathetic Creditors.

A sitting of the London Bankruptcy Court was held on November 9th before Mr. Registrar Francke for the public examination of Godfrey Isaacs and Michael Levy, lately trading at 3A, Queen Victoria-street, E.C., as "George Harrison," paper agents. The receiving order was made on March 28th, 1923, on the petition of a creditor.

Mr. F. T. Garton attended as official receiver, Mr. Tindale Davis appeared for Mr. T. G. Piper, the trustee, and Mr. E. W. Nansell for the debtors.

The debtor Isaacs was first examined, and in reply to the official receiver stated that he commenced business on his own account in November, 1912, as a paper merchant at 31, Eastcheap, E.C., under the style of "George Harrison." The debtor Levy joined him as a partner in November, 1913, and they traded in partnership under the same style. The business was very successful up to the end of 1920, when, in consequence of the slump in trade and their inability to recover their book debts, they were compelled to pledge their stock with their bankers in order to carry on the business. In July, 1922, they registered "George Harrison (Agencies), Ltd.," with a nominal capital of £4,000, to carry on business as paper merchants and agents; both witness and his partner were appointed directors, and held that position at the date of the receiving order. Witness attributed the insolvency of the firm to the slump in trade and inability to recover their book debts. The usual books of account were kept and annual balance sheets were prepared. In 1921 witness obtained advances from their bankers in respect of properties belonging to third parties. Those advances were treated in the books as additional capital, but on the other hand, they were not shown as liabilities owing to the third parties. The properties so brought in amounted to £21,595.

The debtor explained that those properties were purchased by the firm for relatives and employees during the time of prosperity. Frankly and naturally they were the properties of the third parties from a strictly legal point of view, but the partners always considered that it might be necessary to bring them back as part and parcel of the business. They were fully entitled to do so, as was evidenced by the fact that no objection had been raised by the third parties. He agreed that the net result of omitting the advances from the list of liabilities was to show in the balance-sheet of January 31st, 1921, a small credit of about £200 to himself, and a small debit of about £100 to his partner, instead of a deficiency of £25,000, and it followed that the balance-sheet was inaccurate to that extent.

The year 1920 was most disastrous, and according to the books a loss of £69,840 was made on that year's trading, and the account received from the accountant on February 12th, 1921, showed, roughly speaking, a deficiency of about £20,000. For the purposes of the balance-sheet the stock was taken at £32,000, although its original cost was something well over £100,000. There was actually no market of any description from which to arrive at a correct estimate of the valuation of the stock. They valued it at £32,000 in order to be on the safe side, but with the slightest reaction in business there was no reason whatever why it should not have reverted approximately to the original cost. That contingency did not in fact arise, but the court should appreciate the atmosphere of that period, it being about the depth of the slump.

The Official Receiver: Things were about as low as they could be?—Yes.

The Official Receiver: And you put the stock at a fair price based on what you thought was the market price at the time?—I cannot agree to that.

The debtor went on to explain that he thought they could have sold it at a higher figure, but the market was not ready for it, and seeing that the stock cost originally four times the amount placed upon it, the figure of £32,000 did not represent a fair price at the time. Although the February, 1921, account showed a deficiency they had outside assets in the shape of the properties standing in the names of third parties.

The next balance-sheet showed £25,000 additional capital introduced by witness, and £24,000 by his partner, a total of nearly £50,000, of which £21,000 came from the third party properties and the balance was their own money. The introduction of that additional capital cleared off the deficiency.

The Official Receiver: Now we come to the balance-sheet for 1921. That was made when you knew your position?—Yes, but we made a profit of over £30,000 that year.

The Official Receiver: But even then there was a deficiency of over £20,000.—Yes.

Questioned upon his drawings, the debtor agreed that in 1920 they amounted to £2,485, in 1921 to £3,742, and in 1922 to £2,335.

Asked regarding contract losses, witness said in one case they obtained an offer for a parcel of paper and cabled instructions to the mill, but the latter failed to carry out the contract, and in consequence they (the firm) were unable to fulfil their contract to supply the paper. In that case they settled an action (in which £75,000 was claimed as damages) out of court with a payment of £15,000. In another case the contract related to 5,000 tons of Dutch strawboards. The margin between the buying and selling price was 2½ per cent. Their customer agreed to pay a certain sum to liquidate the contract and they in turn agreed to pay the suppliers a sum of £1,200. They accordingly paid the £1,200, but in the meantime their customer went into voluntary liquidation, without paying them anything.

The debtor further stated that in 1919 he interviewed the manager of the Westminster Bank, Ltd., regarding an overdraft of £10,000 and that was granted without any security being required. In consequence of subsequent bad trade, they had to ask the bank for further assistance, and on that occasion they handed over to the bank stock to 50 per cent. of the purchase price value, as security for the amount advanced. The depreciation on the value of the stock caused the bank to think they were not sufficiently covered; and when the market fell completely at the end of 1921 the bank asked for further security. It was then that they got their friends to put up their properties as collateral security. The net result was that the bank had control of the whole of their stock, and were now creditors for £34,000.

The debtor next explained the circumstances under which a Mr. G. Goodman became their debtor for many thousands of pounds.

The Official Receiver: In July, 1922, you formed a company practically to take over your business?

The Debtor: No, I cannot agree to that statement. The company started a similar business.

The Official Receiver: The company took over whatever goodwill there was?

The Debtor: If you mean that any goodwill there may be goes with me, I agree with you.

Mr. Tindale Davis said he had no questions to put to the debtors, who had rendered all possible assistance to the trustee.

Re-examined by Mr. Hansell, witness said the creditors had accepted a composition scheme, and the amount required to carry it through (£8,000 odd) had been paid into Court. Creditors would ultimately receive further amounts so as to eventually obtain 20s. in the £.

Mr. Hansell: What has been the attitude of your creditors towards you?

The Debtor: Very, very sympathetic indeed.

Mr. Hansell: Now with regard to your trade liabilities. What proportion do they bear to your total liabilities?—About £10,000.

And some of the creditors, who you properly enter in your list of liabilities, will never rank against the estate?—That is so, about another £10,000.

The witness added that of the debts which were in existence when the statement of affairs was prepared, some had been released by the creditors and others had been paid by third parties who would make no claim against him in respect of the amounts they had paid. That would reduce the bulk of the creditors ranking for dividend to the amount mentioned.

The debtor Michael Levy was also questioned by Mr. Garton, the official receiver, and generally confirmed the evidence given by his partner. He added that his drawings from the business amounted to £1,196 in 1920, £4,807 in 1921, and £2,684 in 1922.

The examination of both debtors, who said this was their first failure, was ordered to be concluded.

Disinterested Advice.

In "Notes for Buyers," the house organ of Messrs Spicers, Limited, "Ubique" writes: "By the way do you take in the weekly journal of the craft, the 'BRITISH AND COLONIAL PRINTER AND STATIONER'? I haven't a farthing of money interest in it, but fair's fair; and when I see this country producing a weekly printing trade paper which the craft in other great countries cannot produce, and when I see such plenty of good craft matter in it, I feel constrained to put in a word about it. You are surely not doing yourself justice unless you take it and regularly glance over it."

SUBSCRIPTION FORM.

Please send me weekly "The British and Colonial Printer and Stationer," at 13s. per annum (including postage) until countermanded.

Name..... .....

Address (in full).. .. ..

Northfleet Paper Mills, Ltd.

Receiver and Manager Appointed.

Mr. Justice Tomlin, in the Chancery Division on Friday, had before him a motion by Mr. Edward Micklem and the Bankers Investment Trust, Ltd., for the appointment of a receiver and manager of the Northfleet Paper Mills, Ltd.

Mr. W. A. Greene, K.C., for the plaintiffs, said they were trustees of a debenture trust deed dated May 12th, 1896. The first defendant was the company, the second was the C. W. Realisation Co., Ltd., holders of first debentures, the third was the National Provincial and Union Bank, and the last was Mr. John Dobson, both being holders of second debentures. The Bank was also trustee of the second debenture trust deed.

His Lordship: Is this company one of the Becker Group?

Mr. Greene said it was. It was an old-established company, having been re formed in 1883, and on May 12th, 1896, it issued 4½ per cent. first debentures, of which £105,000 were now outstanding. The second debenture trust deed was dated November 17th, 1920, and was an issue of £100,000 debentures, all of which were outstanding. Mr. Dobson was the holder of £1,000 of these. Counsel read an affidavit stating that the company had a valuable goodwill and it was very important that the business should be disposed of as a going concern. There were also pending contracts which it was desirable to complete. On November 7th, 1923, the company gave notice by letter that it had passed a resolution that it could not carry on, and requested the trustees to apply for the appointment of a receiver and manager. The company, said the affidavit, had stopped payment, had come to the end of its resources, and had no further money for the payment of wages. Creditors were pressing and writs would be issued and executions levied in the course of a few days. The appointment asked for was that of Mr. Reginald Bernard Petre, a partner in the firm of W. B. Peat and Co., chartered accountants.

Mr. Gordon Brown, for the Bank, said it was to everybody's interest that the appointment should be made.

Mr. Bischoff, for the C. W. Realisation Co., said they held £15,000 first debentures, and he supported the application.

His Lordship made the appointment as asked, with liberty to act at once on the usual undertaking.

Federation of British Industries.

The following gentlemen have been elected to serve on the Grand Council of the Federation of British Industries for the year 1923-24:

Main Group 8.—Sub-Group 1 (Letterpress and Lithographic Printers): Col. H. R. Fletcher, Col. J. R. Truscott, and Sir William Waterlow, K.B.E. Sub-Group 2 (Electrotype, Stereotype Manufacturers and Process Work): General W. Wright Bemrose and Mr. F. Waterhouse. Sub-Group 4 (Publishers' Binders): Messrs. Robert Wilson and W. B. Wykes.

Main Group 18.—Sub-Group 1 (Papermaking: Messrs. Arthur Baker, F. G. Hawdon, E. Percy Reed, and Captain W. E. Nuttall. Sub-Group 2 (Manufacturing Stationers): Messrs. J. J. Keliher, James MacLehose, and J. Leonard Spicer. Sub Group 3 (Paper Box and Carton Manufacturers): Mr. Arthur Stevenson. Sub-Group 7 (Wallpaper Manufacturers): Mr. John E. Entwistle. Mr. A. W. Foster and Mr. Entwistle have been elected to the Executive Committee.

German Paper Competition.

Bearing upon the proposals of the Prime Minister for the relief of unemployment, "A British Papermaker" writes to *The Times* as follows:—

The paper mill with which I am connected has for many years specialised upon a cheap grade of paper used throughout the whole of the textile trade. It is produced entirely from waste material from this trade and from the printing industry, which would otherwise be destroyed at a cost of at least 10s. per ton in labour. The collection and sorting of this cost not less than £2 per ton in unskilled labour of the very poorest class. The cost in wages in converting this into paper is £3 7s. 6d. per ton.

During the past 12 weeks not less than 200 tons of German paper has been delivered to three of my customers at £4 per ton below the lowest price at which it can be produced profitably by British mills of the most modern and efficient type. As the production of this 200 tons requires 230 tons of raw material, the comparison works out as follows:—

Wages on 230 tons at £2 10s. per ton ...	£575
Wages on 200 tons of paper at £3 7s. 6d. per ton	675
making a total of £1,250 loss to the British wage-earner, as against a saving to the consumer of—200 tons at £4—£800.	

British Imports of Paper, etc.

U.S. Board Exports.

The total exports of bristols and bristol boards from the United States during the month of August reached a figure of 346,118 lbs., of the value of $17,624. The principal consumer was Cuba, which took 293,170 lbs. ($10,543); the Philippine Islands came next with 22,532 lbs. ($2,876); the third place was occupied by Canada, 13,787 lbs. ($1,740).

A much larger item of export is paperboard and strawboard, which in August reached a total of 6,416,992 lbs., of the value of $284,349. The largest customer was China, which absorbed 3,077,556 lbs. ($112,010); the second place is occupied by Canada with 1,954,148 lbs. ($76,108); then follow Japan 373,195 lbs. ($38,420), Cuba 308,273 lbs. ($13,480), Kwangtung (leased territory) 186,138 lbs. ($5,560), Mexico 138,704 lbs. ($10,996), England 81,155 lbs. ($5,700) and Australia 75,026 lbs. ($5,909).

QUARTERLY EXPORT ISSUE—DECEMBER 6, 1923.

PUBLICITY AND PRINT

are inseparable. One could not exist nowadays without the other.

Newspaper Publicity is a necessity to the modern business. Publicity must, however, be undertaken systematically with the right journal or journals—journals with a recognised reputation.

The selling power of space depends upon a reputation backed by results, and these results must tell every time. Reputations are, however, not made in a day.

It has taken some forty years to establish the present-day reputation of the **Quarterly Export Issues** of the

British & Colonial Printer & Stationer

At the present time this Journal is the recognised overseas medium of the Printing and Allied Trades.

It circulates among buyers in the following markets:—

Australasia	**China**	**South America**
India	**Japan**	**Canada**
East Indies		**United States**
West Indies		**South Africa**

RESULTS

One of the most successful of our advertisers says:—

"It will no doubt interest you to learn that during the past few years we made considerable additions to and have extended our Export Dept. We thank you for the assistance that your journal has contributed towards this export business."—C. B., Ltd.

The next issue will be published on Dec. 6.

Can you afford to neglect this opportunity of extending your export trade?

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.

2.—It occupies a space of only six feet on the run, and is quite noiseless.

3.—The power required is such a small amount that it can be driven from any existing shafting.

4.—Centres of any kind or width can be worked on the machine.

5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.

6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

MACHINES SUPPLIED FROM STOCK.

Some Factors in Business Building.

Mr. H. R. Grubb (Governing Director of Messrs. H. R. Grubb, Ltd., Croydon), Suggests Many Points Worthy of Printers' Attention.

Printers to-day are increasingly realising the need for a higher standard of thinking and working, and in various parts of the country they are getting together to compare experiences and discuss ways and means of attaining that greater efficiency and serviceableness which the time demands. An address to this end was the principal feature of the November meeting of the Association of Master Printers of South-East London, held on the 13th instant at the Bridge House Hotel, London Bridge. The speaker was Mr. H. R. Grubb of Croydon, who contributed a thoughtful paper on "Some Factors in Business Building." There was a good attendance of members, Mr. G. Poulton, the president being in the chair. The Association's current business, which proved to be somewhat protracted, was first dispatched, and Mr. Grubb was then called upon to address the meeting.

What is Business Building?

Business building, said Mr. Grubb, is not snatching the bone from the other dog Primarily and essentially it is the creating of a good reputation, because basically all business building consists in creating a series of good impressions in the mind of the public, and there can be no solid, permanent business construction otherwise.

The human mind is a kind of mental card index system by which facts, impressions and opinions are being recorded and stored away, to which at some near or distant date reference will be made and on which action will be taken; and the firm that has succeeded in recording on the mental card indexes of others the most favourable record in regard to themselves and their product will in due course secure the business which they are seeking. A trader's most valuable asset is a good reputation.

Business Building is a Science

to a much greater extent than is commonly recognised. Chance is not in it, but law is dominant. However much it may appear to the contrary, everything is governed by law or principle, and successful business construction means conformity to certain definite principles with the knowledge that certain definite results must follow.

The true spirit of business is service—giving of your best both as to quality and quantity—and this spirit should exist both sides of the counter. He who gives to the community his best has the right (and he only has the right) to expect the community to give to him its best. He who glories in his ability to get the "best side of a bargain" has little to boast of if he only knew it. In good business both sides are entitled to, and should receive, equal satisfaction. For instance, to take advantage of another's unfortunate circumstance in order to gain a financial advantage in a deal is legalised robbery, and immoral. Giving your best to the other fellow, not getting the most from him, is the panacea for most of the troubles of to-day, whether as between employer and employed, or buyer and seller.

Business building factors may be classified into three groups: (1) Personal, (2) managerial, (3) constructional. And before actual constructive efforts can be successfully initiated it is essential that matters personal and managerial should be scientifically correct.

The Personal Factors.

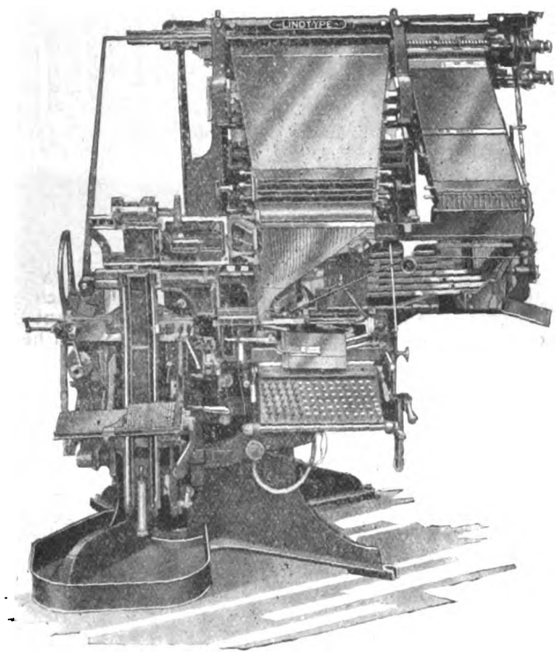
Primarily, the principal himself is the determining and essential element in every business, and his psychological qualifications will determine success or failure. If it were possible to make an accurate analysis of every man's mental and temperamental qualifications before he enters upon his business career, his success or failure could be pre-determined. Qualification, and not circumstance, is the factor on which all depends. The following are a few of the qualities (and their opposities) on which it is possible to make a forecast of one's career: Perseverance, energy, courage, ambition, judgment, concentration, observation, ability, reliability, are the guarantees of success; whilst their opposites, indolence, indecision, fear, apathy, prejudice, inability and unreliability are the certain forerunners of failure.

The Managerial Factors.

In this connection the efficiency of the principal is again the all-important factor, for he is, or should be, the mainspring of the whole concern—its dynamic force; and what he is, the staff in some degree will always be, for better or worse. Let us for a moment reverse the usual order of things and consider ourselves the staff. We will call the governor in "on the carpet," for a change, and will address to him a few pointed and very necessary remarks. We will tell him—"We have not felt at all satisfied recently with your methods and ideals, nor with the lack of thought and initiation displayed, and we are sorry to have to tell you that unless we see an improvement in these respects at an early date you will lose your job and we shall be compelled to appoint your successor. Instead of wasting time as you are doing and leaning so much upon your staff you would be better employed initiating schemes of business construction and organisation. If you are slack and undervalue the importance of time and energy, what right have you to expect better things from us? and if you fail in matters of initiative and resourcefulness, you must not expect us to make up the deficiency. We shall not speak to you again on the matter, and trust this will be a warning to you, and that we may see an early improvement. Otherwise you know the course we intend to adopt."

Although presented in that imaginative manner, the point will be obvious, viz.: That it is the principals who above all determine the tone and character of the whole business, provide the driving force and inspire or otherwise to a greater or less degree those in their employ.

Departmental Managers.



Not less important is the matter of efficiency of managers of departments. The standard of efficiency in the composing-room or machine-room will be very largely influenced by the efficiency of the managers of these rooms, and when it is remembered that in a department of, say, 12 or 20 men, the managers' standard is reflected so many times over, it will be seen that the total effect on the whole room is a matter of the greatest importance.

How long does it take to waste say £10 in a machine room on such matters as waiting for formes or stock, want of tools and small items of equipment, insufficient co-operation between the composing and machine departments, avoidable corrections on machine, spoilage of work for want of supervision, and so on? And how many customers may a firm lose in the course of a year through failure to deliver work to time, all because the management may be faulty? In the selection of managers for the various departments, salary is not the primary consideration, but efficiency.

Efficiency of Service.

What are you doing for your customers? Are you simply doing the job or are you giving a service? Our grandfathers did the former; our grandsons will do the latter, and they will be wiser than we. Give your customer your best. Instead of blindly carrying out his ideas—whether right or wrong, whether advisable or inadvisable—tell him what should be done. We know that the customer's coming to us and ordering work is not the end in view but only a means to an end, viz., the advertising of his goods or the announcing of an event, and it should be the business of the printer out of his special knowledge and experience of those matters to give his customers expert advice and assistance towards the end in view. Printers have so far displayed too much mechanical obedience and too little originality and suggestiveness.

LINOTYPE AND MACHINERY LIMITED
9 KINGSWAY
LONDON

It is essential that all plant should be the best of its kind, suitable, of course, to the particular kind of work being done or in view, with a margin of capacity beyond that actually required at the time or in the immediate future. The importance of keeping all machinery in perfect order cannot be overemphasised, and the danger of a serious accident due to such trifles as a loose screw or nut is of the greatest possible importance. Many a serious breakdown on a machine has been caused by neglecting a loose bolt. Adequate supply of material and small appliances is a means of preventing waste of time. Many employers appear to prefer to allow their staff to hunt round the room for appliances or material with which the works may be under equipped, thereby wasting money in labour which by the expenditure of a few pounds on equipment could be entirely avoided. Fifty pounds spent in this way may before long save hundreds of pounds loss of valuable time, especially with labour at the high price of to-day.

Reliability is another important managerial factor. Keep faith with your customer with regard to time. When proof or the completed job is required within any time humanly possible never let your customer down. Sometime ago a firm spent a lot of money in endeavouring to secure one who could have been a very big customer and on the first (and of course the only) order let him down very badly indeed in the matter of time with the result one might expect.

Find time to think quietly and leisurely. Many printing businesses are suffering for just this requirement. Work comes in, is hurried out either on account of pressure or because the price will not allow much time and thought, and the same routine goes on day after day and year after year, with consequently no time to spare to think out matters of organisation, development, equipment, etc. A couple of hours' quiet thought or consultation with departmental managers may mean hundreds of pounds saved in the course of a year by improved efficiency and organisation and a more scientific system of working. It does not pay for the principal of a business to be so busy with petty details he might easily depute to a clerk or a manager as to prevent him giving the necessary time and thought to the important matters of supervision and construction. Work less and think more. Depute to others all you possibly can and leave yourself free to be continually taking a general survey of methods and prospects if you wish to reach the high-water mark of successful business management and development. A monthly conference between the head of the firm and his manager, giving an opportunity for the free discussion of all problems arising from time to time, and the careful consideration of any suggestions that may be brought forward, will be found invaluable in the introduction of newer ideas, and by giving everyone the opportunity of showing his interest and ability in contributing by his thought and initiative to the efficient management of the business.

Constructive Factors.

With regard to the third group of factors in business building, namely the constructive, there are many points to which time will not allow reference to be made. The first essential, however, is that every job sent out should be in itself an advertisement for the firm. Do

printers fully realise the potential value of every customer? In every business there are two processes constantly going on, viz., (1) attrition, that is loss of customers through competition, closing of businesses and other causes, and (2) multiplication, a process too commonly ignored when considering business development and construction. In every well-conducted printing business, turning out a good class of work, out of, say, every fifteen customers one at least should bring or introduce another, and this process is operating like the growth of a seed, so that every customer may be regarded as an acorn from which may grow the potential oak. It would be easy to cite instances where from one small customer a large number of customers could be traced with an aggregate business amounting to many thousands of pounds, and these cases, instead of being isolated examples, are instances of the process continually going on to a greater or lesser extent in every printing establishment.

The question as to whether advertising does really pay seems to have been answered in the affirmative by practically all trades except that of printing. For while printers are busily engaged in advertising every other trade, it is the rarest exception to find a printer using it seriously to extend his own. Have printers really faith in their own medicine? If they have, why do they use it so little?

What is advertising? Not merely attracting attention as some seem to think. We may attract attention and excite either ridicule or admiration. The basis of all successful advertising must be admiration or at least appreciation. Now if a printer can produce and send out something which will excite admiration the result of that must be favourable to his own business. The public are asking for quality and are prepared to pay for it within reasonable limits. Then let quality and service be the tools which printers are to use in their advertising campaign.

Do not estimate the success or failure of your advertising schemes by their immediate results. What may appear at the time to be a disastrous failure may, after the lapse of several years, prove to be one of the greatest successes of one's lifetime.

Competition.

Why should the battle-axe of price-cutting be the chief and sometimes the only weapon used in competition? It should be the last, even if used at all. The better and more effective weapon is service. Price is not necessarily a criterion of value. There may be 5 per cent. difference in price but 20 per cent. difference in service. At the same time do not lay claim to better work than anyone else, because that is only another way of saying that other printers' work is inferior to yours. It may be quite true, but more likely it is not, and in any case it is bad form.

When soliciting a prospective customer, on what grounds do you ask for his business? His present printer may serve him badly, but for all he knows you may serve him worse. He may have to pay up very promptly now, but how does he know that you may not wait on the doorstep for his cheque the day after delivery? These are questions which must naturally occur to a prospective client, and it is essentially necessary when approaching him to be prepared with some solid reasons other than that of prices for the transference of patronage.

At the close of Mr. Grubb's address Mr. W. Whyte, secretary of the London Master Printers' Association, proposed in very cordial terms a vote of thanks, expressing regret that time did not permit Mr. Grubb to deal with other points he had wished to touch upon. This was duly seconded and was carried with applause.

In closing the meeting, the chairman reminded members that the December gathering which was to be held at the Bridge House Hotel, on Tuesday, December 11th, would take the form of a whist drive and concert. There would be no business. The reception would take place at 6.30 p.m.; whist would commence promptly at 7, followed by refreshments, during which and subsequently there would be a first-class concert. It was proposed to invite all members of the South-West and Thames Valley Districts and a friend each. Ladies would be particularly welcome and a room filled to overflowing would gladden the hearts of the chairman and his executives.

Printers' Managers and Overseers ASSOCIATION.

MANCHESTER AND DISTRICT CENTRE.

The Lanston Monotype Corporation Limited, under the direction of Mr. J. Lewthwaite, their progressive representative in the North, have been holding an exhibition in Manchester of the latest and modern Monotype, and other machinery of interest to craftsmen desirous of being in the van of printers. Naturally, the members of the above-named association who belong to the Manchester and District Centre organised a visit, when over fifty members went to 42, Albert-street, Manchester, and were enlightened in respect of a number of interesting machines.

Lanston Machinery Inspected.

One was the latest Monotype Composing Machine with D pattern keyboard, which composes and casts any size of type from 5-point to 24-point, and in any measure up to 60 ems of pica. This machine has become immensely popular, especially for tabular work with jobbing houses up and down the country. The DD keyboard enables composition in two measures and two sizes to be operated for at one operation. Books containing two type sizes are composed in one handling of the copy. The number of large firms who have installed and added to their installations have appreciated the value of this modern mechanical achievement.

A separate machine, but one that is an adjunct to the Monotype is the Monotype Type, Lead and Rule Caster, which casts type from 5-point to 36-point, giving an output on 24-point types of 38 lbs. per hour; leads and rules 1½-point to 12-point are cast and cut automatically to any length up to 25 inches, the output per hour, taking a 2-point lead as a basis, being 300 feet. Many firms have a similar machine attached to their Monotypes, and the Lanston people have brought out this special machine because they realise that it can be doing the work that will allow the Monotype to be giving greater output on valuable orders.

The Miller "High-speed" cylinder press, with automatic feeder, gives an output of 4,000 impressions per hour. Handles all grades of stock from thin bank to cardboard and combines quality with output. It is a wonderfully fast automatic flat-bed, is easily operated, movements are free from jar or vibration without the sacrifice of impressional strength, register, distribution of ink or other important qualities essential to the production of the highest quality of multi-colour and half-tone printing. We watched it produce perfect sheets full of half-tone blocks, and had some of the sheets run through again to test the register, the only difference noticeable being an additional supply of ink owing to double printing. By direct gearing of the cylinder with the bed throughout the printing stroke, perfect register is assured. The reciprocal movement of bed and cylinder, each of them travelling but half the distance, serves to slow down the peripheral speed of the cylinder. Loss of register between feed guides and grippers is therefore never experienced. Samples of four-colour process work showed perfect register at speeds ranging from 3,600 to 4,000 impressions per hour. The marvel is the inking arrangements and the simple and reliable roller adjustments, the forme rollers clearing the maximum size forme in both directions.

The Miller Suctiontype Feeder is designed to suit the high speed press, having positive air control of the sheet from pile to guides, right or left register and automatic trip and brake actions. The stock table holds 26 inches of stock, and it is not necessary to be exact in setting the pile as any distance up to quarter inch will successfully lift the sheets and have them carried into register. When the pressman desires to make ready he instantly detaches the feeder, runs it back on rails, and has full command of the cylinder. When the compositor or pressman requires access to the forme or ink duct he can swing away the delivery and operate with ease. The delivery table automatically lowers to receive stock 30 inches high printed side upwards, so that the pressman has full command of the work. A control lever puts the Miller variable speed drive into such a position that speeds from the minimum to 4,000 impressions per hour are under control.

The Craftsman Perfect Register Platen is fitted with an automatic sheet feed, capable of producing 2,400 copies per hour, three and four-colour work with accurate register being printed on it. The small automatic device for carrying the sheet into register makes up for any defect in the setting of the feeder by an absent-minded pressman. Several members had sheets repeatedly run through and admitted that it was far ahead of some other automatic feeders.

The Boston Wire Stitcher is practically instantaneous in adjustment from one thickness of work to another, all parts being easily accessible and interchangeable.

The Miller Saw Trimmer claims to "do everything"—will saw, trim, mitre, grind, undercut, mortise, notch, bevel, rout, rabbet, drill, jigsaw, broach and plane in either wood or metal. Also it will help every craftsman to live longer and enjoy life as well as pay a good dividend to the employer.

The Mentges Folder is an all-round machine for newspapers, and will fold, paste, trim and inset 4 pages to 12 pages, from 1,800 to 2,700 folds per hour, handling sheets 18 inches by 24 inches to 44 inches by 56 inches.

The Job and Circular Folder operates up to 3,000 complete folds per hour and takes any sheet from 5½ inches by 6 inches to 22 inches by 32 inches.

Tea and a Lecture.

After close upon three hours' feast of mind, members were led by Mr. Lewthwaite to the Winchester Restaurant, Deansgate, where a substantial tea made everyone satisfied, an adjournment being made later on whilst arrangements were completed for a lantern-lecture on "The Monotype." Mr. R. C. Elliott, who, we believe, had something to do with the perfecting of the "DD" keyboard, was the lecturer, and his charm of manner, winning delivery, and enthusiasm for mechanical devices, kept his audience at attention for over an hour. He began with a description of the Church Mechanical Composing Machine of 1820 and carried the mind from one advancement to another until he reached the perfect machine, the Monotype.

Mr J. H. Nuttall said the Monotype output was used for first-class work, and he wondered if the metal could be hardened, especially for stereo work. There was no better face of printing surface from any mechanical machine than the "Monotype."

Mr. J. Lewthwaite replied that each house had metal mixed to suit its own requirements, some firms preferring a soft metal to a hard one. The standard Monotype metal was 10 parts tin, 20 parts antimony, and 70 parts lead. Some firms failed to have their metal renewed, and it was natural, if metal was robbed of 60 per cent. of its goodness, that work could not be done that was anything like efficient.

Mr. R. Bates said the metal difficulty was met with at various times, and each one could make it hard or soft. Prejudice in everything should be avoided, and if each person sized up his requirements he would eventually find the right thing. No machine gave better alignment when in the hands of a craftsman who took an interest in his work. If the human factor could be done away with in the alignment of faces, the wonderful die cases would last many years longer than they did. He, the speaker, probably set up more 10-point matter than any firm in the district, and he had cases that had been in constant use for more than nine years. As to whether a firm should put in a Monotype or slug machine, it was a question for each firm to settle according to the class of work for which they catered. Many offices would find that the combination of the two kinds would meet all their requirements.

Mr. O. Whitehead (Oldham), in discussing the Craftsman Perfect Register Platen, asked if it were possible to print a full half-tone on same, as he thought there might be a difficulty in the lifting.

Mr. W. J. Beck replied that the example they had in the show room of a solid black forme required greater lifting and pulling power than the half-tone. Those sheets had been printed on the platen as a test, and they had come out perfect. He had never had a report of the machine failing, which was proof that wherever it was installed it was giving satisfaction.

Mr. E. L. Pitts and several others asked questions on the six machines they had seen demonstrating, and the final agreement was that very little could be added in the way of criticism as they were so excellent in their construction.

THE TENTH BRITISH INDUSTRIES FAIR·1924

THE WHITE CITY SHEPHERD'S BUSH, LONDON, W.12

APRIL 28–MAY 9, 1924

"For us, therefore, the vital problem is the problem of markets, the restoration of old markets, but still more, the development of new markets."

Sir Philip Lloyd-Greame (President of the Board of Trade), Imperial Economic Conference, 2nd Oct., 1923.

"We must seek to develop our markets to the fullest extent possible. The more we can develop them within the British Empire the better."

Mr. W. L. Mackenzie-King (Prime Minister of Canada), Imperial Economic Conference, 2nd Oct., 1923.

"I have tried to indicate that it would be a serious thing to British Trade if the position they have at present in the Dominion markets were lost to them."

Mr. S. M. Bruce (Prime Minister of Australia), Imperial Economic Conference, 9th Oct., 1923.

FOR PARTICULARS APPLY TO THE SECRETARY, BRITISH INDUSTRIES FAIR, DEPARTMENT OF OVERSEAS TRADE, 35, OLD QUEEN STREET, S.W.1.

Trade Notes.

Partnership has been dissolved between C. D. Beckwith, W. D. Bowman, P. L. Forbes, and A. C. Mason, publishers, 99, Shoe-lane, London, E.C.4, under the style of the Film Story Publishing Co., so far as concerns P. L. Forbes; also between A. N. Vesty, G. Vesty, L. Vesty, and S. W. Vesty, cardboard box manufacturers, 9, Evington-street, Leicester, under the style of Vesty Bros, so far as regards A. N. Vesty.

A fire which occurred on Monday at a shop in Woodstock-street, Oxford-street, W., is said to have started in the basement of the building occupied by Messrs. Gurney, printers. A number of girls working on the premises were temporarily cut off by flames and smoke. Happily no serious hurt occurred.

Representatives of the London Master Printers' Association and of the London Society of Compositors are meeting in conference to morrow (Friday) to endeavour to reach a settlement in respect of the proposals which were at the last conference referred to the executives, regarding machine composition in periodical houses. The L.M.P.A. arranged for a meeting of periodical houses to be held on Wednesday to ascertain, prior to the conference, the views of the houses likely to be affected by the proposals.

Arising out of the last wage settlement, negotiations are continuing between the L.M.P.A. and the National Society of Operative Printers and Assistants on the question of rates for assistants on the larger rotary machines, chiefly in use in periodical houses.

The London Central Districts Association of Master Printers has arranged to hold its sixth bohemian concert, under the presidency of Mr. Geo. Eaton Hart, at Stationers' Hall, on Tuesday, December 4th, at 7 p.m. The reception will be at 6.30 p.m. by the president, vice-presidents and committee, and in the course of the evening Mr. W. Howard Hazell, J.P. (president of the L.M.P.A.) will deliver a short address.

The Association of Master Printers of South East London are arranging an attractive special gathering by way of their December meeting, which is to take place on December 11th. Business will be eschewed, and the evening devoted entirely to social amenities, including a progressive whist drive followed by a first class concert. Members of the South-West L.M.P.A. and the Thames Valley M.P.A. are receiving invitations, and a big rally of printers and their ladies is confidently anticipated.

The Printers' Managers and Overseers (Parent) Association held a very successful celebration of their 30th anniversary on Tuesday evening. The event took the form of a whist drive, at Slaters' Restaurant, 192, Oxford-street, where there was a big rally of members and friends. During the evening a presentation was made to the president, Mr. S. M. Bateman, the vice-president (Mr. R. H. Berry) handing to him a gold albert chain and to Mrs. Bateman a wristlet watch. A report of the proceedings will appear in our next issue.

It is announced that the *Daily Herald* will continue publication during 1924, and for an indefinite period afterwards.

Announcement has been made in the *Evening Standard* that Sir Edward Hulton has presented £75,000 as a farewell gift to the staff of the newspapers he recently sold.

Mr. John H. Harris, the Liberal candidate for North Hackney, was on Tuesday granted an injunction against the *Hackney and Stoke Newington Recorder*, in respect of a libel contained in an article on Mr. Harris's candidature.

A case, said by the Recorder, Sir Ernest Wild, K.C., to be of great importance, in that it involved the liberty of the Press, was decided at the Old Bailey, on Thursday, when William Parker Evans, aged 42, the editor of the *Sporting Times*, was sentenced to four months' imprisonment as a first-class misdemeanant, and in addition ordered to pay £50 towards the cost of the prosecution for publishing and posting an indecent or obscene libel.

On Monday night the transport staff of the London *Star* held their first annual dinner. Mr. Josiah and Mr. Donovan, for the department, spoke of the good relations existing between the transport men and the firm, and Mr. B. F. Crosfield and Mr. H. Murch, suitably responded.

The death occurred last week of Mr. E. T. W. Dennis, of the well-known printing firm of E. T. W. Dennis and Son, Ltd., Scarborough.

The death is announced from New York of Mr. Frederick Dixon, lately editor-in-chief of the *Christian Science Monitor*, editor of the *International Interpreter*, and a frequent contributor to English periodicals.

Mr. E. A. Judges formerly editor of the *Surrey Times*, Guildford, has died suddenly at Hampstead.

Mr. W. C. Smart, who retired recently after 52 years' service with Messrs. W. H. Smith and Sons, died on Monday after a brief illness. The late Mr. Smart rose from the position of junior assistant to be head of the newspaper department of the firm.

Mr. John R. Theakston, a well-known Hull stationer died suddenly while travelling in a crowded railway carriage to business on Saturday morniag.

Mr. Hugh M'Whinnie (76), of Barnstaple, Devon, proprietor of the *North Devon Herald*, at one time on the *Liverpool Daily Post*, and afterwards editor of the *Bristol Daily Mercury*, and *Bristol Evening Echo* left £7,035 (net personalty £3,548).

The Swedish Postal Director states that Sweden is returning to pre-war postal rates next autumn.

Erinoid, Ltd.—Mr. Andrew Binnie, chairman of the company, presided at the annual meeting of shareholders held in London recently. He referred to the varied uses of Erinoid, and reported that business had picked up again. Speaking of paper, the chairman said it "has again declined sharply in value, and we have, therefore, written down our stock of specially prepared paper. This is an item of loss which cannot recur, for this special paper is now at the level of packing paper and will soon be used up." It was remarked that owing to a prohibitive tariff the company had to transfer their French trade to a French company. The payment of a dividend at the rate of 4 per cent. was agreed to.

Trade Union Matters.

Printer and Compensation Claim.—The secretary of the Carlisle branch of the Typographical Association has reported to the Executive Council that a compensation claim of a member who had a finger amputated in a guillotine machine has been placed in the hands of a solicitor. The insurance company have admitted liability under the Workmen's Compensation Act, but deny liability under the Employers' Liability Act, contending that there was not a defect in the machine, and that it should be inspected by an expert. The Executive Council advised the inspection of the machine by a qualified guillotine machine operator.

Printers and Free State Grants.—The Ministry of Industry and Commerce of the Irish Free State have informed the officials of the Typographical Association that, as a result of the representations made to the Ministry, a grant would be made to the Association of 6d. for each week of benefit under the unemployment insurance scheme in respect of branches within the area of the Irish Free State.

Those whose interest in paper is sufficient to impel them to study figures will have noted the disparity between pre and post-war imports and exports as they touch the various branches of papermaking. They will have seen that as against the year 1913 our exports for every grade of paper except wrappings have increased, while wrappings themselves have decreased to the extent of 40 per cent. approximately. Turning to imports, it will have been noted that they have not increased in proportion to our exports. Apart from the miscellaneous collection of papers and goods which come under the classification of "other sorts," only coated papers show a greater import for 1923 than was recorded in 1913. Particular interest attaches to wrappings, for it is here we are inclined to accept foreign imports as being responsible for the bad state of our own mills. Actually the imports so far this year are slightly under the figures for the same period in 1913.

RATES

For Motor Drivers, Carmen and AUTO-CYCLE DRIVERS.

The new agreement signed last week between the London Master Printers' Association and the London Central Branch of the National Union of Printing, Bookbinding, Machine Ruling and Paper Workers contains the following stipulations *re* wage rates for motor drivers, carmen and auto-cycle drivers:

Motor drivers, £4 3s 6d. per week. If driver is a member of the Paper Workers' Union, the firm is to have the option of sending another member of the Society with the van, whose rate shall be the porter's rate of £3 11s. per week; carmen, £3 19s. per week; auto-cycles, £3 10s. per week.

Overtime Rates: The Overtime Agreement to apply, it being understood that in the case of periodical houses, the Society undertakes to make special arrangements in accordance with the existing agreement between the L.M.P.A. and the Society.

The above rates and conditions to operate on and from the pay-day of week ending December 8th, and to apply to all members of the Society employed by London Master Printers' Association members within the recognised London area. In any firm where better conditions prevail, such conditions shall not be prejudiced by this agreement.

Envelopes for Printed Matter.

Protest Against New Regulation.

The following statement was made last Thursday by Mr. A. E. Goodwin on behalf of the Master Printers' Federation: "At a special meeting of the Council of the Federation of Master Printers held to-day in London a resolution was adopted calling attention to the unemployment that was being created by a new postal regulation, which is to come into force on January 1st, restricting the use of envelopes for the despatch of printed matter to a small size. Mr. A. E. Goodwin stated that a leading firm of envelope makers now had their machines standing idle, and had discharged a number of their employees because of this proposed regulation, orders for the old pattern envelope for use after January 1st having ceased. The attention of Parliamentary candidates is to be called to the proposed legislation to prevent British advertisers posting printed circulars and catalogues on the Continent, and they are to be urged to support this."

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

Egypt.

The British Commercial Agent for Egypt reports that the Egyptian Government Press, Cairo, is inviting tenders, to be presented by noon on December 20th, for the supply of various binding and printing materials required during 1924-25, including binding and printing cloths, bookbinders' muslin, eyelets, glue, starch for bookbinders' paste, cotton tape, letterpress ink, roller composition, type-metal, etc. United Kingdom firms interested may obtain further particulars as to conditions of tendering, specifications and samples of the cloths required, on application to the Department of Overseas Trade.

The British Commercial Agent for Egypt reports that the Egyptian Government Press are inviting tenders, to be presented by December 3rd, 1923, for the supply of paper and Bristol board. Applications from United Kingdom firms for further particulars should be addressed to the Department of Overseas Trade, 35, Old Queen-street, London, S.W.1. (Reference No. 11832/F.E./M.C (2).

Chile.

A British commission agent in Santiago is desirous of representing British manufacturers of news-print paper. (Reference No. 557).

The Art of Typographic Display

West and North-West London Exhibition of Printing.

The enterprise of the Association of Master Printers of West and North-West London met with deserved success on Thursday evening last, the occasion being the Association's "Specimen Exchange and Exhibition of Printing." The lecture hall of the Westbourne Park Institute provided a suitable venue, walls and tables being utilised for an extensive display of members' work, whilst sitting accommodation was available for a large gathering of master printers and their employees, all of whom listened with keen interest to an address on "Typographical Display," by Mr. H. B. Naylor.

An Exhibition to be Proud Of.

Members of the Association met at 6 o'clock to dispatch current business, and at 6.30 the hall was open for the exhibition, visitors being allowed full liberty to wander around and inspect the numerous exhibits. At the same time light refreshments were provided, under the hospitable direction of Mrs. Emlyn Jones, assisted by the Misses Woollston. The exhibition proved to be a revelation both to visitors and to members, the quantity and quality of the printing specimens submitted being most gratifying to the originators of the event, and, on the whole, highly creditable to the printers of West and North-West London. The work displayed covered so wide a field that a mere enumeration of the different classes of printing represented would make an extensive list. Exhibits ranged in size from a visiting card to a 16-sheet double crown poster, and examples were to be seen of almost every printing process now in use.

The Many Exhibitors.

Further to the commendatory remarks made above may be added a brief indication of the outstanding features of the individual showings. One noteworthy exhibit consisted of an admirable selection of cinema posters and film synopses in colour by Mr. R. F. Hunger (Hampstead-road). Messrs. Langley and Sons (The Euston Press), contributors of the largest exhibit, had a strong showing of letterpress posters, other items being coloured brochures and show cards. An exhibit indicating a big range of sound general printing was that of Messrs. Morton, Burt and Sons (Bayswater and Willesden Green), salient features being magnificently produced art bookwork, as well as posters and commercial printing in colour. Messrs. Baines and Scarsbrook Ltd. (South Hampstead) had a varied and very attractive showing of booklets, posters and commercial work. Messrs. Augener Ltd. (Chiswick) had an interesting exhibit of music printing, including covers as well as text. Messrs. Sidders and Son (West Kilburn) showed artistic catalogue work, Mr. A. S. Huth (Cricklewood) some very fine lithographic and collotype colour printing, Mr. F. A. Perry (West Ealing) examples of commercial work, Mr. Harold Pearce (Harrow) some exceptionally pleasing series of commercial stationery, together with booklets and calendars, Messrs. Warren Hall and Lovett (Camden Town) reports and pamphlets, Messrs. Philp and Sons (Harlesden) a variety of commercial printing, and Messrs. King and Hutchings Ltd. (West Ealing) catalogues and booklets.

Most of the above-mentioned firms were also represented in the book of specimens Others contributing to the book were: Messrs. Barnard and Crannis, Ltd. (Soho), Davis and Son (Shepherd's Bush), J. Davey and Sons (Soho), Hunt, Barnard and Co., Ltd. (Marylebone), Leveridge and Co. (Harlesden), Lowe and Brydone (Printers), Ltd. (Willesden Junction), H. W. Searle (Hammersmith), J. Wakeham and Co., Ltd. (Kensington), W. A. Webb (West Ealing), and the Westminster Press (Paddington).

An out-of-the-ordinary exhibit was one put forward not as an example of work now being done, but rather as illustrating how *not* to print—a sort of typographical chamber of horrors. This was a framed collection lent by Mr. J. R. Burt of odd pieces of jobbing printing, hand bills, cards, etc., whose jumbles of types, extraordinary lay-outs and weird general effects gave the sensitive typographer cold shivers down the spine.

As visitors inspected the numerous exhibits, one heard many expressions of admiration at the excellence of individual items displayed and at the great variety of work being executed by printers of the district. Indeed it was scarcely an exaggeration to remark, as did Mr. Naylor, that the exhibits were such as would do credit to any firm either here or in America.

Very appropriately, the meeting was held in the midst of this display of printing. The chair was taken by the president, Mr. J. Emlyn Jones, who was supported by the hon. secretary, Mr. J. R. Burt.

Mr. Emlyn Jones, in opening the meeting, made fitting reference to the death that week of Dr. Clifford, the veteran Nonconformist minister with whose name Westbourne Park Chapel is so closely associated. After paying high personal tribute to Dr. Clifford's lovable character, the chairman asked all present to rise in silence as a token of respect, and this was done.

Introducing Mr. Naylor, Mr. Emlyn Jones explained that a number of smaller exhibits of members' work had been mounted and bound together into book form, so that each contributor to the exhibition might have a copy, and an exchange of specimens thus take place. Mr. Naylor, whose ability and taste they knew, would in the course of his remarks, make special reference to these examples.

Address by Mr. H. B. Naylor.

Referring first to a few general points in connection with good printing, Mr. Naylor suggested that the more the printer knew about a customer's business, the better he could handle his work. If the customer showed the printer his wares, and perhaps even conducted him round the factory, there was greater likelihood of the printer's producing work that would do credit to the customer and himself. All printed matter could be regarded as advertising. A well-designed and well executed book was an advertisement in more senses that one for the printer, and for all who had to do with its production and sale. The printer's letter-heads, too, should carry the conviction that the printer knew his business; the letter-head, incidentally, was one of the cheapest forms of advertising. In the designing of printing, however it should be remembered that good conventionality was infinitely better than bad originality.

Turning then more particularly to the subject of typographic display, Mr. Naylor remarked that this stood for something more than the orderly arrangement of types, which would not suffice if the illustrations were out of keeping, or badly executed, or if paper or ink were unsuitable, or the printing bad. He then proceeded to review individual examples of printing contained in the book of specimens, the brief comments of praise or criticism directed to these examples serving well to illustrate a number of important principles of typographic design. Whilst some specimens came in for unmitigated praise, others were referred to as containing faults that should be avoided, such as ineffective illustrations, printing on too large a size of paper, the use of stock of unsuitable surface, wrong choice of ink, the faulty use of ornamentation, and so on.

Mr. Naylor was faced with rather a ticklish proposition in having to criticise work whose producers were many of them in his audience. However, he showed so much ability, tact and constructive helpfulness in his way of handling the matter that his remarks gave general satisfaction, and he was enthusiastically applauded at the close.

The Discussion.

The chairman, in throwing the meeting open for questions and discussion, remarked that faults were palliated to some extent by the fact that the specimens shown were not produced for the purpose of exhibition, but were examples of work turned out in the course of everyday business. Moreover, it should be remembered that the customer did not always allow the printer his own way in the matter of choice of colours and so on.

One speaker suggested that the printer should, as a rule, impress upon his customer that, in the production of copy, the less he said, the better the printed matter would be.

Mr. Naylor approved the idea that to reduce the number of words would generally facilitate good display, and went on to urge the desirability of the printer's having more to say in the designing of the matter he produced.

Mr. Burt supported this view, remarking that the West and North-West Association and others were giving serious attention to the question of extending the printer's service. Printers, he said, should endeavour to convince their customers that they could carry out work satisfactorily without the aid of the expensive advertising man, who often had not such a good idea of printing possibilities as the printer to whom he dictated.

Mr. Sidders further urged the need that printers should insist on being allowed to do creative work and not consent to be mere servants. The advertising man said to his clients "I am a specialist. You are going to have this printing as I want it done, because I have to sell your goods." Printers should take a stronger line, and not weakly acquiesce in customers' suggestions. The printer who insisted upon his status as a specialist was more likely to gain the customer's confidence and to keep work.

Mr. J. D. Wise complimented the Association on the exhibition as a whole, and on

A Corner of the Exhibition.

Digitized by Google

the special artistic merit of some examples shown. In the course of his remarks he expressed his pleasure at seeing so many of the younger workers present. Pointing out the increased educational advantages of the present day, he made a rousing plea for the best use of the opportunities available.

Mr. Scarsbrook remarked that he thought this the most inspiring craft meeting he had ever attended, and he complimented Messrs. Burt and Emlyn Jones upon the success achieved.

Mr. F. A. Perry proposed a very hearty vote of thanks to Mr. Naylor, expressing the hope that this first exhibition might be the precursor of many. Mr. Pratt seconded, laying stress on the fact that the exhibition had provided a happy opportunity for the meeting of employers and employed, such gatherings being of mutual advantage. The motion was carried enthusiastically.

After Mr. Naylor had briefly responded, a very cordial vote of thanks was also passed to the chairman and Mr. Burt, the motion being proposed by Mr. E. N. Paul, and seconded by Mr. Beale.

The meeting ended with responses from Messrs. Burt and Emlyn Jones. The former remarked that the object of the gathering had been expressed as being "to cultivate an interest in efficiently executed work, and create a standard in the district that will merit increased custom." He thought that object had been attained. He went on to express his appreciation of the attendance of so many employees, and suggested that on another occasion it might be possible to have an exhibition lasting more than a single day, and perhaps thrown open to the public. Mr. Emlyn Jones cordially associated himself with Mr. Burt's remarks, adding a few words of personal appreciation of the enthusiasm and hard work shown by their secretary.

Electrotypers and Stereotypers

MANAGERS & OVERSEERS' ASSOCIATION

The usual monthly meeting of the above Association was held at the headquarters, St. Bride Institute, Bride-lane, E.C 4, on Tuesday of last week, Mr. A. Chadwell (president) occupying the chair.

After the reading of the minutes, Mr. J. Parker proposed a very hearty vote of thanks to the secretary and the stewards for the able way in which the annual dinner arrangements had been carried through.

Very cordial assent was given to the resolution, accompanied with expressions of appreciation from several of the members.

Mr. A. T. Padbury (Messrs Bradbury, Agnew and Co.), who was elected to membership at the last meeting of the Association, made his first appearance amongst the members, and received a warm welcome from the chairman.

Before discussing several matters privately concerning the Association's welfare, the question of the members' informal dinner was considered. Speaking on the matter, the chairman explained that the success which had attended last year's event justified them in repeating the function this year. He said there were several of their members whose business arrangements would not allow them to attend the annual gathering and ladies' night, so that an evening other than Saturday on which all the members could attend would be most acceptable.

It was then agreed that this event should take place on a Monday in February, and that Messrs. J. Craske, W. M. Forsyth and H. Crossland be appointed stewards.

About forty members of the Edinburgh Printers Managers' and Overseers' Association paid an interesting visit to the Inveresk Paper Mills, Musselburgh, on November 16th. The visitors were very pleased with all they saw, being conducted over the mill by Messrs. Swift and Wood, members of the mill staff. Mr. Peter Henderson, on behalf of the Printers Managers' and Overseers' Association, has written to Mr. C. Snelling, the managing director, thanking him for the permission given to visit the mill and expressing the opinion that it had enabled the printers to appreciate the papermakers' difficulties.

Shares (£5) of the St. Neots Paper Mill Co., Ltd., were sold by auction recently at from £7 2s. 0d. to £8, the average being £7 8s. 7d.

The large profits made by retail tradesmen on paper which is weighed with foodstuffs is commented upon by the *Daily Chronicle*. In the case of coffee, it is stated, the grocer is selling paper at half a crown or even more a pound. The people who get most for their paper are, probably, the sellers of cooked meats, which may be anything up to 4s. 6d. a pound.

You'll never become a partner unless you feel you are a part of the enterprise.

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies, Machinery for Sale and Wanted, Businesses for Sale and Wanted, Partnerships and Investments, Miscellaneous.

One Insertion **3/0**
Three Insertions **6/0**

For every line exceeding three lines **6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion **1/6**
Three Insertions **3/0**

For every line exceeding three lines **6d**

Sales by Auctions, Tenders, Patents for Sale, Legal and Financial Announcements

Per line **1/0**

Replies may be addressed to Box Numbers, Office of the "British and Colonial Printer and Stationer," 58, Shoe-lane, London, E.C.4, for which a fee of 6d. is charged to cover Postage of Replies.

Cheques and Post Office Orders to be crossed and made payable to STONHILL & GILLIS.

Telegrams: Stonhill, Lud, London.

United States—LOCKWOOD TRADE JOURNAL CO., 10, East 39th-street, New York.
Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, NOVEMBER 29, 1923.

Boosting Better Printing.

WITH a great many printing presses straining under the rush of election work, the desideratum most prominently in printers' minds at the moment is speed. The customers who have been bringing in their orders for political printed matter of all kinds may appreciate tastefully planned and perfectly executed work, but their main concern is to have the stuff out at the earliest possible moment, so as to make the utmost use of the short time available for electioneering. But though the advantages of speed may momentarily be in the foreground, the fact remains that a consistently prosperous industry must be broadly based on excellence of craftsmanship. In the present difficult circumstances it is the more creditable to the Association of Master Printers of West and North-West London that so large a measure of success attended their "Specimen Exchange and Exhibition of Printing," of which we publish a full report in this issue. Added to the election handicap was the fact that it was possible to give only comparatively short notice to the intending exhibitors, and the Association's excellent display of print was, therefore, all the more remarkable. The success achieved will doubtless spur the same Association to further efforts in this direction, and it should also serve as a good example to other groups of craftsmen; for the exemplification and discussion of the principles that govern artistic and effective printing cannot fail both to improve craftsmanship and to benefit business.

* * *

Colour Printers' Difficulties.

STRETCH in paper is the chief enemy of the colour printer who is called upon to superimpose several printings in exact register. A great deal of the offset printing now being performed is executed in colour and accurate register is imperative. Uncoated paper is superseding art and chromo paper to a very considerable extent; and as there is a greater tendency for uncoated papers to be affected by atmospheric conditions, it stands to reason that there is need for greater care in the preparation of paper to be used for colour printing on the rotary offset press. Quite recently we have known of 20 per cent. of a large order being spoiled through bad register caused by the effect of air humidity. If a batch of paper stretches after having received its first impression through the press, it is practically impossible to get it right by dodging.

* * *

Trouble from Stretch.

THE problem of paper stretching is one worth a very full and detailed investigation by some competent member of the paper industry. From time to time snatches of information come along, and most of the extant text books have a scant reference to the principles underlying machine and cross way divergencies. German students have investigated the moisture absorptive capacity and susceptibility to expansion of the ultimate fibre. Not a great deal of research has been carried out on the finished paper, or at least no very definite conclusions have been arrived at. From the selection and blending of the raw material to the final operation of transporting by sea or rail, practically every phase of manufacturing treatment has an influence on ultimate susceptibility to atmospheric conditions. There is sufficient research work of a fascinating nature to keep some student of papermaking well employed for a long time. From a practical and commercial point of view, the incentive to undertake such work is provided in the fact that modern developments in the printing industry tend to bring into greater use for colour printing the very classes of paper that offer the least resistance to expansion or contraction.

* * *

Paper for Election Printing.

THE paper merchants have been wonderfully quick to seize the sales opportunities presented by the present General Election. Within a day or two of the announcement of the Dissolution, sample sets of papers specially prepared for electioneering literature and clearance lines of suitable types of paper were in the post to printers all over the country. Heavy stocks of appropriate papers, boards and envelopes were distributed by the larger houses to their various provincial depots. Certain mills immediately arranged for consignments of stock to be held at wharf or store for the convenience of their agents in local spheres. The whole essence of election work is speed and accessibility. Stocks in London or at mill are little use to the printer in Newcastle who is given two days to complete an order. Thanks to paper trade initiative, there is very little in the way of paper or board the printer may require that he will not find on his doorstep.

* * *

Paper Imports Still Rising.

THE receipts of paper and cardboard at British ports during October show an upward tendency. Amounting to 1,404,877 cwts., they not only register increases respectively of 374,774 cwts. (36·3 per cent.) against the corresponding month last year, and of 606,861 cwts. (76 per cent.) compared with October two years ago, but constitute the highest monthly figure since July, 1920, when the imports stood at 1,424,768 cwts. Printings and writings (549,193 cwts.) were the largest individual item during the month, representing a proportion of 39 per cent. of the total imports, and exceeding October's figure of twelve months ago by 211,525 cwts. Packings and wrappings (372,925 cwts.) occupy the second position, amounting to 26·5 per cent. of the quantity received, while the third place is secured by strawboards

Digitized by Google

(293,714 cwts.) 20·9 per cent. Imports of packings and wrappings and strawboards were larger than was the case last year. The value of the month's imports—£1,474,549—indicates increases of £357,769 (32 per cent.) over October last year, and of £497,131 (50·8 per cent.) contrasted with October two years ago. During the first ten months of the year the imports reached 10,189,838 cwts., an increase of 1,265,277 (14·1 per cent.) compared with the corresponding period of last year. Shipments of packings and wrappings (3,177,916 cwts.) to this country during January to October have been on a very large scale, exceeding those of the corresponding period last year by 880,327 cwts. The ten months' value—£11,061,870—marks an increase of £982,527 (9·7 per cent.) contrasted with the former ten-monthly period.

Chief Sources of Supply.

THE outstanding feature of the shipments of printings and writings during the month was the heavy arrivals from Newfoundland, amounting to no less than 214,645 cwts. This figure represents a proportion of 39 per cent. of the imports of this class of manufacture and a rise of 137,005 cwts. compared with the same month last year. With the exception of a slight increase on the part of Sweden, consignments from the usual sources of supply were on a similar scale to those of twelve months ago. With regard to the imports of packings and wrappings, the chief source of supply during the month was Germany, shipments from that country increasing from only 25,401 cwts. last year to 135,627 cwts. last month. As a matter of fact, Germany appears as the only country with increased shipments of this class of goods during the month.

Paper and Cardboard Exports.

FROM the point of view of volume the exports of paper and cardboard last month appear eminently satisfactory. As regards individual items, however, it is evident that, with the exception of printings, considerable leeway is necessary to be made up before the export trade can be said to be in a prosperous condition. The October figure of 500,137 cwts., besides closely approximating a pre-war monthly average, registers an increase of 234,854 cwts. (88·5 per cent.) compared with October last year, and an excess of 379,193 cwts. (313·5 per cent.) over the same month two years ago. Printings sent abroad during the month (353,758 cwts.) mainly account for the big figure in the October returns. They not only show an advance of 202,084 cwts. compared with October last year, but register a proportion of 60·6 per cent. of the total quantity despatched abroad during the month.

Overseas Markets.

WITH regard to oversea markets, the shipments of printings to Australia are again the principal feature of the returns, for which the preference given to news-print of British manufacture is, of course, responsible. During the month, the receipts to the Commonwealth alone, amounting to 238,799 cwts., exceeded by 123,840 cwts. the consignments to all the other colonial and foreign markets combined; they also show an advance of 169,879 cwts. on the quantity sent to that market last year. New Zealand, British India and British South Africa have been larger purchasers of this class of paper, while less has been sent to Canada, Ceylon and the Straits Settlements. During the month printings were received by British Possessions to the extent of 315,599 cwts., as compared with 38,159 cwts. by foreign countries, whereas in October last year the former markets absorbed 115,022 cwts. and the latter 36,652 cwts. From January to October no less than 1,284,470 cwts. of printings have been despatched to the Australian markets, as against 459,271 cwts. in the corresponding period last year.

Personal.

SIR EDWARD M. ILIFFE, managing director of Messrs. Iliffe and Sons, Ltd., has been returned unopposed as Conservative member for the Tamworth Division.

IN addition to Sir Edward Iliffe, the London Master Printers' Association has chances of being represented in Parliament by several others of its members who have been adopted as candidates. These include Sir G. Rowland Blades (Epsom), Mr. A. E. Newbould (West Leyton), Mr. E. E. Alexander (East Leyton), and Mr. A. H. J. Conwick (Chippenham, Wilts).

MR. W. H. SESSIONS, managing director of the Ebor Press, York, is standing as Liberal candidate for Thirsk and Malton.

MR. FRANK MURRELL, past president of the Cardiff Master Printers, is contesting Weston-super-Mare in the Liberal interest.

MR. RAMSAY MUIR, editor of the *Weekly Westminster*, is standing as Liberal candidate for Rochdale.

SIR CHARLES DARLING, late justice of the King's Bench Division, will be the guest of the evening at the annual dinner of the London District of the Institute of Journalists, to be held under the presidency of Mr. Bernard Weller, on December 15th, at the Hotel Cecil.

SIR FREDERICK BOWATER is finding the strain of business too much for him after his recent illness and therefore proposes to seek rest and health in a two or three months' sojourn in Egypt and the South of France. It is hoped this will have the desired effect.

THE dinner to Mr. T. P. O'Connor by the Irish Literary Society, which was to have been held at the Florence Restaurant, Rupert-street, W., on Sunday, has, at his own request, been postponed until Sunday, December 2nd, owing to the Election.

MR. W. V. RIVERS, proprietor of the *Reading Standard*, has been re-elected president of the Berks, Bucks, and Oxon District of the Newspaper Society.

MR. A. H. MUNDEY, London manager of Fry's Metal Foundry, is a popular lecturer on matters relating to metallurgy, and has been invited to give a number of lectures to printers and engineers during the forthcoming season.

MR. MUNDEY was to speak yesterday (Wednesday) at the Heriot-Watt College, Edinburgh, under the auspices of the Edinburgh Typographia, on "Printing Metals." Other engagements include the following: November 30th, to the engineering students of Edinburgh University, at the University, on "The Metallurgist in Engineering Practice"; on December 13th, at the joint meeting of the Institute of Metals (London local section) with the London section of the Institute of British Foundrymen at the Institute of Marine Engineers, the Minories, Tower-hill, E.C.1, on "Some Foundry Problems"; December 14th, in connection with the lecture series arranged by the Stationers' Company and Printing Industry Technical Board, at Stationers' Hall, Ludgate hill, E.C.4, on "The Printer and his Metals."

MR. CHARLES HARRIS, the secretary of the *Oxford Times* Company, has been elected Sheriff of Oxfordshire.

MR J. E. NETTLETON, treasurer of the Leeds Typographical Society, has been elected full-time assistant secretary and treasurer by 681 votes, against 114 cast for the second candidate, Mr. D. Addy.

MR. W. E. HILEY, forestry research officer at Oxford University, has been appointed editor of the *Quarterly Journal of Forestry*, the official organ of the Royal English Arboricultural Society.

Stereotypers' Auxiliary Concert.

The first concert of the season of the Electrotypers' and Stereotypers Auxiliary was held on Monday at Anderton's Hotel, Fleet-street. The enterprise shown in the past by this Auxiliary was further exemplified, when a most successful evening's programme was carried through. Mr. Harry Williams, who occupied the chair, was supported by a large gathering of friends interested in the claims of the Printers' Pension Corporation. Amongst those present were: Messrs. W. Bullett, A. Chadwell, W. M. Forsyth, W. J. Light, G. W. Sharvell (sen.), J. Miller, W. C. Warren and A. E. Wood.

The concert—which was arranged by Mr. George J. Harrison—was quite up to the usual standard of excellence provided by this Auxiliary. The following were the artistes: The Misses Jessie Wood (soprano), Gwendolen Jones (mezzo), Florence Weatherley (soprano), Kate Mayes (mezzo soprano), Nora Blakemore (comedienne), Mollie Wynter (sifflleuse and humoriste), Evelyn Clifford (contralto), Lilian Mann (contralto), Beatrice Betts and Gwen. Lewis (vocal duets), and Messrs. Andrew Gooden (tenor), Fred Temple (comedian), Harry Speller (humorist), Alan Stainer (ventriloquist), John Humphreys (baritone), Will Kings (entertainer), Walter Barker (comedian), Nelson Jackson (entertainer), Arnold Southwood (humorist) and Charles Hardy (accompanist).

A feature of the vocal contributions was a song entitled "God's Flowers," written by Mr. Harry Williams, which was sung by Miss Gwendolen Jones; the proceeds from the sale of this song are to be devoted to the funds of the Printers' Pension Corporation.

During a pause in the programme, Mr. W. C. Warren, in proposing a vote of thanks to the chairman, took the opportunity of expressing the thanks of the committee to Mr. Williams for all the work he had done for the Auxiliary. Mr. Warren said they were rather proud of what they as a small section of the trade had been able to do in recent years. Up to the present they had founded six pensions and had nearly completed the seventh. As a result of their efforts that evening he believed they would not only have completed their seventh, but would be able to make a start on the eighth pension. He was also proud of the fact that they had never run a candidate at an election who had not been successful on the first application. Last year they had a difficult task, yet they ran four official candidates and one or two unofficial ones, but he was glad to say their record was unbroken. At the next election in March, there would be more candidates than ever before. Last year they were successful in paying an amount of no less than £500 to the Printers' Pension Corporation.

The vote of thanks was heartily accorded, being accompanied by the singing of "For he's a jolly good fellow."

Mr. H. Williams, in reply, referred to the fact that they often read in their newspapers while sitting in their cosy chairs before the fire of the pitiful conditions in which some people lived, and they often thought that it was beyond their power to render help. However small their contribution might be to a deserving cause, he asked them not to be ashamed of it, especially if it came from the heart. He thanked them all for the support he had received on behalf of the old, the weak and the lonely.

As a result of the concert the plate realised ninety guineas.

MR. E. H. LEE, of Nottingham, chairman of the Health Committee of the Joint Industrial Council, to give an address under the auspices of the London District Committee on January 8th, on "Health Conditions in Printing Offices."

INDUSTRIAL WELFARE SOCIETY.—The fact that the Industrial Welfare Society, which held its fifth annual general meeting last week, is in a stronger position than in the previous years of its existence, is an indication of the attention which is being paid by industrial and commercial firms to the conditions under which their employees work. The membership of the Society is approaching 1,000 firms, in addition to about 300 associate members (welfare supervisors, employment managers, etc.). From the pool of experience at its disposal, the Society has rendered service to some 3,000 firms and miners' welfare schemes.

DIVIDENDS AND REPORTS.

SPORTING AND DRAMATIC PUBLISHING CO.—The profit and loss account for the year ended September 30th, 1923, shows an available profit of £6,011, including £4,352 brought in. After meeting the dividend on the preference shares for the half-year ended September 30th, there is a balance of £3,911 to be carried forward. The directors state that the increase in revenue derived both from circulation and advertisements, has exceeded the anticipation since the alteration of the paper to its present form, which was inaugurated last March.

OLIVES PAPER MILL CO., LTD.—The directors of Olives Paper Mill Co., Ltd., in their report for the year ended July 28th last, state that after charging £15,000 for depreciation there is a loss of £50,857.

THE IMPERIAL PAPER MILLS, LTD.—The directors' report for the year ended August 31st, 1923, states that after providing for depreciation, debenture interest, Corporation Profits Tax, and the preference dividend to February 28th, 1923, the accounts show a net surplus of £134,258. Out of this sum the directors have paid the half-year's preference dividend to August 31st, 1923, and propose to declare a dividend of 7½ per cent., less income tax, for the year on the ordinary shares of the company. During the year the directors were able to make satisfactory arrangement for the repayment of the whole of the outstanding First Mortgage Debenture Stock. Having regard to the state of trade throughout the country, the past year's working has been remarkably good, and there is reason to believe that the current year's trading will be most satisfactory.

NEW COMPANIES.

ALF PARKMAN, LTD.—Capital £3,000, in £1 shares; to acquire the business of a printer and wholesale stationer now carried on by A. W. Parkman. Private company. Directors: A. W. Parkman and S. H. Pratt. Registered office: 29, 30, Marlborough-street, Bristol.

BLACKHAM (GREAT BRIDGE), LTD.—Capital £2,000 in £1 shares, to carry on at Great Bridge or elsewhere the business of printers, booksellers, stationers, newspaper sellers, dealers in fancy and leather goods and small wares, advertising agents, etc. Private company. Linden, of Gothenburg, Sweden, to acquire trade mark No. 422,185 and the right to use the name "Yumak" in connection therewith, and to carry on the business of manufacturers and sellers of picture frames, wholesale and retail stationers, etc. Private company. First directors: A. G. Thynne, F. Simmonds, E. J. Heinz. Registered office: 1, Regent-street, S.W.1.

SIDDERS, LTD.—Capital £100, in £1 shares; to acquire the business of a stationer, newsagent, etc., now carried on by H. S. Sidders at 133, Uxbridge road, W., as "S. H. Sidders and Co." (formerly A. R. Sidders and Co.). Private company. Subscribers: S. H. Sidders and S. B. Sidders. Registered office: 133, Uxbridge road, West Ealing, W.

LATEX DEVELOPMENTS, LTD. — Capital £6,250, in 5,000 ordinary shares of £1 and 25,000 deferred shares of 1s.; to acquire the benefit of certain existing inventions; to adopt an agreement with H. Broomfield and R. Russell, and to carry on the business of manufacturers, importers, exporters and brokers of, agents or factors for, and dealers in, rubber, rubber latex and rubber goods of all kinds, rubber fabrics, asbestos and asbestos goods, leather and linoleum and substitutes therefor, paper, pulp and papermaking materials, boards, cardboards, packing cases, containers, etc. First directors: Sir Edward Penton, K.B.E., D. F. L. Zorn, J. Fairbairn and J. Beckingham. Registered office: 7 and 8, Great Winchester-street, E.C.2.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

WILLIAM PILL, LTD. (printers, stationers, billposters, etc.).—Deposit on November 5th, 1923, of deeds of 14 and 26, High-street, and 1, 2, 2a and 3, Carshalton-road, Sutton, and freehold premises and printing works at Hackbridge, to secure all moneys due or to become due from the company to Barclay's Bank.

ALEXANDER DALTON, LTD. (printers, newspaper proprietors, stationers, etc.).—Mortgage on "Albion Chambers," with warehouse, etc., in George-street, and mortgage on "The Argus Printing Works," at Dover-street, both in West Hartlepool, both dated October 26th, 1923, to secure all moneys due or to become due from company to National Provincial and Union Bank of England, Ltd.

WINDEBANK AND CO., LTD. (manufacturers of and dealers in paper, card, straw and leatherboards, wood pulp, paper materials, etc.).—Debenture dated November 3rd, 1923, to secure £20,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: Branch Nominees, Ltd., 15, Bishopsgate, E.C.2.

WALTER H. ROGERS AND CO., LTD. (paper merchants, London).—Issue on November 7th, 1923, of £100 debentures part of a series already registered.

LONDON CALEDONIAN PRESS, LTD.—Particulars of £50,000 debentures, authorised November 7th, 1923, charged on the company's property, present and future, including uncalled capital; the whole amount being now issued.

EDWARD J. WOOD AND CO. (PRINTERS), LTD. (London).—Particulars filed of £1,000 debentures, authorised October 31st, 1923, charged on the company's undertaking and property, present and future, including uncalled capital the whole amount being now issued.

LISTER, EVANS AND CO., LTD. (stationers, etc., Hull).—Particulars filed of £400 debentures, authorised October 2nd, 1923, charged on the company's undertaking and property, present and future, including uncalled capital (if any); the whole amount being now issued.

BANKRUPTCIES, etc.

Re JOHN MCKERROW, chromolithographer and designer, late of Carroun-road, Fentimen-road, Clapham. This debtor attended before Mr. Registrar Francke on November 23rd at the London Bankruptcy Court for public examination upon accounts showing total liabilities £2,201 and a deficiency of £1,960. In reply to the official receiver, debtor said that for many years prior to December, 1914, he was employed by a chromolithographer and designer carrying on business at Offley Studios, Offley-road, Brixton. Upon the death of his employer in that month he took over and, until September, 1917, continued the business in partnership with another person. Owing to pressure by creditors the business was then sold and the proceeds were paid away to the creditors. In the following month debtor commenced a similar business at 22, Carroun-road; in July, 1922, being in want of capital, he entered into a trading arrangement with three other persons who financed the business with loans and took it over in January, 1923. Witness attributed his insolvency to heavy working expenses and bad trade. The examination was concluded.

Re ARTHUR COOKE NICHOLLS, stationer and newsagent, 214, King street, Hammersmith. The public examination of this debtor was held on November 23rd at the London Bankruptcy Court, the accounts showing total liabilities £615 (unsecured £416) and net assets valued at £117 after

Digitized by Google

deducting £49 for payment of the preferential claims. The debtor stated that he purchased the business for £175 in March, 1914, and carried it on successfully until 1921, but subsequently gradually declined, and in consequence of pressure by creditors and an execution having been levied, he filed his petition last April. Witness attributed his failure to lack of capital, slump in trade, and heavy medical expenses which had amounted to £100 since April, 1920 The examination was concluded.

Re George Purves Chace, Red Lion House, Red Lion-court, E.C., commercial and colour printer.—The first meeting of creditors was held on Nov. 21st at the London Bankruptcy Court, when accounts were submitted showing liabilities £4 932, against assets valued at £749. The official receiver reported that it appeared from the debtor's statement that in August, 1920, he acquired an interest in Alphagraph Company, paying £300 for a one-third share thereof. The trading name was changed at the end of 1921 or the beginning of 1922 to Smart, Chace and Co., and in January, 1923, works were established at High street, Old Woking, and offices were taken at Faraday House, Charing Cross-road, W.C. In February, 1923, Mr. Smart, one of the partners, was paid out and the debtor paid £150 for that gentleman's share, thus becoming entitled to a two-thirds interest, plus an additional interest on further capital invested. The partnership was still in existence, and the other remaining partner was prepared to take over the debtor's liability, provided the latter released his interest in the firm. The debtor attributed his failure—which was unconnected with the firm's affairs—to loss on a deal with music publishers and to heavy interest paid to moneylenders. Mr. David Hart, accountant, 5, Argyll-street, W., was elected trustee to wind up the estate in bankruptcy.

News-Print Production.

Canada's Figures for Nine Months.

A report issued by the Canadian Pulp and Paper Association states that the production of news-print paper by Canadian mills during the first nine months of the current year amounted to 944,820 tons. This quantity is considerably greater than the total previously reached in any complete year, with the exception of 1922, when the output was 1,081,364 tons.

In the corresponding nine months of 1922 the Canadian mills produced 799,373 tons, so that this year's output up to the end of September exceeds that for last year by 145,447 tons, or over 18 per cent. If the mills maintain this level of production during the last three months of the year, the output for 1923 will be well over 1,250,000 tons.

By far the greater part of the news-print manufactured in Canada is destined for export and up to the end of September exports of this grade of paper amounted to 839,222 tons, or practically 90 per cent. of the total production. The United States is naturally the chief market, and 821,788 tons, or 97 per cent. of the total exports, have gone to that country in the first nine months of the year. The remaining 17,434 tons have been distributed mainly to New Zealand, Australia and South Africa

The following table shows the quantities (in tons) exported to the various countries up to the end of September:—

Exports to	Nine Months 1923	1922
U.S.A.	821,788	644,733
Australia	5,667	25,488
New Zealand ...	7,343	8,904
South Africa ...	3,168	6,019
Latin America ...	439	3,148
All other	817	9,632
	839,222	697,924

The value of these exports in 1923 was $63,277,966 and in 1922 $49,689,864

News print exports this year have exceeded those for last year by 141,298 tons, or 20 per cent., while those to the United States were greater by 177,055 tons, or 28 per cent. Exports to other countries declined considerably from last year's figures, a decline especially noticeable in the case of Australia.

UNITED STATES
Imports and Exports of Paper, etc.

The total values of the imports of paper (excluding printed matter) into the United States, and exports therefrom, during the undermentioned periods were:—

		Imports.	Exports.
August,	1923 ...	$10,140,431	$2,076,985
,,	1922 ...	6,863,045	2,172,840

German Reparations Refund.

A good deal of concern is being aroused among paper importers over the question of the repayment by the German Government of the 26 per cent. deductions for reparations. The actual situation is obscure; but we are given to understand that the Reparations tax will not be refunded by the German authorities on business placed after November 17th. It would appear from this that the imports of German goods into this country will be seriously interfered with in the future. The German manufacturer claims that he is quite unable to afford to pay the 26 per cent. himself, while to add this to the price of the goods would, it is held, be fatal. Further reports on the subject state that receipts on which repayments may be claimed must be presented to the German Government before March 31st next.

The late Mr. Richard Edwin Jones, caterer and hotel proprietor, of Messrs. R. E. Jones, Ltd., owning numerous establishments in London, South Wales, and provincial centres in England, at one time a compositor on the staff of the *Western Mail*, left £29,000

T. H Bracken and Co., Ltd.—Notice is given by the joint liquidators (Messrs. E. Duncan Taylor and Wm. Emmerson) that a meeting of the creditors of this company will be held at the offices of Messrs. John Gordon and Co., 7, Bond place, Leeds, on Monday, the 19th inst., at 3 o'clock.

Canadian Pulp and Paper.

September Exports.

The regular report of the Canadian Pulp and Paper Association states that the total value of the pulp and paper exports from Canada for September was $11,715,869. This was a decline from the previous month of $1,579,400 but an increase of $1,393,586 over September, 1922.

Details of the various grades exported are given below:—

	September, 1922. Cwts.	Value. Dols.	September, 1923. Cwts.	Value. Dols.
Paper—				
News-print ...	1,591,145	5,632,758	1,818,591	6,870,190
Book Paper ...	4,675	37,759	5,199	40,948
Other paper & Manufactures	—	574,097	—	653,113
Total paper	—	6,244,614	—	7,564,251
Pulp—	**Cwts.**	**Value. Dols.**	**Cwts.**	**Value. Dols.**
Sulphate ...	270,053	825,789	234,439	761,695
Sulphite, bl. ...	228,190	933,358	225,829	929,121
,, unbl....	563,068	1,310,640	456,819	1,282,808
Mechanical ...	739,364	1,017,882	681,595	1,177,994
Total pulp	1,800,675	4,087,669	1,598,682	4,151,618

The distribution of these exports in September was as follows:—

To—	Paper. Dols.	Pulp. Dols.	Total. Dols.
United States ...	7,072,584	2,954,723	10,027,307
United Kingdom	190,229	1,095,288	1,285,517
All Other ...	301,438	101,607	403,045
	7,564,251	4,151,618	11,715,869

Exports of pulp wood in September amounted to 112,366 cords, valued at $1,172,814, compared with 94,351 cords, valued at $974,568, in September, 1922

For the first nine months of this year the value of the exports of pulp and paper has shown a considerable increase over the value in the corresponding nine months of 1922, the total being $104,636,736, compared with $83,792,893 for last year, an increase for this year of practically 25 per cent. Increases both in quantity and values have been shown in practically all grades of pulp and paper and these exports reflect the increased activity of the Canadian mills.

Details for the various grades are given in the following table:—

	9 months 1922 Tons.	Value. Dols.	9 months 1923. Tons.	Value. Dols.
Paper—				
News-print ...	697,924	49,689,864	839,222	65,277,966

Inveresk Paper Co., Ltd.

Prosperous Scottish Company Entertains Retiring Officials.

A complimentary dinner was given by the Inveresk Paper Co., Ltd., in the North British Station Hotel, Edinburgh, last week, to Mr. Henry Tait and Mr. Walter Cranston, who are retiring from the service of the company after 43 and 41 years' service respectively. Mr. William Harrison, LL.B., chairman of the company, presided over a large company, and among the others present were his fellow directors, Mr. Charles Snelling (the managing director), Mr. E. S. Lendrum, Mr. Alex. Macbeth, S.S.C., J.P., Mr. T. D. M. Burnside, Mr. A. W. Gotch Berrill, Mr. G. A. Pike, Provost Mitchell (Musselburgh), Councillor McCrow (Edinburgh), Mr. Alex. Robb (general manager of the Commercial Bank of Scotland), Mr. Sylvair Mayer, K.C., Mr. S. Lamert (De La Rue and Co.), and representatives of a large number of papermakers throughout the country.

It was an interesting function. Tributes were paid to the two veterans of the Scottish paper trade in a happy speech by the chairman, and in the references to the prosperous year which the Inveresk Co. has enjoyed, the point was not overlooked that the foundations laid by the pioneers of the company had been a not unimportant contributory factor. The guests of the evening received presentations of silver tea and coffee services from the board of directors in recognition of the valuable services they had rendered during their long careers.

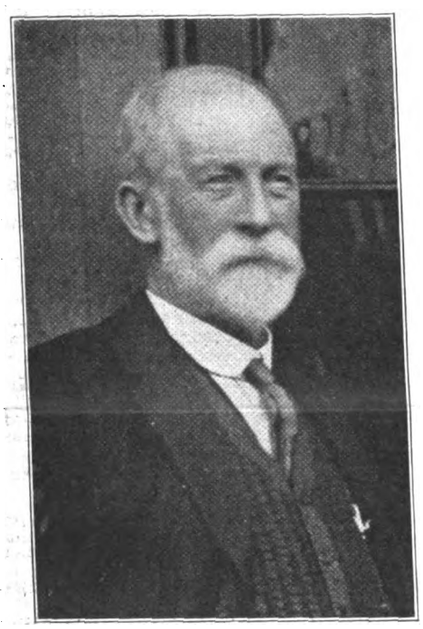

Photo:

MR. H. J. TAIT.

Tributes to the Guests.

The chairman, in submitting the principal toast, "Henry Tait, Esq., and Walter Cranston, Esq.," said that so long as the name of Inveresk as a papermaking company was known, so long would their names be known. (Applause.) Henry Tait first entered the paper trade in the year 1865 at the well-known mill at Valleyfield, still under the control of the famous Scottish firm of Cowan. (Applause.) He left Valleyfield in 1876, and migrated to Inveresk. Inveresk at that time was a comparatively second-rate consideration in comparison with Valleyfield, in that it made pulp for Valleyfield. In 1880, their old friend, in conjunction with Mr. Menzies, established what, in his (the speaker's) opinion, had been and was the foundation-stone of the success of the Inveresk Paper Co.—the coating mill. That coating mill had not been perfected, as some people in the paper trade evidently thought, in a few months' time. They had been making coated paper at Inveresk for 43 years, and their friend Mr. Tait paid visits even as far back as 30 years ago to the United States and the Continent to get all the latest advice for the production of coated paper. Although personally he was not a papermaker—he was only a lawyer (laughter)—Mr. Harrison declared, from his knowledge, through daily contact with people in the paper trade, that there was no coated paper manufactured in the world that could command a higher price than Inveresk coated paper. (Applause.) Turning to Mr. Cranston, the chairman said that curiously enough he also went to Valleyfield—in 1871—and migrated to Inveresk in 1883. It was a strange coincidence that those two men, who, along with that great papermaker, Mr. Robert Menzies (applause), laid the foundation stone of the Inveresk Co., should have gone to Inveresk from Valleyfield, and after this great lapse of time should be retiring practically simultaneously. Mr. Cranston started at Inveresk as cashier in 1883, and he could say this, that he had never come across a factory which was run financially on sounder lines. (Applause.) In no business—no paper mill at any rate—had he come across better statistics to show what the weekly profits were than at Inveresk. They had learned to form a very high opinion of the integrity of their two friends and to love them. (Applause.) It was a great thing in a paper mill to-day to be able to rely on men of the type of Mr. Tait for quality and Mr. Cranston for costs. If they did not know what their costs were in a paper mill, they were lost. Although their friends were retiring after 43 years and 41 years' service, they were leaving in all good will. Mr. Tait was to be succeeded in the coating side of their mill by his nephew, Mr. Willie Tait, who had been connected with the mill for the last 30 odd years. Mr. Tait's son was one of the first assistants in the paper machine house. Mr. Cranston was also leaving a son in the mill, who was likewise a first assistant in the machine house.

Mr. Harrison concluded his remarks by reading telegrams conveying good wishes and then made the presentations of the silver plate amid loud applause.

Acknowledgments.

Mr. Tait, in returning thanks, said he must also express the thanks of Mrs. Tait in particular. Both the gift he had already received from the workers and that gift from the directors would be cherished more than he cared to express. It would not surprise them to hear that it was with great reluctance he was laying down the shovel and the hoe, because papermaking had been his hobby for many years. (Applause.)

Mr. Cranston, who also expressed thanks, recalled some of his early days in the trade and the names of men who had helped to lay or secure the foundations of businesses on the Esk. Referring to the difficulties of the Inveresk Co. during the war, he said that in August, 1914, they had 595 workers, 477 of whom were males, and when the Armistice was signed they had only 207, of whom 169 were males. On the banks of the Esk were paper mills which in the past had, and still held, a premier position in the paper world. The products of those mills—Valleyfield, Esk Mills, Dalmore, Polton, Springfield, St. Leonards and Inveresk—were well known the world over. (Applause.)

The Work of the Staff.

Mr. Lamert, in proposing the toast of "The Staff and Employees of the Inveresk Paper Co. (Ltd.)," said that anyone who had been at the head of a great industrial concern knew that the success of any company was entirely due to the staff. He thought he might say that the success of the Inveresk Co. this year had been an outstanding event in the whole of the paper trade. That success could not have been obtained unless they had had a staff, not only individually capable, but a staff with every member pulling his full weight for the benefit of the firm. (Applause.) Among the names he mentioned were those of Mr. Snelling, the managing director; Mr. Swift, who made the paper; and Mr. Currie. Referring to the purchase of cartridges from Messrs. Caldwell's at 3½d., by his firm (De La Rue and Co.), Mr. Lamert said that it cost them something like another 2d. to paste and coat their cards, and when they had done that they had travellers offering them paper from Germany, pasted and enamelled, at less than they were paying for the body paper. ("Shame.") Shame or no shame, that was a thing they should think over.

Mr. Snelling, who responded on behalf of the staff, said that so far as the past year was concerned, they had only done their duty. They had done fairly well, and they intended to try to do as well in the coming year, if not better. (Applause.)

Mr. H. M. Stevenson, who has been provincial agent for the company in England for 23 years, also responded.

Mr. Alexander Robb, general manager of the Commercial Bank of Scotland, who proposed the toast of "The Inveresk Paper Co., Ltd.," said the company had had an exceptional measure of success during its somewhat lengthened career. He was quite sure that the exceptional position which had been attained by the company was due to the skill and enterprise of the management during this long period, and that that prosperity would continue in the future. (Applause.)

A Prosperous Year.

The chairman, who replied, said that the Inveresk Co. had had a prosperous year—a very prosperous year indeed—compared with other similar undertakings. The exceptional success of the company was due to the foundation-stone laid many years before the war by great minds in the paper trade. One of those great men was Mr. Robert Menzies. (Applause.) The war boom had deceived many of them. In looking at any figures of a paper company he only wanted pre-war figures, because pre-war figures convinced him that if a company could make money pre-war it could make it post-war. Proceeding, he said there had been times of anxiety even in so prosperous a concern as the Inveresk Co. He recalled that when he was first associated with the company in the early part of 1921, they were saddled with something like 7,000 tons of esparto grass, the bulk of which had cost £26 per ton, and the market price was about £5 10s. There was a prospective loss on raw material alone of over £200,000. They came through by careful management with a loss of £36,000, and that was past, thank God! (Applause.)

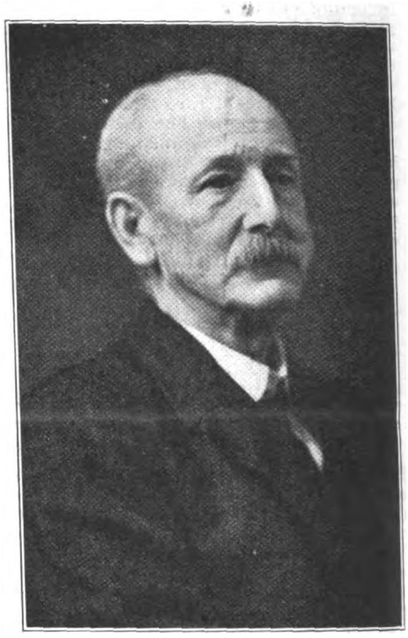

Photo: Drummond Young, Edinburgh.

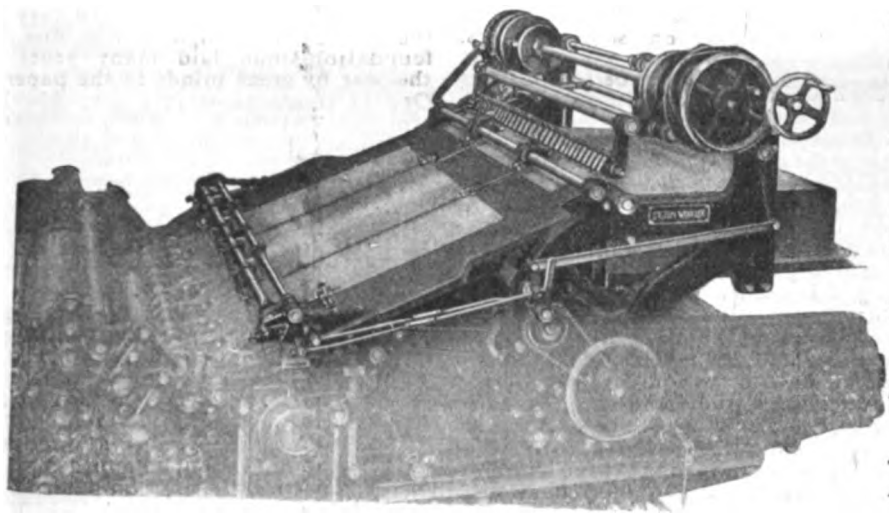
MR. WALTER CRANSTON.

Mr. A. W. Gotch Berrill, who also responded, said he claimed with great pride that his firm had exported Inveresk paper as long as the Inveresk Co. had made paper to be exported.

Mr. Mayer, K.C., proposed the toast of "The Paper Trade."

Mr. E. Macfarlane (London) acknowledged the toast in the unavoidable absence of Mr. Stanley Cousins. He mentioned that Mr. Cousins was to have responded, a duty for which he was eminently fitted by reason of the position he occupied in the trade and the respect in which he was held. Mr. Cousins had travelled North on the previous evening in order to attend that dinner out of respect for the managing director of Inveresk (Mr. Snelling). Having so lately vacated a sick bed, Mr. Cousins ought to have spent a quiet day after his journey, instead of which he had gone over three paper mills, and that had been rather too much for him.

Mr. E. S. Lendrum proposed "Our Guests," to which Provost Mitchell replied, and the toast of "The Chairman" was given by Mr. G. A. Pike.



An enjoyable musical programme contributed to the success of the function.

The "WINKLER" Automatic Feeder

will increase the productive capacity of your Printing Machine, 25 to 50 per cent. above that of hand feeding, with better register. When feeding large sheets of very thin paper the output percentage is even higher.

SWISS MANUFACTURE

SEPARATION of sheets by suction and blast.

Length of printing machine is not increased and access not impaired.

Feeds to register any stock from tissue to board.

Works in unison with the machine, and at any speed up to the maximum guaranteed by the press makers.

Rapid change of jobs, and therefore suitable for short runs.

No tapes or friction wheels, and therefore no marring of colours or setting-off when working colours or backing up.

The blast of air frees the sheet from dust and fluff before it is fed.

Adaptable to any type and size of sheet fed press; if desired, with a Stacking Arrangement.

Write to-day for Prospectus to the Sole Agents—

Gold Inks

(LETTERPRESS)

IF you have never yet tried Gold (Letterpress) Inks or are familiar only with those hitherto obtainable, Lorilleux and Bolton's gold inks will be a revelation to you.

No modern printer keen on cutting costs and speeding up production can possibly afford to ignore the handiness and economy they offer.

The following points show the great superiority of Lorilleux & Bolton's gold inks:—

1. They do not clog or harden on the rollers.
2. Need no specially skilled operator.
3. Are suitable for either platen or cylinder machines.
4. The machines can be run at normal speed.
5. Retain their brilliance for long periods.
6. Print the type thoroughly and heavy solids without difficulty.

Available in light and dark shades of gold as well as silver.

Write for specimen prints and generous sample tin to-day.

Employment in Paper & Allied Trades

A Wave of Depression.

Figures and information concerning the paper, printing and allied trades demonstrate the state of the industries during October. Employment in the paper trade continued moderate on the whole; in many districts the mills were still working irregularly. With letterpress printers employment showed a further slight decline in London, and continued fair on the whole in the provinces, though it was reported as bad and worse than a month ago at Leeds, Manchester and Newcastle-on-Tyne. It was again reported as good with electrotypers and stereotypers in London. In the lithographic printing trade employment continued moderate. With bookbinders employment remained slack, but showed a further slight improvement in London and was good at Edinburgh.

This report is borne out by the statistics of unemployment in insured industries. The most serious increase in unemployment has taken place in paper and paper board-making, where the total percentage of unemployment, including part short time, rose from 6·9 on June 25th to 9·0 on October 22nd, the latter figure comparing with 11·7 for all industries.

Coming to details, we find that out of a total of 56,560 insured persons in paper and paper board, the number of males out of work increased from 2,951 in June to 3,898 in October. The number of females unemployed in June was 927, rising to 1,211 last month.

In the case of cardboard boxes, paper bags and stationery, the percentage unemployed on October 22nd, namely, 7·3, showed only a slight variation from the 7·4 of June 25th, the highest point having been reached on July 23rd with 7·6. The estimated number of insured persons in this section of the industry is put at 55,640. The number of males unemployed fluctuated as follows:—June, 1,230; July, 1,188; August, 1,139; September, 1,166; October, 1,170. The corresponding figures for females are:—June, 2,874; July, 3,040; August, 3,010; September, 2,999; October, 2,917.

Numerically the printing, publishing and bookbinding section is the largest. The estimated number of insured workpeople in these trades at the end of July was 231,010, made up of 150,870 males and 80,140 females. Variations in the percentages of unemployment from June to October have been negligible, the only alteration from the figure of 5·6 in the five months being 5·7 on August 27th. In October, however, there have been rather more males out of work than in the preceding four months, while the reverse is the position with regard to females. In June the number of males returned as unemployed was 8,737, whereas in October the figure had risen to 9,041. In the case of females the 4,173 of June is replaced by 3,927 in October.

Writings, Envelopes & Cover Paper

Details of American Exports.

U.S. total exports of writing papers (except papeteries) in August reached a figure of 513,586 lbs. (of the value of $89,530). The principal customer was the Philippine Islands with 113,553 lbs. ($16,629), followed by Japan 92,658 lbs. ($13,320), Mexico 55,552 lbs. ($10,081), Australia 53,778 lbs. ($8,170), China 47,594 lbs. ($8,919).

Cover papers exported from the United States represented 102,248 lbs. ($18,272). Canada, in the first place, absorbed 47,387 lbs. ($9,995), Japan took 16,631 lbs. ($2,691) and Cuba 11,499 lbs. ($1,431).

Envelopes exported came to 192,008 lbs. ($42,689), the principal markets being Cuba 70,494 lbs ($11,731), Canada 25,040 lbs. ($7,412), Philippine Islands 11,864 lbs. ($2,493).

Foreign business in papeteries represented 63,563 lbs. ($32,544). The principal customer was Cuba with 20,588 lbs. ($11,731), followed by Australia 12,776 lbs. ($3,874).

LONDON WHOLESALE PAPER CO., LTD.—Creditors of this company (in voluntary liquidation) are required to send in particulars of their claims on or before December 7th to the liquidator, Mr. C. T. Millns, Saracen House, Cock-lane, Snow-hill, E.C.

Australian Notes.

Paper and Stationery Imports into Victoria—Australasian Paper and Pulp Co., Ltd.—A Review of the Year's Operations—"Sun" Capital to be Increased—Loss on the Sydney "Daily Mail"—Complaint of Government Waste—Missing Commonwealth Notes—New Companies.

(From Our Sydney Correspondent.)

IMPORTS of paper and stationery into Victoria during July last represented a value of £160,000, comparing with £154,501 in July last year.

AT the annual meeting of the Australasian Paper and Pulp Co., Ltd., the chairman, Mr. N. E. Brookes, reviewed the operations for the year ending June 30th. He described the business during the period under review as satisfactory. Both output and sales had increased, the improved results having been obtained in spite of the fact that the Geelong Mills had been closed down and that the running of the other mills had been affected by the various alterations and additions carried out during the year. Reconstruction of the mills had been delayed by the late arrival of machinery from overseas, but it was anticipated that the improvements would be completed by October. Reference was made to the heavy purchases of wood pulp, but it was explained that the board expected to make a considerable reduction in this item during the current year.

SIR H. R. DENNISON, who also spoke, referred to the amalgamation of the Melbourne and Sydney interests, the result of which, after a year's working, he said, was not as satisfactory as was anticipated.

THE same speaker mentioned the engagement of Mr. R. Helin, a Canadian pulp and paper expert, who had thoroughly investigated the position. As a consequence of his recommendations one mill had been closed and the Board had not hesitated to spend a large sum of money in order to improve the company's other mills. The company at present, it was stated, was catering for three-fifths of the Australian requirements in the class of goods it manufactured. The remaining trade could be secured without additional plant or increased costs. There was no reason why the company should not manufacture the whole of the requirements of Australia. Duties were sufficiently favourable, and he was informed that labour conditions here were no worse than in any other part of the world. With regard to the services of Mr. Helin, the chairman mentioned that the board was endeavouring to permanently engage him.

A MEETING of the shareholders of the *Sun* Newspapers, Ltd., has been called for the purpose of discussing a resolution to increase the capital by £250,000 to £1,000,000 by the creation of 243,000 ordinary shares of £1 and 14,000 employees shares of 10s. Reasons for the proposed increase are the expansion of business, which necessitates extra machinery, the building of a new office, and the provision of more capital for the Melbourne Company.

ACCORDING to the *Sydney Sun*, the operations of the Sydney *Daily Mail* Newspaper Co., Ltd., for the year ended April 30th resulted in a net loss of £2,176, expenses having totalled £83,459 against gross earnings of £81,282.

COMPLAINT is made in a Sydney newspaper of what is described as a scandalous waste of public money in the printing of reports and inquiries by Royal Commissions and Government departments. Uninteresting and irrelevant evidence, it is stated, is set out in too much detail, and the reports often contain some 300 pages costing as much as 12s. 6d. each, few of these reports, however, ever being circulated. It is contended that in most cases a few typewritten sheets would be quite sufficient for record purposes.

TWO EMPLOYEES of the Commonwealth Note Issue Department have made their appearance in the courts charged with stealing a number of forms of Australian £1 notes. The notes were printed on special paper, which were made up in bundles of 1,200 sheets. When authority is given for the printing, a sufficient number of these bundles are issued and the paper is checked in the process of printing. It was during the checking of a particular order that a sheet was found to be missing, one of the notes from the missing sheet subsequently being returned to the Government printers. According to statements made to detectives, the accused were said to have confessed to abstracting, in one case, two sheets, and in the other, one sheet of notes from the grill. Both the accused men were committed for trial.

THE following new companies have been registered:—Galwey and Co., Ltd., capital £20,000, stationers, printers, etc.; Gulliver and Murch, Ltd., capital £10,000, to acquire the process engraving business known as "Gulliver and Murch"; Hygienic Containers, Ltd, capital £10,000, dealers in plate, spoons, drinking vessels, and similar articles, made from paper or cardboard.

American News-Print Production.

The monthly bulletin of the News-Print Service Bureau, New York, giving September statistics, states:—The 45 United States companies reporting produced 110,209 tons and shipped 110,240 tons; the 20 Canadian companies produced 102,486 tons and shipped 99,188 tons, making a total production of 212,695 tons and shipments of 209,358 tons in both countries. These companies also produced 3,046 tons of hanging, of which 767 tons were made in Canada. Shipments in United States exceeded production by 31 tons and production in Canada exceeded shipments by 3,368 tons. Stocks at the end of September totalled 24,663 tons in the United States and 18,670 tons in Canada, a combined total of 43,333 tons which is equivalent to 4·5 days' average production.

Comparing production of 51 identical companies during the first nine months of 1923 with that of the same period of 1922, the United States companies show an increase of 62,016 tons, or 7 per cent., the Canadian companies an increase of 146,063 tons, or 18 per cent., and the total of all these companies shows an increase of 208,079 tons, or 12 per cent.

The average daily production of newsprint paper by these 51 companies reporting for September amounted to 95·6 per cent. of the average daily output during the three months of greatest production in 1922, with allowances for changes in machines.

Death of Mr. C. D'Oyley Mears.

It is with regret that we announce the death, at the age of 78 years, of Mr. C. D'Oyley Mears, which occurred at his residence, 6, Farley-road, Catford, S.E., on the 21st instant. Until ill-health confined him to the house, deceased was a familiar figure in London pulp and paper trade circles. He had a most active and successful business career, and, although not in personal touch with everyday affairs during his indisposition, he maintained almost to the last a keen interest in trade movements.

Mr. Mears had a very intimate knowledge of the leading men associated with the industry and all events that took place over a period exceeding 60 years, and his

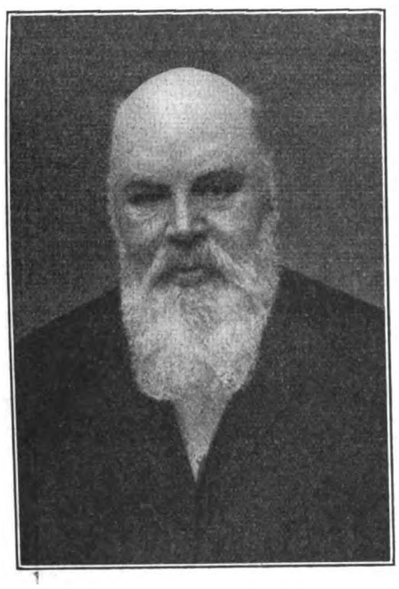

Photo: Hendrey, New Cross.

THE LATE MR. C. D'OYLEY MEARS.

reminiscences were always extremely interesting. His good nature and genial disposition won for him a large circle of friends.

The early days of wood pulp was a topic which Mr. Mears could discuss with first-hand knowledge. At the Ilford Mills, where he was manager, he took rank among the first papermakers in this country to successfully manipulate the fibre for papermaking purposes.

The promoters of the Ekman Paper Mill (now known as the Northfleet Paper Mills) recognised Mr. Mears' experience and ability, and appointed him manager during the period of construction.

Mr. Mears was one of the original members of the British Wood Pulp Association, and took a keen interest in the organisation for many years. He served the office of hon. secretary with great assiduity, and in appreciation of his services he was made an hon. vice-president.

At one time Mr. Mears was associated with mills at Dartford, where his investigation covered a special process for the treatment of straw for papermaking purposes.

Some 30 years ago he opened offices in London, first at Godliman-street, and subsequently at Wardrobe Chambers, Queen Victoria-street, E.C., and established himself as a paper and pulp expert, trading under the name of C. D'Oyley Mears and Co. His wide knowledge of the wood pulp trade was generally recognised, and his services frequently requisitioned as arbitrator in important cases of dispute. His reputation also brought him many commissions for reorganising works abroad.

In addition to the pulp side of the business, and the introduction of special mechanical appliances for paper mills, Mr. Mears developed an important paper sales branch. For over 20 years his firm successfully represented the *Daily Telegraph* Mills, Dartford, the agency terminating only a short time ago.

The deceased took a keen interest in the Stationers' Social Society, serving the office of president in 1900. As a Freemason he held high rank, and for many years was an energetic worker for the welfare of the craft.

Paper on the Continent.

Conditions in Germany and Scandinavia.

Mr. M. Levy, of Messrs. George Harrison (Agencies), Ltd., has recently returned from an extensive tour of the paper mills of Europe. He has been in the habit of paying such visits every year, and on the present occasion toured the whole of Germany and Scandinavia.

Distress in Germany.

Speaking the German language, Mr. Levy was able to obtain a clear insight into the conditions which governed the social and industrial lives of the people, amongst all classes of which the greatest distress prevails. The purchasing price of the mark drops at such a great pace that the people are unable to buy even the necessaries of life, and the fact is seen in their cadaverous appearance. Indeed, wages, by the time they are received at the end of the week, go a very little way, and so much anxiety does housekeeping involve that the number of women entering lunatic asylums is alarming.

In regard to carrying on business, merchants and manufacturers have a very difficult task, by reason of the fluctuations of the Exchange. Much of the business transacted is a mere gamble, depending upon the change in values. The factors governing industry in Germany are so chaotic, that although better prices can be obtained in the home market, manufacturers prefer to export their goods. The new gold mark basis, although of great help in some directions, makes things much worse in others. Cheques can only be sent in ordinary marks, and thus a buyer, in trying to pay his gold mark account, has to send two or three cheques before a settlement is arrived at, although the first cheque based on the exchange of the day it was sent, should have settled his account in full. The conditions of sale, however, are that the cheque has to be cleared before the gold mark basis is arrived at, and as this usually takes a couple of days, during which period the exchange can drop considerably, it becomes almost impossible to transact business at home, with the result that the mills usually engaged in that commerce are entirely at a stand-still, with the exception of those who have gone in for export. Even the mills which have export connections, particularly those which have to purchase raw material, are badly off for orders; in fact, no mills know where they stand, particularly in regard to prices. None of the mills are running to their full capacity, with the possible exception of a few which were far-sighted enough to take as many orders as they could possibly get earlier on. Expenses of manufacture in Germany are very high, as well as being uncertain. This is especially the case if raw material has to be purchased from abroad, such as pulp from Scandinavia and coal from the United Kingdom.

In the Hands of the Workpeople.

Mr. Levy is of the opinion that many of the German mills are being run in order to keep the workpeople employed and thus quieten things as much as possible. The difficulties of administration are enormous, demands for increases of wages being constantly made, sometimes as often as twice a week. In many cases the mills are practically controlled by the workpeople, every mill having its own works committee, which must be recognised by the directors, and through which Committee the repeated demands of the employees are put forward.

According to Mr. Levy it is nothing unusual for a deputation to visit a director's private house late at night, with a demand for an immediate increase in wages on the morrow. Such is the pass to which the directors have been driven, that many of them would be quite willing to hand over the whole of the concern to the workpeople, if they could be assured of receiving the mill back intact when conditions are more stable.

Reparations Payment.

While Mr. Levy was in Germany considerable apprehension was felt by many manufacturers at the suggestion of the German Government to cease the refund of the 26 per cent. deducted by the British authorities for reparations. Since he has been back, Mr. Levy has received several letters on the subject, and it was understood that the threat of the German Government would take effect on November 15th. Should the German authorities carry out their threat, it is felt that the consequences will be very serious to the paper agents in this country. It is suggested, for instance, that the German manufacturers might send their goods into Holland, whence they can be despatched to this country without their origin being detected, or, on the other hand, they might decide to export the paper to other markets, such as America. In either case the agents of this country would lose business, and the Government would be deprived of its share of Reparations.

According to a statement of Mr. Neville Chamberlain in the House of Commons last week, however, the information received leaves it doubtful as to whether the German Government really proposes to alter its existing practice, for the present.

Conditions in Scandinavia.

With regard to the conditions of the paper industry in Scandinavia, when Mr. Levy arrived in that part of the world, he found the mills very hard up for orders, but before he left there was a general improvement. In most cases now mills are sold out for this year, the recent disaster in Japan having brought forward a large amount of business; the demand for China caps being particularly large. In fact, such was the call for this class of paper that even kraft mills, short of orders, turned their machinery to the manufacture of China caps as a means of overcoming the slack period.

The slump in prices for wood pulp caused by the falling off of American orders was, to a large extent, responsible for the disturbances in the paper market. However, when Mr. Levy left the outlook was a little better, and so far as the paper market generally is concerned, he is quite hopeful.

Incidentally it may be mentioned that George Harrison (Agencies), Ltd., who carry on a strictly agency business, supplying the trade only, are in a position to quote for any class of Continental paper, due to the range of mills they represent.

Czech Paper Industry.

The U.S. Commercial Attaché at Prague says that the unfavourable situation in the Czecho-Slovak paper industry remains little changed from what it has been for some months past. This is one of the Czech industries most seriously hit by high operating costs, relatively high coal prices, and high freight rates, and those factors have been decisive in losing for the Czech mills the bulk of their export customers in favour of German and Scandinavian mills. Practically all of the mills in the country are operating on a much reduced scale, and a number of them have been for a long time entirely closed.

The pulp industry has fared somewhat better, particularly those mills located in the western part Czecho-Slovakia, where the high Czech freight rates were of less consequence in exporting.

PUBLICITY AND PRINT

are inseparable. One could not exist nowadays without the other.

Newspaper Publicity is a necessity to the modern business. Publicity must, however, be undertaken systematically with the right journal or journals—journals with a recognised reputation.

The selling power of space depends upon a reputation backed by results, and these results must tell every time. Reputations are, however, not made in a day.

It has taken some forty years to establish the present-day reputation of the **Quarterly Export Issues** of the

British & Colonial Printer & Stationer

At the present time this Journal is the recognised overseas medium of the Printing and Allied Trades.

It circulates among buyers in the following markets:

Australasia	**China**	**South America**
India	**Japan**	**Canada**
East Indies		**United States**
West Indies		**South Africa**

RESULTS

One of the most successful of our advertisers says:—

"It will no doubt interest you to learn that during the past few years we made considerable additions to, and have extended our Export Dept. We thank you for the assistance that your journal has contributed towards this export business."—C. B., Ltd.

The next issue will be published on Dec. 6.

Can you afford to neglect this opportunity of extending your export trade?

"Lithotex" Plant and Appliances

Supplied to the Printing Trade by

PICTORIAL MACHINERY, LIMITED

Users write us regarding their purchases as follows:

STEP-AND-REPEAT MACHINE

"The Machine is O.K. We are very pleased and are finding it most accurate."

"We do all sorts of jobs and find few things too difficult to tackle."

"If we were compelled to go back to older methods we should feel we were placed at a very serious disadvantage."

"The men can get (on Step-and-Repeat Machine) just what is wanted."

"We have had no difficulties at all."

"We are exceptionally pleased with results obtained."

"Now that we have introduced your process (Step-and-Repeat Machine, etc.) we have practically no trouble whatever."

"The Electric Clock is working splendidly and is just what was wanted." (As fitted to Step-and-Repeat Machine).

"I have found the Machine, after three years' working, gave as perfect results and register as when first operated, there being little to wear or get out of gear."

PRINTING FRAMES

"The frame is tip-top, no fault can I find with it."

"In ordering two more Frames I say it more than justifies all that was claimed."

"It is the best face-up Printing Frame in the trade."

LITHOTEX ARC LAMPS

"The Arc Lamps are also splendid and give every satisfaction."

"They are the best Arc Lamps it is possible to work. No variation. No jumping."

"Must say I find them entirely satisfactory."

PICTOGRAPH CAMERAS

"They are the best by far I have seen and in fact the whole installation (complete plant for Photo-litho) is admirable and I am proud of it."

Photographic operator of a new Photo-litho plant entirely installed by ourselves, writes:

"I am glad to say I had very little trouble to get things going although I had no assistance at all except an apprentice for glass cleaning. Owing to having therefore a first-class plant I was able to produce very good work at a cost much below that which I imagined."

(Original Letters can be seen).

Export Notes and Comments

Government and Overseas Trade.

WRITING in the midst of the turmoil of the General Election, one finds the thought of export trade naturally tinged with political colour, especially as in this Election trading issues are so largely in the foreground. It must be a matter of general satisfaction, whatever one's political opinions, that there is so much wholesome feeling about, emphasising as a matter of practical politics the desirability and possibility of fostering trade between this country and its Colonies and other outposts of Empire. The bases of a good deal of trade expansion in this direction must have been laid at the recent Imperial Conference, and, whatever party is now returned to power, the need for increased overseas trade can scarcely lack further close attention. Every effort will have to be made to find new outlets for our manufactured goods, and whilst there is everything to be said for closer trading relations within the Empire, the heavy loss of our Continental market suggests that the Empire alone should not be the limit of our commercial hopes. In this connection a most promising outlook is beginning to appear in the direction of Russia. That country's immense area, with its increasing commercial possibilities, can hardly any longer be left out of account in our trading calculations, especially in view of the striking report presented by the important trade mission that has just returned from that country, a mission comprising, amongst other business men, the cousin of the Prime Minister and the managing director of the big firm of Baldwin's. Russia is evidently on her feet again, and, with a stabilised currency and prospects of returning prosperity, offers immense openings for trade for those who are sufficiently alive and courageous to enter into full trading relationships. The printing and allied trades stand to benefit both directly, and still more indirectly, from every development of overseas trade.

The Empire Exhibition.

THE great trade event of the near future is, of course, the British Empire Exhibition at Wembley Park, opening in April next, when manufacturers and traders of the Empire are to combine to make the biggest exhibition ever seen, with grounds extending over 240 acres and £10,000,000 spent on preparing for the show. British manufacturers including those in the printing and allied trades, will here have brought to their door a big opportunity for opening up relations with overseas buyers. Printers, and to a certain extent printers' suppliers, have already booked space, and there will certainly be an impressive, if not a really comprehensive, showing to represent the printing industry of this country. Big representations of Colonial industries are assured, and there will be a vast influx of commercial people from all quarters of the globe. In connection with the Exhibition, preparations are now being made for holding the International Advertising Convention in London from July 14th to 19th next year. Two thousand or more delegates from the United States are expected to attend the Convention, which has been organised by the Associated Advertising Clubs of the World, whose headquarters are in New York.

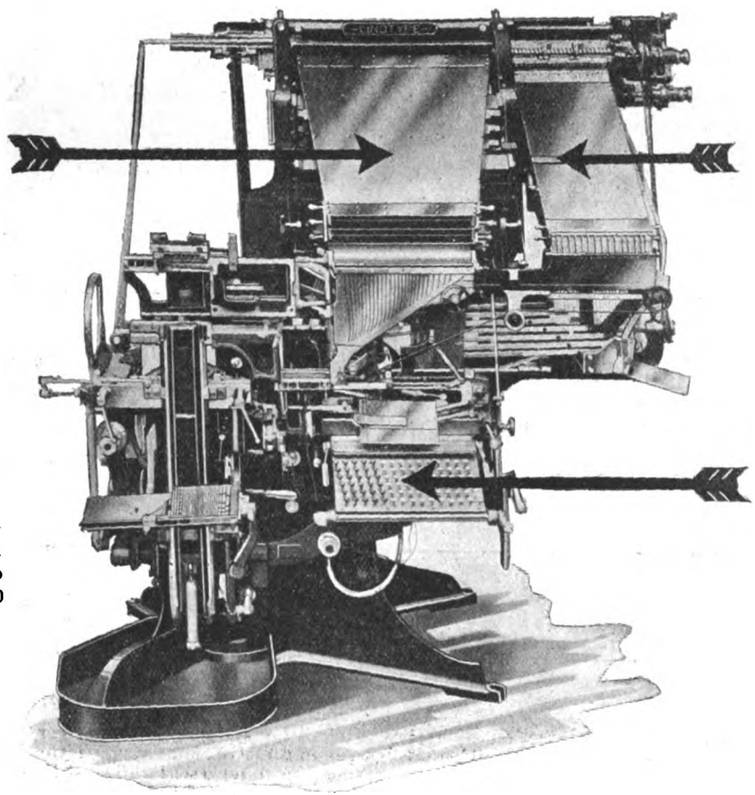
British Industries Fair.

THE date of the tenth British Industries Fair is rapidly approaching, and the prospects are that the display at the White City will be an advance on any of its successful predecessors. Special importance attaches to the fixture next year, since it coincides with the British Empire Exhibition at Wembley. For the convenience of visitors, home and overseas, the date of the Fair has been arranged later in the year than usual, namely, April 28th to May 9th in London, and May 12th to 23rd in the Birmingham section. Those attending one or the other, therefore, will be able to kill two birds with one stone. The B.I.F. continues to offer a unique opportunity for manufacturers to exhibit their wares and for buyers to study their character and prices. That the Fair is growing in importance and scope is shown by the fact that for several years individual Dominion firms have participated and an official Indian exhibit has been included. Last year the Dominion interest was reinforced by a combined exhibit, organised by the Canadian Chamber of Commerce in London, with the most successful results. The present crusade for the expansion of Imperial trade, based as it is on the soundest economic and political principles, could find no fitter objective than a great demonstration of Imperial industries before the genuine trade buyers of the Empire, the United States and Europe, who will no doubt be present in greater numbers than ever at Shepherd's Bush.

Lower Exhibiting Costs.

DURING the past four years the Department of Overseas Trade has pursued a consistent policy aiming at the all-round reduction of the cost of participation in the London Section of the British Industries Fair. Apart from the reduction in the cost of floor space which the Department was able to effect at the last Fair, the expense of participating has been brought still lower for 1924 by the cuts in the scale of charges for "shell" stand erection under the Department's scheme. Since 1921, when the cost of both materials and labour was at its height, the scale of charges for stand erection has been reduced year by year in sympathy with the fall in costs. This has been assisted also by the gradual perfecting of a standard scheme of construction. The comparative costs of a "shell" stand in 1921 and 1924 are as follows: Area, 100 square feet, 1921, £13 6s. 8d., 1924, £8 18s. 11; 200 square feet, 1921, £26 13s. 4d., 1924, £13 13s.; 500 square feet, 1921, £66, 1924, £17 18s. 11d. It is apparent, therefore, that the question of exhibiting at the British Industries Fair will be, from a financial point of view, a very different proposition in the coming year from what it has been in past years. It should be remembered also that this saving has not been effected at the expense of any diminution in the service rendered to buyers and exhibitors, as the full scheme of overseas propaganda, the provision of interpreters, buyers' club, etc., will be continued in the same manner as in previous years.

The Big Australian Market.



SOME interesting information appears in the new official Year Book of the Commonwealth of Australia for the fiscal year ending June, 1922, concerning the electrotyping, stereotyping, printing and binding sections of the printing industry. The period dealt with is the 12 months of 1920-21 (the latest for which returns are available), and the information given shows how high the printing industry ranks in importance amongst the manufacturers of the Commonwealth. For instance, during the year dealt with it afforded employment for more than 20,000 employees, and paid out in wages and salaries a sum of over £4,000,000, while the total value of its output amounted to £13,845,574. Of the various items referred to it is shown that the number of factories in the Commonwealth amounted to 1,132, which were divided among the different States as follows, the figures in parenthesis representing the number of employees: New South Wales 425 (8,547), Victoria 405 (8,271), Queensland 132 (2,894), South Australia 75 (1,415), Western Australia 70 (1,137), and Tasmania 25 (789). With regard to the approximate value of the plant and machinery in the various States, that of New South Wales was

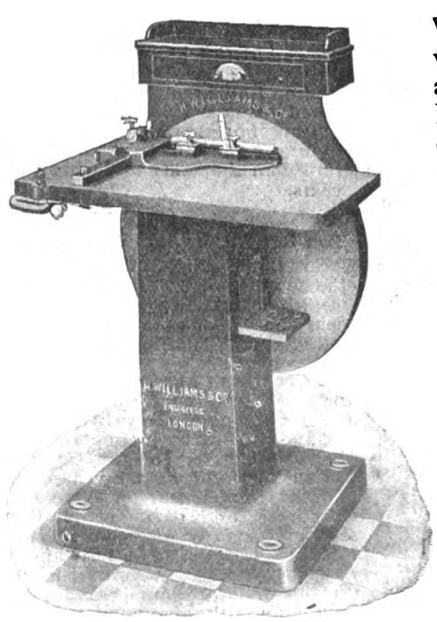
LINOTYPE MODEL 4 with SIDE MAGAZINES

Sets all type faces and bodies from 36 point to 5 point from a SINGLE STANDARD KEYBOARD

This section represents the popular Model 4 with which the majority of printers are already familiar. Its magazine equipment consists of three full-size magazines arranged one over another. Each magazine is supplied ready to set two different type faces of upper and lower case. All three magazines are available for immediate use at the will of the operator. Control levers conveniently positioned enable him to bring into use any of the five magazines with which the machine is equipped, so that if the copy needs it he can proceed immediately from the composition of 36 point to 6 point, or from 8 point to 20 point, and so on.



These two magazines have 68 channels arranged to carry founts of large display characters (upper and lower case, figures, and punctuation marks) up to and including 36 point. The display faces are set direct from the same power-actuated keyboard which controls the main magazines.

Every Linotype Operator throughout the world knows this keyboard. From it can be set all the type matter you require up to 36 point.

Write for full particulars: LINOTYPE & MACHINERY LIMITED 9 Kingsway, London, W.C.2

Why be a Slave to a Slow Uneconomical Hand Shoot Board?

When you can buy a **POWER Rotary Shoot Board** which will trim wood or type-high stereo metal "Dead True" all sides square, which cannot be done on any Hand Shoot Board. This machine will shoot up twenty blocks to one on a Hand Shoot Board, without the least exertion or danger to the operator. The Rotary Shoot Board will slice off wood or high-type stereo metal at the rate of more than 600 lineal feet per minute when 12 in. blocks are trimmed, and the blocks will be dead square all ways, which is the most important part. Unless the blocks are square they will rise when locked up in a forme and cause endless trouble and delay. The time that is wasted in trying to square up a block with a Shoot Board and Plane would in a short time pay for this machine. We have six of these machines running in one office alone, and over 100 running in London. Made in the following sizes: 6 in., 9 in., 13 in., 15 in., 18 in., 22 in., 24 in.

Our machines are running in the following countries: Australia, New Zealand, India, Egypt, Belgium, France, South America, United States of America, Chili, Spain, Holland and Germany, and we have supplied our "STEREOLINE" (Regd.) Enamel for producing fine art Stereos throughout the world.

the highest, amounting to £1,513,574, followed by Victoria £1,092,690, Queensland £341,590, South Australia £209,136, Western Australia £178,842, and Tasmania £56,212. Coming to the total value of the output of the different States, Victoria was responsible for £5,317,251, being closely followed by New South Wales with £5,158,051, and then Queensland £1,463,828, South Australia £906,325, Western Australia £688,825, and Tasmania £311,294.

Developing Industry.

THE development which has taken place in the electrotyping, stereotyping, printing and binding establishments in the Commonwealth is a notable feature. Since 1916 the expansion of the printing and allied trades has necessitated the employment of 1,806 additional workers and 1,575 horse-power units, whilst the values of the raw materials and the final output have more than doubled. The value of the allied trades total output of work in the year 1915-16 was £6,849,373, whilst in 1920-21 the total stood at £13,845,574. The total wages paid in 1915-16 was £2,582,539, whilst the wages bill for 1920-21 came to no less than £4,083,732. These data all go to show the live and progressive character of the allied trades in Australia, and the important possibilities attaching to closer commercial relations between the Commonwealth and the Mother Country.

Canada's Printing Industry.

ALTHOUGH the value of the pulp and paper industry of Canada far exeeds that of printing and bookbinding, the latter has an importance all its own. Indeed, so far as the number of establishments are concerned, printing and bookbinding are far in excess. Capital investment and value of products, however, are much less, as also is the cost of materials. Nevertheless, there are 670 establishments under the heading of printing and bookbinding according to a tabulation incorporated in the report issued in June last by the Department of Overseas Trade. The capital invested reached $28,248,490, cost of materials stood at $14,015 292, and the value of products was $38,826,979. There is thus a very good market for printing supply houses, and there is no reason why British firms should not get an increasing share of the custom. True, the American manufacturers and merchants are in closer touch, but there is good reason to believe that the feeling towards British traders is of the sort that would be helpful. What Canadians desire in printing and supplies, as in other directions, is service as well as goods. The straight methods of this country are already understood and appreciated; so that with enterprise and push, aided by the Imperial spirit, a greater share of Dominion orders should come to the Mother Country.

Canadian Customs Requirements.

THE important subject of Customs requirements in respect of printed matter sent into Canada appears, unfortunately, to be less perspicuous than it ought to be. By an Order in Council of September 21st, 1922, as amended by Order in Council of June 11th, 1923, printed or lithographed matter of all kinds, including books and pictures (except seals, labels and tickets, for which special instructions are issued) is required to be marked, stamped, printed or labelled in legible English or French words in a conspicuous place, that *shall not be covered or obscured by any subsequent attachments or arrangements*, so as to indicate country of origin. Such marking, stamping, printing or labelling is to be as nearly indelible and permanent as the nature of the goods will permit. By reason of the words italicised, it would appear that imprint on books to Canada is required to be placed on the outside of cover, and consequently an imprint on the title page alone would not comply with the regulations as being a place covered or obscured by a subsequent attachment. According to the U.S.A. tariff regulations, goods which admit of being marked with country of origin are required to be marked in English words in a conspicuous place. Arising out of the difficulty referred to above, a United States Treasury decision, which came into operation on July 15th, 1922 (ref. 39108), authorises the imprint on all books imported into the United States to be placed on the cover or on the title page.

Printing Organisation in South Africa.

SINCE Mr. M. Hennegin arrived in South Africa as organising secretary of the Federation of Master Printers in the Union, much has been done to foster a public spirit among the members of the craft. His task is not an easy one, even in the view of the local printers. However, the organising secretary is an optimist, and the progress already made justifies that attitude. A new constitution is being set up, and master printers generally are being imbued with the virtues of cost-finding and the evils of price-cutting. It is safe to assume that the house of the South African printers will soon be placed in better order, and that the members of the organisation will be doing more profitable printing. This must tend to the opening up of a better market for British supply houses.

Dutch East Indies Market.

QUITE a good market for printing supplies exists in the Dutch East Indies, and the fact is well worth calling attention to in this Export Issue of the *British and Colonial Printer and Stationer*. A large portion of the printing, lithographing or engraving supplies imported into the Dutch East Indies emanate from Australia, where there are a number of firms representing English houses who have ample stocks of the neeessary materials constantly on hand and who are, therefore, able to make deliveries within three months from the time the order is placed. The American Vice Consul at Batavia, Java, reports that, in addition to Australia, Japan, Germany and England are the prominent sources of supply for copper and zinc plates, and photographic goods, including cameras. Japan holds first place among the sources of copper plates, closely followed by Australia; while Germany, England and the United States are important suppliers of zinc plates. The copper received from Japan is largely in sheets of about 60 by 30 centimetres, and costs about 10 guilders a sheet after all Customs duties, etc., have been paid. The German zinc plates measure 60 by 50 centimetres and cost about 8 guilders per sheet, Customs duties paid. There is a divergence of opinion as to the quality of the Japanese plates, some importers considering them good, while others claim that the polish on them is very poor, although the copper is of excellent quality. Japanese zinc plates are reported to be of inferior quality, and Japan is no longer looked to as the chief source of supply for these plates. Practically all cameras, including those used for copying, enlarging and reducing purposes, arrive from Germany, which also supplies the Dutch East Indies with nearly all the photographic materials imported.

Inks for the Argentine.

UNITED STATES printing ink manufacturers have practically captured the market of Argentina, which, before the Great War, was in European hands with the Germans leading, so says a U.S. Trade Commissioner at Buenos Aires. Ten years ago, in 1913, Argentina imported 320,045 kilogrammes (705,571 pounds) of printing ink of which Germany furnished 42 per cent., France 30 per cent., the United States 23 per cent., Great Britain 6 per cent., and the rest of the world less than one-fourth of 1 per cent. Two years ago, in 1921, Argentina imported 406,645 kilogrammes (896,490 pounds) of which the United States furnished 79 per cent., Germany 12½ per cent., Great Britain 3¾ per cent., France 3¼ per cent., and the rest of the world approximately 1½ per cent. It is stated that American "news" ink is softer than European ink, and the newspaper publishers of Argentina prefer it, now that they have become acquainted with it. They can run the presses faster with the American ink. The ink passes through the torrid zone on the way to the Argentine ports, Buenos Aires and Rosario, with the result that it has to be re-worked before using.

Market for Inks in China.

WHILST there is bound to be a big increase in the market which China offers in printing supplies, the ink manufacturer who has his eye on the possibilities must remember the special requirements and limitations of the present situation. One outstanding feature is that lithographic printing is, because of the illiteracy of the masses, in great excess of typographic work; 85 per cent. of the printing is lithographic and the other 15 per cent. typographic. The bill for lithographic and printing inks for a whole year in China amount to only about $800,000. Calendars, labels and posters make up most of the output, as pictures are very popular. The inks used in China for lithographing and printing are obtained from Europe 10 per cent., United States 30 per cent, Japan 55 per cent., and 5 per cent. from China. The reason for the largest percentage from Japan lies in that country's proximity and the low manufacturing costs. Competition is so keen that it is necessary for local firms to carry large stocks, and this involves such a heavy investment for European and American firms as to make the trade almost prohibitive. At one time the Germans imported dry colours into South China and taught the Chinese to make their own inks, and these inks are now used liberally among the smaller lithographing and printing establishments. This ink is of an inferior quality because small native dealers are concerned with price rather than quality. Very little magazine work is done in China, the few periodicals published generally using ordinary news ink for the inside papes with a one-colour cover. Importers carrying local stocks frequently mix their own inks according to demands made upon them by the trade. Black is the staple colour, but there is a ready sale for bright colours, red predominating, with blue second and yellow third. There is also a small demand for greens and violets.

A Progressive Australian Firm.

Messrs. P. J. Firth (Queensland) Ltd.

Two years ago P. J. Firth (Queensland), Ltd., purchased the old-established business of Aulsebrooks, Ltd. At that time the business was carried on in rented premises in Tank Street, Brisbane, but the new management thought it would be much better for the progress of the business if they got into their own building, and accordingly about two years ago they purchased land at the other end of the city, and made arrangements for the erection of a modern factory.

The block of land selected is in Alfred Street, Brisbane, facing Brunswick Street Railway Station, having a frontage of 140 feet and a depth back of 137 feet. On this block of land the company have erected a factory building 120 feet frontage by 126 feet depth. The accompanying illustration gives a good idea of the front elevation, but does not show the full depth back.

The factory is magnificently lighted, having windows on both sides as well as at the front and back. Many of the latest labour-saving improvements have been installed, and to the left of the building there is a 20ft. private lane which permits lorries to pull up and unload at one of the two unloading bays, and then turn round and pull out again without disturbing a lorry which might be unloading at the other unloading bay. Not only is the factory well lighted and very comfortable for working in, but in addition there is included a well-appointed dining room with small tables for each four or five employees, with a kitchen adjoining where morning tea and afternoon tea is prepared, and where the employees' lunches are also prepared should they so desire. The building has been erected with extra thick walls, so that if necessary further floors may be imposed without having to strengthen the existing walls.

All of the manufacturing is done on the ground floor and the factory is arranged so that the raw materials come in on the left-hand side of the building, go through to the cutting department, then to the bending, slotting and corner cutting, and then either to the wire stitching department or else to the covering department. After passing through these departments the boxes are quite handy to the loading-up bays. The cost of the land and building is in the neighbourhood of £14,000.

SPICERS LIMITED have issued their *Notes for Buyers* in a different form, in order to draw special attention to the Christmas trade and the service which they are able to render in this connection. It is wisely suggested that consumers of paper and boards should not neglect their ordinary business on account of the Election, and that they should be prepared for the inevitable Christmas rush, which will probably come with greater force when the Election is out of the way. The value of Spicers' service is fully demonstrated by the publication as well as by the large assortment of papers, envelopes and cards of every sort and description which accompany it.

Notable London Ink Makers.

Messrs. B. Winstone and Sons, Ltd.

Messrs. B. Winstone & Sons, Limited, have, since, 1848, made for themselves a name in the printing world, which name now stands as a guarantee of high quality for all the goods manufactured and exported by them.

The Head Office, situated in the centre of the City of London, is literally surrounded by the most important newspaper printing offices in Great Britain. This chief establishment of the Company is in itself a complete business organisation, comprising all the departments necessary for the scientific manufacture and dispatch of printing inks. The following sections may be cited:—Administration and commercial offices, laboratories, colour testing rooms, ink blending rooms, ink matching rooms, ink grinding mill rooms, store of raw materials, litho roller manufacturing department, and packing and dispatching departments. The existence of this organisation in such a position is of untold service to the great number of printing houses to which it is uniquely accessible, and it is a veritable triumph of industry that a unit of this description is standing where in general only the most important newspaper offices, banks, etc., can retain their positions.

To enumerate completely the various types of ink manufactured would take too long, but, in brief, the following are a few of the principal general headings under which Winstone's Inks naturally class themselves.

A Wide Range of Inks.

Messrs. Winstone's black letterpress inks range from high-quality process and proving blacks to the cheaper jobbing blacks used by smaller houses, and we may mention under this heading the news printing inks which have a world-wide reputation. Poster inks, too, are manufactured in a wide range of colours and qualities to suit the particular purpose and character of the finished poster. The making of lithographic inks for the direct process is carried out with special care, these inks being tested in the laboratories so that the lithographer may use them confidently, assured that no acid or other harmful ingredient is present which may in any degree cause difficulties in working. Litho offset inks, as the result of long and careful experiment, are now produced in a quality of exceptional colour strength, ensuring brilliant and solid results even when the machine is carrying a minimum of ink. Three-colour inks are made in unvariable qualities with extreme cleanness in working, and these have been favourably reported on by very many important printing houses, it being definitely claimed that valuable time is saved by the straightforward runs resulting. A special department has been created at Shoe Lane under the control of a practical expert to deal with all three-colour ink orders, enquiries and problems. The house of Winstone was the pioneer in the manufacture of photogravure inks, and to-day holds an outstanding position. The pleasing results produced by these inks in monochrome and three-colour may be seen in the Company's recently issued specimen book. Gold and silver metallic inks bearing the name "Excelsior," are manufactured in various shades, the makers' chief aim being that their absolute reliability may enable the printer to use them with confidence on all coated stock.

The Stratford Factory.

This other section of the Company's Works deserves mention. The works cover an area of several acres, and it is here that, in addition to large ink-grinding operations, the raw materials for the London factory are made. Large stocks of linseed oil for varnish manufacture are held for maturing and with a view to the stabilisation of prices. Here the varnish is made and stored in tanks so that there shall always be on hand a good supply of matured quality for immediate dispatch. Other important manufacturing departments of the Stratford Factory include: Dry colours, Frankfort black, copperplate oils, and transfer papers.

Here also are situated the Company's roller casting and composition works, where the letterpress rollers of a very large number of printing houses in London and the Provinces are dealt with under the Company's popular contract system. In these works is also manufactured Winstone's "Radium" roller composition, which has for a considerable period been used by printers in many countries. This composition is carefully adapted so that it shall suit the climatic conditions of the country to which it is being exported. It is invariably packed in hermetically sealed tins in order that no harm shall result from the consignment passing through other climatic conditions than those existing at the port of discharge.

In addition to their wide range of printing inks, varnishes and dry colours, Messrs. Winstone supply a varied range of materials required by printers. These materials—comprising blankets, felts, moleskin, offset blankets, printers' furniture, bronze powders, transfer papers, litho rollers, etc.—are all specially tested and are guaranteed to be suitable for printers' requirements. The same department also offers to export printers a wide range of specialities which are invaluable to the printer in those difficulties which occasionally occur as the result of difficult papers, or when rushed jobs have to be got out. With these specialities, inks may be adjusted to be made exceptionally quick drying, or less expensive, and so on.

Messrs. Winstone's export trade has grown considerably since the end of the Great War. Every attention is paid to indents received, and all ink shipped abroad is packed in tins which are hermetically sealed. By a simple but effective device these tins can be opened without the use of any tools, and when opened the ink is securely protected by an efficient cover, ensuring economy and convenience.

It will be apparent from the foregoing that the house of B. Winstone & Sons, Limited, whose address is 100–101, Shoe lane, London, E.C., offers extensive service, and the Company claims that savings can be effected by printers indenting not only for inks, but for sundries of every description; in this way, under one order and one invoice, a variety of requirements may be covered in one consignment, thus effecting economies in freight, packing, carriage and insurance.

Japanese Paper Market.

News from Japan is to the effect that the country is carrying on wonderfully well in spite of the upheaval caused by the earthquake. British paper representatives are doing their part to place things on a business footing. It is so far fortunate that some at least of the British consignments of paper were on the way, therefore escaping destruction. It is symptomatic of the Japanese spirit of recovery that fresh orders for paper have already been received. It is understood, of course, that when business gets going there will be a considerable demand for paper, so much of which passed away with the disaster.

Commercial houses in Japan are also re-establishing themselves and the general outlook is good in view of what has taken place.

A CANADIAN firm of stationers wish to secure the Canadian agency for a line of children's or so-called toy books. (Reference, Canadian Government Trade Commissioner's Office, 73, Basinghall-street, E.C.2).

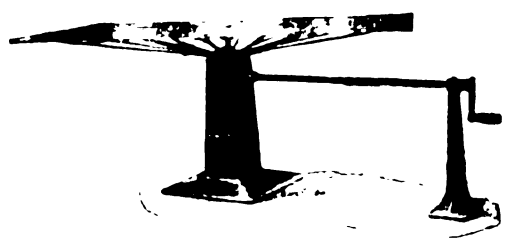
What our Manufacturers are Doing

British Machinery and Other Products that Merit the Attention of Overseas Buyers.

Bookbinding Machinery: T. W. and C. B. Sheridan.



The T. W. and C. B. Sheridan Co., Ltd., have just brought out a New Style Case-maker, which produces 2,000 cases per hour, and will turn out 15,000 cases per day, representing an immense advance in speed. Accurate measuring of the cloth and correct spacing of the boards is guaranteed. Any kind of cloth can be used, including T patterns and blank book canvas of the lightest weights. The cases are claimed to be superior to those made by hand. The cloth is accurately fed from a continuous roll, and passed through the improved glueing device. The two boards are then positively placed on the cloth by a side hopper feed. The forwarding movement is an adjustable gripper, operating in combination with the corner cutting mechanism, which cuts the corners, while the gripper, still holding the cloth and board, moves them forward to the turn-in rolls. This insures accuracy in the placing of the back-lining, and absolutely prevents inaccurate turn-ins and misplacements of the boards, due to any strain on the cloth. The back linings are automatically fed from a continuous roll. The heads and tails are folded like a hand-made case. The side folders are arranged with the case smoother as part of the second enfolder, so that the case is automatically pushed into the smoothing rollers. Cloth slitter and rewinder for the cloth is furnished with the Casemaker. One of the New Style machines, which will make cases from 6 in. by 9 in. up to 16 in. by 25 in., has arrived in this country, and in the next week or so will be installed in one of the biggest London binderies. Sheridan Case-makers are, of course, well-known throughout the trade in this country, a similar machine, producing over 1,000 cases per hour being in use by practically all the leading cloth binderies, including Messrs. J. Burn and Co., J. M. Dent and Sons, Dow and Lester, Greycaine Co, Hazell, Watson and Viney, Ltd., Leighton, Son and Hodge, Love and Malcolmson, T. Nelson and Sons, Straker, Son and Smith Bros., Ship Binding Works, Ward, Lock and Co., Wyman and Son, Key and Whiting. Some of these machines have been running for over 25 years.

Bookbinding Machinery: Aug. Brehmer.

Thread book-sewing machines form an important part of the machinery offered by this London house, and a variety of effective models are obtainable. Amongst these will be found, for instance, a machine intended for sewing the heaviest account books, letter copying books, etc., and is made in two sizes, one to take books up to 22 ins., and the other up to 28s. in length. According to size, one to six books may be sewn at one time, and cut asunder afterwards, each separate book having kettle-stitches at its ends and also between the tapes. Another machine is designed especially for sewing letterpress work, etc. It works with double thread, and no cuts are made in the head and tail of the sections. It can be had either for French sewing only, *i.e.*, for sewing books without using any material at the back, or for sewing on ⅛ in. and ¼ in. wide tapes, cord and canvas, and French. Glueing and gumming machines form another class of machinery of interest to bookbinders, box-makers and others, whilst the house of Brehmer offers also an extensive series of wire-stitching and binding machines to suit all requirements.

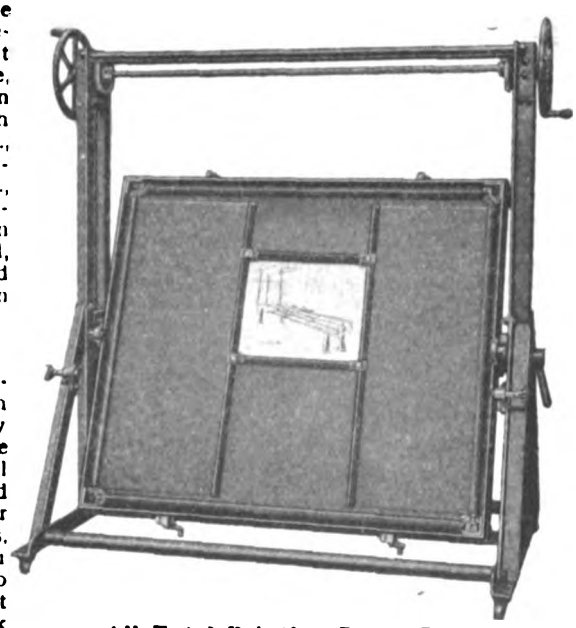


Photo-Litho Apparatus: Hunters Ltd.

The activities of Messrs. Hunters Limited in connection with process and photo-litho matters generally are well known to our readers. Amongst the new apparatus of special interest is the latest model Pedestal Type Photo litho Whirler, supplied for either hand or power operation. This is shown in the accompanying illustration. An absolute essential for the satisfactory coating of the zinc or aluminium plate is that the latter shall be kept perfectly level, in order that the coating may be of even thickness. This whirler is made with a heavy metal (plate) top, and the supporting bars are provided with double-ended adjusting nuts, so that any section of it can be independently adjusted. The whole apparatus is of most

New Photo Litho Whirler.

rigid construction, and for ease of operation, the working parts are mounted on ball bearings. We also illustrate their All-metal Photo-litho Printing-down Frame, of which very large numbers have been installed both at home and in the Colonies. In this they have entirely obviated the use of wire ropes and counter balance weights, the upper frame being operated by bevel gearing and screw motion. Four-way roller shutter blinds for masking off any portion of the plate are

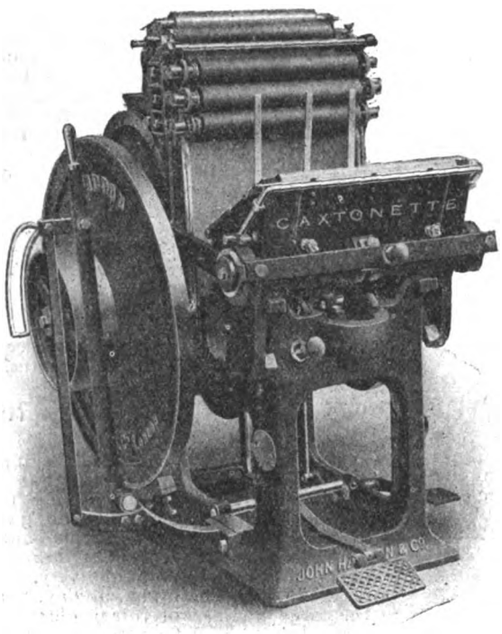
All-Metal Printing-Down Press.

also provided, and the vacuum is obtained by specially constructed motor-operated rotary pump, with speed controller. Once the vacuum is established, absolute contact between the negative and the metal plate is maintained by running the exhausting pump at half-speed during exposure. We understand from Messrs. Hunters that they have now evolved an entirely new type of All-metal Register Model Printing-down Frame, by which the difficult operation of putting down successive colour negatives in register is overcome, and further that they already have quite a number of these on order. One of the great drawbacks to the more rapid development of colour photo-lithography has been the difficulty of laying down colour negatives quickly and exactly, so that great interest attaches to mechanical means such as are now provided on the new Register Frame, by which negatives for any number of colours can be placed in hair-line register without difficulty.

Photo-Litho and Process Supplies: Pictorial Machinery, Ltd.

Microscopic accuracy is becoming more and more a desideratum of the printer as the latest photographic reproductive processes develop. Machinery makers are succeeding in meeting the demand for apparatus that will make the delicate processes connected with photo-litho and block making as far as possible exact and fool-proof, and a foremost place in this endeavour is taken by Pictorial Machinery, Ltd., the well-known London supply house. Messrs. Pictorial Machinery, Ltd., are the proprietors of the world-renowned Lithotex Patent Step-and-Repeat Machine, and have supplied this machine during the course of the last year to many large printing houses at home and abroad. Besides this machine and their Lithotex and Printing-Down Frames Messrs. Pictorial Machinery, Ltd. have introduced auxiliary apparatus of great value in photographic reproduction work, and a strong feature of the service of this house is the retention of a permanent staff of expert demonstrators and instructors whose advice and assistance are available to users of the firm's apparatus.

Lithographic Machinery: George Mann and Co., Ltd.



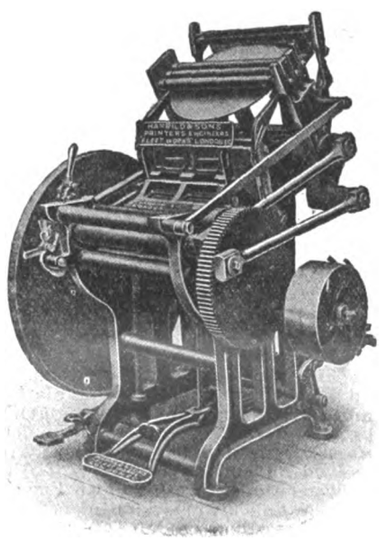
George Mann and Co., Ltd., the lithographic machinery specialists, inform us that they have acquired a foundry adjoining their Leeds works which is capable of dealing with 50 tons of castings per week. This enables them to cease being dependent on local iron-founders and give prompt delivery. The works are in operation night and day, owing to the large number of rotary offset machines, both single and multi-colour, which are being ordered. The works are able, however, to give quick delivery and report that they are capable of dealing with a much greater influx of work. Each machine is manufactured throughout in these well-equipped shops by British labour. As evidence of the good service rendered by Mann machinery we may mention that we have heard of a certain well-known firm of tin-printers in the Midlands who have a Mann "Standard" rotary tinplate decorating machine supplied in 1909 which is still running and printing perfectly at 1,680 impressions per hour. The guaranteed speed of this machine is 1,750 impressions per hour, and yet, after 14 years' wear and tear, the machine still gives perfect results at a speed very little under that guaranteed. The patent Two Colour and Perfecting machine continues to sell rapidly, the demand being equivalent to the output. These machines, as is generally known, are extremely compact, occupying little more room than a single-colour machine. The running costs are by no means exorbitant, the work is turned out in wonderfully quick time, and perfect register is assured and guaranteed. Large and small houses continue to find the "Baby" (20½ in. by 12½ in.) single colour rotary offset machine a profitable investment. Extremely fine colour and commercial work is being turned out at low competitive prices. The jobs have that softness and tone peculiar to offset printing and are claimed to be much in advance of work turned out by any other process that is capable of giving the same output at anything like a competitive price. Rotary tinplate decorating machines, both "Rapid" and "Standard" models, are selling well. The example cited above of the output being obtained from a "Standard" machine after 14 years' work is sufficient comment as to the value of these machines. Messrs. Mann announce that they have had entirely new catalogues prepared, which are printed throughout by the offset process. These catalogues are being published within a week or so and they will be of double interest to the trade, firstly because of the information they contain about Mann ma-

Digitized by Google

chines, and secondly because they illustrate what can be done by the photo-offset process on Mann machines. Finally, George Mann and Co., Ltd., allow us to state that they are only too willing at any time to conduct any master printer or overseer over their Leeds works and demonstrate the method by which these machies are built in such a way as to give the best possible service to every printer.

Platen Press: John Haddon and Co.

We have received from John Haddon and Co. a neatly printed and fully descriptive booklet describing their new crown folio art platen, which they market as the "Caxtonette." We illustrate the machine herewith. The Caxtonette is modelled on the lines of Messrs. Haddon's complex art platen presses which are favoured for their elaborate design and perfect inking arrangements. The salient

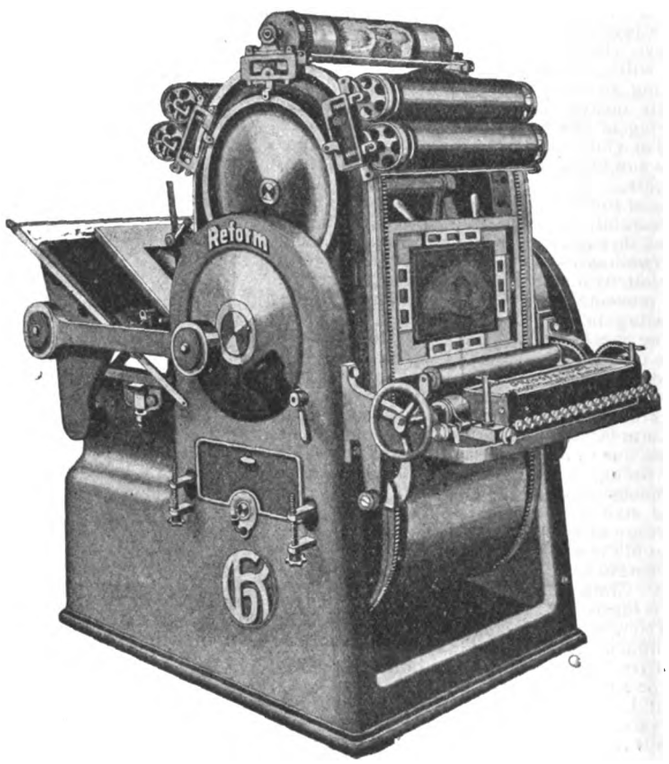


Crown Folio Art Platen.

eatures of the art platen are all retained in a simplified form, so that the inking on the Caxtonette is superior, and capable of producing good half-tone work, which is such a difficulty to the ordinary crown folio platen which is only fitted with disc inking. The booklet is tastefully set in types, borders, etc., cast at their Caxton Type Foundry, and deals with every feature of the machine. Included in the text of this descriptive matter will be found testimonials from many firms of repute, who write in the highest praise of the Caxtonette, and bear convincing testimony to the outstanding capabilities of this comparatively small platen machine. Worthy of special note is the fact that in the construction of the Caxtonette Messrs. Haddon have adopted standardisation and interchangeability of parts, the Caxtonette booklet serving also as a catalogue of all the parts of the machine, which are carefully catalogued and numbered for easy reference. Standardisation of machine parts is a feature for which the American manufacturers have been so often complimented in the past, and it is refreshing to find an English house of printers' engineers who are both willing and able to put sufficient money into their product with a view to ensuring accuracy, uniformity and economy in production. We understand that a specimen of colour printing together with the booklet will be sent to any part of the world post free upon request. Printers overseas will be interested to know that the machine is priced at the moderate figure of £180, which includes free delivery to their port. Messrs. Haddon do an extensive export trade, and doubtless the facility offered to the printer of knowing the cost delivered to his port is a big incentive for inducing the overseas printer to send along an order which does not leave him in any doubt as to the ultimate cost of the machine when delivered.

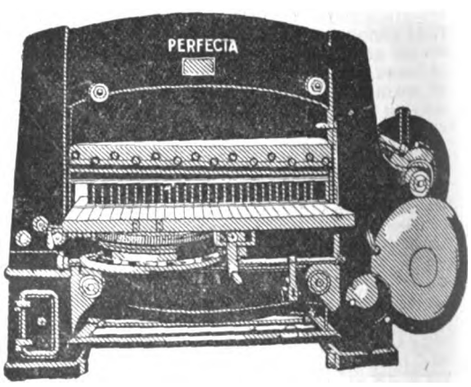
Platen Presses: Harrild and Sons, Ltd.

An interesting new feature amongst the products of this well-known British house is the Improved "Bremner" Platen. These are produced in the firm's own well-equipped factory, and a special feature is that all parts are made to jigs. These machines possess three distinctive points: (1) The throw-off impression action is so arranged that operator can throw the rollers off the face of the forme at will, which is a great advantage when running up colour, or on special block work; block is not inked twice when impression is thrown off; the machine can also be used under ordinary conditions of throwing off impression only. (2) Adjustable roller bearers. (3) By improved inking arrangement the rollers do not merely roll up and down the forme in the same position every time, but when they come to the bottom of the forme, by a very simple and very ingeni-



Improved "Bremner" Platen.

ous arrangement the rollers are given a turn and they thus come up in a position different from that in which they came down. These are exclusive features of the Improved "Bremner" Platen. The same firm makes the "Harrild" Art Platen, a well-known machine of the heavy type, for three-colour process work, etc.



Miscellaneous Machinery: A. Edler.

A new item of special interest amongst Mr. Edler's machinery is an Offset Platen Press, which we illustrate herewith. This is a novelty which, it is claimed, offers enormous advantages to the letterpress printer, as he can now use the hardest or softest paper, or even writing paper, on a platen, and print the finest half-tone blocks with first-rate results. We understand that the sale of this machine has been kept back, as the manufacturers have not been able to cope with as many orders as came in, but Mr. Edler is now able to supply these machines comparatively

The New Offset Platen (Edler).

quickly, and can show one at work at any time in London by appointment. Strong evidence of the approval which the "Perfecta" Guillotine has found in this country is provided by the fact that a single London firm has ordered five of these machines during the last six months. With an automatic feeder this machine is claimed

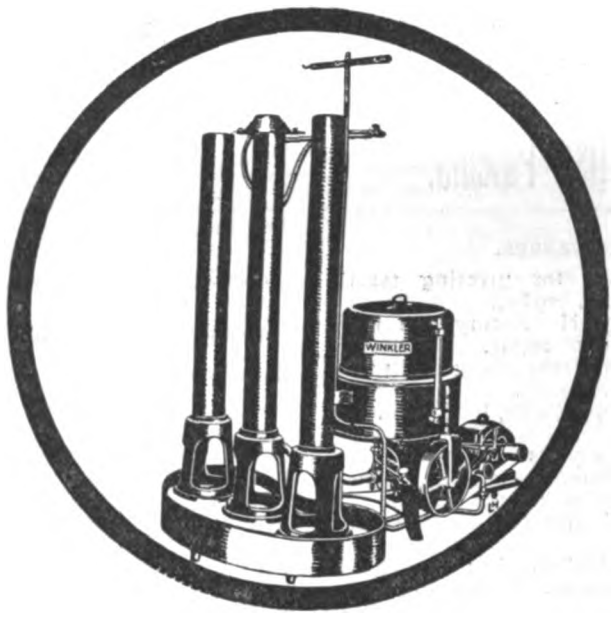
"Perfecta" Guillotine.

to give the output of eight ordinary guillotines, and the register with printed work is absolute. An illustration of this machine appears herewith. Another Edler feature is a new Book Sewing Machine, eminently suitable for publishers' bookbinders. The machine is guaranteed to sew 60 to 70 sections per minute, and the sewn books are automatically delivered, so that the operator has nothing to do but to feed the sections into the machine. Mr. Edler has also brought out a new flat-bed Bronzing Machine named

Digitized by Google

the "Progress," of which there are already many now at work both in London and in the provinces. The machine, which can be inspected at any time by appointment, is so arranged that no dust can escape into the printing room, and with this principle no exhaustor is needed, although one could be fitted to the machine if required. In practice, however, it has been shown that no advantage can be gained by an exhaustor or vacuum with this new construction. The construction all through is so simple that an unskilled man can make himself familiar with it within a very short time. The speed amounts to about 2,000 sheets of 24 ins. length, and, of course, any thickness and quality of paper and cardboard can be used. The machine is guaranteed to meet the requirements of the Home Office. The price is less than half of Mr. Edler's previous flat-bed bronzer.

Numbering Apparatus: E. W. H. Stanleigh.



A very interesting development adapted to save time, money and trouble in respect of extensive numbering work of all descriptions has been brought forward by Mr. E. W. H. Stanleigh. This is the Automatic Numbering Chase, which is suitable for Wharfedale or platen printing machines, with numbering barrels adjustable in all directions, for production numbering of cheques, bonds, coupons, check books, tickets of all descriptions, etc., etc. The chase is made with reversible action for Wharfedale machine for numbering parallel to or at right angles to the cylinder. The Automatic Numbering Chase fits in the machine in the same way as an ordinary type chase. The number barrels, which are type-high, are placed in any desired position, either parallel to or at right angles to the cylinder. Mr. Stanleigh has produced a neat brochure describing and illustrating this apparatus.

Miscellaneous Machinery: Oscar Friedheim, Ltd.

We understand that Messrs. Oscar Friedheim, Ltd., of 7, Water-lane, Ludgate, E.C.4, have been appointed sole agents for Messrs. Fischer and Krecke, of Butefeld, who are one of the largest Continental manufacturers of bag-making machinery. Messrs. Friedheim also hold the sole agency for the whole of the combine of envelope machine manufacturers in Germany, and the machines handled are claimed to be of first-class workmanship and fitted with all the most up-to-date improvements. We need hardly mention the other machines which Messrs. Oscar Friedheim, Ltd., handle as they are well known amongst the principal houses in this country and in all parts of the world. This firm specialises in all classes of machinery for the bookbinding, boxmaking and stationery trades.

Miscellaneous Machinery: W. J. Light and Co., Ltd.

From Messrs. William J. Light and Co., Ltd., we hear that they have not only been doing a considerable business in the home market, but have also exported to Australasia and South Africa a considerable amount of the stereotyping machinery which forms an important section of the goods in which they deal. Messrs. Light, besides having their own specialities, are agents for Messrs. Winkler, Fallert and Co. S. A., Berne, and have some notable Winkler machinery to offer. An interesting item is the Winkler Automatic Ingot Castor, for re-melting, mixing, refining and ingot-casting all printers' metals (slugs, type, stereo plates, etc.), and white metal alloys with melting points up to 500 degs. C. Type and stereo metals in the strenuous treatment which they are necessarily given are often subjected to wasteful over-heating, stirring and skimming of the metal while it is too hot, and oxidisation, this forming dross, which has to be skimmed off, thus gradually impoverishing the alloy. This results in a serious loss in dross and in an excessively high bill for renovating metal. The Winkler apparatus is designed to substantially cut down these losses. Only the clean metal is cast, from the bottom of the pot, under the weight of the whole contents of the metal pot, the dirt and impurities remaining on the surface of the metal. The surface of the metal is kept in a non-oxidising atmosphere, which prevents the formation of dross. It has been proved in practice that this effects a considerable economy in metal. The sliding door of the hood covering the melting pot remains closed, except when the dirt is being skimmed off, and the choking and unhealthy fumes from the metal are carried off through the flue. When the metal flows into the moulds the air is displaced and escapes through the metal in the pot, thereby acting as a natural stirrer. The furnace is so constructed that heat losses through radiation to the atmosphere are minimised. The furnace can be heated by gas, coal or coke. The Winkler Roller Casting Apparatus, which we illustrate herewith, contains important new features and is claimed to produce perfect rollers by simple, cheap and rapid operation, using existing moulds and spindles. By means of a simple apparatus arranged underneath the crucible, which is connected with the foot of the mould by a flexible pipe, the composition is pressed upwards, and in rising displaces the air, so that the rollers produced show no bubbles nor wavy structure.

Winkler Roller Casting Apparatus.

Bookbinders' Cloth: Bentley, Smith and Co., Ltd.

From this Manchester firm of book cloth manufacturers we have received for inspection a number of specimens which show that they are producing a comprehensive range of materials of interest to bookbinders. Cloths in great variety include art vellums, common colours, paper lined cloths, cotton buckrams, art cambrics and art canvas. The pleasing and often novel effects attained in these products, and the competitive prices at which they are offered, make the samples of practical interest to users of such materials.

Printing Inks: R. A. Bartlett, Ltd.

Success is continuing to attend the efforts of Messrs. R. A. Bartlett, Ltd., the printing ink, varnish and colour manufacturers. We understand that they are doing an increasing business with the export market in their "Apex" concentrated letterpress inks, also in their special lithographic inks to which the firm's foreign and Colonial friends have made many highly complimentary references. A feature which has been particularly appreciated is the fact that "Apex" inks are worked with a minimum of moisture.

Printing Ink: John Kidd and Co., Ltd.

As evidence of the steadily progressive nature of this firm's business, we learn that considerable extensions of plant are now being provided, by which it is intended still further to increase the facilities for the rapid execution of their ever-increasing home and colonial orders. In these days of restricted trade, when the tendency of the generality of manufacturers is in the direction of curtailment rather than expansion, it says much for the high quality and value for money represented in the goods of Messrs. John Kidd and Co., Ltd., that they can, with full confidence in the future growth of their business, undertake the extensions referred to. We have received from this firm specimens of a series of gold and silver metallic inks they have recently brought out. These inks are supplied, we are informed, in the form of powder and medium in separate tins, so that the printer can readily mix just sufficient ink for the job in hand, and of any desired consistencyto suit the class of paper used. Waste is eliminated, and the results obtained are equal to any procurable by dusting with bronze powder, with the still more important advantages of increased adhesiveness and the total absence of the danger to the operative existing in the old method of bronzing.

Printing Inks: Lourilleux and Bolton, Limited.

Much enterprise is being shown by this London firm, which has recently introduced several new features that are of interest to ink-users both in this country and overseas. A thing that appeals particularly to printers requiring small quantities of certain inks is the supplying of inks in tubes. Messrs. Lorilleux and Bolton have produced a new catalogue devoted to these tube inks, demonstrating that a very useful range of colours and blacks is thus available at a small cost, and to the smaller users the avoidance of waste inseparable to some extent with ordinary tins will appeal very strongly. Each tube contains a half-pound of ink. For occasional jobs of three-colour work, for instance, the range of colours is admirable, but jobbing and process blacks, with reds, blues, magenta, orange and brown are also amongst the inks represented. Another innovation that meets a real need and speaks highly for the progressive character of this firm is their patented "Frequentia" Colour-Testing Lamp. This affords a conveniet and improved means of testing the fastness of colours to light. Those requiring thus to test colours of all kinds, either materials or printed sheets, would do well to inquire about the "Frequentia," which has important points of superiority to previous apparatus of similar character, a notable feature being the elimination of the heat effects that have hitherto been a disturbing factor.

Printing Inks: Slater and Palmer.

Messrs. Slater and Palmer have always laid emphasis on the fact that in the production of improved printing inks they seek to economise time, labour and materials in the printing office. This idea is further developed by their specimen book just issued. Small in size, it is handy in form, and shows 60 specimens of black and coloured letterpress inks. These are selected from a much larger range of their productions so as to exhibit just the shades and qualities most in regular demand for the present trade conditions, enabling printers quickly to select the particular ink they require. The book is flexible, and so arranged in groups of shades that the complementary colours can readily be placed together for a choice to be made of inks suitable for a two-colour circular or catalogue. A pleasing study of fruit forms the tri-colour specimen, and practical printers will recognise that the great range of tones produced demanded inks of perfect transparency and delicacy of shade. We are informed that all the specimens in the book have been worked under quite ordinary machine conditions, at high speed, and from

Digitized by Google

the actual inks as numbered and priced. The fact that a considerable proportion of the specimens are printed from fine-screen half-tone blocks serves to show the high class of work for which the inks are adapted. All the inks shown can be supplied for lithographic and offset processes at a small proportionately increased price. This being our special Export Number it is fitting to mention that large numbers of copies of the Specimen Book have been dispatched to Slater and Palmer's Colonial and foreign agencies for distribution amongst their clients, for whom the inks will be adapted to the climatic and working conditions of the respective countries to which they may be exported.

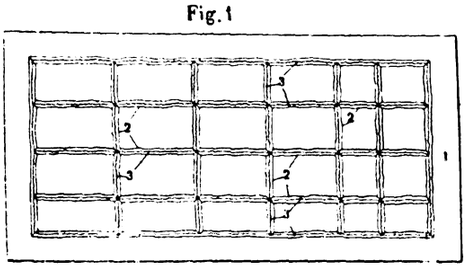
Carbon Paper.

A British patent has been granted to Mr. A. Haig relating to carbon papers and like transfer materials coated on one side. In the manufacture of such papers, two like sheets or webs are separably connected, and the outer surfaces are coated separately or simultaneously, the papers being thereby prevented from being torn, and the coating-composition being prevented from passing through pin-holes on to the plain sides of the sheets. Specifications 24981/11 and 138,226 are referred to.



UNDER recent amendments of the New Zealand Customs Tariff millboard in sizes prescribed by the Minister of Customs is admitted free in all three sections of the tariff.

Imitation Hand-Made Paper.

A British patent has been granted to Messrs. C. Rivage and Paul Le Sage, covering a process and apparatus for the production of paper and cards in imitation of hand-made paper and cards.

As shown in the accompanying drawing, the invention consists in forming upon the plate 1, made of steel or other suitable material, ribs 2 showing a triangular section with a broad base so arranged on the plate as to fix the limits for the outlines of the several blanks which are imitations of

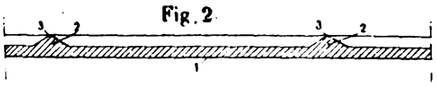


Fig. 1

hand-made paper or cards and which are to be obtained from moistened sheets of machine-made paper or card having determined sizes.

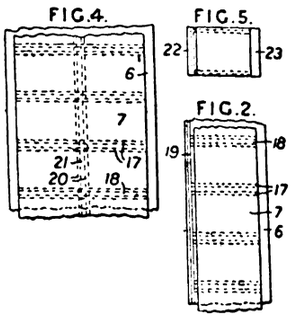
These ribs 2 can be obtained in any suitable manner and, for example, by covering with bitumen or other protecting material the metal plate at the places where the same has to be provided with ribs and in then submitting the plate to the biting action of an acid. The operations of coating and applying the acid are of course repeated until the ribs have attained the desired height; the inclination of their edges is corrected, if necessary, by means of a milling cutter or in any other suitable manner so that the apices of these ribs will form, as shown in Fig. 2, sinuous ridges 3 the whole of which show exactly the same outlines as the blanks or

Fig. 2.

pieces of paper or card imitating hand-made materials which it is desired to obtain from a moistened sheet of machine-made paper or card.

These blanks are obtained by passing together between the rollers or cylinders of a rolling mill both the sheet-steel 1 provided with the blunt edges 3, as indicated, and of the pile of moistened sheets of machine-made paper or card in any suitable number, resting upon said edges.

While passing between the rollers of the mill, the sheets of machine-made paper or card are submitted, on the plate 1 to such a pressure that they are separated or broken by the ridges 3 of the plate into a certain number of blanks having an irregular outline like the ridges and show edges made thinner as a result of the paper pressing against the inclined faces of the ribs 2.



Waterproof Paper Board.

Waterproof paper board or box board is manufactured in accordance with a United States patent by heating finely divided Montan wax into a pulp mass of cellulose fibre. This fibre mass has been previously mixed with finely divided calcium hydroxide. A precipitating agent is then added to throw down the mass of fillers and waterproofing agents on the pulp fibre and the pulpy mass is worked up into sheet or web. The board may also be made in composite form, wherein the lower layer is made of felted fibre and the top layer is made of thin highly-waterproof fibre Montan wax and a voluminous flocculent precipitate.

IN order to secure concentration and greater efficiency, the directors of A. M. Peebles and Son, Ltd., have in view the disposal of their Queen Victoria-street premises, and in the New Year will conduct the whole of the London business from the wholesale premises at 28, St. John's lane, Clerkenwell, E.C.1. All connections of the company will be given good notice of the date on which the change will take effect.

Making Paper Bags.

In an invention by Mr. C. W. Hartmann paper bags are made from two strips of paper, the side edges of the bags being crosswise to the movement of the paper through the machine. One bag may be produced from the width of the paper, as shown in Figs. 2 and 5, or two, as shown in Fig. 4. Two crosswise strips of paste 17 are applied to one web 6 for the sides of the bags, the webs 6, 7 being severed along the non-pasted portion 18 and a strip of paste 19 is applied to an over-

lapping portion of the bottom web, the bottom 22 being produced by folding over this pasted portion. For producing two bags from the single width, two lengthwise strips of paste 21 are applied to one web 6 and the webs 6, 7 are severed lengthwise along the non-pasted portion 21 between them. The machine employed may be of the kind described in Specification 197,581. According to the Provisional Specification, the bags may be formed from a single web, folded lengthwise to form the bottom.

Stencil Paper.

An application for a British patent has been made by Mr. W. Koreska relating to an invention for the manufacture of stencil sheets and coating compositions.

A stencil sheet for duplicating, of the kind wherein characters are formed thereon by impact with type or by means of a stylus, consists of a fibrous porous base, preferably paper, coated with a composition which includes a derivative of cellulose such as inorganic or organic esters of cellulose, oxy-cellulose or hydro-cellulose. Hydrated cellulose precipitated from solutions of cellulose or cellulose and esters may also be employed. The coating may also include a mixture of esters and hydrated cellulose such as is generated when nitro-cellulose is partly denitrated. Tempering agents, such as rosins, oils, fatty acids, wax, gum, caoutchouc, balata, and similar hydro-carbons may be added to the composition. The substance or mixture chosen may be dissolved in a volatile solvent consisting, for example, of "dekaline" or "tetraline" where the composition employed is a mixture of cellulose ester with hydro-carbons, fatty substances, oils or caoutchouc. Amyl acetate or a mixture of ethyl ether and alcohol may be used if the esters are mixed with fatty acids or substances soluble in those solvents. Where the coating includes cellulose esters the solvent is allowed to evaporate after the coating is applied.

To produce a coating consisting wholly or partly of hydrated cellulose, the coating applied to the base is treated with a suitable precipitating liquid, *e.g.*, a coating comprising nitro-cellulose may be softened by partly denitrating it. A specific example of a suitable composition is given as 400 grms. of nitro-cellulose, 800 grms. of castor oil, 1,000 grms. of tallow and 10 litres of amyl acetate. A suitable colouring solution may also be added.

CHAS. MORGAN AND CO., LTD., 182-4, High Holborn, ask us to announce that in order to relieve telephonic congestion caused through increased business, they have arranged for two additional telephone lines. This extension necessitates altering their telephone number, which from December 1st will be Regent 7404 (eight lines).

PATENT YOUR INVENTIONS. Protect by Trade-mark your Goods; advice and handbook free.—B. T. King, Registered Patent Agent, 146A, Queen Victoria-street, London, E.C.4. 14278

WASTE PAPER: ITS RECOVERY AND RE-MANUFACTURE. By Jas. Strachan. A Fund of Information; price 12s. 6d.—Stonhill and Gillis, Publishers, 58, Shoe-lane, London, E.C.4.

TENDERS WANTED.

COUNTY BOROUGH OF EAST HAM.

To Printers, Stationers, Etc.

THE Town Council invite Tenders for Printing and the supply of STATIONERY, BOOKS, etc., for the alternative periods of one year and three months, and three years and three months, from 1st January, 1924.

Schedules and Forms of Tender may be obtained on application to "The Borough Treasurer," Town Hall, East Ham, E.C., and on payment of the sum of £1 1s., which sum will only be returned upon the receipt of a bona fide tender. The Scheduled Samples may be inspected on any day (except Saturday) between the hours of 9 a.m. and 5 p.m., at the Town Hall.

The person or persons whose Tender is accepted will be required to observe and fulfil the obligations upon Contractors specified in the Fair Wages resolution adopted by the House of Commons on the 10th March, 1909, which is fully set forth in the conditions annexed to the form of tender, and to enter into a contract with a bond for the due performance thereof.

Sealed Tenders endorsed "Tender for Printing, Stationery, etc.," to be delivered to "His Worship the Mayor, Town Hall, East Ham, E.6," not later than 12 o'clock noon of Saturday, 29th December, 1923.

The Council does not bind itself to accept the lowest or any Tender.

(By Order)
C. EUSTACE WILSON,
Town Clerk.

Lloyd Memorial (Caxton) Seaside Home.

Lady Violet Astor Lays the Foundation Stone of the Printers' Peace Memorial Wing.

Another chapter in the splendid history of the Lloyd Memorial (Caxton) Seaside Home, Deal, was inaugurated on Saturday with the laying of the foundation stone of the Printers' Peace Memorial Wing. Such has been the call upon the accommodation of the Home by ailing printers and their women folk that further beds became necessary. At the present time, although 122 patients can be looked after, 50 have to sleep outside. There was need, therefore, of more beds in the Home, and with the excellent object of commemorating the Peace and in remembrance of the members of the printing and allied trades who fell in the Great War the idea was conceived of erecting a new wing which would provide 23 additional bedrooms (88 beds), giving a total accommodation for 210 inmates.

The benevolent work carried on at the Home readily elicited the sympathy of Major the Honourable J. J. Astor and his wife, who have a residence in the neighbourhood of Deal, and Lady Violet gracefully laid the foundation stone of the new wing on Saturday in the presence of a large and representative gathering, including the Mayor and Corporation of Deal. A civic procession was arranged from the Home to the scene of the ceremony, which commenced with the presentation of a bouquet to Lady Violet Astor by the matron of the Home (Miss Louise Gray).

Progress of the Home.

The chairman of the Home (Mr. Wm. T. McMullon) then gave a brief account of the objects and progress of the Home. He mentioned that it was 36 years since the idea of the institution occurred to about half-a-dozen newspaper compositors in London, and 12 years since they came to Deal with a very small income and very little money and took over the Deal College, which had been empty for three years and was rather dilapidated. In its place they now had the fine looking building in the High-street. Fortunately they had always good friends among master printers, and Messrs. Lloyd came forward and lent them £3,000 to purchase the old Deal College. Five years later, so great had been their progress, that they had to consider the question of building more accommodation, and the idea of that new wing had been conceived. It was, however, a very expensive matter and they found they would require £16,000, which was a large sum for a number of working men to get together. Fortunately Mr. Frank Lloyd came to their assistance again and gave them a cheque for £4,000 to start the scheme, and later Mr. J. M. Blanche, of the *Observer*, used his influence to get a donation of £2,000 from a concert which Mr. George Robey gave for the printing charities. As they were unable to proceed with the extension of the Home owing to lack of funds, they bought Winchester House, in the neighbourhood, which provided 34 more beds. For that freehold they paid £2,000. Then Mr. Lloyd inquired as to how they were getting on with the wing and how much money they required. When they told him £4,000, that gentleman came forward with £4,000 and so completed the amount required. It was then found that the addition of the wing displaced considerable accommodation that they had in the original home, and it was necessary to find some other means of housing their convalescents. They did that by purchasing some villas, but they required another £3,000 for that. On Mr. Frank Lloyd's hearing of this position he said: "Here is another £1,000, get on with it." They would see, therefore, that the Home had been promoted by working printers and master printers in combination. The work was carried on with the assistance of a number of weekly subscribers, the handsome help they received from the master printers, the efforts of the various collectors and the work of their committee, but still more by the activities of their admirable secretary, Mr. Parker—(applause)—without whom at the headquarters in London they would never have been able to do what they had done, because he had been their "chief beggar" all along. So far as the Home itself was concerned, its success, without doubt, was due to the extraordinary personality of their Matron (Miss Gray), whose kindness had won the hearts of everyone who had entered the Home, patients going away not only with physical healing but with spiritual healing as well. (Applause.) The speaker intimated that a deep religious feeling permeated the administration of the Home and the efforts of those who were associated with the work.

The Bishop of Dover then offered up prayer, following which Mr. H. O. Ellis, the architect, and Mr. T. T. Denne, the builder, on behalf of the committee, presented to Lady Violet Astor the ceremonial trowel and mallet, with which she proceeded to lay the foundation stone, which bears the following inscription:—

Printers' Peace Memorial Wing.

This wing was erected to commemorate the Peace of 1919 and in remembrance of those members of the printing and allied trades who fell in the Great War 1914-1918. The foundation stone was laid by Lady Violet Astor on the 1st day of December, 1923.

Prayers were then said by the Bishop for those who had made the great sacrifice in the War, and a trumpeter of the Royal Marines from Walmer Barracks impressively sounded the Last Post. Further prayers were offered for the Peace, for the Home, and for the staff.

Major Astor's Sportsmanship.

Sir Neville Pearson, in the absence of Sir Rowland Blades, proposed a vote of thanks to Lady Violet Astor for undertaking the ceremony of laying the foundation stone, and spoke of the sympathetic support which Lady Violet and Major Astor gave to numerous philanthropic movements. Speaking of the sportsmanlike instincts of Major Astor, who had been grievously wounded during the War, Sir Neville remarked that his crowning feat of sportsmanship was perhaps in acquiring *The Times* at a price which was not likely to yield him any glowing financial benefit. Most of the people in this country looked upon that as a generous act in safeguarding, for the time, a publication which was a reflector throughout the world of those steady elements in politics which governed the people to-day. (Applause.)

The Mayor of Deal seconded the vote of thanks, and also paid a tribute to the benevolent work of Lady Violet Astor and Major Astor on behalf of the people of Deal.

Lady Violet Astor, in reply, said she did not think anyone present would readily forget the interest of that occasion. The trowel and mallet, with which she had been presented, she would value tremendously, because they would remind her of that interesting occasion, and of the first foundation stone she had ever laid—a foundation stone which, she was proud to think, was to commemorate the Peace and in remembrance of those men who had died for their King and Country. They knew something about the work and the great amount of good that the Home had done, and she felt confident that the new wing would be a fitting memorial to the men who so ungrudgingly crossed the water to fight for their country. Let them, when wishing every success to that Home, think of those men—and they were still near—and with their recollection and their love they would help on the good work which was now being done.

Winter Garden Reception.

Subsequently a reception was held in the Winter Garden, where Major Astor and Lady Violet, who received the visitors, were very cordially greeted.

Major Astor, in the course of an address, said the management of the scheme which they had inaugurated that day was in the best hands. Of that they could reassure themselves at once by turning to the existing institution. Anyone who had had the opportunity of going over the Lloyd Memorial Home would agree with him that it could not be better conducted. (Applause.) It was interesting to know that within the last 12 years or so the income from subscribers had risen from £500 a year to over £8,000. (Applause.) These figures showed what a really useful work that institution was carrying on. Thanks to the benevolence of Mr. Frank Lloyd and other subscribers, it was now possible to carry out the splendid idea of building the Printers' Peace Memorial Wing. For the success so far achieved great credit was due to the chairman, Mr. McMullon, and the committee, which had been admirably supported by Mr. Kemp, the vice-chairman, who they were sorry to hear was compelled to resign owing to ill health. They were pleased, however, to welcome his successor, Mr. J. L Scorgie. Major Astor said he would also like to make a reference to the really splendid work which had been done by Mr. Parker. The committee was nothing if not alive and progressive, and it was good to know that they were not going to rest content with what they had achieved. They had before them now a scheme for providing cottages on an adjacent site for retired printers, and in view of the shortage in housing, and in the public interest, it was proposed that half of that accommodation should be available for the citizens of Deal outside the printing trades. He (Major Astor) thought that was a very admirable project. Of course, it needed funds, and a concert had been organised for the following Saturday at Kingsway Hall. In wishing this effort every success, Major Astor said he should like to start the subscription list with a personal contribution of 100 guineas. (Cheers.) Major Astor proceeded to pay a tribute to the work of the committee of management and the staff of the Home, in whose hands, he said, the administration was perfectly safe.

Mr. G. Mascord also added his tribute to the efficiency of the work at the Home and to the efforts of the committee and officials.

Mr. C H. Roud, proposing a vote of thanks to Lady Violet Astor, referred to the happy inspiration which prompted Major Astor to offer to start the concert fund so generously. That act augured well for the success of the cottages, which, he hoped, would soon be standing in the place of the existing property.

Mr. H. Gimson seconded the resolution, which was carried with acclamation.

Major Astor and Lady Violet both briefly acknowledged the compliment.

Mr. McMullon expressed thanks to Lady Violet Astor and Major Astor for having so splendidly launched their latest scheme. Ever since they came to Deal, he said, they had experienced nothing but good fortune. Referring to the erection of the cottages, he said they intended to provide accommodation for retired London printers at a nominal rent, and half of them would be placed at the disposal of residents of Deal. He added that the committee recognised that as an institution it was up to them to do all they possibly could for the people of Deal. Encouraged by the kind words of Major and Lady Astor, they would do their utmost to fulfil their trust in an equitable manner and to use every penny on behalf of those who needed their help. They did not restrict themselves to taking convalescents into the Home at Deal. They now had a fund from which they were able to send a great number of people to West End consultants, while rheumatic cases were sent to Bath, Droitwich and elsewhere, resulting in marvellous cures. In addition, they had been instrumental in sending a great many consumptives to sanatoria. In that way they had saved several lives. It would be seen from these facts that their scope of activity was a large one, and he thought the claims of the Home would commend themselves to everyone who realised the work that was being carried on. (Applause.)

Mr. J. L. Scorgie (vice-chairman) proposed, and Mr. A. R. Stuart (chairman of the House and Finance Committee) seconded a cordial vote of thanks to the Mayor and Corporation of Deal, in replying to which the Mayor observed that the committee had that day put another crown on their building.

Among those who attended, in addition to the various speakers, were:—Lady Pearson, Sir Frederick Bowater, Major-General H. D. Farquharson, Colonel Congdon, Major and Mrs. Clark, Colonel and Mrs. Cameron, Lieutenant-Colonel and Mrs. Johnston, Captain and Mrs. Rowe, Alderman Sellers, Lt.-Colonel O'Sullivan, Mr. S. Goy, Mr. T. A Newnham, Mr. and Mrs. W. Darracott, Mr. and Mrs. C. J. Fieldson, Mr. H. W. Clarke, Dr. F. M. S. Hulke, and Mr. H. F. Parker (the secretary).

KAMRA PRESS STUDIOS, LTD.—Capital £1,000, in £1 shares; photographers, photographic printers and lithographers, colour process and half-tone engravers, stationers, printers, etc. Private company. First directors: W. E. Marshall, H. V. Clow and Una Greenhalgh Gill. Registered office: Abbey House, Victoria-street, Westminster, S.W.

EXCELSIOR METAL CO., LTD.—Capital £1,500, in £1 shares; to acquire the business of monotype, intertype, linotype, stereotype, autoplate backing and all type metal manufacturers and specialists, carried on in London by B. Jones and A. J. Cameron, as the "Excelsior Metal Co." Private company. Directors: B. Jones, J. R. Williams and A. J. Cameron. Registered office: 177, Fleet-street, E.C.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

WALLASEY PRINTERS, LTD.—Issue on November 10th, 1923, of £100 debentures part of a series already registered.

WHITELEY AND WRIGHT, LTD. (newspaper proprietors, etc., Manchester).—Particulars filed of £10,000 debentures authorised November 3rd, 1923, charged on the company's property, present and future, including uncalled capital, the amount of the present issue being £3,500.

WEST NORFOLK AND KING'S LYNN NEWSPAPER CO., LTD.—Particulars filed of £6,000 debentures authorised October 18th, 1923, charged on the company's undertaking and property, present and future, the whole amount being now issued.

HARRISON JEHRING AND CO., LTD. (newspaper proprietors, etc., London).—Satisfaction to the extent of £500 on October 31st, 1923, of debentures dated September 19th, 1922, securing £15,000

ROLLS HOUSE PUBLISHING CO., LTD.—Mortgage on "Rolls House," 2, Bream's-buildings, E.C., dated November 2nd, 1923, to secure all moneys due or to become due from the company to Lloyd's Bank, Ltd., not exceeding £3,300.

SATURDAY REVIEW, LTD. (London).—Debenture dated November 22nd, 1923, to secure £500, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: A. B. F. Young, 22, Ladbroke-square, W.11.

MORGAN REEVE CO., LTD. (advertisers, printers, etc., London).—Particulars filed of £1,000 debentures authorised November 19th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

PEARLITE BOX CO. (1918), LTD. (London).—Issue on November 21st, 1923, of £100 debentures, part of a series already registered.

ASSOCIATED ILIFFE PRESS, LTD.—A debenture has been registered dated November 2nd, 1923, to secure £500,000 constituting a first charge on various properties in London, and a floating charge on the remainder of the company's undertaking and property, present and future, including uncalled capital. Holders: Sir Edward M. Iliffe and William C. Iliffe, Dorset House, Tudor-street, E.C.

HEWITT AND LEWIS, LTD. (stationers, printers, etc., London).—Mortgage debenture dated November 1st, 1923, to secure £100, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: M. G. R. Watson, Seer Green, Beaconsfield, Bucks.

J. J. KELIHER AND CO., LTD. (printers, manufacturing stationers, etc., London)—Satisfaction to the extent of £1,000 on November 20th, 1923, of debenture dated October 10th, 1921, securing £7,000.

"INDUSTRIAL INDIA," LTD.—Agreement to issue a debenture, dated October 25th, 1923, to secure not more than £5,000, charged on the company's undertaking and property, including uncalled capital. Holders: Tata Publicity Corporation, Ltd., Navsari-buildings, Hornby-road, Bombay.

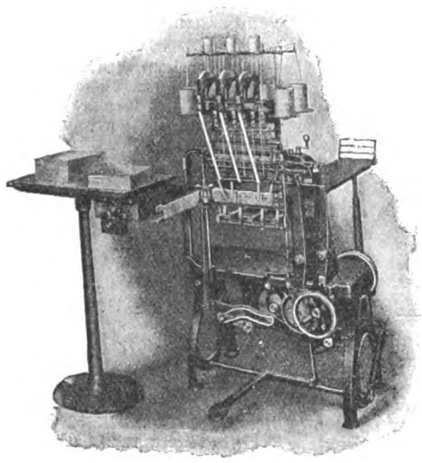
DORSET DAILY PRESS, LTD.—Debenture dated July 25th, 1923, to secure £5,000, charged on the company's undertaking and property, present and future, including uncalled capital. Holder: Rev. P. T. Mignot, Thornton Hall, King Cliff, Jersey. (Registered November 22nd, 1923, pursuant to Order of Court).

C. H. PEACOCK, LTD. (printers and publishers, Watford)—Satisfaction in full (a) on October 13th, 1916, of mortgage dated December 22nd, 1909, and supplemental deeds dated June 18th, 1910, and November 3rd, 1914, securing £6,700, (b) on October 31st, 1923, of charge dated February 14th, 1911, securing £1,000 and (c) and (d) on same date of mortgage dated October 13th, 1916, and equitable charge dated January 26th, 1920, securing the amount owing on its current banking account.

C. H. PEACOCK, LTD.—Debenture, and as collateral security thereto, a mortgage, both dated November 1st, 1923, to secure £11,000, charged (by debenture) on the company's undertaking and property, including uncalled capital (by mortgage) on 100 and 100a, High-street, Watford. Holder: T. R. Clutterbuck, Nicklefield Hall, Rickmansworth.

ANCHOR PRESS, LTD.—The repayment of £13,000 mentioned in our last issue, it should have been stated, represents the balance of the debenture issue securing £25,000, the previous repayment of £12,000 having been made on November 10th, 1922.

BANKRUPTCIES, etc.



Re CHARLES PHILIP BRADY, lately printer, 195, Strand, W.C.—The public examination of this debtor was held last week at the London Bankruptcy Court before Mr. Registrar Mellor, the accounts showing total liabilities £1,995 (unsecured £1,715) and assets consisting of shares of no present value, and pawn tickets, 5s. Replying to the official receiver debtor said that in December, 1919, he was taken into partnership by a firm of printers trading as the St. Paul's Printing Co., at 8, Archer street Works, Piccadilly. Witness introduced altogether £450 capital, and a fourth partner joined the firm in January, 1921, providing £700 further capital; the trading proved unsuccessful and in November, 1921, his partners retired from the business leaving him with the assets and liabilities on terms that he was to pay £100 to one of the original partners and £650 to the fourth partner, but he had only paid to them £21 and £250 respectively. He subsequently carried on the business alone, under the same style, until March, 1922, when he sold it to Chas. Brady and Co., Ltd., for £650, payable as to £100 in cash, and the balance in shares. The company, which took over stock and book debts worth £1,700, undertook to discharge certain of the outstanding liabilities amounting approximately to £1,100, of which £1,000 had been paid. Witness acted as managing director of the company at a salary of £1,000 per annum until it went into voluntary liquidation in April last. Since then he had been employed as traveller to a firm of printers. He attributed his insolvency to liability for debts (£1,480) not taken over by the company; to interest on borrowed money, and to depreciation in the value of his household furniture and shares. The examination was concluded.

OLIVES PAPER MILL CO., LTD.—According to a supplementary report of directors, it is proposed to create £50,000 7 per cent. new first debenture stock, ranking in priority to all existing debenture debts, and the reduction of the interest on 8 per cent. mortgage debenture stock (on which interest is in default) to 5 per cent. One-third at least of the net profits of any year will be applied to the redemption of these new debentures. If any dividend is declared, debenture-holders will be entitled to additional interest.

United States—LOCKWOOD TRADE JOURNAL CO., 10, East 39th-street, New York.
Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, DECEMBER 6, 1923.

Printers and the Election.

WHATEVER the issue of the General Election, the printing industry can take credit to itself that it has not failed to make its voice heard on many matters that are of great importance both to itself and to industry in general. As we have already indicated, the Federation of Master Printers issued a questionnaire raising points on which candidates' views should be ascertained, including such subjects as State trading and postal rates, and printers throughout the country have been pressing these matters upon prospective members of Parliament. In respect of the subject of postal rates, Sir Laming Worthington-Evans, the Postmaster-General, in reply to an inquiry from the Federation, has stated, "The question of reduction of postal rates is wrapped up in the general position of national income and expenditure, and will be considered when the next Budget is decided. Until then I cannot make any promise that postal rates will be reduced, although I should like them reduced." Mr. A. E. Goodwin, the secretary of the Federation, states that whilst a number of prominent candidates of all shades of politics follow the views held by the Postmaster-General, there is also quite a large body of opinion which will vote in favour of the immediate reduction, provided that the Post Office can remain self-supporting. It is strongly urged by the Federation that the Post Office surplus of last year, viz., £4,250,000, should be devoted to a reduction in postal rates, to give the requisite stimulus to trade revival. It is also pointed out that if the surplus revenue from the postal services is to be transferred to the Treasury for the purpose of balancing Budget estimates of other departments, the possibility of this reform becoming effective is somewhat remote.

* * *

Tariffs and Paper Supplies.

IF tariffs were introduced and applied to paper imports, one wonders whether there would be any English mills capable of producing cover papers equal to those which have established themselves as prime favourites in the eyes of the advertising specialist. Certainly there are already some good cover papers made by a few of the home mills, but almost entirely they are of the bread-and-cheese variety. Of course, there is perhaps not a great bulk of trade in imported cover papers; but whatever that bulk is, it would keep more than one mill under full pressure. Formerly, practically all the de luxe stuff came from the States, and, in fact, the downright really good cover stock still comes from the other side of the Atlantic. And users willingly pay the price, just in the same way that there are enough willing buyers to keep Rolls-Royce cars in the market. There is quite a good and a growing trade in high grade cover paper, so Germany has once again taken a hand in it, and what the States do at a high price, German manufacturers can do at a lower price.

* * *

Public Bodies and British Paper.

BRITISH papermakers are probably right in thinking they are entitled to a greater measure of support from home consumers than they have been accustomed to receive in the past. Not only private individuals, but public bodies, it is thought, might show a greater sympathy toward domestic manufactures, and in ordering paper and stationery it is suggested they might give greater consideration to the manufactures produced in this country. It is pointed out, for instance, that the Stationery Office make the stipulation that the paper supplied to them should be manufactured on the premises of the contractor. Although this is a little non-committal, it practically means that only British paper is ordered through the Government office. Local authorities, who are large consumers of paper and stationery, might adopt a similar formula in their contracts. Such a preference for British products would, it is thought, confer a great benefit upon an industry which is suffering very considerably at the present time.

* * *

Slight Trading Improvement.

THE slight improvement noted on the merchanting side of the paper trade appears to be well maintained. Writings and printings are becoming a bit more active, and there is a perceptible increase in the demand for art papers. Fine writings, ledger papers and bonds have a small but steady market, with the occasional interposition of larger contract orders. Boards are in mediocre request, and wrappings have a very poor market. On the whole, merchants are inclined to think that trade is improving. Prices are firm and competition is very keen; hence profit margins are narrow. Conditions and stocks are more nearly standardised than at any time since the war. Most of the wholesale houses have issued sample books showing standard stocks, but to allow for possible contingencies price lists are issued separately.

* * *

Colonies and News-Print.

IF the merchants are finding a bit more trade, they are more highly favoured than the mills. The only section of the manufacturing industry that can view the situation with equanimity is the news-print section. The Australian demand for news print is six times what it was ten years ago, and the news-print mills at home enjoy a preference of £3 per ton. What would happen if we lost the Australian market, or what will happen if Colonial preference becomes inter-Colonial preference, with equal privileges for Canada in the matter of news-print for Australia, is too serious to contemplate. Meantime, the basis on which the prosperity of the news-print mills is founded is not difficult to ascertain.

Printers' Managers and Overseers Association.

Anniversary Celebrated and President Honoured.

That important and successful organisation, the Printers' Managers and Overseers' Association, has just completed its first thirty years of useful activity, and it has contrived both to celebrate this auspicious event and to make manifest the high esteem in which it holds its retiring president, Mr. S. M. Bateman.

In celebration of the 30th anniversary some 150 members, ladies and friends assembled at Slater's Restaurant, Oxford Circus, on the 27th ult., a Whist Drive being the main attraction. There were 20 hands, divided into two parts, and Mr. Simpson was an efficient M.C.

During the interval there were a duet and three songs well rendered by Miss Ellis and Mr. C. R. Earl, followed by an informal presentation to Mr. and Mrs. Bateman, the president being the recipient of a gold chain, and his esteemed partner of a wristlet watch. The presentation was made in well-chosen terms by Mr. R. H. Berry, vice-president, supplemented with a few intimate and personal remarks by Mr. E. H. Berryman, to which Mr. Bateman replied in his usual felicitous manner, recalling several interesting events in Association history. Mrs. Bateman also expressed her thanks Mr. E. W. Whittle added a few words and cards were resumed.

There were no phenomenal scores, and the pace was easy, but everyone seemed thoroughly to enjoy the games.

The following were the prize-winners:—

Member's Prize, Mr. A. T. Walters; Member's Lady's Prize, Mrs. A. Taylor; Gent's First Prize, Mr. Buckingham; Lady's First Prize, Mr. Shepherd; Gent's Second Prize, Mr. Bullett; Lady's Second Prize, Mrs. Clark. Highest First Half, Mr. French and Mrs. Blenkins; Highest Second Half, Mr. Jack and Mrs. Berry. Mystery Prizes, Mr. Curtis and Mrs Jarvis.

Mrs. Bateman presented the prizes, and Mr. A. E. Jarvis, in a few apt and humorous phrases, proposed a vote of thanks to that lady, and also to the M.C. for the genial fulfilment of his rather difficult duties, to which Mr. Simpson replied. All members and friends who attended had a very pleasant evening, the arrangements of the Stewards being all that could have been expected or desired.

Mr. S. M. Bateman.

At last Tuesday evening's meeting of the Parent Association (which will be reported in our next issue), Mr. R. H. Berry (The Chichester Press) was elected president in succession to Mr. Bateman, and the occasion was utilised to make further recognition of Mr. Bateman's long and valued services, he being presented with the Medallion of the Association.

Printing, Bookbinding & Kindred Trades Overseers' Association.

Annual Bohemian Concert.

Another triumph was added to the long list of successful achievements gained by this Association on the occasion of the annual bohemian concert, which took place on Saturday at the Talbot Restaurant, London-wall. There was a large attendance of members and friends, and the opportunities for social intercourse that occurred during the evening were fully taken advantage of. Mr. A. Jones, the musical steward, once again proved his ability as an organiser, and succeeded in presenting a thoroughly enjoyable concert. Mr. H. Milton (president) occupied the chair and was supported by Mr. J. Fleming (vice-president). Among those present were Messrs. A. Cox (secretary), A. G. Aves, Geo. Eden, A. W. Hunt and A. W. Sandilands.

The concert artistes included the Misses Elsie Bailey, Dorothy Glover (sopranos), Ethel Holland (contralto), Amy Whitehorne (mezzo soprano), and Messrs. A. Cox (violinist), A. Jones, Adrian Kennedy, Gordon Lee, H. Owen, A. Terriss and Walter Todd (humorist). Mr. Fred Holland, as accompanist, acted with his usual ability.

At the conclusion of the programme Mr. J. Fleming proposed a vote of thanks to the chairman and Mr. Jones for the efforts displayed in their respective capacities.

A brief response from both gentlemen brought a very successful evening to a close.

The Hon. John McWhae, Agent-General for Victoria, entertained members of the Australian official and Press circles at dinner at the Trocadero Restaurant recently to say goodbye to Mr. D. W. McCay, London representative of the *Sun* newspapers, who is returning to Australia.

The *British and Colonial Printer and Stationer* circulates all over the world.

Personal.

Lord Burnham has accepted the presidency of the British-Italian League, in succession to the late Lord Plymouth.

Mr. W. Howard Hazell, J.P., president of the L.M.P.A., addressed a crowded audience on the occasion of the bohemian concert at Stationers' Hall on Tuesday, arranged by the London Central Districts Association of Master Printers. The evening was an unqualified success, and Mr. A. E. Goodwin was enthusiastically supported in expressing the thanks of the gathering to the promoters of the concert, Messrs. Geo. Eator Hart and W. H. Burchell.

Mr. Joseph Goodman, F.R.P.S., delivered an interesting lecture on Tuesday evening to the members of the Printing, Bookbinding and Kindred Trades' Overseers Association on the subject of the "Romance of Offset Lithography."

Mr. Harold V. Chappell of the Bristol printing house of Chappell and Co., Ltd., president of the South-Western Alliance of the Federation of Master Printers, has had to undergo operation in hospital, but has happily recovered sufficiently to be able to be removed to his home.

Mr. C. P. Scott, editor of the *Manchester Guardian*, has been elected Honorary Fellow of Corpus Christi College, Oxford.

Mr. William Scarff, the deputy editor of the *Leicester Mercury*, has retired, after 55 years' service on that journal, owing to ill-health.

Mr. Arthur Bennett, of the composing-room staff of the *Yorkshire Post*, has retired after 53 years' service.

Mr. C. R. Seddon, J.P., president of the Papermakers' Association, and Mr. Thomas Armstead (Messrs. Thomas Owen and Co., Ltd.), while in Toronto were entertained by Mr. H. F. E. Kent, president of the Canadian Pulp and Paper Association.

The visit of these two gentlemen to the Dominion has been the means of further cementing the cordial relations which exist between British and Canadian papermakers.

According to comments in the trade press, Mr. Seddon and Mr. Armstead exchanged ideas with many of the leading manufacturers in Canada, and both were greatly impressed by the great development of the industry in the Dominion.

Some time was devoted to the study of Canadian market conditions in their relation to respective business negotiations between British mills and Canadian consumers.

Rating of Machinery.

Committee of Inquiry Appointed.

The Federation of Master Printers is informed that the Minister of Health and the Secretary for Scotland have appointed a committee with the following terms of reference:

To inquire into the present law and practice in regard to the rating of machinery and plant in England and Scotland respectively, to make recommendations as to the alterations which are desirable and practicable, having regard to the financial and other considerations involved, with a view to removing inequalities, and, if possible, assimilating the law and practice of the two countries; and to make definite proposals for giving effect to such recommendations.

The committee is constituted as follows:—

Mr. Edward Shortt, K.C. (chairman), Mr. Gerald Eve, Mr. Hugh S. Gladstone, Mr. A. A. Lorimer, Sir Douglas Newton, K.B.E., Colonel Sir James Remnant, Bt., Mr. Matthew Lang Simpson, Mr. Joseph Spain, and Mr. J. T. White.

The secretary of the committee is Mr. G. R. Hill, of the Ministry of Health, Whitehall, S.W.1.

Trade Notes.

THE week's partnerships dissolved include those between: C. A. Gray and C. C. Gray, printers and stationers, at Central-chambers, Broadgate, Coventry, under the style of C. A. Gray and Son; between A. E. Priseman and W. H. Eastoe, lithographers and printers, 12, Pembroke-street, Islington, London, under the style of Priseman and Eastoe; and between S. Kaye and A. Bowman, cardboard box makers and printers, 24 and 24½, Great Pearl-street, Spitalfields, London, under the style of Kaye and Bowman.

A PETITION for winding-up the International Travel Bureau has been presented by T. Whittingham and Co., Ltd., 10-12, Little Trinity-lane, E.C., printers, and is set down for hearing in the High Court on December 11th.

AMONGST the writs issued in connection with the General Election is one at the instance of Sir John Leigh, Unionist candidate for Clapham, against Mr. Leopold Spero, the Labour candidate for the division, for an alleged slander in connection with Sir John's newspaper proprietorship.

FOLLOWING the death of the *Pall Mall*, caused by the big combine of newspaper proprietors and the absorption of the Hulton Press, it is now announced that the *Sunday Illustrated* will appear no more. The reason is officially ascribed to the heavy weekly loss on the paper.

MR. WALTER CORDER gave a fascinating lecture at Armstrong College, Newcastle, on Friday night, on the subject of "Our First Printers," to the Master Printers' Association and the Joint Industrial Council. Mr. Corder has a remarkable collection of ancient written records, aud these he exhibited and explained.

UNDER the auspices of the Stationers' Company and Printing Industry Technical Board, a lantern lecture, "Printers and Their Metals" will be delivered at Stationers' Hall, Ludgate-hill, on Friday, December 14th, 1923, at 6.30 p.m. by Mr. A. H. Mundey (London manager, Fry's Metal Foundry). Mr. J. Gomer Berry is to take the chair.

THE next monthly lunch arranged by the Association of Master Printers of West and North-West London will be held at Pagani's on Tuesday, December 11th, when Mr. A. B. Culley will explain a scheme of life insurance for employees.

THE Northampton Polytechnic Institute, St. John-street, E.C.1, holds its annual prize distribution and students' conversazione on Friday, December 7th, 1923, when Sir W. Martin Conway, Hon.Litt.D., M.A., F.S.A., F.R.G S., will distribute the prizes and certificates.

THE L.S.C. SOUVENIR.—On the occasion of the dinner of the London Society of Compositors held on Saturday at the Hotel Cecil to celebrate the Society's 75th anniversary, each guest received a handsomely produced souvenir brochure in the shape of an illustrated record of the Society's work. The souvenir — Linotype set throughout — was printed by the well-known firm of George W. Jones, at the Sign of the Dolphin in Gough-square, Fleet-street, London, E.C., and, like all the work turned out by this firm, well merited the very eulogistic comments that were passed regarding its production. The dinner programme, printed by the same firm, was another admirable piece of typography, the two productions serving well to demonstrate the superb effects obtainable by the skilful use of Linotype ornament.

A PUBLIC dinner to the *Lancet* to celebrate the hundredth anniversary of the existence of that journal was given at the Hotel Victoria, on Thursday. Lord Burnham was among the speakers.

THE Dorland Agency, 16, Regent-street, London, S.W.1, with offices in New York, Paris, Buenos Ayres, and Rio de Janeiro have been appointed by the British Empire Exhibition sole agents for advertisements of exhibits in the Overseas Press.

MESSRS. W. G. MONNERY AND CO., LTD., printers' suppliers, are in the happy position of finding that increasing business demands increased accommodation. They are accordingly removing at the end of this year from their present address in Farringdon-avenue to more commodious premises at 15 and 16, Thavies-inn, E.C.1.

THE death occurred on November 25th, after a long illness, of Mr. John Woodley Barter, printer and stationer, 43, Frankfort-street, Plymouth.

MR. PATRICK L. BEARLEY, editor of the *Catholic Times* from 1884 and a journalist of wide repute, died on Thursday night, aged 64.

THE funeral of Mr. W. C. Smart, manager of the news department and counting-house of Messrs. W. H. Smith and Son for 52 years, took place at West Norwood on Friday. He only retired on September 30th last.

THE funeral took place on Saturday of the late Mr. Thomas Murray, North Shields, for 40 years a member of the reporting staff of the *Newcastle Chronicle*.

THE late Sir Richard Mackie, of Leith, on the board of A. B. Fleming and Co., Ltd., left £96,611.

THE first periodical to be published in a British disciplinary institution has been produced by the Borstal boys at Rochester. It is a quarterly called the *Borstalian*, and is written partly by the boys themselves under the editorship of a housemaster. It is printed at Maidstone Gaol.

A JOURNALISTS' Association of India has been formed with headquarters at Bombay. Mr. Marmaduke Pickthall, who was chairman of the largely attended meeting of journalists in Bombay at which the association was proposed, urged the need for a better understanding between English and Indian journalists in India.

A REPRESENTATIVE gathering of foreign newspaper correspondents in London and of the French colony met last week at a luncheon at the Café Royal in honour of M. J. de Marsillac, the London editor of the Paris *Journal*, who has recently been made a Chevalier of the Legion of Honour.

ANOTHER big effort is being made by the Labour Party to establish a daily newspaper in New York to replace the *Leader*, which ceased publication a few weeks ago, owing to lack of funds. It is hoped to start publication on January 1st.

Chancellor and State Trading.

Postal Rates Reduction.

Mr. Neville Chamberlain has replied to questions addressed to him by the Federation of Master Printers to the effect that he is opposed to state trading as a general principle. He is not quite clear as to the position of the Select Committee appointed to inquire into the State Printing, but sees no reason why the Committee should not be reappointed. Regarding a reduction in the postal rates and the removal of restrictions imposed by the Post Office on printed matter, he would like to see a reduction as soon as possible, but in view of the loss of revenue fears it will not be practicable to bring it about just yet. He is prepared to support legislation to prevent British advertisers from posting circulars on the Continent. He will also support amendments to the Merchandise Marks Act, so that all printed matter imported into the country shall show on it the country in which it has been produced.

Mr. A. E. Goodwin, secretary of the Federation, states that replies have been received from hundreds of candidates, and that Conservative and Liberal candidates are in the main opposed to State trading, and would support the continuance of the inquiry. The Labour candidates, whilst favourable to State trading, see no objection to this inquiry.

Considerable interest is shown in the questions relating to postal rates, and there is general agreement that this is a case for immediate investigation and decision.

The amendment of the Merchandise Marks Act would undoubtedly help British trade. Many people buy foreign goods of inferior quality under the impression they are of British make. The printing trade only ask that people should know where the goods come from.

NEWS from Japan is to the effect that the paper mills escaped damage during the recent earthquake. According to Mr. T. Aeki, secretary of the Association of Japanese Paper Mills, not a single paper mill in or near Tokio was destroyed by fire.

The Printing Crafts Guild.

"The Progress of Machine Composition" was the title of a lantern lecture delivered by Mr. Douglas Foster Stevens in the College of Technology, Manchester, on Saturday last. The cinema illustrations thrown upon the screen pictured to the mind the detailed building up and accurate adjustment of the super-line machine named the "Intertype." On a Model "C" there are comparatively few moving parts in connection with the magazine, which must save expenses in first cost and give less liability to wear and tear afterwards. The Model "C-s-m" is a standardised three-magazine "Intertype" with a standardised three-magazine. Each of the three magazines carries one set of two-letter matrices or various combinations of other kinds of matrices, thus giving the operator quick command of fifteen alphabets—six different faces and three different sizes. With extra standard magazines and extra side magazines, the operator can set any number of different faces and sizes of type. It is a practical machine for fast text and display composition, to set and cast 5-point to full width, 36-point bold and 60-point bold condensed in lengths from 4 ems to 42 ems. A copy of the "Hucknall Dispatch," a weekly newspaper which had been produced entirely on the "Intertype," with the exception of the title and illustrations, showed that a newspaper jobbing office was contained in the machine, the cost of distribution afterwards being infinitesimal. The publication mentioned is one of the cleanest and best printed of its kind we have seen, every letter and character appearing, thus showing the advantage of having new type at standard height, and saving the cost of patching, overlaying and underlaying that goes on in the average newspaper foundry or machine room where old and new types are mixed together. In the discussion which followed about twenty members put questions about the split mazazines and probable stoppages of matrices, the correct assembling of matrices from the side magazines when travelling on a horizontal belt, the size and build of the metal pots on the 36 and 42 em machines, the probable springing of lines of type in the pressroom, the universal ejector blades, changing of moulds, detection of wrong founts, etc. Messrs. Stevens and Whittaker fully answered all the querists and added that the "South Wales News and Echo" had installed 36 machines, a large number of newspapers all the world over having proclaimed its practical efficiency. A thing almost unbelievable was that one operator in a newspaper office had never had occasion to attend to the distributor once in a period of six weeks. The special arrangement for centrally heating the metal led to quicker melting and less gas to keep the metal at a standard heat.

Mr. Jas. Begg was chairman for the evening, a vote of thanks being moved by Mr. F. J. Hughes and suitably replied to by Messrs. Stevens and Whittaker.

WEE MAC.

The Marzio Mechanical Overlay — A NEW OVERLAY

Is the simplest, cheapest, quickest and most effective yet introduced. Over fifty printing firms in Milan alone are using it.

Effects are produced which cannot be obtained by cut-out overlays.

Especially suitable for half-tone and colour formes.

A complete set of materials with instructions and licence to use the process for £3 3s. 0d.

The Bawtree Photographic Type Composing Machine.

Some Notes by the Inventor, Mr. A. E. Bawtree, F.R.P.S.

In the lecture by Mr. W. B. Hislop, at Stationer's Hall, on the 9th of November, one slight mistake was made in describing this invention. It was asserted that the machine was of the "artist" class, intended rather to replace the work of the hand-lettering department than that of the composing room. While it is quite true that the machine will efficiently do much of the work of the hand-letterer and, when there is a good deal of lettering to be done, as in the case of illuminated addresses, will effect a real economy, its principal utility will lie in the realm of the ordinary mixed work of the composing room.

Supposing that the machine is installed in a general shop, large quantities of close type work will continue to be set on either the Linotype or its photographic or mechanical equivalent; but, where these appliances are not available, comparatively small amounts of close work can be set up economically on the Bawtree machine. The actual rate of composing will be slower than by means of an elaborate type-setting machine, but the loss in time will be more than compensated for in other directions.

New Decorative Possibilities.

It is, however, in the mass of display work, advertisements, programmes, leaflets, tickets and other kinds of work, which form such a large part of the general printer's business, that the machine shows to greatest advantage. By means of the new method of composing, the printer will have at his disposal a practically unlimited range of types of all sizes and faces. Not only will he possess the orthodox styles, but many kinds of hand lettering and forms of character which are practically impossible to secure in any other manner. Entirely new principles of decorative composition are opened up by this new means. In one case, for example, the chief lines in a rustic fair announcement were composed of letters each of which was an elaborate composition of rustic tree branches and leaves, while in another case some matter on a boy scout's programme was set up in characters each of which was a silhouette of a scout with the semaphore flags in proper positions. When any such style of type in a complete range of sizes is obtainable for a few shillings, these things become possible.

The aim in the construction of the machine in question has been to effect the largest field of utility with the fewest and simplest parts and the very minimum of complications in working. Everything is easily accessible, and if a repair should become necessary it can be performed quite as easily as fitting a renewal to a bicycle.

The general form of the machine is shown in Fig. 1, and a key diagram to this photograph is given in Fig. 2.

The Machine Described.

Each style of alphabet is contained upon the surface of a flat glass disc nine inches in diameter, having a small nick in the edge in one place. To insert a disc in the machine, it is merely placed between three stops, so that a point enters the nick and three clips are closed down upon it. Thus, fixing, removing and storing a disc is as simple a matter as that of manipulating a gramophone record. The disc is held upon the back of the ring A. The disc contains 78 characters, one circle of 48 and an inner circle of 36, three being omitted from each ring on account of the radial arms of the ring A. In this ring are two circles of holes for the whole 84 positions. Letters and signs are so marked against the holes that, when a pointer is against a character at the top of the machine, the character itself, on the negative disc, is behind the exposing lamp at the bottom of the disc. In order that the character may be placed exactly in position, a spring plunger D is allowed to enter and lock the proper hole before exposing the character. The six places on the negative disc which are covered by the arms of the disc holder are utilised for producing spaces, whose values are shown in black on a white ground on the rim of the disc holder.

The disc holder is mounted upon a spindle, which passes through a bearing B. By means of the arm C this bearing may be raised or lowered in order to bring either circle of characters opposite the lens. The electric illuminating lamp can be seen at E.

Sliding along the length of the machine are two carriages; the more forward one bears a lens and the rear one the roll holder for the sensitive material. These two are connected together by camera bellows. The roll holder seen at F contains a chamber below for a spool of paper and another at the top for receiving the exposed sheet. There is no provision for daylight loading, not only because, as in the Kodak camera, this has the disadvantage that a whole spool must be used before development, but because it adds unnecessary complication. The roll holder is detachable as easily as the dark slide of a camera. Within it is a straight edge, above a steel plate. The paper or film passes between these, and the line of the straight edge is just beyond the last line exposed. Thus, by means of a penknife, the exposed portion can be at once cut from the roll for development. So handy is this arrangement that it is easy to compose, remove and develop a single line of matter. This is an additional advantage when corrections in work already prepared have to be inserted. On the end of the roll holder is the pointer G. This can be adapted either to remain fixed as regards vertical motion or to rise and fall as the sensitive material passes up or down. Behind the roll holder is the copyboard H, across which is fitted a scale similar to that of a typewriter. By means of this pointer and scale display work can be centred or lines can be justified in the same manner as is done on the typewriter. That is to say, the line is first worked in dummy, the end space noted and then this space divided in two for centring display work or divided between the spaces for justification. At the other end of the roll holder is a disc, which is connected to a pair of rollers within the holder, between which passes the sensitive material. By means of divisions on this disc and a pointer, the paper or film can be accurately passed upwards when a line of work is completed, or it can be passed up and down as required when lettering or ornamental matter is to be set up otherwise than in a horizontal line. This is of value especially in display advertisements. A rough sketch of the lettering is fixed to the copy-board, the pointer set free to move with the paper in the holder and adjusted to each character on the sketch before the actual exposure of the character is made. By this means lettering can be composed to register with colour work.

The Spacing Cam.

The spacing cam I is an interesting feature of the machine. It consists of two plates of steel each ⅛in. thick, separated by a washer ¼in. thick, the whole being assembled into one piece. The front view of one of these plates is shown in silhouette form in Fig. 3, which is actual size. There is, the writer is informed, a strong tendency now to standardise the widths of the various characters in a fount of type, so that, for example, a W is always so much per cent. wider than an M quad, and an I so much per cent. narrower. For all type faces to which this standardisation has been applied, one spacing cam will do common service, but the machine is intended to suit all forms of characters, both of English and any foreign kinds, in which the characters can be accommodated in the 78 positions available. (This excludes the old style of Chinese). Therefore, different spacing cams are necessary for alphabet discs which do not conform to the standard widths. The function of the spacing cam is to provide a limiting stop to the travel of the roll holder, whereby, after exposing each character, the latter can be caused to move along just the right amount to carry out of the way the width of sensitive material which has been exposed. For example, if a W requires a space of 12mm. an I in the same alphabet will need, say, 3mm. The zero limit is represented by a diameter of about 2½in., or, say, a radius of 32mm. Apart from a constant motion which may be added at will, as will be described later, when the cam is so turned that a step of this radius is in position, no motion will be imparted to the roll holder. The spacing cam is mounted on the same spindle as the alphabet disc holder and turns with the latter. This position is, therefore, marked as one of the "spaces," with the value zero. The width required for each character or space is represented on the spacing cam by the amount by which the radius of each step is less than 32mm. Thus, for the above W, the step will have a radius of 20mm., and for the I its step will have a radius of 29 mm. The spacing cam is changed even more easily than the disc. Not every disc needs a different cam; the cams are numbered and the appropriate figure marked on each alphabet disc. The motion permitted by the spacing cam is transferred to the roll holder by a simple mechanism. The sliding fork J has its upper prong behind the lower one. The former is in the plane of the rear plate of the spacing cam and the lower prong is in the plane of the front plate. The rear plate of the cam, therefore, bears 48 steps, corresponding to the outer ring of the alphabet disc, while the front plate has 36 steps, corresponding to the inner ring. Each plate is, therefore, automatically brought

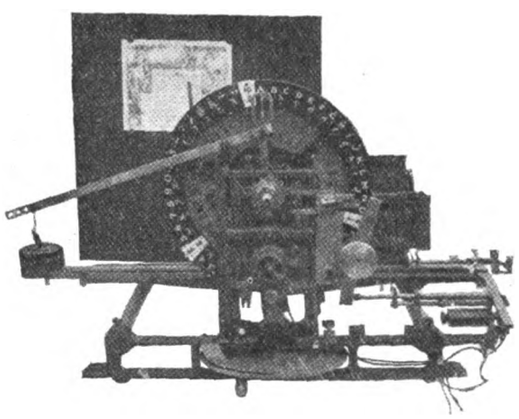

Fig. 1.—General View of Machine.

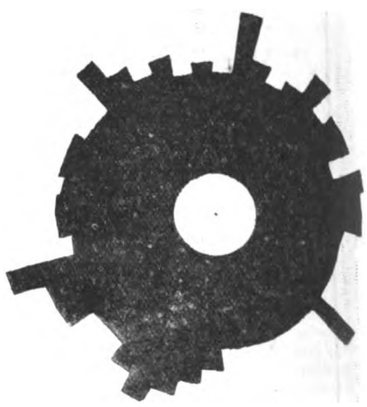

Fig. 3.—Plate of Spacing Cam.

Digitized by Google

into operation. The fork J is held away from the cam by a light spring.

With its fulcrum exactly half way between the right-hand end of the fork J and the end of the rod M is the swinging arm K. Attached to the centre of this arm is the operating hand-wheel L. If, therefore, the upper end of K were just touching J and the lower end were just touching M, turning L counter clockwise would impart motion to M just equal to the distance by which the spacing cam step then in position was less than the zero radius of 32mm. It will, however, be observed that, while the lower end of K is in contact with M when in the position of rest, the upper end is about 12 mm. away from the end of J. This amount of extra motion is, therefore, always imparted to M every time it is moved. The sliding rod M is in the plane of the alphabet disc, and it pushes outwards the front end of the horizontal lever N. This end of the lever N is always pushed to the left by the spring Q, but this motion is prevented from imparting shock to the machine and also from sending the lower end of K too far the end of J and the top of K can now be given. The rod of the roll holder has an end, on the roll holder side of the lever N, with which this lever engages when pushing the roll holder along, but the rod arches over N and does not closely engage it on the opposite side. There is a space which is variable by means of the screw O, which is provided with a milled head and graduated scale. Now, suppose the machine be set to reproduce characters of equal size and that this screw be turned right in, so that it presses the lever N against the end of the rod of the roll holder, every time L is operated, the roll holder will travel the width permitted by the spacing cam plus the extra motion of 12mm. provided by the space between J and K. If O be turned back for a distance of 12mm., the roll holder will move every time just the distance permitted by the spacing cam and no more. Now, the lever N is not parallel in section; its operating point is 21mm. wider when the machine is set to ¼ the size of the character on the negative disc than when it is set to twice the size (21mm. equals for lettering or border-making or when the machine is used for step and repeat work, can be easily made and maintained with automatic precision.

The rod which is operated by the rear portion of the lever N is, of course, not attached rigidly to the roll holder carriage, or the latter would merely swing backwards and forwards with each reciprocation of N. It slides through a tube in the carriage, on the side of which is an electric magnetic brake. During the forward stroke the magnet is excited and the motion of the rod is transmitted to the roll holder; on the return stroke, the current is cut off, and the rod is free to move alone. In order to prevent friction pulling the carriage back, there is a second rod, fixed to the framework of the machine, passing through the carriage also and fitted with another electro-magnetic brake. This magnet is only excited during the return stroke.

The scale of enlargement or reduction is set by means of two concentric discs T, each bearing numerals. When the same numeral on both discs is brought opposite

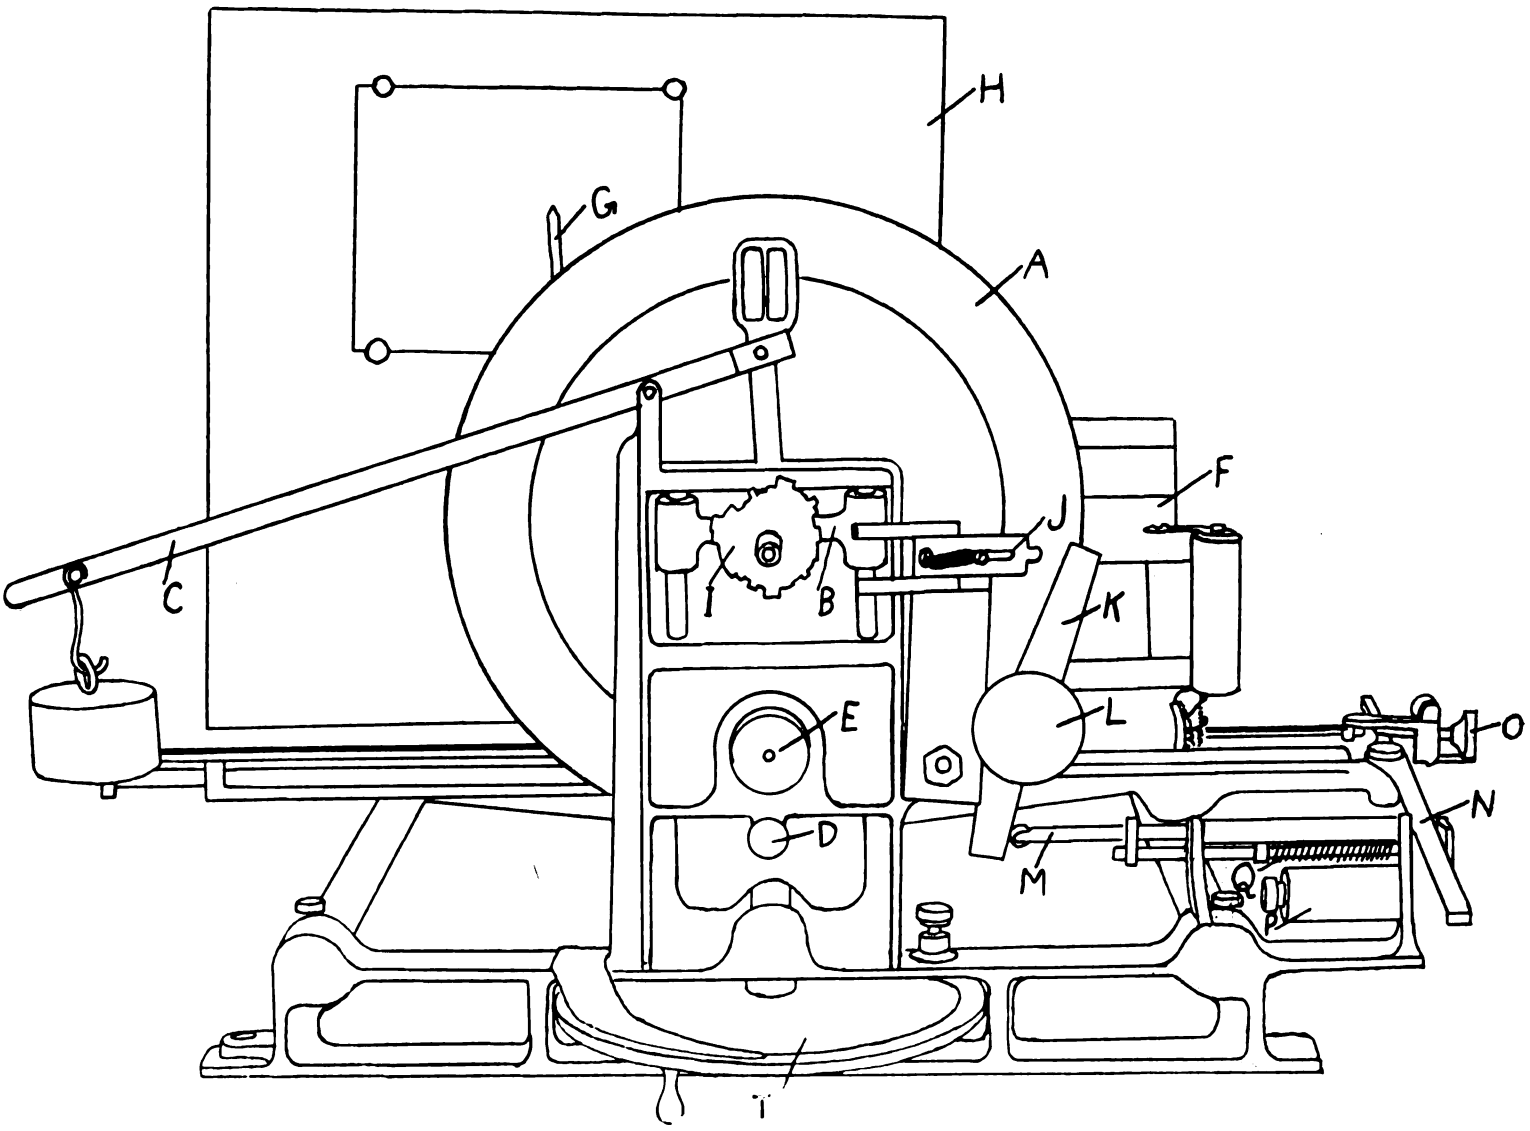

Fig. 2.—Key Diagram to the Bawtree Apparatus.

on account of its momentum, by means of the dash pot P. Having turned the wheel L as far as it will go counter clockwise, the operator releases it, letting the spring Q restore it to its zero position. Since turning the wheel L some way further than the zero position in the clockwise direction operates the shutter of the machine lens, it is important that this shutter shall not be accidentally released by momentum.

The fulcrum of the lever N is on the lens carriage and in the plane of the nodal point of the lens. The rear end of this lever N operates a sliding rod attached to the roll holder and in the plane of the sensitive material. It will thus be seen that, if the focussing mechanism is set to copy equal size, the motion of the roll holder will equal that of the rod M. If the machine is set to produce characters one half the size of those on the disc, each motion of the roll holder will be one half of that permitted by the spacing cam and so on for every other scale of enlargement or reduction. An explanation of the space of 12mm. between 12 by 2–12 by ¼). If, therefore, the screw O is set to just touch the lever N when the machine is set to ¼ size, each character will be separated by a uniform distance of 3mm. more than its width, no matter to what scale the machine is set. If the screw O is withdrawn a distance of 3mm. each character will be allotted just its width, as in close type setting, no matter to what scale the machine is set.

On the rod M is a nut with milled head and graduated scale. This nut presses against the frame of the machine and more or less prevents the return of the rod M to its normal position. By this means more or less of the gap between J and K can be eliminated. The spacing between characters or ornaments provided by this nut and scale differs from that provided by the screw O in that it is subject to the same degree of magnification or reduction as the character itself, whereas in the latter case the space is constant however the machine is set. By the use of these two spacing devices any desired adjustment of spacing, either an index and a locking bolt pushed home, that scale of focussing is fixed. Of course, it would have been possible to operate from one disc by means of suitable gearing, and, indeed, this was done in earlier models, and is practised on other types of machines, but, as stated at the commencement, everything possible has been done towards eliminating unnecessary parts, and this automatic focussing device is necessarily more complex. It must be borne in mind that, while the fewest possible number of movements is essential for setting each character, the variation of size is required so much less often that a few more seconds occupied on this operation is less important than the introduction of more complicated mechanism.

Among the other uses of the machine than straightforward type composing are the following:—

Eliminating Brass Rule.

It dispenses with the brass rule cabinet. Single lines are obtained by repeatedly exposing the dash sign, as is done in under-

Digitized by Google

lining on the typewriter, the strength of line being determined by the scale of reduction. Dotted rules of varying strength and closeness are similarly merely rows of full-stops. Experience may indicate that it will be less trouble to employ a special disc with dashes and dots of various strengths than to work from the characters provided on the alphabet disc. On the one hand, this would involve the small labour of changing the disc, but on the other the lines could be composed quicker from special characters of larger size. Many little points of this kind will, of course, only come with experience; the all-important fact is that the machine works properly either way.

Borders and Fancy Backgrounds.

These are worked from a special disc containing 78 different figures, which are sufficient to produce an immense range of designs. A border is a simple line of figures, either all alike or alternating one with another. Tint grounds are made by repeating lines of the same border one below the other.

Step and Repeat Work.

Since the machine gives dotted lines and borders which show no visible irregularity, it is capable of composing step and repeat work which will register within the limits of visibility. For this purpose the lamp is being enlarged to 3¼in. square and a metal plate provided to fit the disc holder, having openings of various sizes around it for the reception of the negatives or positives to be repeated. The machine may not yield a huge plate, say 50in. by 60in., but, if it produces one 10in. by 12in., the litho department will only have to put this down 25 times, whereas the individual label would have required setting out some hundreds of times. The machine will not replace the Printex machine, but, costing but a fraction of the amount required for the latter, it should be of importance in litho shops on this ground alone, to say nothing of the purposes for which it is primarily intended.

Insets.

It is evident that this special negative holder can also be utilised to produce ornamental capital letters at the beginning of chapters or addresses, for tail pieces or other ornaments and for inserting illustrations in line or half-tone into the text. The lay-out would be pinned to the copyboard, and all the components could be arranged with ease.

Little need be said as to the photographic material to be used. Celluloid film could be employed, but is expensive, and corrections would be extremely difficult. One cannot have buckling and overlapping when sharp contact is afterwards required in a pressure frame. When a transparency is desired, Transferotype paper is the most suitable. Bromide paper is obtainable equal in rapidity to the roll film, and this can be developed by the Bromoil process into a litho transfer direct. Some authorities see a desideratum in projecting direct upon the zinc litho plate by the Paynetype or some similar process, but it is difficult to see how corrections or author's alterations can be effected in this form of result.

In conclusion, the machine is so simple and comparatively inexpensive that even the small printer can add it to his plant, while its field of usefulness is so great that it will do nearly everything which the large firm usually requires. The small man is thus in a position to compete on equal terms with the large house. With fresh type faces, costing but a few shillings for a whole range of sizes of each, one can be added profitably with almost every big job undertaken. Space prevents a more detailed description of the working of the machine and its possibilities, but enough has been said to indicate that it puts considerable facilities in the hands of all printers who are capable of using a little photography.

Norway's Paper Exports.

Norwegian exports of pulp in September reached a value of 12·5 million kr., comparing with 8·5 million kr. in the same month last year. Exports of paper were 9·9 in September and 9·1 million kr. a year before. For the periods January-September exports in million kr. were: 1923, pulp 118, paper 78·6; 1922, pulp 96·9, paper 82·8.

Bay Sulphite Co., Ltd.

Statement by Sir Frederick Becker.

A meeting of shareholders in this company (which is incorporated in Canada) was held at 34-40, Ludgate-hill, London, E.C.4, on November 22nd for the purpose of hearing a statement from Sir F. Becker.

There were present: Mr. S. H. Kaye (Disley Paper Mills Co., Ltd.), Mr. Geo. Clapperton (Cannon and Clapperton), Mr. A. A. Rose (Clyde Paper Co., Ltd.), Mr. Geo. Newcombe (*Daily Telegraph*), Mr. Burleigh of Messrs. McLintock, Thomson and Co. (representing R. and W. Watson), Mr. King Smith and Mr. Gilliman (Golden Valley Paper Mill), Mr. J. L. Geddes (Culter Paper Mill), Mr. A. De Buriatte (Isaac Warwick and Co.), Mr. J. E. Seddon (East Lancashire Paper Mill), Mr. G. Manning and Mr. Duffie (Thames Paper Co., Ltd.), Mr. C. Davidson and Mr. — Davidson (C. Davidson and Co., Ltd.), Mr. Tabb (Bathford Paper Mill Co., Ltd., and Ryburndale Paper Co., Ltd.), Captain Nuttall (Cooke and Nuttall), Mr. Law (Hill, Craig and Co.), Mr. Lewis (Imperial Paper Mill Co., Ltd.), Mr. Somerville (R. Somerville and Co., Ltd.,) Mr. Owen (T. Owen and Co, Ltd.). The shareholders included Mr. Wells (representing Mr. Harold E. Carter), Mr. E. B. Montesole, Mr. Geo. Buchanan and Mr. J. Dobson.

Sir Frederick Becker said the accounts for December last were before them, and they would see therefrom that the directors in Canada declared and paid the 6 per cent. dividend on the redeemable preferred and declared, but did not pay the 8 per cent. preference. Since then the company had fallen into some difficulties, not on account of any inherent fault; they were making good pulp, more of it than ever, and they were making good profit, but the evil influence that had pursued all his Canadian enterprises had been at work. When the finance which enabled them to secure the lands behind their mills at Ha! Ha! Bay and acquire control of the Chandler Mill came to actual completion, they found themselves up against a group at the last moment. Banking interests stepped in and demanded a profit on the transfer of the contract of $104,000 per year for ten years, a sum of $1,040,000. The directors in Canada did not know what to do, and after consulting with him (Sir Frederick) they had to make the best of a bad job and bow to that exaction, the more so as a certain gentleman promised to stand behind the continued re-finance which would rid them of the group who controlled and dominated the Chicoutimi Board. This gentleman, in London in June, arranged and, he believed, placed an issue of $3,000,000 Preference Shares, which was to be used to pay off existing advances of the co-operators, called 6 per cent. redeemable pre-preferred, and to give the company ample working capital and money for extension. They had, however, reckoned without their host. The issue, consented to by practically all of them who had put up hard cash, had to be carried by a three-quarter majority of all shares voting in classes according to Canadian law. The wrecking group had been given $2,250,000 common stock for their existing common stock in St. Lawrence, and this represented not a penny, not one cent of cash paid by them, but it was sufficient to prevent the deal going through. The company was thus left in the position of having heavy commitments of a capital nature and practically nothing to pay it with. The spirit of antagonism — brutal antagonism — was exemplified when it was borne in mind that the common stock in which they were alone interested could never by articles or existing deeds receive one penny of dividend while the 6 per cent. redeemable preference existed. The denial of the most ordinary credits for wood and the general panic position of the banks in Canada rendered it impossible to finance wood operations of the Chandler Mill, and they stood now in danger of being without wood to run the mill at Chandler and the consequent foreclosure of the bondholders and the entire wiping out of their investments of nearly $3,000,000. His firm were creditors and owned about $1,700,000 He was doing all he could to find the assistance needed in London; in Montreal he feared their enemies were too strong for them. The failure of Becker and Co., which followed these troubles and had its origin in the same hostile and grasping hands, had caused the company to have bills returned for £66,872 16s. 3d., but against this were considerable pledged securities and the entire ordinary capital held by Becker and Co. in the Bay Company, and there was owing to Becker and Co., on account of the 20s. and 30s. paid, £55,000. It was hoped that the company would thus not lose very much. The balance sheet showed the company was making money. He had personally visited the sites and the mills, and with the technical direction under Mr. Sureth their mills were the best in North America, making large sums of money. He had candidly put the position before them, and he asked anyone to suggest anything that could be done.

Questions of finance and relations with regard to pulp contracts were thoroughly discussed, and it was suggested that a committee be appointed.

Government Contracts.

Contracts were placed with the following firms during October:—

Stationery Office.

CARBONIC PAPER.—Caribonum Co., Ltd., London, E.; Read Manufacturing Co., Ltd., London, E.C.

ENVELOPES, Specified, Schedule E., Contract for.—Smith and Young, London, E.C.

ENVELOPES.—J. Dickinson and Co., Ltd., Hemel Hempstead; McCorquodale and Co., Ltd., Wolverton.

FOLDERS.—Roneo, Ltd., London, E.

GUARD BOOKS, SKELETON.—Waterlow and Sons, Ltd., London, E.C.

MOCK VELLUMS.—H. Gibbs and Sons, Mitcham; H. Band and Co., Brentford.

PAPER OF VARIOUS DESCRIPTIONS.—Basted Paper Mill Co., Sevenoaks; J. Brown and Co., Ltd., Penicuik; H. Bruce and Sons, Ltd., Currie; Caldwell's Paper Mill Co., Ltd., Inverkeithing; Cooke and Nuttall, Ltd., Horwich; R. Craig and Sons, Ltd., Airdrie and Caldercruix; Darwen Paper Mill Co., Ltd., Darwen; P. Garnett and Sons, Ltd., Otley; Golden Valley Paper Mills, Bitton; Hendon Paper Works Co., Ltd., Sunderland; Hollingworth and Co., Maidstone; W. Joynson, St. Mary Cray; C. Marsden and Sons, Ltd., Northfleet and Tamworth; Olive and Partington, Ltd., Glossop; Ryburndale Paper Mill Co., Ltd., Ripponden; St. Neots Paper Mill Co., Ltd., St. Neots; R. Sommerville and Co., Creech St. Michael; Team Valley Paper Mills, Ltd., Gateshead; Thomas and Green, Ltd., Wooburn Green; Ulverston Paper Co., Ltd., Ulverston; Wiggins, Teape and Alex Pirie (Sales), Ltd., Stoneywood.

PHOTOGRAPHIC PAPER.—Ilford Plate Co., Ltd., London, E.

PORTFOLIOS.—J. W. Ruddock and Son, Lincoln; Norton and Gregory, Ltd., London, S.W.

WILL COVERS.—J. Dickinson and Co., Ltd., Hemel Hempstead.

Crown Agents.

STATIONERY.—Waterlow and Sons, Ltd., London, E.C.

Waterproofing Paper.

In waterproofing paper by the addition to the pulp of an emulsion of resin, soap and wax, subsequently precipitated on the fibres by alum, the materials, according to a patent by Mr. A. T. Masterman, are retained in the emulsified condition and a harder and more waterproof product obtained by the addition of a polymerizing agent, *e.g.*, formaldehyde, tannic acid, an alkaline solution of potassium permanganate, chromic acid, &c. Oil may be added to the emulsion and a small quantity of a water-soluble colloid, *e.g.*, glue, gum, alkali-casein, &c. The temperature of the pulp is maintained throughout the operation above the melting point of the waterproofing agent employed.

In the example given, a size of sodium resinate is dissolved in its own weight of water and heated to 70° C. while stirring in one-third of its weight of paraffin wax. After emulsification a 40 per cent. solution of formaldehyde to the amount of 8-10 per cent. of the resin is added and the temperature allowed to fall to 50° C., when gelatine to the amount of 1-2 per cent. of the water present is stirred in. The size produced is placed in the heater and the temperature maintained at 45-60° C.

Paper Trade Statistics.

Overseas Countries' Imports and Exports of Paper.

The quarterly return dealing with the figures up to September 15th, 1923, issued by the Board of Trade, gives the following interesting statistics relating to the imports and exports of paper of certain foreign countries and British Possessions:—

FINLAND.—In the seven months ended July news-print was exported from Finland to the extent of 73,031 tonnes (of the value of 221,750,000 marks), as against 72,193 (270,254,000 marks) in the corresponding period of the previous year, and 45,738 (212,136,000 marks) in the seven months of 1921. Packing paper exports in the three respective periods were: 15,480 tonnes (55,870,000 marks), 17,669 (75,850,000), 6,548 (34,130,000). Pasteboard figures were: 14,594 (34,808,000), 12,263 (35,576,000), 3,946 (13,823,000). Writing paper: 3,754 (19,580,000), 7,796 (45,427,000), 1,765 (15,046,000). Tissue paper: 633 (7,681,000), 136 (4,368,000), 384 (4,096,000).

NORWAY.—Printing paper exported amounted to 80,417 tonnes during the seven months ended July, as against 75,404 in the corresponding period of the preceding year, and 35,033 in January to July, 1921. Packing paper dispatched from Norway represented 36,647 tonnes during January to July, 36,022 in the preceding corresponding period, and 7,981 during the first seven months of 1921.

SWEDEN.—Paper "of all kinds" exported from Sweden during the first seven months of this year stood at 151,495 tonnes, against 120,925 in the preceding year, and 77,246 in the corresponding period of 1921.

DENMARK.—The value of paper and paper manufactures entering Denmark in the first seven months of 1923 amounted to 15,506,000 kr., contrasted with 14,479,000 kr. in the similar period of the previous year, and 15,053,000 kr. during January to July, 1921.

GERMANY.—Given in 100 kilos., fancy, coloured, varnished, etc., paper exported from Germany during the first half of this year reached 100,660, as against 73,750 in January-June last year. Photographic paper exports stood at 6,209 during January to June, contrasted with 6,138 last year.

NETHERLANDS.—Printing and writing paper (including news-print) exported from the Netherlands during the first seven months of the year represented 26,258 tonnes (6,688,000 guldens), compared with 19,069 (5,111,000 guldens) in the previous year, and 15,924 (6,748,000 guldens) during the seven months of 1921. Imports of the same class or merchandise during the three seven-monthly periods were: 20,262 tonnes (4,933,000 guldens), 1923; 20,958 (4,903,000 guldens), 1922; and 13,340 (6,249,000 guldens), 1921. Strawboard exports reached 103,411 tonnes (10,973,000 guldens) during the first seven months of the year, as against 90,274 (7,337,000 guldens) in the preceding year, and 43,434 (6,376,000 guldens) during January to July, 1921. [Gulden = 1s. 8d.]

BELGIUM.—Paper and cardboard exported from Belgium in the seven months ended July reached 20,825 tonnes (51,276,000 francs). Imports for the same period represented 26,248 tonnes (50,818,000 francs).

FRANCE.—Given in 100 kilos., the paper imports of paper into France during the six months ended June stood at 687,317 (92,355,000 francs), as against 640,606 (80,481,000 francs) in the corresponding period of the preceding year, and 378,566 (100,812,000 francs) in the first six months of 1921. Paper exports in the same three-monthly periods were: 246,833 (124,514,000 francs), 1923; 171,614 (85,169,000 francs), 1921; 168,084 (117,607,000 francs), 1921.

SWITZERLAND.—Swiss exports of printing paper, etc., given in 100 kilos., amounted to 53,038 (2,884,000 francs) during January to June, 60,834 (4,089,000 francs) in the same period last year, and 26,400 (2,473,000 francs) in the corresponding period of 1921.

ITALY.—Paper (white or dyed in the pulp), exported from Italy in the first quarter of the year, in 100 kilos., amounted to 8,949 (8,496,000 lire), compared with 7,717 (9,820,000 lire) in the same period last year. [Lira = 9·6d., or 25 to the £.]

CZECHO-SLOVAKIA.—The exports of printing paper, in 100 kilos., from Czecho-Slovakia during the six months ended June amounted to 57,988, contrasted with 59,388 in the corresponding period of last year, and 61,738 during January-June, 1921. The following represent the other classes of paper goods leaving Czecho-Slovakia during the first six months of the year, the figures in parenthesis showing the amounts in the corresponding period of the previous year: Packing paper, 50,412 (106,923); cardboard, 30,554 (15,761); writing paper, 9,286 (15,314); cigarette paper, 1,819 (4,997).

GREECE.—Printing paper imported into Greece during the whole of last year amounted to 5,430 tonnes (of the value of 16,125,000 drachmas), as against 4,663 tonnes (9,766,000 drachmas) during the twelve months of the preceding year. Writing paper imports reached 701 tonnes last year, and 968 tonnes in 1921.

EGYPT.—Imports of paper and other classes of paper goods imported into Egypt (in kilos.) during the six months ended June were as follows, the figures in parenthesis representing the amounts for the corresponding period of the preceeding year: Wrapping paper, 6,190,212 (5,775,188); printings, 3,803,722 (3,351,580); cardboard, 3,740,890 (3,079,393); writings and envelopes, 789,957 (791,330); cigarette paper, 279,796 (201,387). The six months' imports of wrappings reached a value of £E86,000, as against £E83,000 last year. Printings were valued at £E89,000, compared with £E75,000, and cardboard imports £E52,000, contrasted with £E47,000 during January to June, 1922. Cigarette paper exports stood at 18 tonnes (£E5,000) during the six months of the present year, against 21 tonnes (£E9,000) in the corresponding period last year

JAPAN.—Printing paper imports (in piculs) into Japan during the five months ended May amounted to 136,639 (2,353,000 yen), as against 166,094 (3,277,000 yen) in the corresponding period last year, and 29,655 (1,159,000 yen) in the preceding year (five months). In the same periods the arrivals of packing, etc., paper were: 99,215 (1,594,000 yen), 1923; 99,746 (1,676,000 yen), 1922; 26,491 (917,000 yen), 1921. The value of paper and paper manufactures during the first five months of the year reached 9,144,000 yen, contrasted with 8,914,000 yen in the preceding year, and 10,624,000 yen during January to May, 1921. [Picul = 133⅓ lbs. avoir. Yen = 2s. 0¼d.].

SIAM.—Imports of unprinted paper during the first half of the year stood at 1,364 tonnes (494,000 ticals), as contrasted with 1,115 tonnes (497,000 ticals) in the preceding period, and 1,039 tonnes (853,000 ticals) in the corresponding six months of 1921.

BRITISH INDIA.—During the first quarter of the year paper imported into British India reached 309,569 cwts. (71,80,000 rupees), as against 206,499 cwts. (52,85,000 rupees) in the corresponding period of the previous year, and 99,069 cwts. (55,89,000 rupees) during January to March, 1921.

CEYLON.—Imports of printing and writing paper into Ceylon during the six months ended June represented 19,829 cwts. (5,81,000 rupees), compared with 12,840 cwts. (5,15,000 rupees) in January to June last year. "Other paper" imports were of the value of 7,52,000 rupees in the first six months of the year, 6,81,000 rupees last year, and 1,60,000 rupees in January to June, 1921.

NEW ZEALAND.—Printing paper entered New Zealand in the first five months of the year to the extent of 279,368 cwts. (£354,000), against 116,890 cwts. (£145,000) in the corresponding period last year, and 122,631 cwts. (£362,000) in the similar period of the preceding year. "Other" paper imports were of the value of £260,000 during January to May, compared with £139,000 last year (five months), and £498,000 in the 1921 period.

BRITISH SOUTH AFRICA.—Printing paper arrivals into British South Africa during the five months ended May reached a total of 149,971 cwts. (£198,000), contrasted with 99,485 cwts. (£153,000) in the corresponding period of last year, and 140,317 cwts. (£490,000) in the five months of 1921. Wrapping paper imports reached 51,769 cwts. (£75,000) during January to May, 38,434 cwts. (£66,000) in the corresponding five months last year, and 43,000 cwts. (£160,000) during the five months of 1921. "Other" paper imports represented a value of £66,000 during January to May, £59,000 in the five months last year, and £82,000 in the similar period of 1921.

SINGLE-COLOUR TWO-REVOLUTIONS

TWO-COLOUR TWO-REVOLUTIONS

PERFECTING TWO-REVOLUTIONS

THE "VERTICAL" JOB-PRESS

Its Only Fault!

THE American Miehle Company's Vertical Job-press has, we are told, an only fault. We admit it, we are proud of it, and are glad to publish it abroad because, in point of fact, the fault in question is the machine's greatest virtue.

Oddly enough, it was a satisfied user of the press who drew our attention to the fault, but he did it admiringly, and not by way of complaint.

He said that the results obtained from the Vertical Press exceeded his most sanguine expectations, that his people were constantly finding that more and more jobs could be printed upon it economically and satisfactorily, and that the machine's only fault is its insatiable appetite.

THE AMERICAN MIEHLE COMPANY'S PRESSES ARE MANUFACTURED BY THE MIEHLE PRINTING PRESS AND MANUFACTURING CO. AT CHICAGO AND ARE SOLD IN GREAT BRITAIN AND IN BRITISH OVERSEAS TERRITORY BY THE

L.S.C. Jubilee Dinner.

A Large and Representative Assembly at the Hotel Cecil.

The present year marks a notable event in the annals of the London Society of Compositors, recording as it does the seventy-fifth anniversary of this important printing trade union. In order that this landmark in its history may be more tangibly remembered the Society's officials have celebrated the occasion by holding two gatherings during the course of the year. The first of these took place at the Crystal Palace in the summer, whilst at the Hotel Cecil on Saturday a very successful Jubilee Dinner was held. When it is realised that the history of the London Society of Compositors is practically the history of the printing trade in London for the best part of a century, it is easy to understand that the function on Saturday took the form of a unique gathering, at which were present close upon 600 ladies and gentlemen. Owing to the fact that the General Election synchronised with the event many well-known gentlemen were unfortunately absent. Mr. T. Timberlake (Chairman of the Society) presided, and among those present were the following:—

Mr. T. Timberlake.

The Lord Riddell, Messrs. C. W. Bowerman (Parliamentary Secretary), W. M. Bower (Linotype and Machinery Limited), F. A. Davies, R. Dent, C. J. Drummond, M.B.E., J.P., A. E. Goodwin (secretary, Federation of Master Printers), A. E. Holmes (secretary, Printing and Kindred Trades Federation), W. Howard Hazell, J.P. (president, L.M.P.A.), H. W. Howes (secretary, Machine Managers' Trade Society), G. A. Isaacs (secretary, N.A.T.S.O.P.A.), G. W. Jones, T. W. McAra, J.P. (secretary, Newspaper Proprietors' Association), J. Mortimer, O.B.E. (secretary, Printers' Pension Corporation), H. B. Naylor (secretary, L.S.C. Jobbing Guild), T. E. Naylor (general secretary, London Society of Compositors), A. O'Connor (secretary, Printers' Medical Aid), D. Ponting (news secretary), J. R. Riddell (principal, London School of Printing), H. Skinner, Rev. A. Taylor, Messrs. Woodgate Stevens (secretary, London Branch Amalgamated Society of Lithographic Printers), R. Watson, W. C. Warren (secretary, National Society of Electrotypers and Stereotypers), E. W. Whittle (secretary, Printers' Managers and Overseers Association), and W. Whyte (secretary, L.M.P.A.).

A telegram regretting absence through ill-health was received from Lt.-Col. H. Rivers Fletcher, and a letter from Mr. J. Alison expressing sorrow at not being able to attend.

Toasting the Society.

The loyal toast having been honoured, Mr. T. Timberlake said he felt it a privilege to move what could safely be considered the toast of the evening, that of "The London Society of Compositors." He wished they could bring to life some of the old pioneers who struggled seventy-five years ago to form their trade union, and watch their faces as they witnessed their gathering that evening. He felt nothing but admiration for the spirit displayed by the men in those early days. They lived in times when things were not so easy as for trade unionists to-day. They had all kinds of pains and penalties hanging over their heads almost worse than the sword of Damocles. They were in fear of being put in prison for their views, and ran the risk of losing their heads. It was by the supreme sacrifice made by these men to build up the Society seventy-five years ago that it had been enabled not only to celebrate the Jubilee at the Crystal Palace, but to hold the banquet that night. After referring to the oldest member, Mr. J. Alison, who joined the Society five years after its commencement, Mr. Timberlake said they had progressed ever since the Society's inception. From 1,100 members at the close of the first year, the membership had risen to more than 15,000 seventy-five years after. That might not seem a very large number, but when one remembered that theirs was a centralised society for one large town, it showed the tremendous growth of trade unionism amongst the composing department of the printing trade in London. That night they were assembled not only as members of the London Society of Compositors, but they were glad to have present with them as their guests members of the printing industry, who happened to be on the other side of the table. (Hear, hear.) While the rank and file of the Society were always ready to put their hands in their pockets to provide the munitions of war should the necessity arise, they regarded fighting as the last resort. As members of the London Society of Compositors they believed the best thing for them was to meet round the table with their employers and argue their case. He believed they would agree with him that during the whole of the career of the London Society of Compositors more had been obtained at the conference table than by threats of war. (Hear, hear.) After making reference to the late Mr. Harry Self, to Mr. C. J. Drummond, and Mr. C. W. Bowerman, Mr. Timberlake, in coupling with the toast the name of their present secretary, Mr. T. E. Naylor, concluded by expressing the hope that the Society would go on from strength to strength and that it would live for ever. (Cheers.)

Mr. Naylor Replies.

Mr. Naylor, who was received with cheers on rising to respond, said that after the turmoil of the week's electioneering one found it difficult to rise from the depths of political controversy to the heights of after-dinner speaking. It was his duty first of

Mr. C. W. Bowerman.

all to thank them for the kind response to what the Chairman had described as the toast of the evening. He (the Chairman) had covered the ground so well as to make his task in responding a comparatively easy one. The Chairman had drawn their attention to the great changes that had taken place in the Society since its inauguration seventy-five years ago. It was not alone the London Society of Compositors that had changed. The whole structure of trade unionism had altered during that period, and he thought those who were associated with them in other ways had good reason to be proud of the progress that had attended it during that period. One would not suppose, continued Mr. Naylor, in glancing round that room, that this was a gathering of working men. (Laughter.) Looking at them, and measuring them according to their looks, one could easily suppose that it was a meeting of the Bankers' Institute. (Laughter.) He could readily believe that the representatives of the employers' organisation when they first entered that chamber thought they were coming to the wrong place. They must, however, not forget that the London Society of Compositors was not the only trade union in the printing industry, and it was a source of satisfaction to them to know that while they had made progress the other unions also had been making the pace for themselves and had kept well abreast with them. (Cheers.) They ought not to congratulate themselves as a separate organisation but as one of many representing a great movement that makes for the betterment of humanity at large. (Hear, hear.) In looking back over the past few years, and recognising the great strides made by the trade union movement in this country, he believed he was justified in saying that it had set a fine example to the movement in every country in the world, not only for what it had done, but for the manner and method in which that achievement had been brought about. There had been times when they had felt that nothing less than vigorous methods could achieve their objects, but they recognised to-day that, with the growth of education among the working people of this country, they were in a better position to secure the advantages they sought, not so much by the use of the force they had at their command, but by reason and intelligence being brought to bear on the problems facing them. (Hear, hear.) After speaking of the especial pleasure they felt at having the ladies with them at their festive board, Mr. Naylor remarked that he almost wished they could have celebrations of that kind every year, if not every week. (Laughter.) He was quite sure that with diplomacy and discretion they would in the course of time be able to persuade the employers to place them in the position of being able to afford it. (Renewed laughter.) Referring to Mr. Alison—whom he would have liked to see present—Mr. Naylor said that notwithstanding that gentleman's 93 years he was unable to be with them because he was looking after a married son and daughter. (Laughter.) After alluding to the great services rendered to the Society by Mr. W. Vandy and Mr. Robert Dent, Mr. Naylor, apologising for having to leave before the conclusion of the festivities, jocularly explained that thousands of his future constituents were waiting to hear the flowing periods of their future Member of Parliament. (Cheers.)

Mr. T. E. Naylor.

"For he's a jolly good fellow" was enthusiastically rendered as Mr. Naylor left the room.

Toasting the Employers.

Mr. C. W. Bowerman, in presenting "The Employers' Associations," thought that was a wonderful occasion, and personally he was delighted this toast had been connected with that historic festive gathering. He thought the printing trade and those connected with the composing section of it could claim throughout its history that their association with the employers of London had been most friendly. Their Society had been very fortunate in coming to mutual understandings with their employers with mutually signed agreements, a proceeding, he ventured to suggest, which constituted the strength and the mainstay of the London Society of Compositors. They (the employers) did not always see eye to eye with them—that would be too much to expect—but eventually they came round to their way of thinking, while the relations between the two bodies had remained very harmonious. In days gone

Digitized by Google

by some of the employers kept the Society officials at arm's length, but with the assistance of his friend Drummond he was able, after getting into close contact with these gentlemen, to bring them round to a proper frame of mind. They had arrived at a stage when the employers not only saw eye to eye with them, but had agreed upon the establishment of what was known as the Joint Industrial Council. No other body in the country could claim, as they could, that their men, women, boys and girls engaged in the printing trade received a week's holiday pay at the expense of the firm. (Cheers.) The conferences of the Joint Industrial Council had engendered not only comradeship but a feeling of true fellowship. He was quite sure Mr. Howard Hazell would agree with him in that statement. With regard to the newspaper section of the trade they had present with them the best known man in that branch of the industry. Lord Riddell was a broad-minded man with a big heart, and with that combination in the president of the executive of the important association to which he belonged, they had no fear of the future of newspaper wages. Mr. Bowerman was sorry that Lt.-Col. H. Rivers Fletcher was not able to be present to respond to the toast, especially as his absence was caused by ill-health. His place, however, was to be taken by Mr. W. Howard Hazell. (Cheers.) The speaker could remember when the question of technical education first arose it was suggested that employers should allow their apprentices to attend the technical classes. The firm their friend represented was one of the first to give this encouragement, and, as they knew, Mr. Howard Hazell was the head of the London School of Printing, and there was no employer who took such a keen interest in the question as he did. In concluding, Mr. Bowerman said no trade had a better set of employers than they had in the printing trade, and while this good feeling remained —strengthened as it was by the Joint Industrial Council—they could look forward to the future with hope and satisfaction. (Cheers.)

Lord Riddell's Response.

Lord Riddell, after thanking Mr. Bowerman for the kind words said about the Newspaper Proprietors' Association and the employers in their trade, agreed with the proposer of the toast that it was a wonderful occasion. Their Chairman had, in the course of his eloquent observations, given an account of the parlous condition of trade unionists many years ago. He said they suffered from the fears of pains and penalties. He (Lord Riddell) wanted to say that the position to-day was reversed. (Laughter.) It was the employers who now suffered from the fears of pains and penalties, and who were constantly in a state of apprehension, and were in danger of losing their heads. (Laughter.) He thought the gathering that evening a romantic affair, although it was symptomatic of their industry to see the lions and the lambs sitting down together in an atmosphere of complete friendship and amity. Referring to the London School of Printing, Lord Riddell said though he had the honour to be its president, Mr. Hazell, Mr. J. R. Riddell and the committee did all the work connected with it. He himself was only its ornamental president. Passing on to refer to the London Society of Compositors, his lordship said their organisation was a wonderful one for training statesmen—(hear, hear)—and that was not very surprising when it was remembered that it possessed 15,000 intellectuals. The greatest tribute he could pay to their Society was the fact that when his Association wanted a secretary they chose a member of the London Society of Compositors. The suggestion had been made that he might raise the wages of compositors on the "News of the World" and other publications with which he was connected. His difficulty would be that in doing so he might hurt the hearts of both Mr. Isaacs and Mr. Larcey —(laughter)—and that would be a most terrible thing. All he could say at present was that Mr. Bowerman's suggestion would receive the most careful consideration. (Laughter.) He was one of those who believed that trade unionism had done more for their countrymen than any other movement, and with this belief he thought the London Society of Compositors was entitled to be proud of itself. The employers' relations with it were of a most cordial character.

Mr. Howard Hazell's Speech.

Mr. Howard Hazell, in responding, said they had been toasting the Federation of Master Printers, and it seemed to him that age was toasting youth and inexperience. Their Society had reached its seventy-fifth anniversary while his (Mr. Hazell's) had only arrived at its twenty-first. When age and experience—aided by the suave statements and dulcet tones of Mr. Naylor—negotiated with youth and inexperience, it was perfectly clear which side would win. Speaking particularly of the L.M.P.A., of which he had the honour to be president, he thought that in toasting the employers they were also toasting the London Society of Compositors, because they as an association of employers could not prosper unless they (the members of the Society) prospered as well. (Hear, hear.) Decreased trade meant unemployment on their side, and it meant diminished profits on the employers' side. Their interests were identical. There were some persons among the employers' organisation and the trade unionists who thought they existed solely to dispute about wages. They only had to consider their splendid organisation for pensioning their old members, and other schemes, to disprove that. There was no more glowing example of co-operation than that shown at the annual gathering of the Printers' Pension Corporation a few nights ago. The £31,000 raised on that occasion was not due to the extreme generosity of a few millionaires, but to the self-denial of the master man and the craftsman alike. (Cheers.) After alluding to Lord Riddell's and Mr. Naylor's work on the London School of Printing, Mr. Hazell referred to the Joint Industrial Council, which he termed the parliament of their future. He hoped that that parliament would be completed at no distant date when it would be represented by a member of the Newspaper Proprietors' Association. The Joint Industrial Council, besides dealing with health in the factories, had sent deputations to the Government on the postal and other questions. It was surprising the attention one received from Cabinet Ministers when they knew there were a quarter of a million votes behind the deputation. (Laughter.) Concluding, Mr. Hazell said the future of their industry was in the hands of their Society and the members of the association he himself represented. If they had a broad and statesmanlike outlook, energy in action, with decisions guided by vision, there was no fear for the future of their trade. (Cheers.)

"Our Parliamentary Candidates."

Mr. F. A. Davies (assistant secretary) submitted "Our Parliamentary Candidates." Speaking of Mr. Bowerman, Mr. Davies said he knew no man in public life—except it were Mr. Naylor—to whom the phrase *suaviter in modo, fortiter in re* could be more justly applied. Though members of the Labour Party, these two gentlemen were members of the cratt in the House of Commons—or rather would be at the end of the week. (Cheers.)

Mr. Bowerman briefly responded to the toast.

Mr. S. W. Newcombe (chairman, News Department), in presenting "Our Guests," dealt with the low wages of the compositor during the early days of the Society, and said he was sure the ladies present could not "make even" on 39s. a week.

Mr. Woodgate Stevens made an appropriate reply.

Mr. T. W. McAra, J.P., in offering the toast of "The Chairman," said he was sure his audience was with him in feeling very grateful that Mr. Timberlake was again spared to preside over that gathering after his long and painful illness.

Mr. T. Timberlake returned thanks for the kind way the toast had been honoured.

The speeches were interspersed by a number of musical items, contributed by the following well-known artistes: The Misses Beatrice Betts, Gwen Lewis, and Messrs. Dan Jones, Courtney Mayverne, Hector Gordon, Cyril Weller (accompanist). The musical arrangements—under the able management of Mr. Septimus Hunt—were well carried out.

A thoroughly enjoyable and memorable evening was brought to a close by the singing of Auld Lang Syne, followed by the National Anthem.

MR. J. A. WHITEHEAD, papermaker's agent, of 33, Blackfriars-street, Manchester, has been appointed by Messrs. John Eberstein and Co., Ltd., of Queen Victoria-street, London, to act as their sole agent in the North of England and Midlands, with the exception of Birmingham.

Standardisation of Paper by Tests.

BY HUBB BELL.

It is a well known fact that there has been a lack of attention to standardisation and simplified practice by the paper industry.

Statistics show that there are 800 terms which are used in the buying and merchandising of paper; there are 150 to 200 distinct kinds of paper and the number of uses of each is unknown; of 177 books 101 showed different page sizes; 230 sales house organs had 85 different sizes; 496 trade magazines had 95 different sizes, and 57 national magazines had 27 different sizes.

Standardisation is a very complex subject. In general, it means to single out specific products and materials, to settle upon their properties and dimensions, and to concentrate upon them in production and in use—all to the end of bringing about the greatest overall industrial efficiency possible. This involves nomenclature, purchase specifications, methods of test, uniformity in dimensions, and concentration upon the optimum number of types, sizes and grades of manufactured products.

Most of these factors have an intimate bearing on specifications. A definition of a project or of a process or application often is merely a specification in itself. Conversely, a specification in the larger sense is nothing but an elaborate definition. The specifications for a commodity are really the writing down specifically of what the buyer or purchaser wants, so that the buyer can write or wire, "Send me one hundred pounds of bond paper," and it seems something perfectly definite and specific to both of them.

Definite Recommendations Feasible.

It is perfectly feasible to make definite recommendations as to specifications of quality for commercial use. Test methods are sufficiently standardised, and there are a sufficient number of mills under technical control to warrant this step.

In preparing standard methods and standard specifications, the fullest co-operation must be obtained from manufacturers and consumers, and the standardisation thereby effected will enable the buyer and the seller to speak the same language. In overcoming the prejudice against standardisation, the manufacturer has learned that it is possible for him to produce a far better quality of product, and at the same time greatly reduce his expenses through mass production. This lower cost makes it possible not only to offer to the public better materials at lower unit prices, but also to maintain at the same time higher wages for labour.

Although standardisation restricts the varieties for selection, it permits concentration of thought and skill upon design, so that the products may be more economically and efficiently handled. It also reduces the maintenance cost of the finished structure by simplifying the stocks necessary for their maintenance. Well established standards have developed that factor of safety which is essential for the producer in making the finished product. Moreover, the care which is exercised in the preparation of standards gives full assurance to the public that the materials purchased and tested in accordance with standard specifications and standard methods will result in furnishing the best that can be produced, at the lowest possible cost, and at the same time will afford all safety necessary to the public welfare.

The American Society for Testing Materials, whose membership consists of technical men, has for its purpose "the promotion of knowledge of the materials of engineering and the standardisation of specifications and the methods of testing." Their standards have been adopted in the following field of materials:

Ferrous Metals, including practically all iron and steel products; Non-Ferrous Metals, including products of copper, zinc, lead, aluminium and alloys; Cement, Lime, Gypsum and Clay Products; Preservative coatings, including oils, pigments and paints; Petroleum Products and Lubricants; Road Materials, Coal and Coke, Timber, Waterproofing, Insulating, Shipping Containers, Rubber Products, Textiles.

Read at Technical Section, Pulp and Paper Industry, New York.

Paper can easily be placed on a similar basis since the technique of testing of paper is clearly standardised, and is just being recognised as of much importance.

The paper industry now has available official standard methods. The Paper Testing Methods of the Technical Association of the American Pulp and Paper Industry are defined and standardised so that comparable results can be obtained by different laboratories.

A very important aspect of the technical study of paper, which is covered in the above mentioned methods, is the proper, intelligent and systematic method of procuring portions of a lot of paper which may be duly considered to be a representative sample of that lot. Unless this is done, the value of any test is somewhat depreciated by not knowing whether the sample represents the lot of paper in question. It is believed that proper sampling is important both in the mill during manufacture and also at the point of delivery or shipment to determine the quality of the paper received. Due to the method of manufacture of paper, the lack of uniformity of paper, and the errors introduced during the testing of paper, definite systematic tolerances are given.

The combinations and proportions in which pulps are mixed in the manufacture of papers are innumerable and as a consequence, it is difficult to know, without scientific testing, what the papers may be that one is using, or to buy a paper by name alone for a specific purpose, and know for a certainty that it will stand up in service.

Service Quality Tests.

An old papermaker can, with a great deal of certainty, tell from an examination of a sheet of paper much of its history, and among a number of different papers pick out the one most suitable for the purpose for which it is to be used. But appearances and names are not the best guides.

Service quality tests are always made in both directions of a paper for uniformity; however, the weakest direction must be considered first, as in all materials nothing is stronger than its weakest point. Perfect uniformity is not practicable, due to the method of manufacture, the many different proportions of the pulps, and the use of waste and scrap materials.

The colour of a paper does not indicate what kind of paper it is, for colours are used to disguise the makeup or to make it more attractive. Often a fancy felt or a special roll is used to imprint a design into the paper, and practices of the industry have become so mixed that it is difficult to tell, from the name applied, just what the paper is made of; but the characteristics of any sheet will always be substantially the summation of the characteristics of the raw materials employed in its manufacture, and a fair estimation can be made as to the comparative qualities of a paper if the raw materials which were used are known. It follows, then, that to intelligently select a paper for a specific purpose, the conditions under which it is to be used, and the severity of the service which it must render, must first be considered; and, knowing them, the kind of paper, the weight and the finish, which will best meet the requirements and be best suited for the purpose can be efficiently selected.

It is clear to anyone that it makes no difference what classification a paper is sold under, unless the mill-brand or water-mark establishes beyond a doubt that the designation insures that the paper sold under this class has certain important properties and characteristics which are essential to the successful and satisfactory usage of that paper.

What Paper Testing Shows.

Paper testing for the purpose of determining relative values for these important characteristics has been in use by competent and experienced manufacturers for many years as a means of insuring against defective papers and undue costs. From these tests manufacturers have learned to recognise certain limits for each property outside of which they do not care to go. The limits may vary for different kinds of paper, depending on what conditions they must withstand in use.

One expects therefore to find these limits reflected in classification in a quite definite way; but on inquiry discovers that no one can define a class in definite terms with numerical co-efficients.

Paper testing is, of course, primarily of value to the consumer, who is to be found in practically every line of business. Often large sums of money are spent on the item of paper alone, but as a rule the consumer has no way of judging the character or quality of the paper or its suitability to his particular needs, except through observation or the word of the salesman who is selling it to him, and who is, of course, chiefly concerned in making a sale. That observation counts for a great deal in determining the suitability of a paper and in the estimation of widely different types cannot be gainsaid, but can observation tell which of two writing papers is the better? They may look and feel much alike and yet be widely different in quality and have many different properties.

The consumer can make the seller submit samples and estimates of the particular kind of paper he wishes. He will then have a chance to compare the kinds and qualities of paper on the market and the prices of the different firms. He gets a greater variety to choose from, and also, by letting it be known that the samples are submitted on specification, gets the best price possible for the given quality of goods. Paper testing here performs the duty of determining which sample represents the best value for the money.

Paper Exceedingly Sensitive.

Though it is generally understood that the physical qualities of paper are affected by changes in humidity conditions, there is but little appreciation of the rapidity with which these changes affect it. Paper is so exceedingly sensitive to changes in atmospheric humidity that, in order to obtain concordant results which may be duplicated at other times and by other laboratories, it is necessary to make all physical tests upon it in a room where both uniform temperature and relative humidity are maintained.

The following is a list of tests and determinations to be made with corresponding characteristics which each test helps to determine:

(1) Microscopical examination, to determine fibre composition and show the presence of injurious fibres.
(2) Tearing resistance, folding endurance, tensile strength, bursting strength, to determine quality of material used and care in handling during process of manufacture.
(3) Weight per ream, to determine compliance with contract specification.
(4) Thickness, to determine bulk.
(5) Expansion and absorption, to determine resistance to changes due to moisture.
(6) Per cent. of ash, to determine kind and amount of loading material.
(7) Per cent. of sizing, to determine kind and amount of sizing materials used.
(8) Fastness to sunlight, to determine permanency of colour.

The United States Testing Company was recently appointed official chemist to the United Typothetæ of America in regard to paper. Besides the testing of samples of paper for the members, this laboratory is now at work for the Typothetæ, establishing a set of standards for tests which shall mark the "zone" limitations in paper qualities. It is their plan to be able to define in terms of tests exactly what is the first grade, second grade, etc., in each of the different kinds of paper and to furnish their membership with the grading of the mill brand paper according to these standards. This laboratory will do for them the technical work connected with the establishing of the grades, the defining of the grades before technical committees and associations, and the grading of paper to rate them within the grades. It is their object to have one set of standards by which they will judge paper, so that the manufacturer might know exactly what tests his paper is going to meet, and the members of the Typothetæ shall know what they are talking about in discussing paper qualities.

MESSRS. T. H. BRACKEN AND CO., LTD. (in voluntary liquidation).—The joint liquidators have issued a statement of affairs submitted to the meeting of creditors, which shows an estimated surplus of assets over liabilities of the company, subject to the costs of liquidation, amounting to £22,266. The estimated deficiency as regards shareholders is £10,513.

The Newfoundland Paper Mill.

Progress of the Undertaking.

British paper interests are closely concerned with the erection of the pulp and paper mill by the Newfoundland Power and Paper Co., Ltd. Officers and directors of the company have recently paid a visit to the site of the new undertaking and some information concerning the progress of the work is now available. Those who made the tour of inspection were Sir Glynn H. West, president and chairman of the board of directors (chairman of Sir W. G. Armstrong, Whitworth and Co, Ltd.), Mr. H. D. Reid, vice-president (president of the Reid Newfoundland Co.), Mr. John Stadler (Belgo Canadian Paper Co., Ltd.), who will be managing director, and Mr. Eric V. Bowater (a director of W. V. Bowater and Sons, Ltd., of London).

According to Mr. Bowater, who returned to New York, the Newfoundland Power and Paper Co., Ltd., has been incorporated for $21,000,000, and when the mills in Newfoundland are completed and in operation this company will rank among the largest paper producing organisations in the world, making more than 400 tons of news-print paper daily.

Mr. Bowater, according to the *Paper Mill* (N.Y.), said that the directors of the company were extremely well pleased with the speed which is being made with the erection of the pulp and paper mill and the big dam by the contractors, Sir W. G. Armstrong, Whitworth and Co., Ltd., who have entire charge of the work of construction. Already the foundations of the pulp and paper plants are practically completed, and the erection of the structural steel work is being started. It is hoped that the whole of the outside of the pulp and paper mills will be completed before this winter, after which the construction of the interior work will be rushed so that the equipment can be installed and the mill started running by early 1925.

The equipment of the paper mill will include four 234-inch Walmsley Fourdrinier news-print paper machines and a wrapping paper machine. The news-print machines will be built to run 1,000 feet a minute and will make 400 tons of news-print paper daily. All four of these news-print machines will be installed at practically the same time and will get into production almost simultaneously.

The site of the pulp and paper mills, which will be built close together, will be at Corner Brook, which is located on the Humber River on the west coast of Newfoundland. The buildings and equipment of the plants will be of the latest in every particular. To house the employees at the mills a model town will be built accommodating more than 5,000 persons, and the erection of the first 250 houses will commence shortly.

The equipment of the pulp mill will include twelve magazine grinders of the latest type and enough pulp will be made to take care of all the requirements of the paper machines. This pulp mill will be constructed simultaneously with the erection of the paper mill, so that the manufacture of both pulp and paper will be considered as a unit.

The company will own and control their own ships which are being specially constructed for the expeditious carrying and handling of news print rolls. These ships will transport the company's entire product overseas to the various markets.

Embellish your Printing with

JOHNSON'S

GOLD INK

and SILVER INK.

Prints solid and sharp with one impression and does not rub off. Does not dry on the rollers, works clean, and has great covering power, is BRILLIANT and keeps its colour. Prints on ordinary label and cover papers.

British Exports of Printers' Supplies.

Returns for the First Ten Months of the Year Show Increased Demands for British Manufactures.

The following statistics, taken chiefly from the Board of Trade Returns, deal with the export trade of the country for the first ten months of the year, and demonstrate the extent of the business done by British manufacturers and exporters in supplying the requirements of the overseas printer. In the majority of the instances given, the statistics relating to the more important articles enumerated below show up extremely favourably compared with previous periods. The quantity of paper and cardboard exported during the first ten months of the year—amounting to 3,492,048 cwts.—represents an increase of 1,644,170 cwts. (88.9 per cent) compared with the corresponding period last year, while the value—£7,133,390—shows an advance of £1,793,092 (33.5 per cent). The position secured by the home manufacturer of printing and allied products in gaining a firm footing for their goods in Colonial markets is all the more satisfactory in view of the keen competition which they have to meet from European countries, which have the advantage of cheaper labour conditions and a depreciated currency.

Printing Paper.

Of the different varieties of paper and cardboard exported during the first ten months of the year (amounting altogether to 2,291,036 cwts.), the most important place is again occupied by that of uncoated printing paper. The big shipments of this commodity that have been going abroad during recent months is, of course, due to the large consignments to Australia, a British Possession which gives preferential treatment to news-print from this country to the extent of £3 per ton. The following figures—covering three respective ten-monthly periods—indicate the extent to which British printing paper is growing in favour in overseas markets:—

		Cwts.	£
Jan. to Oct.,	1923 ...	2,291,036	3,258,594
,, ,,	1922 ...	1,098,811	1,961,942
,, ,,	1921 ...	624,621	2,332,900

With regard to the markets to which printing paper was sent during the first ten months of the year, it is satisfactory to notice that British Colonies were responsible for taking 1,882,364 cwts., as compared with 408,672 cwts. absorbed by foreign countries.

Australian shipments during January to October amounted to 1,284,470 cwts. (£1,525,642), as against 459,271 cwts. (£673,573) in the corresponding period last year, and 241,094 cwts. (£814,791) during the ten months of the preceding year.

New Zealand occupies the second place, that Colony's takings representing 184,848 cwts. (£256,320) during January to October, contrasted with 70,583 cwts. (£116,075) in the corresponding period last year, and 42,490 cwts. (£150,007) during the 1921 period.

British India comes next, with 174,539 cwts. (£288,787), against 132,919 cwts. (£240,274) last year (ten months), and 84,651 cwts. (£328,725) in the corresponding period of the preceding year.

British South Africa took 105,056 cwts. (£186,554) during January to October, 52,244 cwts. (£114,052) in the 1922 period, and 64,910 cwts. (£257,162) in the corresponding ten months of 1921.

Canadian and Ceylon shipments indicate a considerable improvement contrasted with the two former periods, while those to the Straits Settlements show a slight decline.

Coated Papers.

The returns relating to the export trade in coated papers (which comprise printed and embossed paper hangings) give every evidence of steady progress. This is all the more satisfactory in view of the very much larger arrivals from Germany during recent months. Shipments under this heading reached 86,511 cwts. (£398,039) during January to October, compared with 52,055 cwts. (£301,656) in the corresponding period last year, and 35,226 cwts. (£280,701) during the ten months of 1921.

Under the heading of "All Other Sorts" of coated paper, shipments during the first ten months of the year reached 43,384 cwts. (£261,804), contrasted with 23,586 cwts. (£201,608) in the previous year, 20,218 cwts. (£248,721) in the ten months of 1921.

Writing Paper.

The returns relating to the exports of writing paper show a marked improvement compared with the two corresponding ten-monthly periods. Of this class of exports no less than 173,819 cwts. were taken by British Possession., as compared with 28,905 cwts. by foreign markets. The quantity and value of writing paper exports during January to October of this and the two previous years were as follows:—

		Cwts.	£
Jan. to Oct.,	1923 ...	202,724	563,601
,, ,,	1922 ...	132,760	466,786
,, ,,	1921 ...	110,529	679,923

With regard to the markets to which writing paper was sent during the ten months of the present year, Australian shipments were by far the largest, amounting to 88,031 cwts. (£212,455), compared with 52,742 cwts. (£152,826) last year. The supplies consigned to the other Colonial markets during the ten months were as follows, the figures in parentheses indicating the quantities and values of the corresponding period last year: New Zealand, 184,848 cwts, £256,320 (70,583 cwts., £116,075); British India, 174,539 cwts., £288,787 (132,919 cwts., £240,274); British South Africa, 105,056 cwts., £186,554 (53,244 cwts., £114,052); Canada, 20,637 cwts., £40,374 (13,872 cwts., £32,051); Ceylon, 14,470 cwts., £26,399 (11,126 cwts., £20,377); Straits Settlements, 8,905 cwts., £18,969 (10,601 cwts., £19,818).

Tissues.

Exports of tissues have been on a broadening scale, and during the ten months amounted to 11,270 cwts. (£107,944). This figure compares with 9,446 cwts. (£97,097) in the corresponding period last year, and 8,867 cwts. (£133,303) during January to October, 1921.

Packings and Wrappings.

In spite of the large shipments of packings and wrappings that have been placed on the market recently by Norway and Germany and other Continental countries, the efforts of the home exporter covering this branch of manufacture have met with considerable success. For the ten months ended October, exports of packings and wrappings represented 434,513 cwts. (£372,477), as against 242,636 cwts. (£245,850) in the corresponding period last year, and 119,180 cwts. (£275,066) in the ten months of the preceding year.

Stationery Exports.

All classes of goods that come under the heading of stationery continue to exhibit steady progress. During the first ten months of the year exports of stationery (of paper manufacture) reached a value of £1,238,295, as contrasted with £1,368,614 in the same period last year, and £1,910,640 in the corresponding period of 1921. The total quantity of envelopes—exclusive of boxed stationery—despatched abroad during the first ten months of the year amounted to 36,948 cwts., against 30,532 cwts. last year (ten months), and 21,437 cwts. in January to October, 1921. This year's exports were of the value of £157,166, compared with £156,976 last year, and £211,233 in the 1921 period.

"Other Sorts" of stationery sent overseas during January to October amounted to 132,920 cwts. (of the value of £1,081,129), compared with 105,047 cwts. (£1,213,638) last year (ten months), and 112,184 cwts. (£1,699,407) for the month ended October, 1921.

With reference to the shipments of stationery (other than paper) despatched to Colonial markets during the first ten months of the year, the premier position is occupied by British India, this market absorbing goods to the value of £159,053, as against £146,544 in January to October last year, and £149,181 in the similar period of the preceding year. The second place on the list is secured by Australia with £156,765, contrasted with £122,912 last year, and £134,833 in the 1921 period. New Zealand's share amounted to £55,301, against £34,505 last year, and £45,565 during the ten months of 1921. Canada (£39,999), the Straits Settlements (£28,068), and Ceylon (£18,178) were larger purchasers of this class of manufacture during the first ten months of the year than in the corresponding period last year.

Boards.

With the increased attention now being given to the manufacture of boards suitable for so many different purposes, it is not surprising that the demand for this important article of commerce is on the increase. In this connection it is satisfactory that more than one British board-making firm is giving close attention to the question of installing up-to-date machinery capable of producing goods equal and in many cases superior to those of foreign manufacture. Under the heading of boards—which comprises millboards, strawboards, cardboard, etc.—the exports during the first ten months of the year stood at 89,688 cwts., against 63,252 cwts. in the corresponding period last year, and 67,660 cwts. during the 1921 ten months.

Printed Books.

Exports of British printed books show a decided improvement. Regarding the destination of the major portion of this branch of export, there is ample evidence—apart from official returns—to show that considerable quantities are finding their way into the Australasian markets. As an instance of the nature of the business being transacted, it may be stated that more than 80 per cent. of the imports of printed books into the Australian Commonwealth during the fiscal year ended June, 1922, were consigned from the mother country. Of the total value of printed books entering this market during the year mentioned—amounting to £911,229—the share of New South Wales alone was of the value of £409,981, while the receipts of Victoria represented £297,465. During the ten months under review, printed books exported from this country amounted to 315,828 cwts. (£2,968,427), contrasted with 226,470 cwts. (£2,622,371) in the corresponding ten months last year, and 233,554 cwts. (£2,942,068) during January to October, 1921.

Printing Type.

In spite of continued competition from American and other sources, British manufacturers of printing type have maintained a steady position. The figures for the first ten months of the year indicate only a very small increase of trade compared with last year, while, contrasted with those for the corresponding period of 1921, it is clearly evident that considerable leeway is necessary to be made up by the British manufacturer before he places himself on a satisfactory footing.

Boxes and Cartons.

Boxes and cartons are now being used for thousands of different purposes, and their value, both from the point of view of health and also of utility, is becoming more than ever appreciated. Even yet there is plenty of scope for their more extended use. The position indicated by the figures for the first ten months of the year show that boxes and cartons of paper and cardboard (including folding boxes) were well in demand by oversea markets. During January to October, exports of this branch of manufacture amounted to 33,756 cwts. (£112,727), contrasted with 14,941 cwts. last year (ten months), and with 16,110 cwts. (£116,140) in the corresponding period of the preceding year.

Paper Bags.

The larger quantities of paper bags that have been dispatched abroad during the first ten months of the year indicate that a much better business has been done. So far as the present year has gone, these shipments represent 33,578 cwts. (£78,690), against 14,394 cwts. (£50,858) in the corresponding period last year, and 12,850 cwts. (£69,661) during January to October, 1921.

Playing Cards.

The returns relating to the exports of playing cards of British manufacture show that a slightly improved business is being transacted. Consignments sent abroad during January to October amounted to 1,909 cwts. (£36,264), contrasted with 1,845 cwts. (£36,027) in the corresponding ten months last year, and 870 cwts. (£20,771) in the similar period of the previous year.

Overseas Printers and their Paper Supplies.

STATISTICS SHOWING AVAILABLE SOURCES.

A comprehensive report on the financial, industrial and commercial conditions in Canada to June, 1923, has been issued by the Department of Overseas Trade. It has been compiled by Mr. F. W. Field, H.M. Trade Commissioner at Toronto, and is accompanied by a supplementary report on Western Canada by Mr. L. B. Beale, H.M. Trade Commissioner at Vancouver.

Users of Canadian Paper.

The table below gives details of the exports of various grades of paper:—

	1922	1921
News-print	959,514 tons	709,241 tons
Wrapping (kraft) ...	18,277 „	6,847 „
Book paper	31,695 cwt.	33,507 cwt.
Bond and writing ...	12,228 „	23,698 „

Canadian exports of news-print and wrapping paper were ahead of the previous year's figures, news-print being 37 per cent. greater and wrapping paper 207 per cent. greater. Book paper and bond and writings were behind the figures of 1921, due to competition and decline in demand for these classes of paper, but the figures show betterment during the year and the demand is improving. For news-print Canada's best customer was the United States, which took 887,835 tons, followed by Australia with 33 393 tons and New Zealand with 12,020 tons. Book paper went principally to Australia and New Zealand, with Great Britain a poor third. Bond and writing paper also went chiefly to Australia and New Zealand with Great Britain not far behind. For kraft wrapping paper Great Britain took the largest share, followed by Japan and Australia.

Australian Paper Requirements.

Under the combined heading of paper and stationery the total arrivals into the Australian Commonwealth during the twelve months ended June reached a total value of £6,326,538, comparing with £4,841,063 in the preceding twelve months.

Among the individual countries of supply, Great Britain occupies the leading position, having sent to the Commonwealth during the twelve months paper and stationery to the value of £3,577,531, against £2,279,251 in the corresponding period of the previous year. Consignments from the other countries of supply were as follows, the figures in parenthesis denoting the value in the year ending June, 1922: Canada, £658,662 (£802,513); United States, £639,203 (£516,582); Japan, £25,691 (£16,863); other countries, £1,406,856 (£1,225,955). Germany's contribution amounted to £18,595, imports from that country being prohibited in the previous year.

The table given below shows the countries of origin and the comparative percentages in value of the imports of paper and stationery for the twelve-monthly periods ending June 1921-22 and 1922-23:—

Country	1921-22 Per cent.	1922-23 Per cent.
United Kingdom... ...	47	56·6
Canada	16·4	10·4
United States	10·6	10·1
Germany	—	·2
Japan	·3	·4
Other countries	25·3	22·2

Australian Market for Boards.

Imports under the heading of "millboard, greyboard, leatherboard, manilla board and woodboard" into the Australian Commonwealth during the fiscal year 1921-22 amounted to 2,138 tons (of the value of £107,944), as against 3,813 tons (£265,542) in the preceding twelve months.

Of this class of manufacture Sweden was the largest supplier with 776 tons (£36,440), although that country's consignments do not reach the 1,234 tons (£80,010) sent in the preceding year. The second position is occupied by the United States with 469 tons (£32,605), contrasted with 1,413 tons (£109,141) dispatched during 1920-21. The United Kingdom's contribution places her third on the list with 461 tons (£26,244), against 439 tons (£41,713) in the corresponding period of the previous year. The contributions, from the other principal countries, during 1921-22 were as follows, the preceding year's shipments being shown in parenthesis: Canada, 246 tons, £6,529 (542 tons, £22,987); Norway, 90 tons, £3,298 (132 tons, £8,386); Finland, 46 tons, £1,227 (31 tons, £1,176); Netherlands, 40 tons, £1,161 (8 tons, £873).

Strawboard Imports.

Under the heading of "strawboard, including corrugated strawboard," the imports were 1,160 tons of the value of £14,804, as compared with 3,071 tons, £67,771, in the preceding year. Shipments from the various countries were as follows, a very noticeable decrease being indicated in Japanese goods: Netherlands, 1,123 tons, £13,909 (978 tons, £22,296); Japan, 11 tons, £464 (2,025 tons, £43,589); United Kingdom, 10 tons, £241 48 tons, £1,378).

Cardboard and Pasteboard.

Cardboard and pasteboard imports reaching the Commonwealth during the twelve months ended June, 1922, represented 256 tons, of the value of £15,475, contrasted with 389 tons, £35,851, in the preceding year. The largest contributor was the United Kingdom with 125 tons, £7,965 (175 tons, £17,221), the shares of the other countries being: United States, 63 tons, £4,079 (121 tons, £12,240); Sweden, 48 tons, £2,503 (25 tons, £1,164); Norway, 17 tons, £728 (nil).

Coated Boards.

Imports under this heading represented 212 tons, £13,263, contrasted with 158 tons, £17,266 during the twelve months of 1920-21. The contribution of the United Kingdom stood at 90 tons, £7,233 (95 tons, £9,419), while the shipments of the other countries were: United States, 58 tons, £3,438 (30 tons, £5,027); Netherlands, 22 tons, £1,296 (nil); Sweden, 18 tons, £812 (30 tons, £2,650); Finland, 13 tons, £183 (nil); Norway, 11 tons, £296 (3 tons, £163).

Paper and Stationery in British Malaya.

Some useful light is thrown on the value of the paper and stationery market of British Malaya by the tables we are able to publish herewith showing imports of (1) paper and paperware and (2) stationery in 1913 and 1922.

The War has undoubtedly brought a change in the relative values supplied by the various exporting countries. The United Kingdom still holds a strong position, her exports of paper and paperware to British Malaya forming in 1913 and 1922 respectively 32 and 39 per cent. of Malaya's total imports and of stationery 66 and 43 per cent.

Austria-Hungary, previously a large exporter of paper and paperware, has dropped out altogether, her place amongst European countries having apparently been taken by Italy. Exports of both paper and paperware and of stationery from Japan have increased enormously, as also have those of the United States of America. Chinese export of paper and paperware has sunk to a comparatively negligible quantity, but exports of stationery from that country and from Hong Kong show a remarkable increase in value.

PAPER AND PAPERWARE.

	1913.	1922.
United Kingdom	£70,461	£79,163
Hong Kong...	52,789	45,690
India	3,787	2,755
Austria-Hungary	40,764	nil
Germany	5,360	1,261
Belgium	5,259	231
France	9	3,860
Italy	1,509	20,191
Netherlands	319	733
Norway	378	1,592
Sweden	832	2,904
China	46,198	3,894
Japan	2,416	17,491
U.S.A.	447	19,351
Other countries	2,276	1,654
Total	£232,814	£200,770

STATIONERY.

	1913.	1922.

U.S.A.	2,307	9,780
Netherlands East Indies...	30	4,185
Other countries	4,139	2,461
Total	£102,406	£249,476

South Africa's Paper.

Recent news from South Africa speaks of the progress being made with paper manufacture by the Premier Paper Mills, Klip River, Transvaal. The mills at present manufacture krafts and blue candle paper, for which purpose they have already imported several expert papermakers, who, with their wives and families and those directly dependent on the industry, number over 100 persons. At this early stage the wage bill already amounts to nearly £7,000 per annum. These figures will increase as the industry consolidates its position and branches into other forms of substance and related manufacture.

Recently it has laid down machinery and is training the necessary personnel for producing on a large scale drab sealing bags, and there is little doubt but that it will in the future supply all local needs in this accessory of its main paper product.

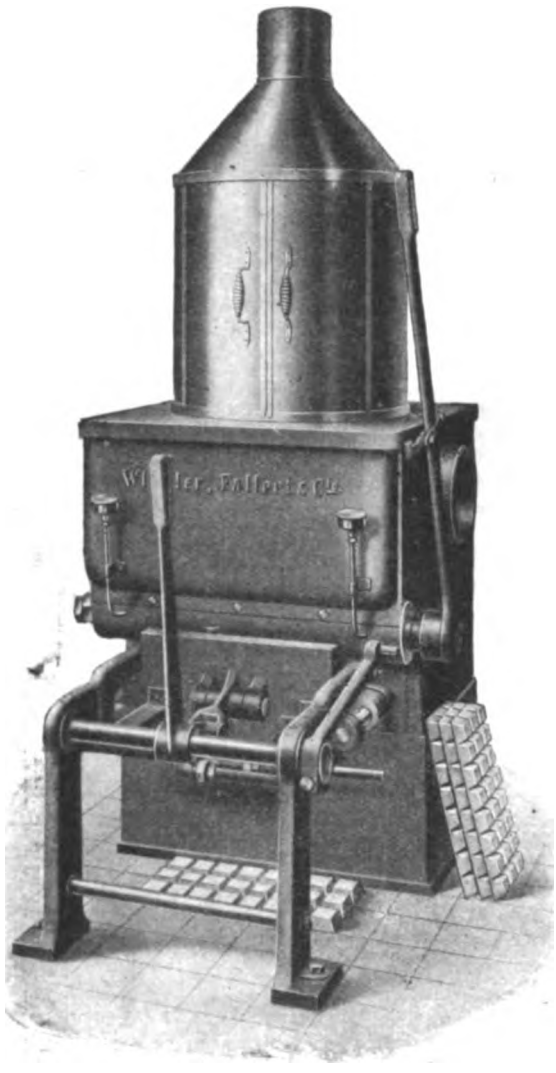
Paper for China—Opportunities for Foreign Manufacturers.

Reporting on the scope for foreign paper in China the Belgian Vice-Consul (M. Hondt) in Shanghai says every year the Custom House returns record a gradual increase in the paper imports. The chief cause of this is the publication of new native newspapers, classical books and the desire to advertise manifested in various branches of trade.

The principal varieties of paper imported are: Machine glazed cap, cap (calendered on one side, news-print (light weight), printing paper (calendered or not, coloured), cover and art paper, glazed and tissue paper, kraft and wrapping paper, and strawboard.

Papers in Demand.

Particulars of the papers in demand in China are given as follows:



Machine Glazed Cap.—Employed for printing books and pamphlets, and resembling tissue paper. Many Chinese books and pamphlets are printed on two uncut leaves, the inner page being left blank. This paper is imported in sheets 25 ins. by 44 ins.; 500 sheets weighing 15½ lbs. The chief purveyors are Norway and Sweden, smaller quantities coming from Germany. These countries have altered their plant to manufacture Chinese paper, of which the sales have been good.

News-print (Light weight).—Employed by the Chinese press. It is also used for posters, prospectuses, printed matter, account books, etc. In silk merchants' shops it is utilised for wrapping; lining for tea chests and many other purposes. Dimensions of the sheets are 31 ins. by 43 ins., weight 37 lbs. per 500 sheets; and 31½ ins. by 43 ins., weighing 45 lbs. for the same number.

Printing Paper (White).—There are three grades, viz., glazed, 27 ins. by 40 ins., weight 60 lbs. per 500 sheets; and 31 ins. by 43 ins., 70 lbs. per 500; not glazed, 27 ins. by 40 ins., 60 lbs. Used for reviews, periodicals, and account books.

Other Varieties.—Coloured poster paper is also employed for prospectuses, etc. The paper is sometimes glazed on one side; most frequently not. It is very light. The most usual colours are red, yellow, violet, pink, orange and green. Dimensions 25 ins. by 37 ins.; weight 25 lbs. per 500 sheets.

The "Winkler" Automatic Ingot Caster

will substantially cut down your loss in dross and your bill for renovating metal.

The Metal is Drawn from Bottom of Pot, which is directly connected with the ingot moulds. Consequently only the clean metal is cast under the weight of the metal in the pot.

The Surface of the Metal is Kept in a Non-Oxidizing Atmosphere, which prevents the formation of dross.

No Unhealthy Fumes from the Metal, these being carried off through the flue.

Automatic Metal Mixing. When the metal flows into the moulds the air escapes through the metal in the pot, thereby acting as a natural stirrer.

"Surface Combustion" Gas Burners, giving uniform furnace temperature and minimum gas consumption. Radiant heating from refractory bed on which correct mixture of air and gas burns completely.

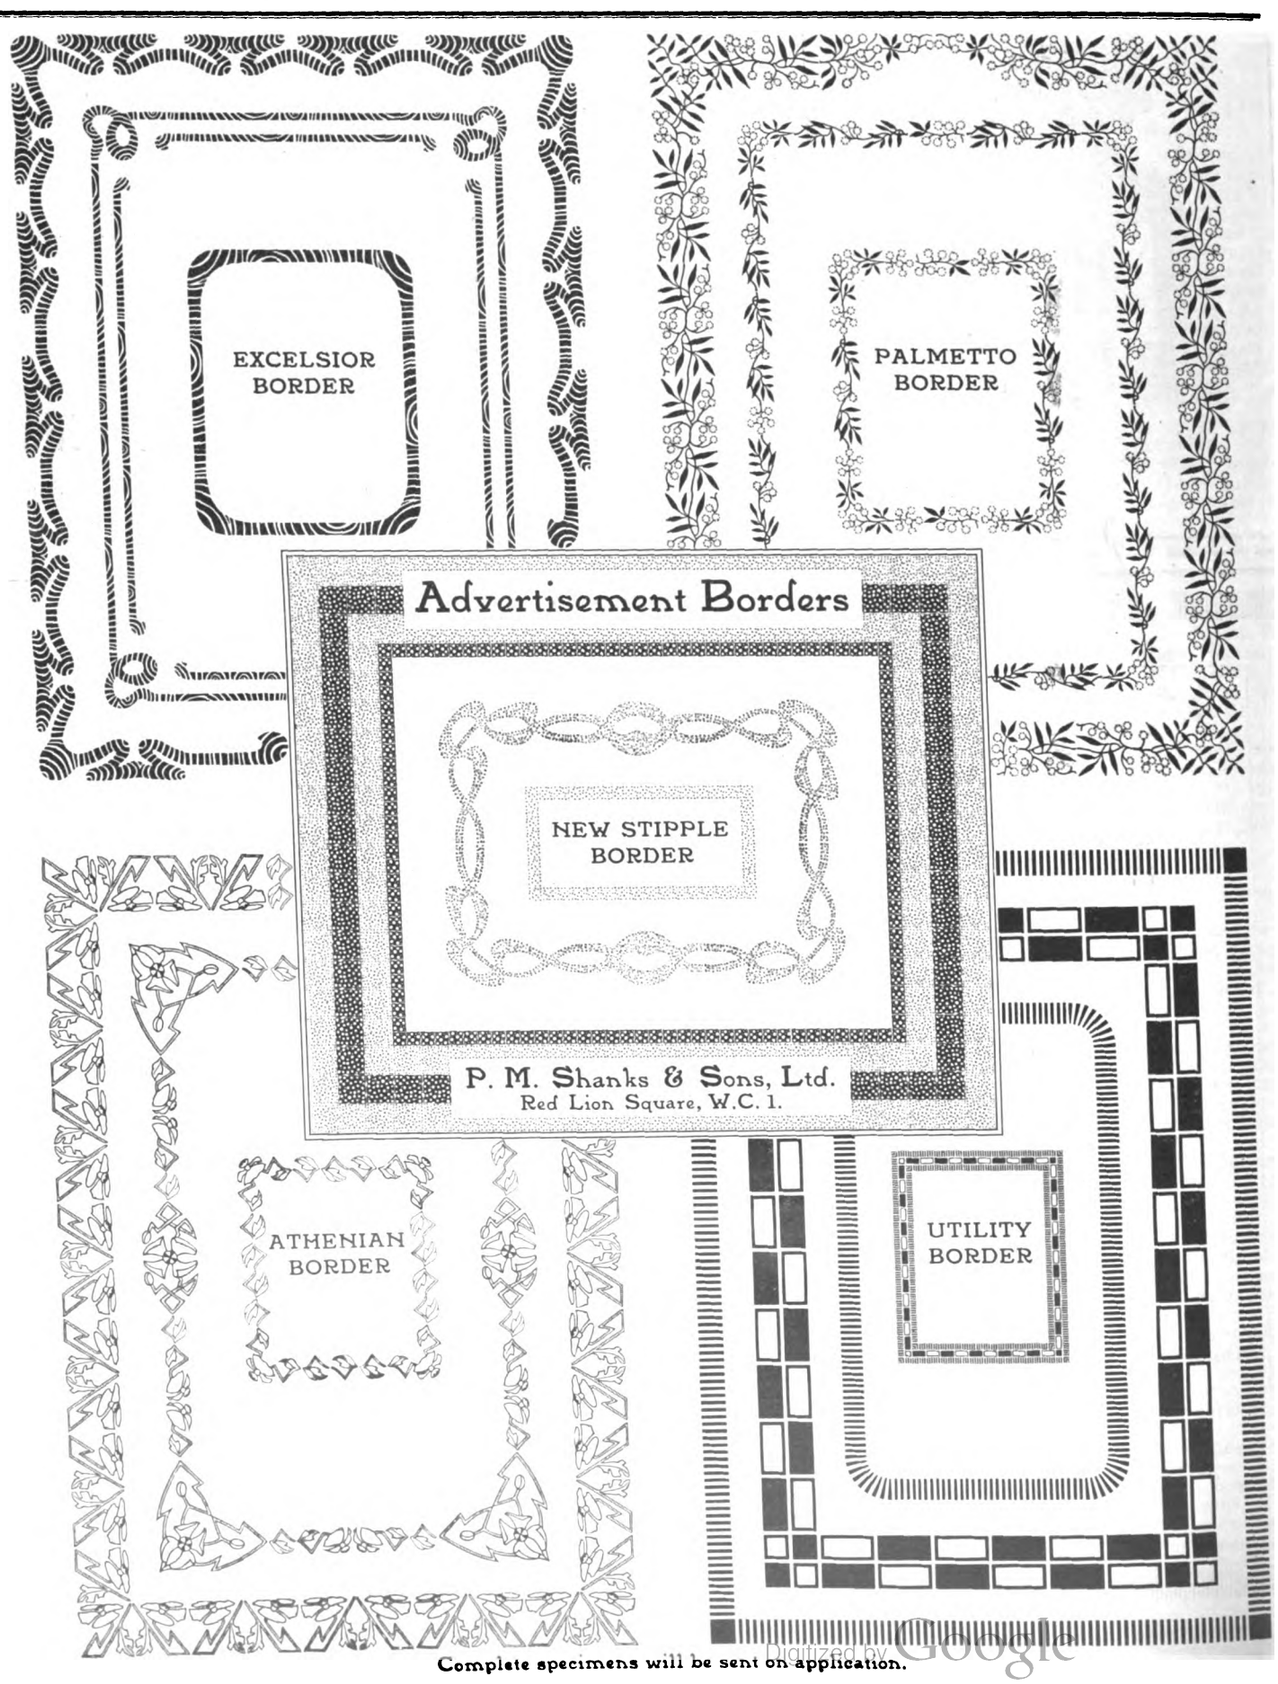
World's Paper Trade.

Germany's total consumption of pulping timber in 1922, amounted, according to *Wirtschaft und Statistik*, to about 7.1 mill. cbm. as compared with 7.6 mill. in 1913. The production of mechanical wood pulp totalled 610,000 tons in 1922 as against 674,000 in 1913, and of cellulose 721,000 as against 839,000. Cellulose production has therefore decreased considerably.

The manufacture of paper was almost equal to that of 1913, viz., 1.58 mill. tons, as against 1.61 mill. tons. By reason of the greatly increased international demand for news-print, paper exports were greater than before the war, those of printing paper rising from 68,749 tons in 1913 to 148,202 tons in 1922. The export of notepaper also increased, whereas in other kinds of paper it diminished sensibly.

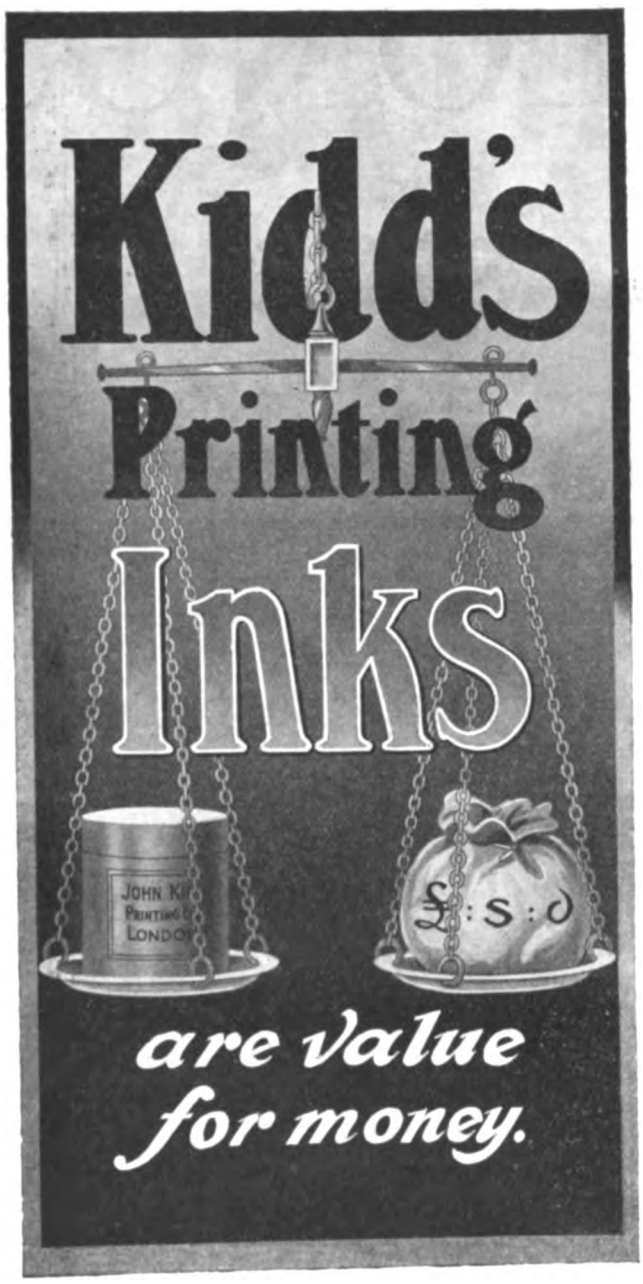
Sweden still occupies the first place as a cellulose exporting country, although Canada is now very close behind. Norway's exports in this article are not as great as formerly; Finland, on the other hand, has more than doubled her cellulose exports, which have almost reached the Norwegian figure, but in regard to mechanical wood pulp, the Norwegian exports are far ahead of the Finnish.



The production of paper pulp and paper has received an extraordinary impetus in Canada. The output of the pulping mills rose from 645,000 tons in 1914 to 1,275,000 tons in 1922, that of the cellulose works from 290,000 to 810,000 tons.

In 1922 Sweden exported 131,698 tons of news-print, as compared with 71,650 tons in 1913; Norway, 107,739 tons; Finland, 130,083 tons; and Canada, 1,022,627 tons, as against 297,260 tons in 1913. The production of news-print in Canada has increased in such dimensions that it threatens to reach the level of that of the United States,

Great Britain, France and the United States are the chief importing lands for wood pulp and paper. England gets her wood pulp from Norway, Sweden and Canada, and most of her cellulose from Sweden. British imports in 1922 totalled 574,497 tons of wood pulp, 365,927 tons of cellulose and 562,416 tons of paper and pasteboard.



The French paper industry is rather more independent of foreign supplies, but imports of news-print have augmented considerably. France imported, in 1922, 176,388 tons of wood pulp, 214,247 tons of cellulose and 140,301 tons of paper and pasteboard, the respective 1913 figures being 259,803 tons, 205,516 tons and 24,361 tons.

The United States imports of wood pulp rose from 159,735 tons in 1913 to 195,562 tons in 1922, those of cellulose rose far more, viz., from 352,691 to 937,870 tons. Her wood pulp imports in 1922 came in the main from Canada, the cellulose imports to the extent of 45 per cent. from that country, 40 per cent. from Sweden, and the remainder from Norway and Finland. The paper imports of the United States consist chiefly of news-print; imports of the latter totalled 928,680 tons in 1922, as compared with 253,290 tons in 1913.—*Economic Review.*

Some Examples of Value in Black Inks.

"J.K." Black—A fine letterpress Ink suitable for the great majority of work in most printing offices. It prints half-tone blocks excellently, and is only 2/3 per pound.

"Triumph" Black—A fine black ink of better quality than "J.K." Black, of great covering power and intense blackness, suitable for high-grade work. Price 3/- per pound.

"Premier" Black " 2/6, and "Zenith" Black " 3/- are both fine black inks which dry quickly enough to prevent offset on art papers, and to save slip-sheeting and its cost.

Coloured Inks of every shade and tone at similar "value for money" prices, in letterpress, litho, offset litho, photogravure, etc.

Gold and Silver Inks which notable printers declare to be "the best."

Bronze Powders. Kidd's are the Sole British Agents for a reputable firm of manufacturers, and their prices do not fear comparison with any on the market.

Kidd's "Resilient" Rollers are made by the most modern methods, and their durability is unsurpassed.

PRINTERS' BLANKETS AND OTHER SUNDRIES ALWAYS IN STOCK.

THE

THOMPSON TYPE, LEAD & RULE CASTER

Reliability of a typecaster consists of the high quality of its product at a cost low enough to make non-distribution economical.

Thompson quality is a standard of accuracy not surpassed even by typefounders.

Simple, complete and compact, using Linotype, Intertype and its own matrices interchangeably, the Thompson produces more type than any other typecaster on the market and equals the out-put of two of some other makes.

Type in all languages from 5 to 48 point, leads, slugs and rule 2 to 12 point, accurate in every detail, are produced on the Thompson Type, Lead and Rule Caster.

S&P S&P

The "Super-Imperial"

Four-sider Disc Ruling Machine.

For Feint Lining only or Feint Lining and Striking 2, 3 or 4 Colours on both sides of Sheets, both ways, at one operation.

With Latest Model Ream Feeder attached, Patent Pile Feeder, or Patent Pile Suction Feeder, with Single or Duplicate Tables.

This Machine will rule both sides, both ways, at one operation, at the rate of 10 to 15 reams per hour, according to size of sheets.

Improved Patent Turn Table and Latest Style Layboy with Back and Side Joggers, included with machine. The "Bailey" Patent Rotary Perforator Attachment, and Shaw's Patent Sheet Cutter can be attached.

A large supply of Discs and Spaces and Disc Rods, and full compliment of Accessories supplied with each machine.

Two Horse Power only required to drive Machine and Feeder, either from Shaft or direct from separate motor. **One Drive** only necessary.

This Machine is very fast, and saves time and labour in handling paper. A very good class of work can be obtained.

We can add Patent Turn Table to our Single Sider Disc Machines and well-known Striker Pen Ruling Machines, for Feint Lining only or Feint Lining and Striking, on one side of the paper **both ways at one operation.**

For Hand Feeding only or with any of our different classes of Feeders attached. We can supply machines both for Hand Feeding and with Feeder combined.

Variations in Estimating Operational Times.

Subject of Vital Importance Being Investigated by the Home Counties Master Printers' Alliance.

The problem of the causes and the possible remedies for the wide variations commonly met with in printers' estimates was brought prominently before the Federation of Master Printers at the Cost Congress, held in London this year, and the printing industry would seem to have awakened to the gravity of the situation at present existing. In this connection the Home Counties Master Printers' Alliance is rendering real service to the trade by the very vigorous way in which it is tackling the problem.

As we have previously indicated, the Alliance began its activities in this direction by holding group meetings at Brighton, Maidstone, Guildford, St. Albans and Southampton, making this variation the principal topic of discussion, and considering particularly that very important aspect of the subject "Variation in Estimating Operational Times." The Home Counties Alliance, it will be remembered, invited a number of printers to submit estimates for certain specific operations required in the production of various ordinary printing jobs. About sixty firms took part in the estimating, thirty of whom submitted estimates for *all* the operations included. An analysis of the results revealed remarkable variations, the difference between the highest and the lowest estimate being always 100 per cent. or more. For instance, in composition (including make-up, imposition and house corrections), the highest estimate gave 70 hours, whilst the lowest gave 30. For some other operations even greater variation was shown; thus, the highest figure for guillotining was 14 hours, against the lowest estimate of 1½ hours, and for banding booklets in 50's, one firm estimated 6¼ hours against another estimate of ½ an hour.

The Home Counties Alliance is, we understand, arranging to conduct more experiments in estimating, and, after further consideration, hopes to have some practical suggestions to offer to the trade with a view to remedying the present state of affairs. In the meantime, much interest attaches to an interim review of the position which was presented at the St. Albans meeting by Mr. William H. Sessions, managing director of the Ebor Press, York, and Fellow of the Incorporated Society of Advertising Consultants. From the December issue of the *Members' Circular* of the Federation of Master Printers, which contains Mr. Sessions' address, we are able to extract the following:—

The Eternal Triangle.

We shall never be able to wipe out the eternal triangle in the relations of men and women—can we prevent this triangle in the relation of printer and customer being an eternal one too?

It is worth trying . . . We lose grip with our customers through their annoyance at our wide variations in estimates. It is not just a question of the price itself, it is the uncertainty. The loss of prestige caused by our estimate variation is a real loss of cash value to the trade, and again I assert it would be beneficial alike to customer and to printer to have it removed.

The two Federation tests mentioned at the Annual Conference showed variations of 120 per cent. and 213 per cent. respectively. The highest variation brought to light by the Home Counties Alliance is that for 500 double-crown posters, in which the variation between the lowest and the highest is 184 per cent.—the lowest is on 5,000 programmes, in which the variation is only 74 per cent. The average variation between the lowest and the highest on the eight items is 122 per cent.

You would perhaps notice I said *only* 74 per cent. but let me use my yard stick simile: What would you say of fifty tailors measuring up cloth with yard sticks varying twenty-six inches, one using a yard stick of twenty-three inches and another one of forty-nine inches?

Have you noticed, too, in the tables of your test how the quotations from the same firm jump about in relation to their fellows? The printer who is the highest for 100 posters is the lowest but four for programmes. This is shown, too, by adding together the total of the eight prices of each firm who quoted throughout; the difference between the lowest and the highest totals is 35 per cent. better than the average variation shown by the single items.

Lack of Standards—the Difficulty.

Thus it is a lack of standards in our estimating that is the difficulty and not so much higher or lower standards in different offices. Indeed, do we not all see this in our daily business round—on one quotation we are hopelessly out on the next we are in, and it is the other fellow who is badly out.

It is therefore clear, clearer even than at the Cost Conference, that the chief cause of estimate variation is the difference of opinion on operation times. It is no use patching up the house in other directions, so long as it is built on these shifting sands.

When I had added up the totals of the eight estimates, I charted them out to see if there were any conclusions to be drawn. I rather expected I should find different "schools of thought" on estimating times. A group who thought in low terms of times, a middle group and a high group, for example.

I was startled at the result. Leave out one at the beginning and three at the end and the rest move up at such regular intervals that for all practical purposes I might have taken a straight line and dotted a printer along at regular intervals. You will notice I have, indeed, drawn a diagonal line across the chart to illustrate this; and, although it is a very thin line, only two dots miss it, and then ever so slightly. I have never seen so regular a chart, regular alas, however, in its variation! One is almost tempted to say after looking at such a chart that the only thing "standard" about printers' estimates is that no two are alike . . .

I showed the chart to a man, and was interested in his first remark: "Do you know you get the same sort of result in a bazaar guessing competition, a few wide of the mark at each end, and a steady variation in between, whereas you would imagine half the people would be clustered round the actual weight, and the other half spread about at each end?"

Now I have been driven to the same conclusion—that estimating for printing is a guessing game and not an exact science.

I am looking at facts as they are and trying to find the truth, and it comes to this—the results of the hours of labour and careful work we put into our estimating have the same results as those of a guessing competition.

Can we avoid this and place our estimating on a surer, more accurate footing?

The Remedy.

I suggest we can, and that the way to do it is the way the printers of the United States and Canada have done it. This is by collecting together from those printers who use the Costing System, and therefore have accurate records, the actual time taken on various kinds of work. When enough times to give us a fair test have come in for work of the same kind, then after careful scrutiny to throw out any records that are clearly errors, to average the remaining times. In this way we shall have found a proper basis for estimating, founded not on opinion as our present estimates too often are, but on actual times taken.

The jobs which pass through each printing office are so very varied that the task of compiling accurate records is not only laborious for the individual firm, but because of this variety would be a matter of slow growth, taking many years to compile

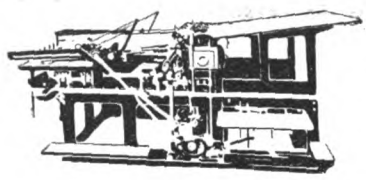
Economise by Installing



The Miehle

WHEN next you are in the market for letterpress printing machinery, fully consider the Miehle.

It may be a long time before you are again in a position to bring your press equipment up to date.

And when considering the Miehle, make a special note of the rapidity with which any job can be made ready for printing. In some cases this feature alone makes the Miehle worth two ordinary presses in actual production, but it does not cost the price of two.

Let us tell you how to economise by installing a Miehle.

LINOTYPE & MACHINERY LTD.

HEAD OFFICE: 9 KINGSWAY, LONDON.

MANCHESTER: 4 Cannon Street.
BRISTOL: 51 Broad Street.
GLASGOW: 197 Howard Street.
DUBLIN: 15 Sackville Place

Members of the Association of British Manufacturers of Machinery for the Printing and Allied Trades

and even then being very incomplete. This compilation would be very much better done by a Central Office, for the number of firms in the printing trade would tend to counterbalance the variety of the jobs.

Perhaps my meaning will be clearer if I suggest a job done only once a year by each printer in the country. The individual printer would have to wait ten years to obtain a decent average; and, even then, his average would only be based on ten results. On the other hand, a Central Office, getting a record from each of 4,000 printers, would in one year be able to issue an average based not on ten records but on 4,000.

In our case there will be this great advantage, that we shall be able to check over our results with those of America; and, between the two tests, we should be able to produce most valuable figures which, because they will be so well founded, will undoubtedly be accepted by the printers of this country as figures which can be trusted.

Composition Problems.

There is one point, and a very serious point, which would require further thought and investigation, namely, that of composition. Anyone who is familiar with what has been done in America will see that but little help is given us regarding this, the most difficult portion of estimating, and those who are not familiar with the American work would see the same omission in its English counterpart—my firm's "Estimator."

Of course, the very varied operation of type-setting is a most difficult one to standardise. Let us see where we are, however, by putting the problem in its simplest form. In its simplest form, what is composition? It is putting a certain number of pieces of metal or wood into a certain given space. I have calculated the number of pieces of metal or wood in the poster you had sent round and divided them by the time estimated for the composition, making a level deduction for locking up and house corrections which are included in the times sent round.

What is the result?

One printer says a compositor will pick up 4½ pieces of metal per minute.
Six say 5 per minute.
Four say 6 per minute.
Twelve say 6½ per minute.
Five say 7½ per minute.
One says 8 per minute.
Eleven says 8½ per minute.
Four say 9 per minute.
Four say 10 per minute.
Three say 12 per minute.

You can make your choice, therefore, anywhere between 4½ or 12 pieces of metal picked up per minute. But which is it really? Is not that the sort of fact we want to know? I do not mean that it would help our estimators in the rush of daily work to know a raw fact like this any more than it would have helped us at our lunch to-day to have brought in a live sheep. Nevertheless, as the live sheep is the first step towards our cooked meat, so we must study or detail someone to study the basic facts of composition, in order to build from these a sounder basis for estimating composition than our present methods.

I hope to see the day when the estimator for composition will use scale rules like the engineering draughtsman. Measure size,

BINDERS TO THE PRINTING TRADE.

PRINTERS who have the facilities for folding, sewing and casing up, can be supplied with cases made in Leather, Rexine, Pluviusin, Imitation Leather, Cloth, or any other material, blocked or embossed in Gold, Imitation Gold, White or Coloured Foil Leaf, ink in any colours.

Our staff consists of more than 300 capable workers, provided with the most up-to-date machinery.

We shall be pleased to submit samples for Trade Catalogues, etc.

set your area scale, set your type grade scale, and there you are. I made an experimental one the other day to see if it was possible and what facts would have to be collected. The idea is possible, the theory is sound, but in practical accuracy, well, the answer is in the negative—at present.

But that is not to say this will always be so; personally, I believe the problem of more accurate estimating in the composing room is a problem capable of solution. It would therefore be a thousand pities—it would, indeed, be a disaster to our trade—if the interest which has been aroused all over the country on this subject of Estimate Variation were allowed to wane without anything being done. We must, indeed, not allow the subject to drop until we have found some remedy, and found some practical way of putting the remedy into practice, until the remedy put into practice has become a habit with the estimators of the country.

This is no light task; but, like most other great improvements—either for the welfare of a people or of an industry—hard, steady, persistent work tells its tale, until finally by the faith and endurance of a few, the many are converted to their side, and so what is only the ideal of a few spreads and becomes the settled habit of an industry

News-print, Book & Coating Paper.

Destination of U.S. Exports.

Exports of news-print paper from the United States in the month of September reached a total of 2,388,067 lbs., of the value of $112,953. Book paper (not coated) was sent abroad to the extent of $2,010,098 lbs. ($237,487). Coated paper exports were 153,382 lbs. ($24,608).

With regard to the markets supplied, in the case of news-print, the chief one Cuba, which absorbed 1,366,168 lbs. ($68,461). followed by the Philippine Islands 379,235 lbs. ($15,581), Mexico 161,499 lbs. ($6,810), Canada 99,433 lbs. ($8,618), Japan 98,538 lbs. ($6,214). For the rest the outstanding markets were situated in South America, although a substantial quantity was sent to Jamaica and other British West Indies.

Cuba was also the principal outlet for book paper (not coated) taking 484,245 lbs. ($48,408). Other principal markets were: Philippine Islands 315,264 lbs. ($23,993), Japan 304,967 lbs. ($36,342), Canada 159,652 lbs. ($18,233), China 120,005 lbs. ($11,877), Australia 113,831 lbs. ($21,025).

With regard to surface coated paper, Canada was the largest consumer, taking 99,842 lbs. ($16,500). Australia comes second with 18,236 lbs. ($2,532) and Cuba third, 16,046 lbs. ($2,367).

Paper Boxes.

Export figures for 1922 show that during the year 4,683 tons of manufactured paper boxes and cartons were shipped to foreign ports from the United States. The total production of box-board in 1922 was 1,571,036 tons, and the total production of all boards was 2,153,835 tons. The total exports of manufactured boxes and cartons was 30 per cent. of the box-board production and 22 per cent. of the total production of all boards.

Canada was by far the largest market for United States paper boxes, with Cuba next in importance. England, Trinidad and Tabago, and Mexico were also large consumers.

Gold Inks
(LETTERPRESS)

IF you have never yet tried Gold (Letterpress) Inks or are familiar only with those hitherto obtainable, Lorilleux and Bolton's gold inks will be a revelation to you.

No modern printer keen on cutting costs and speeding up production can possibly afford to ignore the handiness and economy they offer.

The following points show the great superiority of Lorilleux & Bolton's gold inks:—

1. They do not clog or harden on the rollers.
2. Need no specially skilled operator.
3. Are suitable for either platen or cylinder machines.
4. The machines can be run at normal speed.
5. Retain their brilliance for long periods.
6. Print the type thoroughly and heavy solids without difficulty.

Available in light and dark shades of gold as well as silver.

Write for specimen prints and generous sample tin to-day.

The "WINKLER" Automatic Feeder

will increase the productive capacity of your Printing Machine, 25 to 50 per cent. above that of hand feeding, with better register. When feeding large sheets of very thin paper the output percentage is even higher.

SWISS MANUFACTURE

SEPARATION of sheets by suction and blast.

Length of printing machine is not increased and access not impaired.

Feeds to register any stock from tissue to board.

Works in unison with the machine, and at any speed up to the maximum guaranteed by the press makers.

Rapid change of jobs, and therefore suitable for short runs.

No tapes or friction wheels, and therefore no marring of colours or setting-off when working colours or backing up.

The blast of air frees the sheet from dust and fluff before it is fed.

Adaptable to any type and size of sheet fed press; if desired, with a Stacking Arrangement.

Trade Notes.

IT is rumoured that arrangements are being completed for the control of the *Morning Post* to pass from Lady Bathurst to a central Conservative group, of whom Mr. F. S. Jackson, the chairman of the Unionist party, and Mr. Rupert Beckett and Lord Wittenham (Lord Faber) are the chief figures. Mr. Rupert Beckett is the chairman of directors of the *Yorkshire Post*.

AFTER December 31st the contract for printing Great Britain's postage stamps passes to Messrs. Waterlow and Sons.

VERY considerable damage was done last week by a fire at the printing works of Mr. Edward Appleby, Prince Regent-street, Stockton. The centre of the fire was in the upper half of the building, where were stored large quantities of stationery and other material. The ground floor, in which was much valuable printing machinery, was saved.

FIRE almost destroyed the printing and jobbing departments of the *Lincolnshire Chronicle* weekly newspaper, at Lincoln on Thursday night.

FIRE broke out on Thursday afternoon on the ground floor of the premises of Messrs. Grant, Wine Office-court, Fleet-street. Some damage was done to stores of stationery and office equipment, but the outbreak was soon extinguished.

DURING the dinner hour on Saturday £50 was stolen from a private office at the printing works of Messrs. Jennings and Sons, Redhill.

MR. CHARLES SHERIDAN JONES, journalist, was granted, in the King's Bench Division, on Thursday, £200 damages, with costs, against Mr. E. W. Donallon, of Kingsway, W.C., for wrongful dismissal from the editorship of the *National Champion*.

AT Old-street Police Court, on Thursday, John Charles Alexander Barrowman, a printer employed at the works of the Bank of England, was charged with stealing and receiving from the works at Old-street a quantity of numbering machines valued at £30, the property of his employers, the Bank of England. A remand was ordered.

MR. G. V. GILBERT, who has been assistant works manager of the Mayflower printing works, Lambhay-hill, Plymouth, for the past four years, and who is now severing his connection with the firm, was on Wednesday presented by the employees in the office and works and the staff and overseers at West Hoe with a gold watch.

TO THE *Natsopa Journal* Mr. George A. Isaacs contributes an article vigorously protesting against remarks apropos of high wages in the printing trade made by Sir William E. Berry in his speech as president at the Printers' Pension Corporation Festival.

MR. JAMES SMITH MACDONALD, editor of the *Farmer and Stockbreeder*, and until a few months ago agricultural correspondent of the *Morning Post*, died at Wimbledon on Sunday, aged 50.

MISS HELEN MARION BURNSIDE, author of thousands of verses on Christmas cards, as well as of many songs set to music, has died, age 82. She began her career as an artist, and was art editor at Raphael Tuck's for some years.

THE late Dr. Edmund Knowles Muspratt, LL.D., F.C.S., F.I.C., J.P., of Seaforth, Liverpool, lately president of the United Alkali Co., Ltd., and chairman of the *Liverpool Daily Post*, Ltd, who died on September 1st, aged 90; left estate valued for probate at the gross value of £438,466, with net personalty £430,744.

THE late Mr. Charles Henry Seers, of 7, Dunsford-place, Bath, retired printer, left £6,143.

A LARGELY attended service was held at St. Dunstan's on the second anniversary of the death of Sir Arthur Pearson, the founder.

STEREOTYPERS' OVERSEERS' INFORMAL DINNER.—The annual informal dinner of the Stereotypers, Electrotypers' Managers and Overseers' Association will be held at "Ye Olde London Restaurant," Ludgate-hill, on February 4th next. Members present at last year's gathering will have pleasant memories of spending a very enjoyable evening, and to judge from the arrangements being made for the forthcoming event, there appears every prospect of repeating those experiences. Musical members of the association willing to have their names included on the programme are asked to communicate with the secretary, Mr. W. Bullett.

THE various departments of the *Yorkshire Post* and the *Yorkshire Evening Post* have contributed a sum of £66 13s. 6d. to the winter poor children's boot fund of those papers. Included in the subscription are £5 15s. 6d. from the composing room staff of the *Yorkshire Post*, £5 15s. 6d. from the composing room staff of the *Yorkshire Evening Post*, and smaller subscriptions from the machine room and stereotyping staffs of both papers.

THE fourth annual dinner of the *Daily News* and *Star* Overseers' Guild was held at the Holborn Restaurant on Saturday night, Mr. E. Stewart, chairman of the Guild, presiding. Amongst the guests were Mr. B. F. Crosfield and Mr. Wilson Pope, directors; Mr. H. Murch, staff superintendent and Mr. T. G. Curtis, general manager.

MR. F. ST. GEORGE GRATWICKE, of the *Devon and Exeter Gazette*, gave an address to the members of the Exeter Rotary Club last week, on "The Press, Its Progress, Power and Responsibility."

PAPERMAKING LECTURE.—Through the enterprise of the chief of the University Press (Mr. W. Lewis), a series of lectures to printers are being given at the Cambridge and County School of Arts, Crafts and Technology, and by permission of Messrs. John Dickinson and Co. Mr. F. Heckford gave one of his interesting lectures there on November 29th. There was a good attendance, and the audience were very interested in the discourse. Mr. Heckford gave a demonstration of making white and coloured paper by hand, and an instructive discussion took place on leading questions put by Mr. Lewis and others. A hearty vote of thanks was accorded the lecturer.

WITH the *L.S.P. Record*, the London School of Printing carries on the practice, initiated at St. Bride School, of producing a well printed and interesting monthly school magazine.

ONE Frenchman, two Czechs and two Russians have been arrested in an outer suburb of Vienna, where they had established in a villa a complete plant for forging paper money, including British "bank" notes of all values up to £100 each. Of such bogus money the police have seized British notes alone to the face value of £500,000.

ON charges of high treason, arising out of their articles in opposition to Angora's proposals with regard to the Khalifate, the editors of three leading anti-Government newspapers in Constantinople have been arrested and their journals suppressed.

Trade Union Matters.

"NATSOPA" ballot results have now been published, and the list of officers and delegates for 1924 is complete. Mr. G. A. Isaacs as general secretary and Mr. J. Keep as general organiser have both been re elected unopposed, whilst Mr. G. T. Bevan retains the presidency by a very big majority over two other nominees, Messrs. L. Smith and J. Dalziel.

T.A. AND VERTICAL PRESS WORKING.—The Executive Council of the Typographical Association have been informed by Mr A. E. Holmes that the Executive of the Printing and Kindred Trades Federation have considered the question of the manning of a vertical press in London, and have confirmed a previous decision that the present size and type of machine should be controlled by members of the Platen Machine Minders' Society. Mr. Holmes added that as the Platen Machine Minders' and the Machine Managers' Societies have no branches outside of London, the decision will not affect any T.A. arrangements for the working of such presses in the Provinces.

LABOURER AND TYPE PACKING.—The Executive Council of the Typographical Association, in response to an inquiry from the secretary of the Beccles Branch as to whether a labourer in a local printing office could be allowed to drop formes and pack up type, have announced that such work must not be performed by labourers.

IRISH EMPLOYERS AND WAGE REDUCTIONS.—At a recent meeting of the Executive Council of the Typographical Association a request was considered from the Irish Master Printers' Association for an early meeting of the Irish Joint Labour Committee to consider a reduction in wages of members of the T.A. in Ireland, and it was suggested that "the T.A. Labour Panel should be augmented to allow of negotiations with a body able to speak authoritatively on behalf of the men affected." The Council decided to make arrangements for a conference.

THE bookbinding firm of Messrs. Charles Forward and Son, Ltd., of 25-27, Sayer-street, London, S.E.17, are presenting some of their friends with a neat pocket diary and engagement book. Attractively bound in leather, this serves as reminder both of the firm and of its workmanship.

Printers' Managers and Overseers

(PARENT) ASSOCIATION.

Year Reviewed and Officers Elected.

Last week's gathering of the Printers' Managers and Overseers (Parent) Association was the annual meeting, and a good attendance of members assembled for an important evening's business, Mr. S. M. Bateman being in the chair.

The following five gentlemen were elected members of the Association:—Mr. V. L. Earnshaw (Messrs. Page and Thomas, Ltd., Clerkenwell. Overseer Letterpress Dept.); Mr. E. Ottway (Messrs. Wass, Pritchard and Co., Ltd., Fenchurch-street, E.C. Overseer Letterpress Dept.); Mr. A. W. Paul, junr. (Messrs. Bradbury, Agnew and Co., Bouverie-street, E.C. Overseer Letterpress Machine Dept.); Mr. E. F. Smith (Wass, Pritchard and Co., Ltd., Fenchurch-street, E.C. Overseer Lithographic Dept.); Mr. R. J. Thomas (The Colombo Apothecaries Co., Ltd., Colombo, Ceylon. General manager, Printing Dept.). All save the Colombo member were present to receive a personal welcome, and the president also welcomed Mr. G. Newman, a Cambridge member of the Parent Association.

Mr. R. H. Berry,
New P.M. & O.A. President.

A Satisfactory Year's Working.

The report of the council for the year 1922-23 was read from the chair. It put on record that the result of the year's working had been quite satisfactory. A balance was shown on the right side of the accounts of the local fund, and the Parent Association—despite a number of members being transferred from London, as well as resignations and erasures—had maintained its membership. Mention was made of the Association's third pension, named the "Printers' Managers and Overseers Association (Jarvis-Freeman) Pension No. 3," and the activities of the Association in the direction of technical education were chronicled. In this connection the report stated: "Mr. J. C. Pugh's term of office as Examiner for the Machine Section under the City and Guilds of London Institute expired this session. Under the scheme for the reorganisation of the Institute's Technological Examinations in England and Wales as settled with the Board of Education, the Institute has to make every use of the Education Committees of the Joint Industrial Councils. Members are fully aware of the Association's position so far as the Printing Trade Industrial Council is concerned, and this new arrangement by the City and Guilds of London Institute is felt to be an injustice after the Association's serious efforts during the past 25 years. The Council are at present dealing with the matter." After reviewing the year's programme of business and social events, the report concluded on a optimistic note, promising the Association a new lease of vigorous life.

In response to an inquiry, the general secretary and others gave convincing assurance that no member was erased from membership before abundant opportunity had been given him of remaining in the Association.

No further comments on the report being forthcoming, Mr. S. A. Dawson chided members upon their apathy in this respect, and proceeded to discuss the items in the report seriatim, after which the general secretary cleared up one or two questions.

The report was adopted unanimously.

The chairman next read the accounts, and the two auditors (Messrs. J. French and C. H. Blenkins) testified very cordially to the efficient way in which the Association's accounts are kept, these being admirably clear and accurate.

After a short discussion, in which Messrs. Burton, Dawson, Freeman and others joined, the accounts also were unanimously adopted. In the course of this discussion queries were raised as to the wisdom of entertaining non-members of the Association at the Association's social gatherings, and as to the position of the Leicester Centre in regard to the expenses of the annual gathering. Mr. Whittle dealt with both matters to the satisfaction of the meeting.

On the proposition of Mr. L. C. Mennell, who spoke particularly on the provincial centres, seconded by Mr. J. H. Burton, the meeting expressed its appreciation of Mr. Bateman's services as president and expressed its thanks to the council for their services during the year.

Election of Council and Officers.

Elections were then proceeded with, the scrutineers chosen being Messrs. Berryman, Hardie, Forder and Burton.

Mr. R. H. Berry having been nominated without opposition as the new president, the meeting elected him to the office by show of hands, and Mr. Bateman then vacated the chair to Mr. Berry, who was received with applause, Mr. Berry briefly returned thanks for his election and for the many kind things that had been said about him, promising to do his best for the Association during his term of office.

Other officers nominated unopposed were elected by show of hands, these including: Mr. C. Durston, treasurer; Messrs. J. C Pugh and G. Phillips, trustees; Mr. E. W. Whittle, general secretary; Mr. W. H. Gill, financial secretary, and Mr. A. E. Jarvis, hon. technical secretary.

Each of these gentlemen, with the exception of Mr. Durston (absent through illness), returned thanks in appropriate terms. The meeting heartily concurred in a suggestion made by Mr. Dawson that the secretary be asked to write Mr. Durston expressing the Association's condolence in his illness and hopes of his early recovery.

For the vice-presidency, the voting by ballot resulted in the election of Mr. A. H. Wilson, who received 53 votes, Mr. F. W. Hume receiving 15.

The voting for the eight vacancies on the council resulted as follows: Mr. S. M. Bateman, 67; Mr. C. W. French, 55: Mr. C. W. Brown, 53; Mr. W. H. Wicken, 53; Mr. L. C. Mennell, 52; Mr. A. T. Walters, 52; Mr. E. G. Bausor, 51; Mr. T. B. Lapworth, 47, and Mr. T. G. Carne, 41. As Mr. Wilson's election to the vice-presidency created a ninth vacancy, it is probable Mr. Carne will be co-opted.

In respect of prizes for technical students, it was decided to leave to the discretion of the council the allocating of certain amounts to the London School of Printing and the Stationers' Company. As regards the prizes usually given to the City and Guilds of London Institute it was agreed that the matter be left in the hands of the committee, to be dealt with after considering the new arrangements that are being made in regard to the City and Guilds examinations.

Mr. J. French brought to the notice of the meeting the sad case of an old member in necessitous circumstances, and arrangements were made for immediate help to be given.

Mr. Berry at this point made reference to the retiring president, Mr. S. M. Bateman, and recalled the high esteem in which he was held by the membership and his long services to the Association. He then presented Mr. Bateman with the Association's medallion, after which Mr. Bateman thanked the meeting both for the medallion and for the presentations made to himself and to Mrs. Batemen at the recent whist drive.

The New President.

Mr. Berry, the new president, has been a member of the Association for nearly twenty years, and had served twice as member of the council and once as auditor before attaining the vice-presidency a couple of years ago. During the period of his service as vice-president he has proved himself a business-like, as well as a genial chairman, and he has the confidence of the membership with him as he starts upon his term of occupancy of the Association's highest office. Mr. Berry was born in the City of London in 1865, and educated at the School of St. Bartholomew-the-Great. He served apprenticeship with Mr. W. Edglington, of Bartholomew Close, and was afterwards engaged in the composing department of Messrs. Darling and Son, Great St. Thomas Apostle. After a few months with Eden, Fisher and Co., he was engaged by the Colliery Guardian Co. (the Chichester Press) as case-room overseer, and subsequently was appointed works manager, which position he still accupies.

Lloyd Memorial (Caxton) Seaside

HOME.

A Successful Concert.

A very successful matinee concert was held at the Kingsway Hall on Saturday in aid of the above-named Home. In the absence of Major J. J. Astor, the chair was taken by Sir Campbell Stuart, who, in opening the proceedings, conveyed Major Astor's regrets and good wishes, and also handed over from him a cheque for 100 guineas to the funds of the Home.

The programme included no fewer than 40 star artists from the London theatres and music halls. There was a note on the programme stating that no encores would be given, but so excellent and diverting were many of the items that this was ignored.

There was great applause when the chairman announced that the cost of the new wing of the Home had already been met by special subscriptions. Indeed, the whole proceedings made an impressive demonstration of the number and enthusiasm of the friends of the institution.

The "Old Boys' Brigade" Dinner.

(Messrs. John Swain and Son, Ltd.).

Founded in 1911 by Messrs. Wm. Brett Plummer and F. H. Carpenter, the annual dinner of the "Boys of the Old Brigade" was held at the Mitre Tavern, Chancery-lane, E.C., on Friday, November, 1923. Mr. L. E. Smiles occupied the chair (representing the works department), and Mr. A. J. Walters the vice-chair (representing the commercial department).

The gathering together of the older employees of Messrs. John Swain has become a perennial, and is unique in its way.

Mr. L. E. Smiles. Mr. A. J. Walters.

For instance, every one present must have been employed in the firm for a specified number of years. Consequently, all who sit down at this dinner sit among friends of long standing. All know each other well, whether belonging to the counting house or the foundry, whether manager of a department or only a subordinate. On this special night there is no distinction. They are all members of the "Old Boys' Brigade." It is their boast that they have their first Christmas dinner before December comes in.

Mr. Walters, in proposing the toast of "The Firm," said: "Our good fellowship and comradeship is due to the wonderful organisation of Messrs. John Swain and Son, Ltd., through the admirable directorship of Mr. John Swain himself and of Mr. W. Holt and Mr. A. Dargavel." He continued: "Looking back to our old London offices in Farringdon-street 20 years ago, and comparing them to our splendid offices and works to day in Shoe-lane, one can only see with wonder how the business has increased during the past few intervening years. Our good service has been the guiding factor of our success, added to the fact that the quality of our production has always been maintained. The more work we have and the more work we do the greater will be the prosperity of all, and so it is with pleasure I ask you to drink the toast of 'The Firm.'"

Mr. William Brett Plummer next proposed the annual toast of "The Old Brigade." He explained how, since the first dinner in 1911, when it was his pleasure to be the host, his friend Mr. F. H. Carpenter had suggested that it should be held annually, and that had been carried out. He added that, of course, a "carpenter" and a "plumber" were always useful adjuncts in building anything up, and that was, he supposed, why the "Old Brigade" still existed, and was likely to do so. As the veteran outdoor representative of the process trade it gave him great pleasure to drink to its lasting success and solidity.

Mr F. H. Carpenter in reply said that what he had done for the "Old Boys' Brigade" had always been a labour of love for the good of themselves and also that of the firm.

Mr. L. E. Smiles read the illuminated address that is read every year in memory of "Our Absent Comrades," together with the names of those who were killed in the late war or have otherwise passed away. In a few feeling words he recalled those "Boys" to mind, and then everyone stood up in silence for a few seconds and thought of their friends who were no more, the occasion being a very impressive one, as it always is.

The dinner was followed by an excellent musical evening, supported by Miss Annie Douglas and Mr. Percy Albert. The "Old Boys" themselves provided the rest of the entertainment. Mr. Charles Norman presided ably at the piano, as he invariably does. During the evening Mr. Wm. Brett Plummer was presented with a massive single stone ring, for which gift he suitably and feelingly responded.

Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, DECEMBER 13, 1923.

The General Election.

THE political parties of the State are placed in a quandary by the result of the General Election. The country has declared against the specific remedies for unemployment. Fiscal reform and the Capital Levy have alike been turned down. Therefore, for some time, at any rate, we shall have to submit to a marking of time so far as main principles are concerned. Moreover, the general view seems to be that the new Parliament is likely to have but a short lease of life, so that the country may expect that before long we shall find ourselves in the midst of another General Election, with the disturbances of business—and the temporary stimulus of business—which that event necessarily involves. The trades relating to paper and print have perhaps, of all trades, the least occasion to deplore the recurrence of General Elections, though the political unsettlement entailed is not without its bad effects on business and is regrettable from many points of view.

* * *

Printers' Interests in Parliament.

WHEN Parliament meets in January, the House will not only contain an increased proportion of members drawn from the printing and allied trades, but it will also include a great number of other members who have expressed themselves in sympathy with the printers' point of view in respect of many matters that the industry has at heart. In another column we point out some of the successful candidates more particularly associated with printing, and it will be noted that among these the printers have some very able spokesmen. Whilst they will not see eye to eye on all subjects, these members should prove a source of strength to the printing industry. The points which the Federation of Master Printers has urged upon candidates are (1) the need for continuance of the inquiry into State Printing; (2) the need for a reduction in postal rates and the removal of the restrictions on the postage of printed matter, together with legislation to prevent British advertisers posting printed circulars and catalogues on the Continent; (3) amendment of the Merchandise Marks Act to prevent the importing of printed matter into this country without indication of its origin.

* * *

Business on the Move.

IT would appear as though business was at last on the move. Rather late in the day, perhaps, but nevertheless welcome. The movement, however, such as it is, has limitations and it would be unwise to enthuse over it extravagantly. Of course, there ought to have been activity long ago, and the depth of depression is seen in the fact that it required a general election and the Christmas trade combined to make any impression. Accordingly, it is difficult to say whether the improvement is temporary or not. At all events it will shortly be interrupted by the holidays. Let us hope that the upward course will be continued in the New Year.

* * *

Election Business.

THE General Election must have meant a vast consumption of paper and stationery. It is suggested that the amount of literature sent through the post has created something like a record for quantity. At all events there has been a marked advance upon the last election. Apart from the free postal packet which candidates are permitted to send to each elector, a great deal of other literature has been dispatched through the post. It is estimated that from nomination day up to the eve of polling at least 100,000,000 deliveries were made in the interests of candidates.

Wharfedale Silver Wedding.

Workmen's Tribute to Employer.

Mr. and Mrs. Fred Waite, of Otley (Yorks), celebrated their silver wedding last Thursday, they having been married at Merston Parish Church on December 6th, 1898. Mr. Waite is head of the firm of Messrs. Waite and Saville, Ltd., Falcon Works, Otley, and he and Mrs. Waite were accorded a striking and altogether unexpected tribute of the esteem in which they are held by their workpeople.

Although so far as Mr. and Mrs. Waite were aware, their interesting anniversary was not known outside their family circle, early on Thursday morning they received a telegram, handed in at the Post Office when it opened at 8 o'clock, offering "congratulations from your workmen." There was also delivered at the house a solid silver cake dish, bearing a suitable inscription, from the staff, and for Mr. Waite a case of Dunhill pipes.

Later in the day Mr. and Mrs. Waite were invited to attend a gathering of employees at the works, and they were presented with a solid silver rose bowl, also inscribed, from the workpeople. There were about 250 at the gathering, which was presided over by Mr. Frank Swainston. The presentation was made by Mr. George Cummings, who was Mr. Waite's first apprentice. The speakers warmly congratulated Mr. and Mrs. Waite on their wedding anniversary, and also referred to the friendly relations that existed between master and man at the works.

The gift was acknowledged by Mrs. Waite in a neat little speech, and Mr. Waite also spoke, both intimating that whilst they appreciated the intrinsic value of the gifts, they valued still more the splendid feeling behind them, and hoped that that spirit would always prevail.

The happy little ceremony terminated with three hearty cheers for Mr. Waite, and another three, equally warm-hearted, for Mrs. Waite.

The Printing Trade in Parliament.

Many Candidates Successful.

In the new House of Commons the number of members directly connected with the printing and allied trades is greater than in the last Parliament, both the employing side and the trade union side of the industry having provided candidates who have been successful at the polls. A salient feature is the success of the several printing trade union leaders who stood for election.

SIR EDWARD ILIFFE, one of the first candidates to be returned unopposed, represents the Tamworth Division of Warwick as a Unionist. He is connected with the firm of Messrs. Iliffe and Sons, Ltd., of Coventry and London, and also with the Cornwall Press, Ltd.

SIR G. ROWLAND BLADES is again returned for Epsom, having sat as a Unionist in that constituency since 1918. He is an Alderman and an ex Sheriff of the City of London and chairman of the well-known printing firm of Blades, East and Blades. Sir Rowland was president of the Printers' Pension Corporation in 1917.

MAJOR THE HON J. J. ASTOR has been returned unopposed as the Conservative member for Dover. Chairman of *The Times* Publishing Co., Ltd., he has recently devoted considerable time and money to printing and allied trades charities

SIR JOHN LEIGH has succeeded in retaining the seat for the Conservatives in the Wandsworth (Clapham) Division He was the last proprietor of the *Pall Mall Gazette*.

SIR CHARLES STARMER has gained success for the Liberals at Cleveland (Yorkshire). Sir Charles is well known because of his association with about twenty daily and weekly newspapers.

MR. FRANK MURRELL successfully contested Weston-super Mare in the Liberal interest. He is a past president of the Cardiff Master Printers' Association, representing Wales on the Joint Industrial Council of the Printing Industry, and is still a member of the executive of the Federation of Master Printers. He is also a Liveryman of the Worshipful Company of Stationers.

MR. A. J. BONWICK retains his seat as a Liberal for the Chippenham Division of Wiltshire. He is a Liveryman of the Stationers' Company and a director of a number of newspaper and printing businesses.

MR. T. A. ROBERTSON, who has secured election as a Liberal for Finchley, is a director and the London representative of the printing house of Messrs. W. N. Sharpe, Ltd., of Bradford.

MR. RAMSAY MUIR, who has been returned as the Liberal candidate for Rochdale, is the editor of the *Weekly Westminster*.

MR. R. J. LYNN, the unopposed Unionist candidate for Belfast (West), is the managing director and editor of the *Northern Whig*.

MR. J. B. BURMAN, who succeeded in winning the Duddeston (Birmingham) Division for the Unionists, is a printer and principal of the Burman-Cooper Press, Birmingham.

THE HON. E. C. HARMSWORTH, who retains his position as Unionist member for the Isle of Thanet, is the only surviving son of Lord Rothermere.

MAJOR DAVID DAVIES, who is connected with a number of newspaper and printing interests, was returned unopposed for Montgomeryshire.

MR. C. W. BOWERMAN, who captured Deptford for Labour with a majority of nearly 9,000, is an official Parliamentary candidate of the London Society of Compositors. From 1892 to 1906 Mr. Bowerman occupied the post of general secretary to the Society, and is now its well-known Parliamentary secretary. He has sat for his present constituency continuously since 1906. He is a Privy Councillor.

MR. T. E. NAYLOR, who has been successful in winning S.E. Southwark for Labour, is the well-known and popular general secretary of the London Society of Compositors, for which body he stood as an official candidate. Mr. Naylor has held the position of general secretary of the Society for a period of nearly seventeen years, and fought the same division unsuccessfully in 1918, but was returned at a by-election in December, 1921.

MR. W. S. CLUSE, who won Islington (South), in the Labour interest, is a compositor employed on the Twentieth Century Press, Southwark street, S.E. Though a long-standing member of the London Society of Compositors, he has never identified himself very much with that organisation's affairs. Mr. Cluse, who captured the seat from the Conservatives and whose candidature was supported by the Islington Labour Party, was in November, 1919, elected as a Labour representative on the Islington Borough Council, and in 1922 was one of the few Labour men to secure re-election.

MR. G. A. ISAACS, successful at Gravesend in the Labour interest, is the general secretary of the National Society of Operative Printers and Assistants. He contested the same seat in 1922, but was not successful. Mr. Isaacs was Mayor of Southwark some few years ago.

MR. F. O. ROBERTS has represented West Bromwich in the Labour interest since 1918 and has again been returned for that constituency. He is a J.P. for the Borough of Northampton and secretary of the Northern District of the Typographical Association.

MR. T. W. STAMFORD has been returned as the Labour candidate for Leeds (West). Besides being a useful member of the Bradford City Council, he is closely identified with the activities of the National Union of Bookbinders.

AMONG the unsuccessful candidates were the following: Lt.-Col. H. K. Stephenson (Lib.), Sheffield Park; Mr. T. O. Jacobsen (Lib.), Kennington (Lambeth); S A Newbould (Lib.), W. Leyton, Mr. E. E. Alexander (Con.), East Leyton; Rt. Hon G H. Roberts (Con.), Norwich; Mr. W. H. Sessions (Lib.), Thirsk and Malton; Mr. Ben Riley (Lab.), Dewsbury; Mr. H. B. Grotrian (Con.), S W. Hull; Mr. G E. Winterton (Lab.), Loughborough; Mr. Llew. Williams (Lib.), Portsmouth; Mr. W. Ball (Lab.), Luton; Mr. E. Archbold (Lab.), Balham and Tooting; Mr. E. Woodhead (Lib.), Sheffield (Hillsborough).

CONTRADICTING the suggestion of a political heckler that *The Times* was printed on German paper, Mr. John Walter states that the whole of the paper used in the production of *The Times* is made in Great Britain by British labour. None of it comes from Germany. Of the pulp, which is the raw material of the paper, about 75 per cent. comes from Canada and Newfoundland and the remaining 25 per cent. from Scandinavia. No German pulp is used. It is true that offers of German paper at very low prices have been received, but these offers have invariably been declined.

MR. HOWARD SMITH, a prominent Canadian papermaker, addressing the annual meeting of the Ontario members of the Canadian Manufacturers' Association, as president, strongly urged the raising instead of the lowering of the Canadian protective tariff. Mr. Smith mentioned "the tremendous increase of goods imported from Great Britain, against which our manufacturers are unable to compete, owing to the low cost of labour overseas."

THE offices of the *Spalding Free Press*, together with general printing works, have been burned down. Damage to the extent of several thousand pounds was caused.

Personal.

THE King visited Viscount Burnham at Hall Barn, Beaconsfield, on Tuesday and Wednesday for shooting.

SIR JOHN AND LADY BADDELEY sailed on Friday in the Walmer Castle for Cape Town and Durban, and will not return until March.

SIR GEORGE WYATT TRUSCOTT, Sir T. Vansittart Bowater, Sir E. Hodder-Williams, and Mr. W. Lindley Jones attended the luncheon given by the chairman of the County Purposes Committee of the City Corporation on Friday at the Guildhall.

SIR ALFRED ROBBINS, for 36 years London correspondent of the *Birmingham Post*, who is retiring after 50 years' journalistic work, was entertained on Monday at a dinner given by Sir Charles Hyde, the proprietor of the *Birmingham Post*, and the literary staff of that paper.

MR. ROBERT COLSELL has been appointed Master of the Makers of Playing Cards Company. The new Wardens are Commander J. Augustine Edgell, R.N., and Mr. H. L. Wettern.

AT the London Press Club's ladies' dinner on Saturday, the chairman of the club, Mr. Edgar Wallace, presided, and proposed the only toast, "The Ladies," to which Mr. Frank Dilnot responded.

UNDER the auspices of the South-East London Master Printers' Association a very successful whist drive and concert was given on Tuesday night at the Bridge House Hotel, London Bridge. Mr. and Mrs. Poulton received the visitors, Mr. W. Howard Hazell gave a short address, and Mr. Mason (the hon. secretary) made admirable arrangements for the occasion.

MR. T. G. NEWLAND, the general secretary of the National Union of Printing, Bookbinding and Paper Workers, is again in harness, having recovered from his recent illness.

IN connection with Mr. T. E. Naylor's successful Parliamentary candidature, he has been energetically assisted by his 16-year-old daughter, Marion, who, besides doing much canvassing, has also addressed meetings on her father's behalf.

THE head of the publishing house of Putnam, Mr. George Haven Putnam, now in his 80th year, has written a book of "Memories of the Civil War," to be published early in 1924.

A PERSONAL sketch and portrait of Mr Granville Marshall, representing Charles Morgan and Co. in South Africa, appears in the November issue of the *South African Printer and Stationer*.

The Bookbinder

Loose-Leaf Binding.

The loose-leaf system has come to stay. At the time of its introduction, much diversity of opinion existed as to whether or not the system would be generally adopted, but there is now no question that it has been accepted, loose-leaf systems being installed by all the large offices in this country. Year by year it is getting more popular, and we now find the loose-leaf system being used even in the smallest of offices. One wonders whether printers and stationers are getting their full share of orders for this work, or whether on account of their not thoroughly aquainting themselves with the uses and advantages of this system, they have allowed orders to slip by because, firstly, they have not felt sufficiently competent to advise the customer as to what he really requires, and secondly, because they would not know how or where to place their orders.

To-day we find not only loose-leaf ledgers, transfer binders, and all sorts of devices being used for holding account forms, but many manufacturers are having their catalogues and price lists made up in loose-leaf form, and unless the printer or stationer can show his customers exactly what they require, the order will assuredly pass to a firm who specialises in this class of work, and he loses the order, not only for the covers, but for the printing as well.

Every loose-leaf binder ordered takes the place of not one account book, but many, since the idea of the loose-leaf binder is to economise by using one cover for a never-ending supply of sheets. In the olden days, these orders for account books went in their natural course to the printer and stationer, but now the orders for loose-leaf binders, etc., go only to those who specialise in loose leaf work. It is time, therefore, that every printer and stationer should feel sufficiently confident to take on this class of work, and to do so he must know where to look for advice and assistance in executing his orders.

As a result of the popularity of the loose-leaf system, we find firms laying themselves out in this line of work to supply the trade only. One such firm we have in mind is Messrs. G. Wells and Co., Ltd., loose-leaf binders to the trade, of 11, Bread-street-hill, E.C.4. This company realised from the first that every loose-leaf ledger used meant one less account book to bind, and so they laid themselves out for loose-leaf binding at the very introduction of the system. Working for the trade only, they are always ready to help and advise printers and stationers as to what they require, the best fittings to use, and, if necessary, where the fittings can be obtained.

Messrs. Wells and Co. have a most up-to-date loose-leaf factory, with all the latest machinery for turning out loose-leaf work. One visiting this department would not realise that he was in a trade binders' shop. The first impression is that of a box or cabinet maker's works, what with the power rotary saws, bevelling machines, sand drums, and saw dust, which one sees on going through the department, where the five-ply boards are cut to size, bevelled and finished off preparatory to their being covered in a variety of leather, canvas, etc. The covering department presents rather a more picturesque appearance, and here, firstly, we see the metals being covered. This operation, we understand, is one of the secrets of the trade, and it was only after years of experimenting that a way was found by which the leather was made to stick permanantly to the aluminium, or to whatever metal with which the fitting was made. Stacks of loose-leaf ledgers with metal backs, thong binders, light metal binders, prong binders, etc., covered in all sorts of colours, in leather, corduroy, and canvas, make a very pleasing sight.

The ruling, creasing and slotting departments are fitted with all the very latest power machinery. The slotting machines deserve special notice, for here we see sheets being slotted with six slots at one operation, through a good thickness of paper. Another special department of Messrs. Wells and Co. is devoted to loose-leaf catalogue covers, and they have all sorts of devices for price lists to take from a few sheets up to any thickness. We understand there is a growing demand for this form of price list on account of its economy, because whereas the prices on one leaf may remain as before, the price on another leaf may have to be altered, alterations thus necessitating only the replacement of a few leaves in the whole catalogue.

Notes and News.

More Hopeful Trade Outlook.

The bookbinding industry is only moderately placed as regards employment. Elections may have their welcome orders for the printer, but they bring no grist to the mill of the bookbinder. Even the Christmas season trade is over so far as annuals and gift books are concerned, and as a consequence there have been more members' names on the trade union books than anyone cares to see. During the stress of the campaign preceding the Election, ordinary business fell rather flat, but such orders as were held up pending events will no doubt flow forward, now that the tension has been relaxed. It is reported on good authority that there is a visible improvement in the paper and printing trades quite apart from the increased business created by the Election. Granted that this is so, and our own experience supports the statement, it should not be long before the bookbinding industry begins to claim an increased portion of prosperity.

General Revival Needed.

Lest too sanguine an interpretation be placed upon these notes, it is necessary to add that above all other trades, bookbinding depends upon the general prosperity of the country. Until manufacture, trade, commerce and shipping all show returns in conformity with pre-war practice, it is hopeless for us to expect maximum output. We cannot even look out for new export markets in the same way that the manufacturing stationers can with their stock books.

Paucity of Export Data.

Apropos of manufactured stationery, it is a difficult, if not altogether impossible, matter to secure classified data relative to exports. From the monthly Board of Trade returns we are presented with an opportunity to derive what satisfaction we can from such generalised items as envelopes, other stationery and playing cards. The trade journals of the stationery trade do not devote any special attention to imports and exports. To trace statistics of, say, stationery books would involve a long and careful collation of separate reports from foreign and Colonial sources. Presumably tariffs help statistics inasmuch as there is of necessity a closely detailed and clearly defined scheme of classification for the assessment of duties. Flection experience has at least taught us one thing, and that is the paucity of trade data available for purposes of comparison. It is strange to reflect what importance the average business man piaces upon the facts and figures relating to his business and what little regard is paid to the same matters by organised industry and by the Government Departments concerned.

Cost-Finding Propaganda.

Touching local matters, the new costs and charges expert of the Lancashire and Cheshire Alliance gets down to business among the printers and binders in the area at the commencement of the New Year. He will find plenty of work waiting for him, especially if the bookbinding houses in the area make full use of his service. There are not a great many of them using the cost-finding system as it should be used, and among those who apply the docket to their orders there is a lack of conformity in practice. It is desirable and essential that certain set principles should be adhered to in every house in order to preserve a common standard of costs and charges. Part of the work undertaken by the new official will doubtless be of an educative nature, and he will be presented with ample opportunity to prove his value to the Federation as well as to the industry at large.

The Past Year's Trade.

At this time of the year it is customary to take a survey of the year's trend. Looking back over the general condition of trade, we are bound to admit that the year is closing slightly worse than it began, and certainly with less optimism. At the end of 1922 there were prospects of stability and better trade to follow what was generally recognised as a downright bad year. Very few firms made a real profit in 1922. The stabilisation of wages and lowered prices of material has at least rendered it possible for many firms to pay a dividend on 1923 working despite the disappointment in trade generally. After the first few months of 1923 there were definite signs of increased business, and at the close of the first half prospects appeared to be fairly good. The second half of the year has not justified the promise, and in particular October and November, which should have been the best months of the year, have proved to be among the worst. The current month has brought no material improvement in trade as yet, but there are good signs of increasing activity. Whether these will blossom to fruit will depend very much upon the political situation, which at the moment of writing is enveloped in a dense fog.

Trend of Materials Market.

Surveying the market prices of the year, one observes in general that the present level is well below that at which we commenced the year, although there are some materials that have shown no reduction. Leathers in particular have kept a steady level with just a shade of advantage to the large or keen buyer. Strawboards commenced the year on a £10 5s. basis and finish at £8 5s. per ton. Bookcloths have given the buyer about a penny per yard. Gold leaf has fluctuated, and finishes up just slightly easier than it began. Buckram has fallen about a penny per yard; calicoes have remained firm, as also has glue. The principal decline in price apart from strawboards has taken place

Digitized by Google

in the tape and thread section. Forils have shown a downward tendency, and the user of British substitutes for marbled and lining papers has benefited by a substantial reduction in price during the year. Sundries such as locks, straps and buckles, loose leaf fittings and the various tools and utensils employed in the bindery have also undergone a considerable reduction. Taken all round it is probable that the costs of bookbinding materials to-day as compared against those ruling in January last will show a drop of at least 10 per cent.

Expenses Slightly Down.

It must also be remembered that wages have undergone a reduction and that overhead charges are just slightly easier. The keenness of competition has not permitted the bookbinder to pocket the marginal difference in prices, and the customer has mainly derived the advantage. On the other hand, poor though 1923 may have been, there has certainly accrued a larger volume of business than in 1922 and thus the majority of firms may have escaped without actual loss. The great wish and hope now is that industrial disputes will be avoided and that 1924 will show a substantial improvement over 1923.

Printing, Bookbinding & Kindred

TRADES OVERSEERS' ASSOCIATION.

Lecture by Mr. Jos. Goodman on the Romance of Offset Lithography.

The December meeting of the Association took place on Tuesday of last week at the usual headquarters, St. Bride Institute, Bride-lane, E.C.4. Mr. H. Milton (president) occupied the chair, and there was a large gathering of the members. At the conclusion of some important Association business Mr. Joseph Goodman, F.R.P.S., gave an interesting lecture entitled the 'Romance of Offset Lithography."

The minutes of the previous meeting having been read and confirmed, several items of correspondence were submitted for the consideration of the members.

The following letters (among others) were read by the secretary: From Messrs. Rodney Gibbs, W. H. Christopher, R. Gardner, E. W. Whittle, E. F. Chibnell and Miss Burroughs. (who wrote on behalf of her father, Mr. T. Burroughs, who is in hospital).

Before giving attention to the more important event of the evening considerable time was occupied in discussing several questions concerning the future policy of the Association.

The Romance of Offset Lithography.

Mr Goodman on being called upon for his lecture, said the subject of lithography was a most fascinating one, and in order to get a thorough grasp of its marvellous rise and the importance it has assumed at the present time it was necessary to go back to its inception.

He likened it to a tiny snowball at the top of the mountain, which once set rolling gathered more snow and, by the time it had reached the bottom, produced an avalanche. Mr. Goodman did not suggest that lithography was going to destroy all the other branches of printing processes, although it was making many inroads into certain phases of them. Lithography derived its name from two Greek words, *lithos* (a stone) and *grapho* (delineate or write) It was, proceeded Mr. Goodman, in its broad sense, a planographic process, because the printing image was neither raised above the surface nor carried below it but was on a common plane.

The Work of Senefelder.

Senefelder himself, when he first commenced his work, wrote upon a piece of oölithic stone in Bavaria. Though this strata of stone was found all over the world, it did not possess the same physical qualities for lithographic purposes as the Bavarian oölithic variety. As a matter of fact stone found in other parts of the world was more like chalk compared to that which came from Bavaria. This latter stone was capable of polishing well, and possessed all the properties for imbibing moisture and grease. After telling of the earlier experiments of Senefelder and his experiences of writing music on stone, Mr. Goodman explained that it was from these early beginnings that there came lithography as they understood it to-day. Senefelder found it required 300 lbs. pressure to the square inch to print properly, and tried to get this by employing a lever and stone of 300 lbs. weight, but—alas for the uncertainty of human expectations!—after the second or third impression the stone broke, or the press snapped. Senefelder next tried rubbing the impression and engaged six printers, but not one of them could make himself master of the process; out of 10 impressions, scarcely one was perfect. Out of three reams of the best paper only 33 perfect sheets were produced; this was verily the stone and wood age of lithography.

Rubel's Invention.

In 1876 they got the first start that led to offset lithography in connection with printing upon tin by the use of the rubber blanket. It was a strange thing that lithographers all over the world did not think until about a quarter of a century after this of doing the same thing on paper as they had been doing on tin. It was left to Ira D. Rubel in America in the year 1906 to discover by accident the possibilities of printing on paper from the rubber blanket. Rubel came to England and was joined by a Mr. Sears, of high-light photo-litho fame. They got a machine built at Messrs. Bentley and Jackson's, of Bury. Applications for patents were not granted as the principles of this offset process were essentially the same as those of tin printing. The result of this refusal to grant patents speedily enabled six other makers to come into the field and therefrom was given an enormous fillip to lithographic offset methods.

The Position To-Day.

Coming to lithographic offset work to-day, Mr. Goodman mentioned that not only were posters and newspapers printed by it, but that magazines from cover to cover were being similarly produced. In his opinion there was something unique about the appearance of work done by offset, which was not observable on the intaglio, typographic or any other method. Mr. Goodman then dealt with the combination processes and among these mentioned photogravure and offset, collotype and offset, relief and offset.

After dealing further with the wonderful possibilities of the various offset processes Mr. Goodman concluded by describing some of the limitations of offset. He explained that it was not suitable for decalcomia transfer work, bronze, metal and ceramic pottery work. In spite of the fact that the offset process was not master of all phases of printing it was capable of doing some wonderful things.

A large number of specimens of offset printing executed by such well-known firms as Messrs. David Allen and Sons, Messrs. Blades, East and Blades and other well-known firms in different parts of the world were hung upon the walls of the room for inspection, and Mr. Goodman then explained the interesting points connected with their production.

At the conclusion of the lecture Mr. H. Milton proposed a vote of thanks to the lecturer.

Mr. J. Fleming, in seconding, welcomed offset printing into the trade, especially from the binders' point of view.

The motion was very heartily accorded and the meeting was then brought to a close.

MESSRS. BRADBURY AND SMITH, LTD., who opened up a branch at 146, Great Charles-street, Birmingham, a short time ago, have found it necessary to remove to larger and more convenient premises at Lancaster Works, 25, Legge-lane, Birmingham, where they will carry more comprehensive stocks for the convenience of their customers.

A REPORT on the Norwegian paper market states that there have been some enquiries for kraft, with prices tending to stabilise at the present rather low level. As regards most of the finer qualities, a weaker tendency is prevailing, with values giving way.

DIVIDENDS AND REPORTS.

AMALGAMATED PRESS (1922) announces dividend at 10 per cent. per annum, less tax, on ordinary shares for half-year, payable 1st January.

KELLY'S DIRECTORIES announce an interim dividend on the ordinary shares for the half-year ended September 30th of 1s. per share, being at the rate of 10 per cent. per annum, less tax, payable December 31st.

ARGUS PRINTING.—A net profit of £19,779 is reported by the Argus Printing Co. for the year ended October 31st, following £22,291 for the preceding year. The directors propose to make a final distribution of 12 per cent., giving a total for the year of 15 per cent (the same), and they again propose to add £5,000 to reserve. The amount to be carried is a slight increase on the sum brought in at £12,334. The total of the machinery and plant depreciation fund has been increased from £69,425 to £75,493, which represents the sum written off since 1901.

WATERLOW AND SONS, LTD., report a net profit for the year ended September 30th of £114,910 (against £112,294 for the preceding year), while £65,720 was brought forward. It is proposed to pay a final dividend on the deferred ordinary shares of 10 per cent., making 12½ per cent. for the year (the same). The balance to be carried forward is £37,680. The balance sheet shows that debts owed by the company have been reduced from £415,553 at September 30th, 1922, to £359,253, while debtors to the company are shown to have increased from £336,154 to £383,645. Cash has dropped from £520,807 to £365,273, but investments at £53,950, and stock-in-trade at £1,833,286, are practically unchanged.

MERGENTHALER LINOTYPE.—Net profit for year ended September 30th, 1923, was $2,669,276. Dividend of 10 per cent. was paid, leaving a surplus of $1,389,276.

THOMAS DE LA RUE AND CO.—Report covering 15 months to end of March last shows a loss for the period of £192,571 after crediting revenue with £118,337 receivable from Waterlow and Sons, Ltd. After transferring the general reserve of £5,570 to profit and loss account there remains a debit balance of £187,000 to be carried forward, but the assets include an item of £397,940, representing the purchase price paid for the company's interest in J. A. Weir, Ltd., which the directors state in their opinion is without substantiality. As regards the present state of the business, the board say that a thorough reorganisation has been undertaken; output in all departments has been greatly increased, and expenses cut down drastically. Output has now reached a point at which it is possible to give customers prompt deliveries.

NEW COMPANIES.

ELSWORTH BROS., LTD.—Capital £17,000 in £1 shares; to take over the business of printers and stationers, carried on by A. T. Elsworth, Henry Elsworth and Herbert Elsworth at 38, Bowman-lane, Leeds, as "Elsworth Bros." Private company. First directors: Henry Elsworth, Herbert Elsworth and D. Elsworth. Registered office: 38, Bowman-lane, Leeds.

COMBINED PHOTO PROCESS USERS, LTD.—Capital £10,500 in 10,000 12½ per cent. non-cumulative (free of income-tax) preferred ordinary shares of £1 each and 10,000 deferred shares of 1s.; producers and reproducers of pictures, drawings, designs, portraits, sketches, views, engravings, maps, plans, trade marks, pictorial and other advertisements, etc. First directors: W. H. Burchell, C. C. Barton, W. H. Miller, F. E. Coe and G. I. Spalding.

HUGHES AND KIMBER, LTD.—Capital £250 in £1 shares; to acquire the business of a manufacturer and importer of, agent for and dealer in machinery and materials for the printing and allied trades, now carried on by W. E. Kimber at Dobbs Weir, Hoddesdon, Herts, and at 3, West Harding-street, Fetter-lane, E.C., as "Walter E. Kimber." Private company. Subscribers: H. E. Hughes and W. E. Kimber. Registered office: "Rosemary," Dobbs Weir, Hoddesdon, Herts.

J. M. HUBER, LTD.—Capital £2,000 in £1 shares; to adopt an agreement with J. M. Huber, and to carry on the business of dealers in printing and other inks as formerly carried on by the vendor at 69, Southwark-street, S.E., and that of manufacturers, importers and exporters of and dealers in all kinds of colours, paints, varnishes, stains, dyes, dyestuffs, chemicals, oils, garnishes, gums and materials used in the manufacture thereof, etc. Private company. Subscribers: H. W. Huber and G. L. Muir. Directors: W. G. Huber, H. W. Huber and G. L. Muir. Registered office: 69, Southwark-street, S.E.

ASSOCIATED SCOTTISH NEWSPAPERS, LTD.—Capital £900,000 in £1 shares (500,000 7 per cent. cumulative preference and 400,000 ordinary); to enter into an agreement for the purchase (with certain exceptions) of the undertaking and assets of the *Daily Record*, Glasgow, Ltd., to acquire, print, and publish any newspapers or other publications, etc. First directors: D. R. Anderson, W. Lima, A. S. Fuller, J. F. C. Kruse, W. A. McWhirter, D. W. Barr and F. Spedding. Registered office: Record Buildings, Hope-street, Glasgow.

SAXTON, CHATTERTON AND CO., LTD.—Capital £25,000 in £1 shares (6,500 5 per cent. cumulative preference and 18,500 ordinary); to adopt an agreement with M. S. Chatterton, and to carry on the business of designers, lithographers, printers, manufacturers of crimped cases for cakes and confectionery and pleated paper capsules for bottles, as formerly carried on by the said vendor at Hogarth Works, Whites Grounds, Bermondsey, as Saxton, Chatterton and Co., and that of manufacturers of paper and card, material used therein, and articles made therefrom, etc. Private company. First directors: M. Saxton Chatterton, F. J. Saxton Chatterton, W. B. Russell, A. V. A. Christ, G. Honeyball, T. Bishop and W. A. R. Mayell. Registered office: Hogarth Works, 4 and 6, Whites Grounds, Bermondsey, S.E.1.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

VICKERY PRESS, LTD. (London).—Particulars filed of £1,500 debentures (including £1,000 already registered) authorised November 7th, 1923, charged on the company's property, present and future, including uncalled capital, the amount of the present issue being £500.

NORTHERN SPORTING PRINTING AND PUBLISHING CO., LTD. (York).—Particulars filed of £400 debentures authorised November 1st, 1923, charged on the company's property, present and future, including uncalled capital, the whole amount being now issued.

J. CURWEN AND SONS, LTD. (music publishers, etc., London).—Particulars filed of £2,000 debentures authorised November 19th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

Printers' Managers and Overseers ASSOCIATION.

MANCHESTER AND DISTRICT CENTRE.

The 19th annual general meeting was held in the Mitre Hotel, Manchester, on Saturday last, Mr. F. E. Robinson, president, being in the chair.

The annual report put on record an improvement in the printing and allied trades which had been reflected in the calls for unemployment, the sum expended this year being small compared with the previous 12 months. A good year's work was next reviewed, and incidental reference was made to the fact that during the year the Manchester Centre had the pleasure of handing over £66 to Ancoats Hospital, and desired to thank all those who had contributed to that worthy institution. The balance-sheet showed income £259 5s., expenditure £247 12s. 6d., and balance in hand £11 12s. 6d. The total membership now stands at 89, which represents an increase of two on the year. The report proceeded to express the thanks of the members to the following for their assistance during the year: The Lanston Monotype Corporation Limited, Mr. Travis Burton, Mr. A. J. Gyngell, the American Meihle Co, Messrs. F. Scouler, A Hellewell, J. H. Nuttall, E. Garrett and W. E. Dalby; Fred E. Robinson, president; F. J. Hughes, secretary.

The report and balance-sheet were passed, after which two scrutineers were appointed—Messrs. E. Garrett and W. Smith.

Officers for 1923-1924 are: President, F. E. Robinson; vice-president, F. Scouler; trustees, Edward McVay and J. H Nuttall; treasurer, Jas. E. Mayo; secretary, F. J. Hughes, 424, Moston-lane, Manchester; executive council, F. Burnett, A. Gavin, W. Smith, J. Winstanley, A. Hellewell, E. C. Balls, Geo. H. Rider, A. J. Gyngell; tylers, J. Philbin and A. Piggott.

Votes of thanks to retiring officers concluded the business.

A smoking concert under the direction of Messrs. A. Hellewell and J. H. Nuttall was thoroughly enjoyed by the large gathering of the members and their lady friends, the artistes being Miss Dorothy Roche (soprano), Mr. Tom Green (tenor), Messrs. Geo. Handby and F. T. Ward (entertainers), Mr. J. A. Bennett (violinist), and Mr. Frank Tighe (accompanist); "Auld Lang Syne" concluding an evening well spent.

WEE MAC.

JOHN ALLEN AND SONS (IVYBRIDGE), LTD.—The winding-up petition presented against this company by Samuel Jones and Co., papermakers, Bridewell-place, E.C., is set down for hearing in the High Court on the 18th inst.

New Inventions

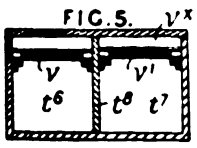
Bookbinders' Inks.

The Alchemic Gold Co., Inc., of New York, has patented metallic-pigment inks for use with heated dies, etc., for stamping book covers, labels, etc., and applicable for ordinary printing. They are made with a vehicle, consisting of a synthetic resin binder, such as coumarone resin, dissolved in a neutral solvent, such as terpineol, or a mixture of terpineol and a small proportion of rosin oil.

Bronzing Machines.

Mr. G. Newson has patented a device for recovering the surplus bronze from bronzing machines and for separating it from fluffy material, and for other purposes. There are two inclined sieves v, v^1 which are contained

FIG. 5.



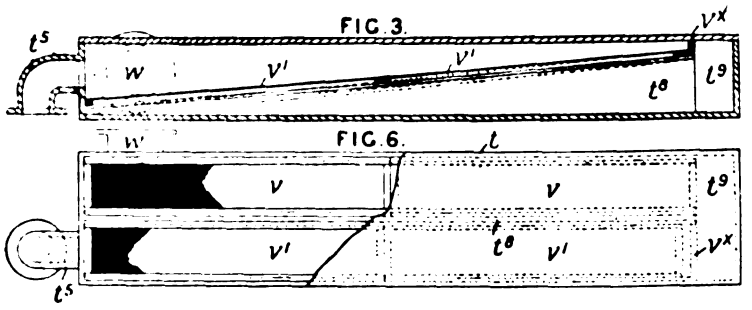


FIG. 3.

in a rectangular box t and over and under which in succsssion air carrying the bronze and admitted impurities is passed by a fan. The box is divided by a longitudinal partition t^4 into two compartments t^6, t^7, which communicate by a transverse passage t^9 at the end of the box remote from the pipe w by which the air from the fan enters the compartment t^6, in which the greater part of the bronze powder is deposited. The air carrying the lighter material passes through the transverse passage t^9, and is forced by a block v^x to pass through the screen v^1 which is of fine mesh. The filtered air passes out through the pipe t^8. The device is described as applied to bronzing machines of the cylinder and roller type as described in Specification 152,053 and 200,558, the bottom of the casing being connected to the fan by a pipe, but is also stated to be applicable to machines of other types, and for purposes other than in connection with bronzing machines.

Glazing and Finishing Printed Matter.

Mr. F. V. Harte has patented an invention by which in glossing, glazing, or finishing coloured or other prints, post cards, playing cards, show cards, and coated or other paper or other boards, leather, wood, or the like, an exceedingly thin sheet or mask of copper or the like is momentarily laid or interposed on the face to be finished while the article is subjected to heat and pressure. The thin sheet instantly passes or conducts the heat, and may be stripped or removed and used again immediately. In rotary machines, an endless sheet may be used, with or without a cooling liquid.

Matrix Material.

Matrix material for the production of stereotype and electrotype printing surfaces consists of an ordinary stereotype flong or other plane and preferable flexible foundation coated with an aqueous mixture of gypsum and glue with whiting or zinc white, or both, to which mixture is added a quantity of mineral oil, preferably a lubricating oil, to render the coating flexible. The matrix is formed by cutting away the coating in the desired places down to the foundation. Additional coating material may be applied to certain of the remaining parts to increase the depth of the hollows of the printing plate produced from the matrix. A screen like design may be produced on any desired part of the printing plate by passing a roller consisting of closely disposed circular knives, twice, crosswise over the corresponding part of the coating on the matrix. In making an electrotype from the matrix, the latter is provided, by immersion or otherwise, with a coating of wax, which is afterwards dusted with graphite. The patentees are Messrs. P. J. A. Scholz and C. W. Woehler.

Paper and Box Board Trade.

Conditions in the paper and box board trade have not improved very much, although the demand for printing and envelope paper has certainly increased owing to the general election, says the *Anglo Norwegian Trade Journal*.

Business should, however, now improve, as nearly all the stock that was available in London, as well as other principal big towns, has been consumed, particularly as regards London, Manchester and Glasgow, and Norway should be able to look forward to some very good contracts for M.G. and unglazed pure kraft paper, as well as ochre glazed and M.G. unglazed striped and nature brown papers.

Friction glazed leatherboards have been sold at £15 per 1,000 kilos, and ordinary white wood pulp boards at prices varying from £15 to £15 10s.

13 IS THIRTEEN AN UNLUCKY NUMBER ? WE SAY **NO** 13

? CURIOSITY ?

is a human failing. It is also a commercial asset. Curiosity is, in fact, one of the secrets of modern commercial success. It keeps you in touch with every modern development of the trade in which you are engaged.

It is a commonplace to say that the printing trade covers a range of activities greater than most.

Obviously, therefore, you haven't the time personally to gather the information to keep thoroughly in touch. This is done for you by the *British and Colonial Printer and Stationer.*

You probably have many friends in the trade, however, who are not keeping in touch.

CO-OPERATION

You can help your friends and us by introducing to them the *British and Colonial Printer and Stationer.*

Let us have their names and addresses : we will do the rest.

THE

British & Colonial Printer & Stationer

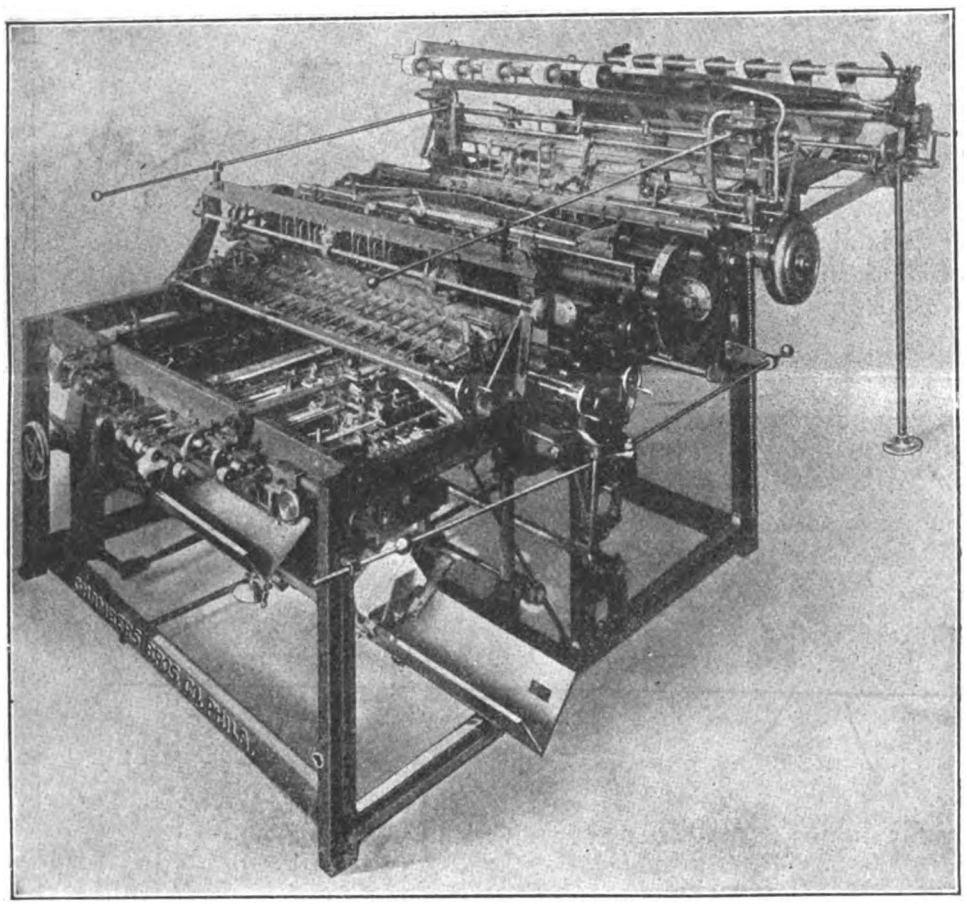
has been established for nearly 50 years. The more important features are :

Reports of Trade Associations, Societies, etc.,
Latest Commercial Intelligence
Technical Articles
Trade Notes
etc., etc.

A monthly issue contains a section devoted to the **Bookbinder** with notes and news and market prices.

The monthly **Lithographic** issue contains special litho matter including litho notes and news.

The **Quarterly Export** issue deals with colonial and foreign markets and provides a general review of the home trade.



COST

The yearly subscription to the *British and Colonial Printer and Stationer* is **Thirteen Shillings** including postage. Is it not worth it?

Send us your friends' names and addresses **To-Day**.

Keeping Presses Active in Dull Months.

By B. A. BOLT,

Sales Manager R. R. Donnelley & Sons Co., Chicago.

Whether a printer is justified in conducting cut price sales during slack seasons in the same way that a retail merchant does and whether he will benefit or suffer in the long run by doing so are questions which arise first in the mind of the printer who tries to meet this problem. However, merchandise already manufactured and on the shelf and presses "on the shelf" are two different things and a printer is not selling those presses but their operation.

A lot of mighty good energy could be dissipated in a futile discussion of the price-cutting phase of this problem. Instead, I will dispose of it by a quotation from Dante's "Hell":

All hope abandon, ye who enter here.

I might also add another selection from the same "Hell," to the effect that there is

No greater grief than to remember days
Of joy when misery is at hand.

The two most important factors in keeping presses busy—factors that produce the greatest permanent benefits—are initiative in selling and diversity of accounts. Foremost is initiative—personal initiative on the part of the salesman, backed by initiative on the part of the management or the sales department.

No hard and fast rule applies, because every printer's situation is different, the difference depending upon the nature and extent of his equipment and the number and character of his clients.

In solving this problem systematically the preliminary step is naturally to make an inventory of your presses as to kind and capacity, and then check against that inventory such work as you have on hand for the dull months or can definitely depend upon from known sources during that period. Face the facts as a public accountant would audit your books. Base your conclusions on experience and not optimism.

By simple subtraction will be left the prospective idle time of your presses. Now you can proceed either to plan your vacations accordingly or to devise ways and means to fill the gap—a gap with predetermined, definite dimensions. You at least have a clear idea of what must be accomplished.

If you really intend to do something about solving your problem, it is important that you indulge in the formality of analysing your situation far enough in advance of the dull period to give yourself at least a fighting chance for success. If you wait until the drought has actually arrived, your efforts are apt to result in the usual scramble for business at any cost.

Guess work produces idle time—probably more idle time than any other cause. Plan your work systematically according to your equipment and then check the progress of your work systematically. Every printer who does this will know at all times where he stands and what to expect.

Many printers have to shut down certain large equipment for thirty or even sixty days and then within a week or ten days start up, full speed ahead, at maximum capacity. This is like waiting all day for a train and then running to catch it. It cannot be avoided in all cases, of course, but a lot of sharp turns can be rounded into easier curves.

In our press and bindery departments we have mammoth master charts, each occupying an entire wall of the superintendent's office. They are divided vertically into two six-month periods and sub-divided into monthly, weekly and daily columns; then cross-divided horizontally into spaces for jobs, and the jobs, represented by coloured cardboard strips, are inserted in these spaces.

The slips are cut to fit the length of time the job in question will use the equipment assigned to handle it. In other words, a slip shows for just how long the time of a particular press has been sold. If more than one press is "sold" additional slips are used.

An unbroken line of strips across the chart means that the press in question has been "sold solid" for the entire year. Gaps indicate idle time—time which the sales department must sell. Schedules are furnished daily and summarised weekly for all departments. Daily records and hourly reports keep the master charts up-to-the-minute.

Our efficiency department also has in effective operation a "load chart" which shows how much floor and platform space is required by a job. It reveals when the peak loads come and whether we have the available space to handle a large job in prospect.

These and other records guide us in estimating future work, and give the sales department an accurate basis on which to estimate available capacity.

To some degree you can protect yourself against the inroads which idleness makes on your income by anticipating your customers' requirements throughout the year and selling them as far in advance as possible.

Many of your larger accounts undoubtedly have a definite appropriation for advertising, made at the beginning of the year, which contemplates certain, specific direct-mailing pieces. If your personal contact with such accounts is as close as it should be, your salesmen will know what those pieces are and when they are scheduled, and will also know—what is more important in this connection—whether any of those pieces can be advanced or deferred.

Of course, the seasonal requirements of the business in question governs whether any such changes can be made, but very often there are large press runs which can come along at almost any time if the printer properly paves the way.

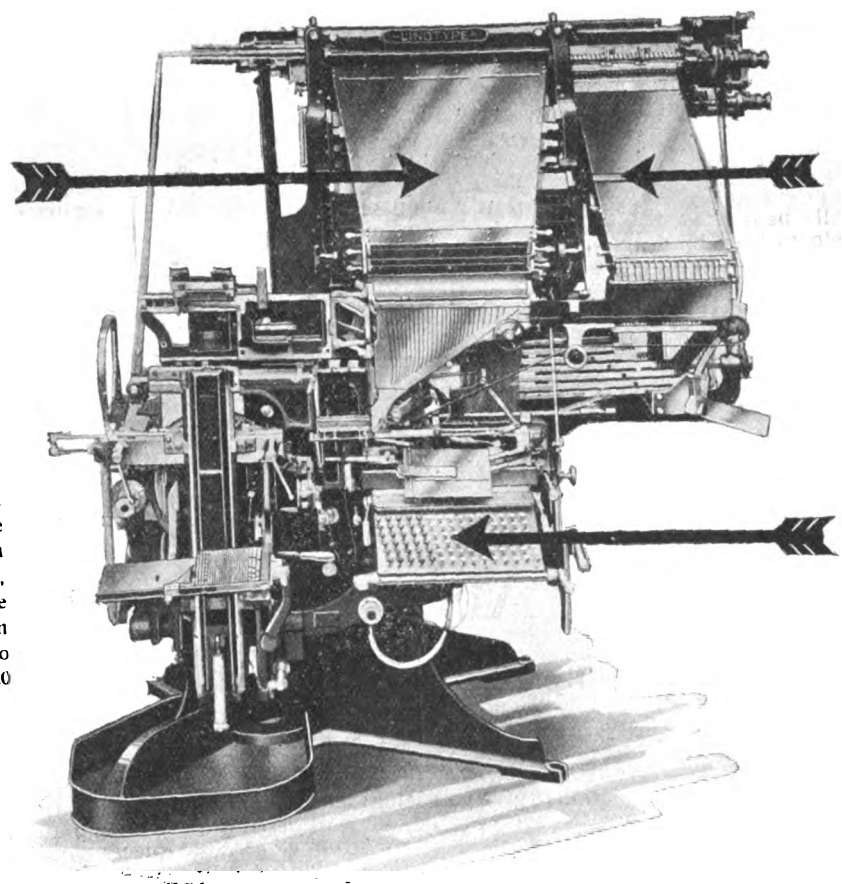
Persuasion is necessary in the case of the advertising man who works on a schedule which he is loath to disarrange for no reason, except that he has formed the habit of following the old order. But a well-directed boost in the way of actual co-operation on the part of the printer will help to get him out of that rut.

The printing salesman should know enough about the business of his customers to render intelligent service, not only to those customers, but also to his firm—and himself—by reason of that knowledge.

Catalogues covering staple lines which do not quote prices, but are accompanied by separate price lists, can frequently be printed far enough in advance of the date of issue to prevent congestion at the usual catalogue printing periods. Special inserts, if necessary, and the price lists can follow. To bring about this advance requires rearrangement of your customer's working schedule, but it is usually just as easy for his advertising department to work on the new schedule after it is once establised, as it was to work on the old one.

Naturally, the customer will require some inducement to make the change and to suffer the temporary inconvenience caused thereby. But this inducement need not be a price concession. The superior service which you can render when he is not working in a last-minute frenzy and your plant is not jammed with rush jobs forms an effective argument in itself.

Often it might be well worth your while to defer billing dates on work which you seek for the dull periods. Just how far to go in this direction depends upon circumstances, of course.



Of all times when it would seem least likely to interest the public in the purchase of stoves, the torrid dog days of mid-summer were selected by the Kalamazoo Stove Co. to put over one of their most successful selling campaigns. They did it by a credit conces-

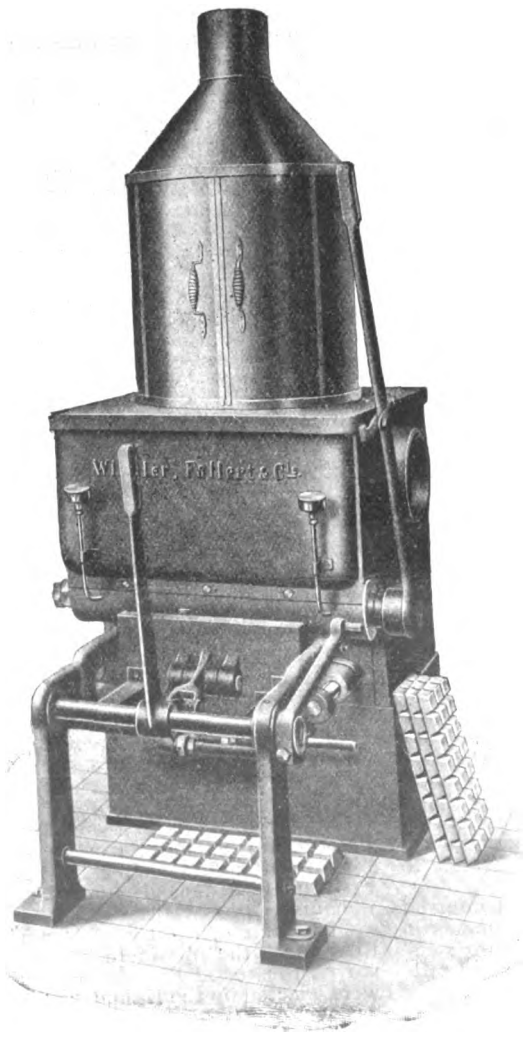
LINOTYPE MODEL 4 with SIDE MAGAZINES

Sets all type faces and bodies from 36 point to 5 point from a SINGLE STANDARD KEYBOARD



This section represents the popular Model 4 with which the majority of printers are already familiar. Its magazine equipment consists of three full size magazines arranged one over another. Each magazine is supplied ready to set two different type faces of upper and lower case. All three magazines are available for immediate use at the will of the operator. Control levers conveniently positioned enable him to bring into use any of the five magazines with which the machine is equipped, so that if the copy needs it he can proceed immediately from the composition of 36 point to 6 point, or from 8 point to 20 point, and so on.

These two magazines have 68 channels arranged to carry founts of large display characters (upper and lower case, figures, and punctuation marks) up to and including 36 point. The display faces are set direct from the same power-actuated keyboard which controls the main magazines.

Every Linotype Operator throughout the world knows this keyboard. From it can be set all the type matter you require up to 36 point.

Write for full particulars: **LINOTYPE & MACHINERY LIMITED** **9 Kingsway, London, W.C.2**

The "Winkler" Automatic Ingot Caster

will substantially cut down your loss in dross and your bill for renovating metal.

The Metal is Drawn from Bottom of Pot, which is directly connected with the ingot moulds. Consequently only the clean metal is cast under the weight of the metal in the pot.

The Surface of the Metal is Kept in a Non-Oxidizing Atmosphere, which prevents the formation of dross.

No Unhealthy Fumes from the Metal, these being carried off through the flue.

Automatic Metal Mixing. When the metal flows into the moulds the air escapes through the metal in the pot, thereby acting as a natural stirrer.

"Surface Combustion" Gas Burners, giving uniform furnace temperature and minimum gas consumption. Radiant heating from refractory bed on which correct mixture of air and gas burns completely.

Write To-day for Prospectus.

sion, allowing the purchaser to defer payment until October first.

A campaign of propaganda may have to be conducted among your customers and their advertising men to put over your idea but the possible benefits to be derived certainly make the effort worth while.

Another suggestion! There is an almost chronic condition among advertisers that affords profit possibilities in dull periods. Many so-called national advertisers, or the advertisers who depend mainly upon publication advertising or other indirect media for results, fail properly to back up such advertising with adequate direct advertising material. The link between their publication advertising and their sales is weak, and the printer who analyses this problem can usually find the weak link and propose a way to strengthen it that will really benefit his customer, and, incidentally, help to keep his own machinery moving.

To propose the right idea at the right time will build business for you. It is a logical service for a printer to render, because a printer prospers to the degree that his customers prosper. Analyse your customer's business. Ascertain his dull periods and then actually initiate sales efforts for him during these periods.

This leads to the important thought I want to put across—which is that the usual "summer slump" is a state of mind. It is a problem and not a condition. It is not inevitable unless accepted as such.

Defined, the causes of "summer slump" have been diagnosed as: (1) vacations; (2) the seasonal nature of a business; (3) "watchful waiting" on crops or other conditions. But, get this, they are only causes in so far as they reduce the sales of *all* commodities in general. This is not an original idea of my own. Others who have faced and solved this problem will vouch for its soundness.

Many manufacturers have adapted their lines to include "summer selling" goods or goods that sell out of the manufacturers regular selling season.

For instance, the manufacturer of hot water bottles now makes bathing caps; the manufacturer of rubber boots, tenis and sports shoes; the manufacturer of corsets, light-weight brassieres. A certain furniture manufacturer a few years ago added porch furniture to his line and increased the volume of his business the first year by $500,000.

The case of S. L. Allen and Co. is notable. For years they made farm and garden implements exclusively and then they added sleds. To-day the "Dixie Flyer" is their largest single item.

As one manufacturer puts it, "To build up July sales, add a July product to your list."

True, the printer can only use his press equipment to produce printing—but fundamentally his manufacturing and selling problems are identical with those of the other manufacturers. With his equipment he must merely produce a new printed product for a new market.

This does not necessarily mean that he must conceive some new printed speciality for which he must then create a market. He need not become a manufacturer "on his own," although one or two large commercial printers have successfully done so and are calendar makers *pro tem* during the dull periods.

The example of the manufacturers mentioned teaches diversity—primarily diversity of accounts for the printer. If the work of your customers bunches at certain seasons, then deliberately go out and seek other customers whose work comes at other seasons. Balance your rations.

I know of a manufacturer of fancy hat bands for straw hats who finally solved his seasonal problem by exporting to countries below the equator where the seasons are reversed. But a printer is not put to such extremities. His problem is comparatively easy.

Special inducements to salesmen to produce new business may—and should—prove a stimulant to both initiative and activity on their part, counteracting the tendency to slow up at such times.

Prize contests among salesmen is the most common method employed. There is no doubt that setting quotas and building to them helps to keep the morale of a selling organisation from drooping during the dry spells, but I doubt if any of the high-powered, big-calibred sales men with whom I have come in contact in the printing business would fall for some of the gold watch and fountain pen affairs that are cast upon the waters to stem the ebbing tides of sales.

Let the benefit to the salesman be commensurate to the benefit to you, and you will get commensurate results.

However, it is highly desirable to change the usual mental attitude of salesmen during dull periods. They can sell if they think they can sell.

One of our own salesmen, who ranks in sales consistently close to the top, makes even more sales during dog days than at any other time. His explanation is that he has less competition. The other salesman have "quit," and the prospect has more time to listen to him, especially if his own business is quiet also. Sometimes, however, he is more willing to listen than to exert himself unnecessarily.

If you really believe in advertising and know how to advertise, then is the time for you to practice what you preach with profit to yourself. Then is the time for a well-aimed campaign of your own. But plan it far enough ahead so that you can take deliberate aim.

Increase your efforts by using lists of specially selected prospects. Go after and keep after the particular kind of prospects whose business will most benefit you.

The successful plans of all other manufacturers in meeting this problem of keeping busy during the dull periods have been based on one fundamental principle, that of changing the mental attitude—their own and their customers — towards such periods. What others have done, you certainly can do. In fact, a printer ought to do even more. Everyone expects it of him.

UNDERSTUDY the man ahead of you, but don't undermine him.

THE FUTURE OF SOUTH AFRICA

THE strong development and progress shown by South Africa, even during the depression of 1922, indicates in no uncertain fashion the measure of prosperity that country will enjoy in more normal times.

The trade outlook for the Union of South Africa in 1923 is extremely encouraging at the present moment, and the attitude of all in that wonderful country—from the Premier (The Hon. Gen. Smuts) down to the smallest Printer—is one of well-founded optimism.

Supply houses catering to the Allied Trades anxious to develop the South African market will be sent a post-free copy of

THIRD YEAR OF PUBLICATION

Digitized by Google

Trade Notes.

PARTNERSHIP has been dissolved between P. P. Hubner and H. M. Wilson, artists, lithographers and designers, 244, Brecknock-road, Tufnell-park, N.19, under the style of Hubner and Wilson.

THE Newspaper Proprietors' Association announce that by agreement no morning or evening papers will be published in London on Christmas Day or Boxing Day.

MR. JOHN H. CREBER, trading as Theophilus Creber, letterpress and lithographic printer, 60 61, Union street, Plymouth, was summoned at Plymouth Police Court on Wednesday of last week for not having limewashed the walls and ceilings of his factory, as required by the Factory and Work Shop Act, 1901. The Magistrates imposed a fine of £1, a charge of having failed to keep a register of limewashings being withdrawn, defendant agreeing to pay costs.

INFRINGEMENT OF COPYRIGHT.—In the Chancery Division on Friday, before Mr. Justice Tomlin, a motion was heard by Thomas Skinner and Co., of 330, Gresham House, Old Broad street, E.C., proprietors of Skinner's Cotton Trade Directory, against the London Directory Company, of 25, Abchurch-lane, E.C., for an injunction against infringing the copyright of the plaintiffs in their publication. The defendants gave an undertaking, to be perpetual, not to use any copyright matter extracted from the plaintiffs' book for circularising purposes, and not to infringe the copyright of the plaintiffs' book, and also not to make use of the information the defendants have already obtained from it.

WHEN John Charles Alexander Borrowman, printer, of Tottenham, was charged on remand at Old street Police Court on Saturday, with stealing and receiving a quantity of numbering machines from the Bank of England Printing Works, Old street, he was bound over for 12 months.

IT has been stated officially at the Conservative headquarters that there was no truth whatever in the suggestion that the Conservative Party had acquired, or proposed to acquire, any London or other newspaper.

"DAILY HERALD'S" FUTURE.—At last Thursday's Joint Meeting of the General Council of the Trades Union Congress and the National Executive of the Labour Party, a resolution was adopted stating:—"This joint meeting congratulates the *Daily Herald* on the magnificent services rendered to the cause of Labour during the recent general election. It thanks the editor, the general manager, and the entire staff connected with the *Daily Herald* and Victoria House for their devoted and efficient work, which contributed so largely to the splendid electoral triumph. The joint meeting learns with the greatest satisfaction that the present position of the paper is such as to inspire confidence in its future and permanent continuance." The resolution went on to urge continued support of the paper with a view to enabling it to compete on equal terms with its competitors.

ON Saturday last the Rochdale and District Printing Crafts Guild held a whist drive and dance which proved a big success. The large hall in the Provident Building was gaily decorated with streamers and lanterns for the occasion. Numerous prizes were given for whist and dancing.

A FINE collection of examples of modern printing together with specimens of fine work of old presses was exhibited last week in the Municipal Central School of Arts and Crafts, Margaret street, Birmingham. It deservedly attracted much attention from the printing and kindred trades. The printing classes are well attended.

THE death occurred on Thursday after a long illness, of Mr. Charles Duguid, the well-known financial writer. Mr. Duguid had been City editor of several important daily newspapers, and had been associate financial editor of the *Times*.

THE late Mr. Sydney H. Caslon, of Rustington, Sussex, managing director, H. W. Caslon and Co., of Chiswell-street, Finsbury, E.C., typefounders, who died November 1st, aged 56, left £28,265.

UNDER an Anglo-Polish Commercial treaty the import duty on type and printers' materials of the United Kingdom origin will be reduced by 30 per cent.

MR. W. R. SMITHSON, stationer and printer, Northallerton, died suddenly outside his shop. He was 90 years of age.

A RETIRED paper mill labourer of Bury, Mr. Samuel Hilton, aged 68, died suddenly while playing dominoes with his daughters.

A PAPER DEBT.—Sidney Shepiro, 20, alias G. A. Clayton, dental mechanic, was charged on remand at Old-street Police-court with unlawfully obtaining credit by fraud, by incurring a debt of £66 to the Great Eastern Paper Co., Middlesex-street. Mr. Knight, prosecuting, said that defendant, who was a minor, started business in September as a merchant, and rented furnished offices at £90 a year. He ordered goods from various firms, and there would be a number of charges upon which the solicitor should ask for defendant's committal. Accused was again remanded on bail.

Trade Union Matters.

WOMEN IN THE PRINTING TRADE.—A meeting of women employed in the Irish printing trade was held at the Dublin Mansion House for the purpose of protesting principally against the system of daily time dockets. Miss Bennett explained that in recent conferences between the printing unions and the master printers various rules had been agreed to, but the masters now, she said, refused to accept them unless the daily time dockets were made compulsory. Views were also expressed in favour of the limitation of apprentices, and a resolution was passed condemning the action of the Master Printers' Association, and resolving to abide by the rules as agreed to at the conferences.

T.A. STRIKE PAY CLAIM.—At a recent meeting of the Administrative Council of the Printing and Kindred Trades Federation consideration was given to the report of the sub-committee dealing with the claims arising out of the printing trade dispute of last year. The Typographical Association claim was for £23,886. The sub-committee reported that the London Society of Compositors, the Amalgamated Society of Lithographic Artists, and the National Society of Electrotypers and Stereotypers were willing to forgo their claims, providing that other unions would take similar action; and the Association of Correctors of the Press had decided to withdraw their small claim. The other societies felt that their claims ought to be paid, and the sub committee recommended that payment should be made. With regard to the claim by the Typographical Association, however, it was maintained that the rules of the Federation had not been complied with, and that at no point of the negotiations had the advice and assistance of the Federation been asked for. The sub committee were therefore unable to recommend acceptance of the claim. Mr. G. A. Isaacs, secretary of the National Operative and Printers' Society, was chairman of the sub-committee dealing with the claims.

Printers at Football.

Under the auspices of the Printing and Allied Trades Charity Sports Association (Football Section) the following League matches will take place on Saturday, December 22nd:—

Division I.

Cassell's *v.* Cornwall Press, at Preston road, Wembley.

Division II.

Baynard Press *v* Harrisons, at "Endcliffe," Old Church-road, Chingford.

On Boxing Day, December 26th, a match will be played on the ground of Messrs. Waterlow's football team at Chingford-road, opposite the Crooked Billet, Walthamstow, between the Berry United league team and an eleven selected from the P. & A.T.C.S. Association league team.

Further information can be obtained from Mr. Geo. H. Marks (Fry's Metal Foundry).

The *Star* machine room football club on Sunday played a first match with the Duke of York's Theatre Football Club, at Mitcham, and won by two goals to nil after a spirited contest.

East & North-East Master Printers.

Mr. Howard Hazell's Address at Aldgate.

The December meeting was held on the 11th inst. at the "Three Nuns" Hotel, Aldgate, to hear Mr. W. Howard Hazell, president of the L.M.P.A. Mr. G. F. Tomkin presided, in the absence of the district president.

Light refreshments were served, before the chairman—after a graceful tribute to Mr. Hazell's activities in connection with the various movements of the Federation—called upon the L.M.P.A. president to speak.

Mr. Hazell said he preferred to call what he had to say a chat more than an address. He said that printers were faced with many difficulties; some of these were the result of the European situation and could not be met inside the industry, but there were difficulties inside the industry which they should strive to overcome. In the forefront of these was price-cutting; he realised they were up against a stiff proposition in fighting the "bedroom" printer as he had heard this class of printer called. He urged the folly of lowering prices to compete with their ridiculous quotations, and emphasised that it is better for an office to be 75 per cent. full of work at fair prices than 100 per cent. full at low prices. He advocated the use of the Federation Costing System and the Hourly Rates as a guide to finding the correct cost of production. He mentioned that the Costing System was being studied by other industries, and said that the assistance of the Federation had been asked for. Mr. Hazell then referred to the work of the Joint Industrial Council, and said he had great hopes of its future; he also spoke of the many directions in which the London Association helped its members. In concluding, he urged members to continue their connection with the Association and strive to overcome their difficulties by meeting together as often as possible in a spirit of co-operation.

Discussion then ensued, many members giving instances of ridiculous undercutting. A member reported that during the Election he had been approached for machining prices for a variety of Labour Party Election literature which had been taken for entire production at absurdly low prices. It was pointed out that this case might have been reported to the L.S.C. local Vigilance Committee who are supposed to deal with such cases.

The chairman said that a committee of keen costing men was now engaged in the endeavour to find a workable proposition to combat undercutting, and he asked members to report to the secretary of the L.M.P.A. concrete cases so that action could be taken.

The chairman thanked Mr. Hazell very cordially for coming to speak to them and giving them such an interesting evening. He assured the president that those present would do their best to benefit by the advice he had given them.

Mr. Hawkins seconded the vote of thanks which was heartily endorsed by the meeting.

The chairman reported on the proceedings of the last Council meeting. A discussion followed, and the meeting concluded with a vote of thanks to Mr. Tomkin for his services in the chair.

THE 40th general annual report of the Board of Trade, which includes the report of the Inspector General in Bankruptcy for the year ended December 31st, 1922, gives a list of trades in which failures have shown the largest increases compared with the preceding year. Among these is mentioned paper manufacturers and merchants, the total of £145,592 comparing with £31,235 in 1921. Decreases are also shown, and here are found printers, booksellers and publishers, the figure of £38,248 comparing with £144,812 in 1921.

ONE of the interesting features in the new issue of the *Monotype Recorder* (printed at the Curwen Press) in an article "On Decoration in Printing," giving examples of fine effects produced by Monotype ornaments used with discretion.

THE Christmas number of *Pearson's Magazine* is packed from cover to cover with good things. The Rt. Hon. Winston Churchill and Miss Marie Corelli are among the literary contributors, whilst there are thirty two pages in colour, with many humorous pictures in colour by Alfred Leete, Laurie Tayler, Heath Robinson, and other famous black and white artists.

Printers and their Metals.

Mr. A. H. Mundey at the Stationers' Hall.

Under the auspices of the Stationers Company and Printing Industry Technical Board another successful craft lecture was given on Friday evening at the historic Stationers' Hall. The lecturer for the evening was Mr. A. H. Mundey (London Manager, Fry's Metal Foundry), who took as his subject "Printers and their Metals," which, by the aid of lantern slides, proved to be very interesting. In the absence of Mr. J. Gomer Berry, the chair was occupied by Mr. George Eaton Hart, who took occasion to explain that the cause of Mr. J. Gomer Berry's absence was the illness of a member of his family. Mr. J. R. Riddell was also unable to be present on account of illness, and during the course of the evening a vote of sympathy was passed voicing the meeting's feelings towards him.

Mr. Eaton Hart's Opening Remarks.

Mr. Geo. Eaton Hart, in introducing Mr. Mundey, said it was extremely gratifying to know that the lecture that night emphasised the rapid strides which technical education was making, and particularly that it now included in its curriculum such subjects as typecasting and stereotyping, also applied science and chemistry. Whilst not entirely discarding rule-of-thumb methods, science now harnessed and proved them before they were incorporated into the more modern and advanced methods. As an instance of this, proceeded Mr. Hart, there was a time, not so long ago when the foreman had his own formula, which comprised the constituent parts of the metal, and a mysterious method of mixing, together with a terribly secret manner of making the flong. As a matter of fact, newspaper proprietors were led to believe that without this mysticism, the issue of their papers might be jeopardised. These men and their methods have disappeared, but happily nothing serious had happened. On the contrary, marvellous results were to-day obtained in illustrated papers like the *Daily Graphic* and the *Daily Mirror*, productions quite impossible a few years ago, and the quality of which was not excelled by any other country in the world.

Continuing, Mr. Hart thought that the possibility of defects in regard to metal was largely increased by the use of typecasting machines, where speed of production must necessarily militate against that high standard of printing, which, nevertheless, the printer was ambitious to produce. One was surprised at the results obtained when some of the problems which faced the printer were considered, such as the composition of the metal, the mixing, the importance of heat, the expansion and contraction of not only the metal itself, but also of the metal of which the casting machinery is made.

Metallurgy at the London School.

It was only of recent years that attention had been given to the important matter of metallurgy in connection with printing at technical schools, and Mr. Hart thought it was encouraging to notice from the syllabus of the London School of Printing that the subject is being dealt with in a most practical manner, not only from the scientific and chemical side, but also from the actual everyday work of the foundry. It was also pleasing to note that the School was the first to introduce the teaching of practical stereotyping,

Concluding, Mr. Hart said one had only to consider the task of the printer as he was daily called upon to reproduce all the fine and delicate lines of a matrix or mould taken from type, or fine half tone blocks, to realise the importance of the question of metal, both in regard to its durability and homogeneity, subjected as it was to the enormous pressure of wear and tear of the modern printing press.

Lecture and Discussion.

Mr. Mundey then delivered his lecture, which we propose to report in next week's issue. He dealt interestingly with the character and properties of the chief metals employed by the printer and briefly sketched the mechanical processes in printing, with relation to the metals used. He also referred to the demands which modern craftsmanship made for the highest grade materials, and the care and treatment of metal in the printing office. During the course of the address some excellent slides were thrown on to the screen, and amongst others, there were depicted, the Autoplate, the Junior Autoplate and the Winkler Casting Machine, as well as several types of melting furnaces used by Messrs. John Fry.

At the conclusion of the address, the chairman, in inviting questions, said the lecture would at any rate cause many printers present to reflect seriously on how much they knew of their business. With regard to stereotyping practice, he believed there was not a country in the world that could beat them. When in America he had opportunities of conferring with stereotypers in various offices, and in many cases he was asked regarding methods adopted in this country.

Mr. J. S. Sunderland spoke of the superior quality of the ordinary typefounder's metal compared with that used for stereotyping and other purposes, and thought there was something which the metal maker had yet to find out.

Mr. Mundey explained that typefounders' metal, containing as it did a higher percentage of tin and antimony than that used in metal for mechanical composing machines, was much harder. There was also the peculiar construction of the mechanism of type-composing machines which had to be taken into consideration, for they must remember that the metal had to be made quite suitable for the purpose to which it was to be put. Good quality printers' metal was to be obtained, however, but they had got to pay for it; and that was the final solution to the whole problem.

In reply to questions by Mr. Hart, who asked what would be the safe temperature at which to submit type-formes without causing any injury to the type, and also what amount of pressure should be used in the hot press, Mr. Mundey replied that no type should be subjected to a temperature of more than 250 degs. F., and no type should receive a greater pressure than three-quarters of a ton per sq. in.

A number of other questions were put by the chairman and several members of the audience, and ably replied to by Mr. Mundey.

Mr. John Fry, in proposing a vote of thanks to the lecturer, referred appreciatively to the life-long study Mr. Mundey had made of the subject of printers' metals. Whereas their fathers and grandfathers, he said, knew little of the underlying features of printers' metals, they to day—thanks to the metallurgist—were not only scientifically informed on the subject, but were able to apply the results of their investigations in obtaining the best possible results.

The Rev. T. Walton, in seconding the vote of thanks, which was very heartily accorded, gave some of his own amusing experiences as an amateur manufacturer of printers' metals, and as an inventor of a type-setting machine.

Mr. Mundey, after returning thanks, proposed a similar resolution to the chairman. Their chairman, he said, was a great printer and a leading one, and his name was one to conjure with in the printing industry. He (Mr. Mundey) felt it a great honour that the meeting should have been presided over by such a well-known authority.

The resolution met with a very warm reception and Mr. Hart briefly replied.

At the conclusion of the meeting Mr. J. W. Davidson gave a practical demonstration of type analysis with the aid of laboratory equipment.

Mr. R. E. Paine.

Complimentary Luncheon and Presentation.

On Wednesday, at Anderton's Hotel, a complimentary luncheon was given to Mr. R. E. Paine, who has been associated for over 50 years with London and provincial newspapers, and a gathering of some 25 old friends in the paper and printing trades assembled to show their appreciation of his services on the mechanical side of newspapers. Mr. Ernest Parke, J.P., of the *Star* and *Daily News*, presided, and was supported by Lieut.-Colonel James Yates Foster, V.D., J.P., Mr. E. H. Raynham, etc., etc.

A presentation of a gold cigarette case, containing the following inscription, was made to Mr. Paine: "Presented to Mr. R. E. Paine by a few old friends on his retirement after over 50 years work on London and provincial newspapers, and in appreciation of his sterling worth and ability. December, 1923."

Printers' Social Evening.

A Pleasant Innovation by the South-East London Master Printers' Association.

In place of their usual monthly meeting, the South-East London Master Printers' Association adopted the agreeable experiment of holding a social evening, on Tuesday, December 11th, at the Bridge House Hotel, London Bridge. The programme consisted of a whist-drive during the first half of the evening, followed by a concert. Invitations had been extended to the members of the three associations south of the Thames, and, as a result, there was a large gathering of ladies and gentlemen, who thoroughly appreciated the change of "fare." As Mr. G. Poulton (President) observed in a few words of welcome, which he offered at the commencement of the proceedings, members of the London Master Printers' Association attended from places as distant as Kingston in the West, Dartford in the East, and Croydon in the South.

At the outset the President, who was accompanied by Mrs. Poulton, held a reception, after which, the members, visitors and their ladies settled down to the rigours of a progressive whist-drive. The game was thoroughly enjoyed, and, during an interval, the President handed out the prizes to the following winners: Ladies—1st (Umbrella), Mrs. E. F. Northam; 2nd (Manicure Set), Mr. J. Barnett (playing as a lady). Gentlemen—1st (Case of Pipes), Mr. B. A. Widger; 2nd (Umbrella), Mr. W. C. Roberts. The hidden number prizes were taken by Mrs. Williams (Hand-bag) and Mr. Abbott (Box of Cigarettes).

At the termination of the whist-drive there was an agreeable interval for refreshments, after which Miss Gwen. Mason, the daughter of the Secretary, handed round cigarettes very gracefully. In appreciation of the great help which she had given during the evening, Mr. Poulton presented this young lady with a box of chocolates.

The second part of the programme was equally enjoyable. The artistes were of an exceptionally good order right through, and included Miss Annie Rees (Welsh soprano), Miss Nora Drake, Miss Mona Grey, Master Reginald Kilbey, and Mr. Charles Hayes. Mr. Wilson Martell acted as musical director. Encores were an indication of the popularity of the performers.

Mr. W. Howard Hazell, President of the London Master Printers' Association, who had previously attended a meeting of the East and North-East London Master Printers' Association, looked in during the evening, and was cordially welcomed.

Asked to say a few words, Mr. Hazell observed that there was a good deal of sound common sense in English proverbs, and it was obvious from the attendance that evening that they approved of the saying, "All work and no play makes Jack a dull boy." The master printers of London, he added, could do a good work among themselves by meeting in such a pleasant and social way. By such intercourse they would find that the master printer was a really good fellow. Talking over their difficulties in such surroundings they would, he thought, find a solution for many of them. Paraphrasing the poet Longfellow he would say, "The mills of trade grind slowly, yet they grind exceeding small." In the first place, they had the grindstone represented by the demands of the trade unions; then by the customers with their imperious demands and requests; and, again, there was the foolish price-cutting competition amongst master printers themselves. It seemed to him that the best method of overcoming these problems was to belong to the Master Printers' Association and try to find a solution of their difficulties by co-operation. In that way they would be able to leave the trade better than it had been, and, at the same time, improve their profits and uplift the whole industry. The suggestion he would make to them that night was that anything they could do individually or collectively to strengthen the Association and to improve its work, so that it might do more in the future than it had done in the past, would bring benefit to each one of them personally and to the whole industry. They were passing through a very difficult time, added Mr. Hazell, but he believed that by co-operation they could

Digitized by Google

look forward hopefully to the time when they would be able to make better and more reasonable profits. Christmas being close at hand, he concluded by wishing them all a Happy Christmas and a New Year of happiness and prosperity.

Mr. A. Langley, Vice-President of the London Master Printers' Association, also spoke, and congratulated the South-East Association on a wonderful gathering.

The evening concluded at 10.30, everyone having spent a most agreeable time, which had passed almost too quickly, so well were they entertained. Mr. Poulton, Mr. Mason (Hon. Secretary), and the Executive are to be congratulated on the complete success of the innovation.

"Gift Saturday" at the Printers' ALMSHOUSES.

The 15th inst. was "Gift Saturday" at the Printers' Almshouses, the inmates of which gathered in full force in the Board Room to partake of tea provided through the kindness of Mr. George Rooke Collingridge, who annually collects the wherewithal from his friends in the City.

Mr. Collingridge presided, and was supported by, among others: Mrs. Collingridge, Dr. and Mrs. W. E. Porter, Dr. and Mrs. James, Mr. W. Vandy (chairman of the Almshouse Committee of the Printers' Pension Corporation), Messrs. F. P. Lewingdon and W. A. Perkins (members of the Council of the Corporation), Mrs. Perkins, the Misses Myers, Mr. Crowther, and Mr. G. F. Higham.

After tea, there was an excellent vocal and instrumental concert, provided by Mr. Jackson West's "Les Harmonies," whose various contributions were greatly appreciated. As each artist left the stage at the end of his or her item, he or she was presented by the chairman with a small present as a recognition of "services rendered."

Mr. G. F. Higham (representing contributors at the King's House of Messrs. Eyre and Spottiswoode) presented each inmate with a packet of cash, and Mr. Collingridge announced that parcels of goods, purchased with funds supplied by his friends, would be delivered at the various residences.

Mr. Vandy, in a characteristically eloquent speech, referred to the great interest taken in the work of the Corporation, and especially that portion carried on at the almshouses, by the Collingridge family—a work which was being so admirably carried on by their chairman of that evening. He proposed a hearty vote of thanks to him for his great kindness to them all.

The motion was enthusiastically adopted, with musical honours and cheers for both Mr. and Mrs. Collingridge.

The Chairman, in reply, expressed the pleasure it gave him to do anything in his power for their wonderful institution.

A very happy evening terminated all too quickly with the National Anthem.

Mr. T. McCallum.

Mr. Thomas McCallum, who for many years has been closely associated with the firm of Messrs. W. and G. Baird, Ltd., Belfast, and the *Belfast Telegraph*, has died at his residence at Belfast, after an illness of several weeks' duration. He received his early training in the publishing business in Glasgow and Edinburgh, later taking up work in that line at Dublin and Londonderry. Proceeding to Belfast, he had charge of the local depôt of the Religious Tract Society. For the past 25 years he had held a responsible position with Messrs. Baird, and for some time had had charge of the compilation of "Baird's Guide."

MR. THOMAS E. CLARKSON has been appointed manager of the Turner Paper Mill Co., Ltd., Rawcliffe Bridge, Rawcliffe, Yorks, in succession to the late Mr. Joseph Turner. Mr. Clarkson, a brother-in-law of Mr. Turner, went with him from the Star Paper Mill Co., Ltd., Feniscowles, between 25 and 26 years ago to Rawcliffe, when the company bearing Mr. Turner's name was formed.

A. M. PEEBLES AND SON'S latest sample book is an excellent example of its kind. In stout boards, it is built up on the loose-leaf principle, the screw fasteners giving ready access to the contents. The productions of Rishton, Whiteash and auxiliary mills cover a very wide range, as indicated by the fact that the sample numbers run up to 79. The thumb index gives ready direction to the particular papers which it is desired to examine, these papers including cream laids and woves, banks and bonds, azure laids, blottings, offset litho, arts, tinted writings and printings, boards, etc. It is obvious that Messrs. Peebles have set themselves out to meet the most exact and modern requirements, and their reputation is enhanced by the quality and variety of the papers in this album.

By being finicky about saving his "pride" many a man losses everything else.

France & Belgium—Mr. FELIX VANBUGGENHOUDT, 196, rue Gerard, Brussels.
United States—LOCKWOOD TRADE JOURNAL CO., 10, East 39th-street, New York.
Representatives also in Australia, India, South Africa, Canada, etc.

THURSDAY, DECEMBER 20, 1923.

Christmas Greetings.

CHRISTMAS comes again to herald the close of another year and the opening of a new one. It is a fitting opportunity to pause and weigh up the results of the past and to contemplate prospects for the future. The great feature of Christmas, of course, is its religious aspect and the flow of charitable feeling which springs from it. There is much that is good in human nature, and it is allowed to show itself when the stress of every-day work is absent. And yet business is the serious fact of life, for through it we earn our daily bread. Contemplating the facts of the passing year, however, there is not much that comes to the mind of a wholly satisfactory character. International affairs have become even more chaotic, whilst many domestic problems are no nearer solution. Influenced by this state of things, the trade and commerce of this country, if not of the whole world, have suffered. At the same time matters might well be much worse. Relations between employers and employed have been much better this year, and as Christmas approaches business happily shows an upward tendency. So the spirit of hope is in the ascendency, as it should be at the festive season, when everybody is breathing good wishes for the future. The mere fact that such aspirations exist is all to the good. Accordingly, with the deepest sincerity we accord to our readers once more the best of greetings, a HAPPY CHRISTMAS AND A PROSPEROUS NEW YEAR.

* * *

Imperial Institute.

ONE of the definite achievements of the Imperial Economic Conference was to define the scope of work of the Imperial Institute. It is now settled that the Institute is to continue its useful activities, although there are many changes in procedure. The Institute is to be financed on a contributory basis as a clearing house of intelligence and information and a centre for the investigation of Empire raw materials. For this purpose the laboratories at South Kensington will be retained to carry on the work of preliminary analysis of raw materials, and the Institute is to be amalgamated with the Imperial Mineral Resources Bureau. A scheme has been adopted by which the Governments of the Dominions and India will support the Institution to the extent of £8,000 for a fixed period of five years, although the annual expenditure of the reformed Institute will, altogether, come to some £40,000. So far as the exhibition of Imperial products is concerned, a modern device is presumably to be introduced, for in place of the exhibition galleries the proposal is put forward that a really representative selection of Empire products should be made for the purposes of a travelling exhibition of a purely educational character. There is also to be considered the possibility of organising travelling exhibitions of the staple products of the Colonies and Protectorates in appropriate trade centres.

* * *

Paper and Cardboard Imports and Exports.

ACCORDING to the Board of Trade returns for November, just issued, receipts of paper and cardboard at British ports last month amounted to 1,308,064 cwts., of the value of £1,368,376. These figures indicate increases respectively of 214,171 cwts. and £187,779 compared with November twelve months ago. As against October, however, the quantity received last month shows a slight falling off, but contrasted with the average for the past few months there is very little variation. Paper and cardboard dispatched abroad during November—amounting to 420,513 cwts., of the value of £837,951—register an increase in quantity of 113,494 cwts. compared with November last year, while the value is higher to the extent of £103,122. In spite of the fact that November's export figure does not quite reach that of October, it nevertheless represents a substantial increase of 56,099 cwts. over the monthly average for the first eleven months of the year. Supplies of papermakers' raw materials received during the month amounted to 108,437 tons, an increase of 1,966 tons compared with November last year, while the month's value—£950,851—indicates an increase of £121,743.

* * *

Paper Production Data.

VERY rarely do we come across any really trustworthy statistics recording in classified form the production of paper by the home papermaking industry. Practically all the figures that appear, whether from official or unofficial sources, are approximate computations, which may be nearly right or very wrong. Obviously, for the purpose of comparision, deduction or for merely knowing the definite facts of the case, reliable official data should be available. It is a very difficult matter to secure returns of this nature from manufacturers, even among those who are active members of their Association. Either from lack of appreciation, mere carelessness or sheer obstinacy there are many manufacturers who fail to respond to any effort to accumulate data which, when collated, would prove to be of inestimable value to the whole industry. We have before us a monthly report of paper production costs issued by an American organisation. From time to time we see the records of Canadian, American, Swedish, Norwegian and Finnish output. But when a reference to English production is desired, it is impossible to get down to the facts. There is something here to think about.

THE Great Yarmouth Council is to appoint a publicity agent at an annual salary of £300.

London Lithographers' Centenary.

Vincent Brooks, Day and Son, Ltd.

A notable event in the history of the printing trade of London was celebrated on Friday night, when a dinner was given by Messrs. Vincent Brooks, Day and Son, Ltd.—London's oldest firm of lithographic printers—to mark the centenary of this well-known house. At the Horse Shoe Hotel, Tottenham court-road, the firm entertained a large company of their employees, together with a number of distinguished visitors connected with the printing trade, amongst the latter being Mr. Gerard T. Meynell, Mr. A. E. Goodwin (secretary of the Federation of Master Printers), and Mr. Woodgate Stevens (London secretary of the Amalgamated Society of Lithographic Printers).

Under the presidency of Mr. W. Vincent Brooks, the present head of the firm, an excellent dinner was enjoyed, and then the company settled down to a generous concert programme interspersed with speeches.

Before the speeches started, an interesting preliminary took place, the chairman and his brother, Mr. Frederick A. Brooks, being presented each with a framed portrait of himself. The presentation was made on behalf of the employees by Mr. Broadstock, who was supported with enthusiastic applause. Both brothers then briefly returned thanks for this pleasant souvenir of the occasion.

The toast of the firm was given by Mr. Gerard Meynell. After remarking upon the wonderful achievement which was being celebrated that night, Mr. Meynell pointed out that lithography was not introduced until 1800. and in 1823 the firm which Messrs. Vincent Brooks represent to day began business, and they were still going on, turning out first class work. The thought of this achievement led him to suggest the slogan "There are far more crooks than Brooks in the printing trade to-day." (Laughter.) Mr. Meynell concluded with a few personal references affectionately reminiscent of Mr. F. Vincent Brooks, the late managing director.

A Unique Record.

Response was made by the chairman, who began with a word of regret that his respected father had not lived to see this remarkable occasion. He regretted, too, that their old and esteemed friend, Mr. Oliver A. Fry, who had been editor of *Vanity Fair* for a number of years and a director of this company since its incorporation, was prevented by ill-health from being present. After thanking Mr. Meynell for the generous way in which he had proposed the toast, Mr. Brooks went on to recall some outstanding facts relating to the firm's history. Although, he said, there were older firms in existence which were now practising lithography, no other house had been established as lithographic printers for so long a period as theirs. This achievement was, he believed, unique. Another point was the record of their staff, and he went on to mention a number of cases of remarkably long service, including that of Mr. Greenfield, who had joined the staff in 1861 (though his connection with the firm had not since been unbroken), and Mr. Broadstock, who had been with them since 1869, and Mr. Clements, the works manager, who had been with them since 1870 He thought these two facts, the age of the firm, and the long experience of their workers, had been a valuable asset to them in the recent period of trade depression. They had in their time done some unique and famous work. For instance, everybody knew the world-renowned *Vanity Fair* cartoons. After recalling a number of other outstanding pieces of work, the speaker mentioned the fact that when Baxter ceased his practice, the firm of Vincent Brooks carried on the process, and they had also been the pioneers of photo printing. The chairman mentioned incidentally that Mr. Griffiths had, at the last board meeting, been co-opted a director of the firm—an announcement greeted with applause—and he closed by expressing, on behalf of his fellow directors and himself, a hope that their happy gathering that evening would help to cement the very excellent feeling already existing between the management and the staff. (Applause.)

Mr. A. V. Hunt, for 25 years a director of the firm, then proposed "The Guests" in an entertaining speech. After recalling 80 years of friendship between the Brooks family and his own, he proceeded to make appreciative individual mention of their visitors, and concluded with a very cordial reference to his old friend Vincent Brooks, to whom he referred as a "great hearted and noble minded" man.

The Visitors' Speeches.

Mr. A. E. Goodwin, very cordially received, responded on behalf of the visitors. In the course of an able speech he spoke in very high terms of the firm's lithographic work, and also mentioned his own association with Mr. F. Vincent Brooks in connection with the Federation of Master Printers, remarking that the whole printing trade of London had often been indebted to that gentleman's sane and useful counsel.

Mr. Courtney Lewis was also called upon to respond, and did so in amusing and interesting fashion, recalling many facts connected with the introduction of lithography into London, and referring especially to the work of George Baxter, in regard to which Mr. Lewis is an authority.

Mr. Woodgate Stevens also responded, recalling his own early association with the firm, and especially his very high regard for Mr. Frederick Vincent Brooks whom he had known. In the old days, he said, there were happy relations between employers and staff, and he felt he could express on behalf of the staff of the present day their appreciation of the way they were treated.

Mr. F. A. Brooks (who was enthusiastically received) proposed the toast of "The Staff," and this was responded to by Mr. Clements.

A very entertaining and pleasant musical programme was given during the evening, and the proceedings terminated at a late hour with the singing of the National Anthem. The whole proceedings were marked with the utmost cordiality, and Messrs. Vincent Brooks, Day and Son, Ltd., are to be congratulated both upon the unique achievement celebrated, and upon the happy manner of its celebration.

The Cornwall Press, Ltd., Athletic AND SOCIAL CLUB.

The third annual dinner in connection with the Cornwall Press Athletic and Social Club was held at the Manchester Hotel, Aldersgate street, E.C., on Saturday last, the 15th inst. A party of about 130 ladies and gentlemen enjoyed a first-class spread, which was followed by music and dancing.

Mr. J. Griffiths, works manager, who occupied the chair as president, submitted, in a very humorous speech, the toast of "The Club," to which Mr. A. J. England suitably replied.

The vocalists included Mrs. E. Jeffery, Miss Shephard, and Messrs. Smith and Blogg. There was a varied programme of dances, which was much enjoyed, much fun being occasioned by the "balloon dance"

Altogether it was a most successful evening, the credit for the excellent arrangements being due to the club hon. secretary (Mr. C. Knatchbull) and the following stewards:—Messrs. S. Young, F. Marchant (the hon. treasurer), H. Jeffrey, E C. Jeffery, and A. Billingham.

MR. A. W. STEVENS, of the composing-room staff of the *Western Mail*, Cardiff, has been appointed overseer in succession to Mr. J. D. Davies.

THE fine collection of Worcester china which Mr. and Mrs. Frank Lloyd have presented to the British Museum will shortly be on view.

IN view of the long and valuable service rendered to A. M. Peebles and Son, Ltd., by Mr. Robert Gilroy, the directors have determined that it is in the best interest of the company he should be appointed a managing director jointly with Mr. H. M. Peebles, and they have made the appointment accordingly.

HENDON PAPER WORKS.—Important extensions are being made by the Hendon Paper Works Co., Ltd., Sunderland. Additions to plant include the installation of eight esparto grass boilers, supplied by the well-known firm of Messrs. Penman and Co., Ltd., Caledonian Iron Works, Glasgow. These boilers are 14 feet long by 10 feet diameter. Each boiler has a capacity of five tons of grass, and works under the latest high pressure emptying system.

Personal.

LORD BIRKENHEAD and the Earl of Derby were guests at a dinner at Manchester on Saturday in aid of the benevolent funds of the Newspaper Press Fund and the Widows and Orphans' Fund of the National Union of Journalists.

SIR CHARLES DARLING was a guest of the London District of the Institute of Journalists at dinner on Saturday, and made a humorous speech on the work of journalists. Lord Burnham and the French Ambassador spoke on the international aspect of journalism.

SIR HERBERT MORGAN left the United States for home in the White Star liner "Majestic" on Saturday, expressing the utmost pleasure at the prospects of the Advertising Convention which will be held in London next year.

SIR HERBERT said that he had received assurances that the number of American advertising men attending the Convention would probably exceed 2,500.

SIR ALFRED ROBBINS, who is retiring from journalism after having attained his jubilee in the profession, addressed the London Commercial Club at luncheon last Thursday on "The Press and the Public Purse." In the course of his remarks he said he believed that this was the only country in the world in which the public purse did not pay or purchase the Press.

AMONGST those attending the Coliseum on Thursday night, on the occasion of the visit of their Majesties to see the very fine programme in aid of the Variety Artists' Benefit Fund, were the directors of the *News of the World* and Mr. Gustave Tuck.

MR. FREDERIC T. CORKETT, F.R.P.S., managing director of Pictorial Machinery, Ltd., arrived back in London on Saturday after a long and successful tour in the United States. He visited a large number of cities, including New York, Boston, Cincinnati, Philadelphia, Pittsburg and Toronto, and found business generally good.

IN the particular specialities in which Mr. Corkett is interested, America is evidently not ahead of this country, and Mr. Corkett comes back full of enthusiasm for the interest shown by American lithographers, and for the hospitality with which they honoured him.

MR. T. E. NAYLOR, M.P. (secretary of the London Society of Compositors), speaking on Saturday at the annual conference of the London Labour Party, as its chairman, said the Labour Party was fn an impregnable position and sought no alliance with the Liberals.

GRAVESEND'S newly-elected Labour M.P., Mr. George Isaacs (secretary of the National Society of Operative Printers and Assistants), on Saturday opened a local People's Christmas Fair which was arranged by the local Labour Party to raise funds for the next election fight.

ON Thursday, December 13th, Mr. Joseph Thorp, of the staff of *Punch*, and an authority on art in publicity, delivered an interesting lecture at the Birmingham Corporation School of Arts and Crafts on "The Artist and the Advertiser, and the Advertiser and the Public." There was a large attendance of master printers, printing students, artists and designers, over which Mr. J. T. Jones presided.

A CORDIAL vote of thanks was passed to Mr. Thorp on the motion of Mr. C. H. Whittaker (Cadbury Bros., Ltd.), seconded by Mr. Simon (of the Press Department, Messrs. Kynoch's).

MR. PERCY WALTER GREENAWAY, printer and stationer, of Camomile-street, is a candidate for the Aldermanic vacancy in the City of London caused by the death of Sir Edward Moore.

MR. JOSEPH MCCABE has been appointed editor of the *Tribune*, a new review which is to be issued on January 5th.

DIVIDENDS AND REPORTS.

WYMAN AND SONS.—Interim of 5 per cent., less tax, on ordinary shares.

MORLAND AND IMPEY.—Report of this Birmingham loose-leaf manufacturing company to July last states that Australian company is now paying dividend on ordinary, and outlook for this company is most encouraging. French company has cleared off its previous losses and paid its first dividend, and there is every prospect that this improvement will be maintained. Profit was £6,489, less debit balance brought forward of £4,473, leaving credit balance of £2,016. Profit is arrived at after providing for contingent taxes and after writing down book value of building materials by £3,096. Previous year only half-year's dividend on 7 per cent. preference shares was paid.

A. M. PEBBLES AND SON, LTD.—The directors, in their report for the period to June 30th, 1923, state with regret that the loss on the year's trading amounts to £12,028. This result shows a considerable improvement on the previous year, particularly having regard to the continuance of the general depression in the paper trade throughout the period under review.

NEW COMPANIES.

HANTS AND DORSET PRINTING CO., LTD.—Capital £10,000, in £1 shares. Private company. Directors: H. J. Marston and A. Earlton. Registered office: 10, West Quay-road, Poole.

EMPIRE SERVICE PUBLICATIONS, LTD.—Capital £1,000, in £1 shares; proprietors, printers and publishers of newspapers, journals, magazines, diaries, almanacs and books, picture, print and music sellers, art dealers, theatre proprietors and managers, etc. Private company. First directors: Capt. D. P. Simson, Lieut.-Col. Macdowall, C.M.G., D.S.O., and P. E. Hurbutt. Registered office: 130, Baker-street, W.1.

SCULTHORP AND PATERSON, LTD.—Capital £1,000, in 750 ordinary shares of £1 and 1,000 deferred of 5s.; (1) to purchase and sell the Imperial Typewriter; (2) to enter into agreements with E. C Sculthorp, 97, West George-street, Glasgow, agent for the Imperial Typewriter Co., Ltd, for the purchase from him, as at October 1st, 1923, of the goodwill and assets of the said agency, and to carry on the same and the business of dealers in office furnishing and supplies, business equipment, printers, stationers and bookbinders, etc. Private company. First directors: E. C. Sculthorp and A. B. Paterson. Registered office: 94, West George-street, Glasgow.

DAVID FLEMING, LTD.—Capital £6,000, in £1 shares; wholesale, retail and manufacturing engravers, die-makers, lithographers, etc. Private company. First directors: D. Fleming, Mrs. H. Fleming and Miss G. Fleming. Registered office: 39A, Renfield-street, Glasgow.

KNIGHT SEYMOUR AND CO., LTD.—Capital £1,500, in £1 shares; printers, wholesale and retail stationers, etc. Private company. Subscribers: F. S. Knight, R. A. Smith and R. C. Seymour. Registered office: 29, Newfoundland-street, Bristol.

CITY AND PROVINCIAL PRESS, LTD.—Capital £575, in 500 10 per cent. cumulative preference shares of £1 each and 1,500 ordinary shares of 1s. each; to acquire the business now carried on by E. J. Hucks at Red Lion House, E.C., as the "City and Provincial Press," and to carry on the business of advertising agents and contractors, printers and publishers of local guide books, hotel tariffs, newspapers, magazines, pamphlets, circulators and other literary works, etc. Private company. First directors: E. J. Hucks and G. Sechiari. Registered office: Red Lion House, Red Lion-court, E.C.4.

SHIRLEY PRESS, LTD.—Capital £3,000, in £1 shares; to acquire the business of printers, bookbinders, publishers, stationers and machine rulers, now carried on by A. May, F. H. Pottle and L. Willis at 1A, Church-street, Shirley, Southampton, as the "Shirley Press." Private company. Directors: F. H. Pottle, A. May and L. Willis. Registered office: 1A, Church-street, Shirley, Southampton.

MAYARDS, LTD.—Capital £1,000, in 1,800 10 per cent. non-cumulative preference shares of 10s. and 2,000 ordinary shares of 1s.; to adopt an agreement with S. C. Hunt and G. H. Jones whereby the whole of the ordinary shares are to be allotted as fully paid up to them or to their nominees in consideration of services rendered and of certain preliminary expenses of the company paid by them, and to carry on the business of publishers and proprietors of newspapers, magazines and other publications, advertising agents, etc., in Great Britain or elsewhere. Private company. First directors: S. C. Hunt and G. H. Jones.

PIGEON POST, LTD.—Capital £1,000, in £1 shares; to acquire, print and publish a newspaper or periodical to be known as the *Pigeon Post*, dealing with pigeons and/or other live stock, etc. Private company. Subscribers: E. H. J. Chambers and F. R. Lovett. Registered office: 22, Silver-street, Hull.

I. D. L. ADVERTISING SERVICE, LTD.—Capital £2,000, in £1 shares; advertising agents and contractors, etc. Private company. First directors: J. Joyce, R. G. Cunliffe and H. N. Cunliffe. Registered office: 99, Piccadilly, Manchester.

KORLAND MANUFACTURING CO., LTD.—Capital £1,000, in 5s. shares; manufacturers, importers and exporters of, and dealers in, mechanical, electrical and general machinery, typing and calculating machines and all other instruments and mechanisms for printing, etc. Private company. Subscribers: S. Leader, K. R. Leader and Anita E. Innocent. Subscribers appoint directors. Registered office: 26, Leather-lane, E.C.

PHINERITE RIBBON AND CARBON CO., LTD.—Capital £2,000, in £1 shares; to acquire the business carried on by J. Y. Thomson and H. Burton at 30, Primrose-street, Bishopsgate, E.C.2, or elsewhere, as the Phinerite Ribbon and Carbon Co., and to carry on the business of manufacturers of, and dealers in, all kinds of typewriter ribbons, carbon papers, etc. Private company. Subscribers: J. Y. Thomson and E. J. T. Gabb. Registered office: 36, Primrose-street, Bishopsgate, E.C.2.

WARREN PUBLISHING CO., LTD.—Capital £5,000 in £1 shares; to acquire the copyright, goodwill and assets of the business of *Mine Host* Magazine, and to carry on the business of proprietors and publishers of newspapers, journals, magazines, books and other literary works and undertakings, etc. Private company. Directors: J. L. Warren and R. Harris.

ANDERTON AND CO. (BIRMINGHAM), LTD.—Capital £300, in £1 shares; to acquire the business of a packing case and ladder maker now carried on at Great Hampton-row, Birmingham, by A. E. Gittings as "Anderton and Co.," and to carry on the business of manufacturers and importers of, and dealers in millboards, leatherboards, strawboards, paper and packing materials, manufacturers of, and dealers in, all kinds of boxes, cases, packing cases, bags and containers, etc. Private company. First directors: A. E. Gittings, Ruth A. Anderton, and Mrs. Helen Gittings.

WM. HARTMANN, LTD.—Capital £1,000, in £1 shares; manufacturers of, agents for, and dealers in, paper and pulp and ingredients and products thereof, etc. Private company. Subscribers: P. L. Schmidt-Werden and H. J. Tilyard. Director: Wilhelm Hartmann. Registered office: College-hill Chambers, 23, College-hill, Cannon-street, E.C.4.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

TOTTENHAM PRESS, LTD.—Particulars filed of £250 debentures authorised September 18th, 1923, charged on the company's undertaking and property, including uncalled capital and goodwill, the amount of the present issue being £200 (on November 30th).

LONDON COUNTY PRESS LTD. (London).—Particulars filed of £80 debentures authorised November 27th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the whole amount being now issued.

LEWER AND POND, LTD. (manufacturing stationers, etc., London).—Particulars filed of £1,000 debentures authorised November 8th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital, the amount of the present issue being £500.

LUCAS, LONGFIELD AND CO., LTD. (paper manufacturers, etc., Birmingham).—Debenture, dated November 17th, 1923, to secure £200, charged on the company's undertaking and property, present and future, including uncalled capital. Holders: H. Kershaw, 48, Comberton Hill, Kidderminster.

BRIGHTON HERALD, LTD.—Issue on October 1st, 1923, of £1,200 debentures part of a series already registered.

ARNOTT AND CO. (LEEDS), LTD. (photographic mount and cardboard manufacturers, etc.)—Satisfaction in full on November 16th, 1923, of mortgage debentures dated March 7th, 1911, securing £4,500.

BANKRUPTCIES, etc.

Re FREDERICK GEO. JONES, printers' agent, 51-2, Hampstead-road, N.W., and 7, Palmerston-road, Westcliff-on-Sea.—The creditors under this failure met on Monday at the London Bankruptcy Court. The debtor started business in January, 1922, in partnership with Mr. S. J. Young, under the style of "S. J. Jones Bros." The business was not sufficient to keep two persons, and in February, 1922, the partnership was dissolved by mutual arrangement, the debtor taking over the liabilities and continuing the trading, but he closed down in March, after paying the petitioning creditors (A. Page and Co.) £400. He still owes that firm £150, that being practically the only liability and in the absence of any assets, the case was left in the hands of the official receiver to be wound up in bankruptcy,

Re ELDRED ALEXANDRE HENLEY HUNTER.—A sitting of the London Bankruptcy Court was appointed to be held on November 30th, before Mr. Registrar Francke, for the public examination of this debtor, who was brought to the Court last September upon the petition of a creditor. (*B. & C.* October 11th, 1923.) Upon the case being called an adjournment was applied for by the official receiver, and by general consent the sitting was adjourned till January 25th.

DUTY never requires a man to be in two places at once.

British Industries Fair, 1924.

Reduced Cost of Participating.

During the past four years the Department of Overseas Trade has pursued a consistent policy aiming at the all-round reduction of the cost of participation in the London Section of the British Industries Fair. Apart from the reduction in the cost of floor space which the Department was able to effect at the last Fair, the expense of participating has been brought still lower for 1924 by the cuts in the scale of charges for "shell" stand erection under the Department's scheme.

Since 1921 when the cost of both materials and labour was at its height, the scale of charges for stand erection has been reduced year by year in sympathy with the fall in the costs. This has been assisted also by the gradual perfecting of a standard scheme of construction. A comparison of the cost of a shell stand in 1921, and 1923 as against the prices ruling for the next Fair, is shown in the attached table:—

Area.	1921. £ s. d.	1923. £ s. d.	1924. £ s. d.
100 sq. feet	13 6 8	10 7 0	8 18 11
200 sq. feet	26 13 4	15 15 9	13 13 0
500 sq. feet	66 0 0	20 14 9	17 18 11

The enormous reduction of cost effected in the last example given is partly due to a sliding scale of discounts, which was introduced with the object of reducing the cost to the exhibitor taking a larger space, and of enabling the smaller firms to exhibit on a more adequate scale without an excessive increase in outlay.

It is apparent, therefore, that the question of exhibiting at the British Industries Fair will be, from a financial point of view, a very different proposition in the coming year from what it has been in past years. It should be remembered that this saving has not been effected at the expense of any diminution in the service rendered to buyers and exhibitors as the full scheme of overseas propaganda, the provision of interpreters, buyers' club, etc., will be continued in the same manner as in previous years.

Co-operation in Publicity.

It is confidently anticipated that 1924 will infuse fresh blood into the veins of the British commercial body. Just as the great 1851 Exhibition opened an epoch in industrial and scientific development far beyond the wildest imaginings of its promoters, so the great Empire Exhibition will mark and initiate a new era in British development. No institution is in a better position to benefit from this movement than the British Industries Fair, the existing machinery of which is qualified to carry on in the future the commercial development arising from next year's exhibition.

The authorities of both exhibitions have not been slow to appreciate and develop their common interest, viz., that all the world shall come to London in 1924. The British Industries Fair has extended to the British Empire Exhibition various facilities for co-operative publicity in its annual "follow-up" campaign to the overseas buyer, and the Exhibition authorities have, among other things, allotted to the British Industries Fair space on the outer cover of their illustrated folder.

When it is appreciated that the first edition of the folder in question will be no less than 2,000,000 copies to be issued broadcast throughout the English speaking world, the value of this publicity to the British Industries Fair will be realised. Its force as an advertisement is also enormously increased by the fact that it is the only matter printed on the folder which is not exclusively concerned with the Exhibition.

BRITISH EMPIRE EXHIBITION.—The time draws near when the British Empire Exhibition will call millions of visitors to Wembley. By way of further advertising the event, the authorities have issued a folder which gives the latest available information concerning the great show. The whole of one side of the sheet is devoted to an elaborate coloured plan of the Exhibition in relation to the railway routes from all parts of London, while the other side contains a description of the various pavilions which will house the exhibits from all parts of the Empire. For the first time particulars are given of the contents of the British Government Pavilion, which will be worthy of the occasion.

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

SWEDEN.

The Commercial Secretary at Stockholm has forwarded to the Department of Overseas Trade a short report on the market for loose-leaf ledgers in Sweden, for copies of which application by United Kingdom firms should be made to the Department of Overseas Trade, 35, Old Queen-street, London, S.W.1. (Reference No. 8406/F.R./M.C.2.)

NORWAY.

The Commercial Secretary at Christiania (Mr. C. L. Paus, C.B.E.) has furnished a report on the market for loose-leaf ledgers in Norway to the Department of Overseas Trade, 35, Old Queen-street, London, S.W.1. United Kingdom firms desirous of obtaining a copy should address the Department at the above address, quoting reference 8322/F.R./M.C (2).

BELGIUM.

A Belgian firm of wholesale importers at Liege desire to secure the representation of British manufacturers of note paper, printing paper, packing and fancy paper. Correspondence in French. (Reference No. 575).

LITHUANIA.

A firm of merchants and agents in Kovno, desire to secure the representation for Lithuania of British manufacturers for metal industries, caustic soda, talc, etc. (Reference No. 583).

An agent in Kovno desires to secure the representation for Lithuania of British exporters of caustic soda. (Reference No. 585).

UNITED STATES.

A firm of agents in Reading, Pa., wish to communicate with British producers and exporters of whiting and china clay, with a view to obtaining agencies, on a commission basis, for the State of Pennsylvania, New Jersey and New York. (Reference No. 596).

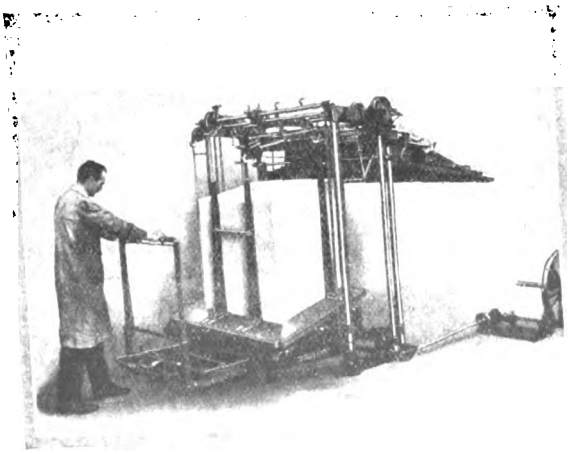
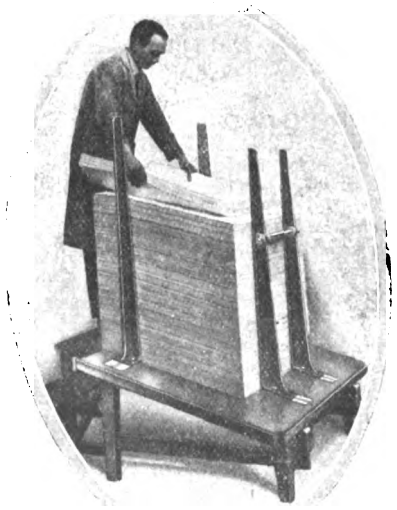
The Latest "Slogger" Equipment.

Demonstration by Messrs. H.T.B., Ltd.



It will be remembered that one of the outstanding features of interest at the Printing Exhibition held in London three years ago was the great strides that have been made in automatic feeding devices. During the three years that have elapsed since then, manufacturers of these contrivances have given even more attention to the perfecting of these mechanical aids that are so conducive to increased production and to greater economy in handling. With the view of showing what is being done by British engineers in the direction indicated, an interesting demonstration was given to a party of Press representatives recently by the principals of Messrs. H. T. B., Ltd., manufacturers of "Slogger" feeders, at that firm's works in Blackhorse Lane, London, E.17.



Interior View of the "Slogger" Works.

Preliminary to an inspection of the machines that have made the name of "Slogger" a household word among printers, the visitors were conducted through the splendidly-equipped and well-lighted workshop, where were seen the different parts of the machines, all made to standard sizes, these parts being produced in large quantities not only for immediate assembly but also for stock, ready for quick delivery to customers who may require them. By the aid of modern tools, all the separate parts of the feeder were being turned out with great precision, afterwards receiving a thorough checking by an expert engineer before being passed into stores.

Coming to the "Slogger" Automatic Pile Feeder—H.T.B. Model—special interest was evinced at the many improvements that have been introduced, and the ease with which the many capabilities of the machine were put into operation, whilst the smooth way it did its work at varying speeds up to 3,600 per hour, was quite remarkable.

Removing Truck: "Slogger" Ready to Start.

Loading Spare Board between Runs.

One recent and clever feature of the machine is the ease with which the interchangeable pile board—after being brought to the machine loaded with paper on a standard truck—automatically gets into position ready for its work. The time taken between the printing of one pile of paper and the commencement of printing the next pile, including removing and replacing of pile board, being only three minutes.

Another advantageous point connected with the machine is the effective method by which the sheets are separated, before they leave the pile board, and made to pass one at a time on to the tapes on their way to the automatic registering contrivance. Separation of sheets is accomplished by means of an air blast device constructed to cause a suitable current of air to pass through the pile of sheets, about 30 times before the sheet is fed. As a matter of fact, two sheets cannot pass through together without automatically bringing the feeder to a standstill. The sheets are carried along on strong flexible endless tapes and travel in perfect ease and exactitude, even when running at the speed of 3,600 per hour.

Another especially clever and interesting feature was the way in which each sheet, just before it reached the front lay, was almost humanly gripped, controlled by the action of a slowing-down apparatus, and thus caused to be placed in absolutely dead register.

The fact that the "Slogger" is constructed with a movable lay-board, enables the machine-minder to have access to the existing lay-board of the press, a feature which will be appreciated when very small runs are required. The feeder—which is bevel-driven—requires only ¼ h.p., and is driven from press. The air current is supplied by a separate self-contained electric motor and fan.

At the time of the visit, the feeder was shown feeding various qualities of printing and fine art paper, manipulating all of them with the same facility and precision in regard to register. As a matter of fact, only a few minutes were required to change the size of sheet being fed.

Another machine about whose future the firm is optimistic is the "Slogger" Automatic Register. This contrivance is designed not to supersede the full Automatic Pile Feeder, but to allow greater choice to the printer in selecting suitable equipment, according to his requirements and space available. For instance, some firms who have only short runs may desire to equip their presses with an automatic machine which will give them greater efficiency in regard to output, and at the same time improve register.

"Slogger" Automatic Register occupies very little additional space and is superimposed on the existing press lay-board, one of the striking features noticeable being the efficiency in which it handled sheets up to 3,600 per hour. By the aid of this ingenious machine, the operator's work is confined solely to roughly placing the sheets to lays, which are then conveyed automatically by means of endless tapes and slowing-down device to the press.

Messrs. H. T. B., Ltd., refer with much pride to the fact that all their productions are British made, with British capital.

Price of News-Print.

The International Paper Co., U.S.A., sent out a notice to its contract customers to the effect that the contract price of news-print in rolls for the first six months of 1924 would be continued at the prevailing figures, $75 per ton.

Mr. C. Howard Smith, president of the Howard Smith Paper Mills, Ltd., Montreal, in a special signed article in the *Journal of Commerce*, New York, tells of the marvellous growth of the pulp and paper industry in Canada during the last decade. Mr. Smith shows that production last year of news-print, in the manufacture of which the greatest advance has been made, was triple the pre-war production figure. He points out that this rapid development has been due principally to the fact that Canada has vast natural resources of forests and water power. A still greater development which is anticipated in this direction will ultimately result in Canada taking her place as the leading news-print producer of the world. From a country that produced comparatively small quantities of pulp and paper and exported very little, wrote Mr. Smith, Canada has become one of the leading countries in this industry with a total production second only to that of the United States.

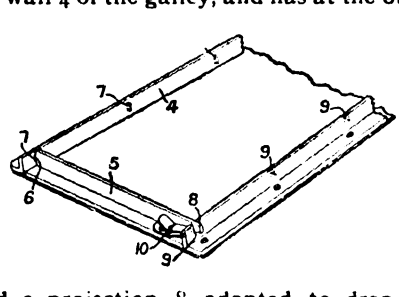
New Inventions

Associating Apparatus.

An invention patented by Messrs. R. Hoe and Co. relating to delivering light products from printing machines comprises sheet forwarding means, a cylinder adapted to fold and forward single sheets or batches of sheets collected thereon, a second cylinder adapted to collect the folded sheets or batches of sheets and means, such as a transfer cylinder or the folding rolls of the first cylinder, for positively holding the products during their transfer from the first to the second cylinder. The sheets cut from the web W by cylindrical cutters 17, 18 are forwarded by rolls, 19, 20, to grippers 22, 23 on a cylinder 21 provided with folding blades 24 which may be timed to fold off either single sheets or batches of sheets to

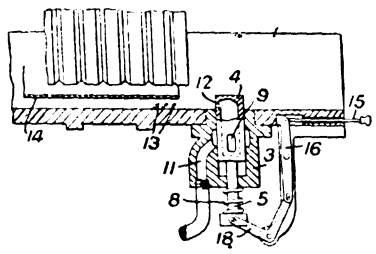


grippers 26 on a transfer cylinder 25, the cylinder 21 acting as a folding cylinder only or as a collecting cylinder as well. The folded single sheets or batches of sheets are transferred by the cylinder 25 to grippers 28, 29 on a collecting cylinder 27, which may collect them into bunches before passing them to a delivery stacker 30, or, in the case of batches already collected on the cylinder 21, may deliver the batches direct to the stacker. In a modification, the sheets are folded off from the first cylinder by folding rolls. Specification 4,942/85 is referred to.

Relief Printing Surfaces.

Messrs. P. J. A. Scholz and C. W. Woehler have patented a relief surface, which may be used as a printing plate or as a mould for casing a printing plate, is prepared by exposing a gelatine coated and sensitised sheet, preferably of thick paper or other flexible material, through a negative or positive transparency of the drawing, etc., to be reproduced, washing away the chromate from the unaffected parts of the gelatin with cold water, rolling up with a fatty ink, applying an aqueous preparation which will be absorbed by un-inked parts of the gelatin, and finally heating. The aqueous preparation is such that, when heated, it will swell and form a hard layer in relief, and may consist of one part of gum arabic or colophony with one part of zinc white, whiting or gypsum mixed with water. In a modification, the design is drawn or printed in a chromate containing mixture on the paper or other sheet coated with unsensitised gelatin, the whole surface being afterwards exposed to light. The sheet is subsequently treated in the manner described above.

Detachable End Galleys.



Mr. W. J. Oliver has patented an invention whereby a galley of the kind having a detachable end, the end-bar 5, which is formed of angle-iron, has at one end a pin 6 adapted to engage in one of a series of holes 7 in one side wall 4 of the galley, and has at the other

end a projection 8 adopted to drop into recesses or slots 9 in the other wall. A spring clip 10, secured to the base of the end-bar, bears against the side wall of the galley to prevent displacement of the bar. The clip is provided with a finger piece to facilitate its release, and may engage a groove in the galley wall.

Casting Stereotypes.

A stereotype casting apparatus, patented by Linotype and Machinery Ltd., of the kind in which the core and drag are horizontal, one or more blowers, controlled by the

operator, are provided for directing air blasts along the space between the matrix and the drag to remove particles of dirt or metal which may accumulate therein. A cylinder 3, secured to the bottom of the drag 2, contains a hollow piston 4 normally pressed downwards by a spring 8 on the piston-rod 5 which is connected by a bell-crank lever 18 and lever 16 to a push-rod or pedal 15. When the piston is raised, compressed air passes from a supply passage 11 through one or more ports 9 in the piston and out through a port 12 along the bottom of the drag and removes any particles such as 13 from between the drag and matrix 14. When the piston is lowered its upper end is flush with the surface of the drag aud the ports 9, 12 are closed.

Photo-Mechanical Printing Surfaces.

In making a gelatine or colloid printing surface, more especially for litho or offset work, under an invention by Mr. R. John, the colloid film is sensitised with a chromic salt, exposed and hardened before or after washing out the soluble salt remaining or both before and after washing. It is then heated in an oven to 400 degs. F., and can be damped with water only, no glycerine or other agent being necessary, and the necessity for periodic gumming is avoided. The plate is sensitised after coating it with colloid, but the sensitising salt can be added to the gelatine coating solution provided the temperature is kept below 130 degs. F. A thin sheet of metal, celluloid or other material may be used. The metal plate is grained or roughened to facilitate adhesion of the coating, but not for reticulating the printing surface. A gelatine coating consists of 2,250 grains of hard gelatine in 32 ounces of water, the gelatine being soaked in cold water and brought into solution by heating to 120 degs. F. The plate is coated at this temperature to a thickness of ·008 to ·0012 inches, and dried. The gelatine is next hardened in a bath of alcohol (32 ounces) and 40 per cent. formaldehyde (1 ounce), dried, washed in running water, and again dried. The sensitising solution contains ammonium bichromate (450 grains), alcohol (32 ounces), and water (16 ounces), to which a light-restraining agent (*e.g.*, 90 grains of erythrosine) may be added. Exposure is effected as soon as possible. A half-tone negative with a very fine screen or grain may be used. After exposure the plate is preferably treated before washing out the bichromate, in a bath of grain alcohol of high proof (95 per cent. or higher), or of ether or ether and alcohol, in order to selectively increase the hardening action in the exposed parts without hardening the unexposed parts, and leave the film in a dry state. After washing to remove the soluble bichromate remaining, the plate may again be treated with alcohol to further harden the hardened portions. The plate is then heated in an oven to 400 degs. F., which completes the hardening of the exposed parts, gives a permanent printing surface, toughens the unhardened parts without affecting their water receptivity, and increases the adhesion of the gelatine and the grained plate.

Esparto Paper Mills.

Annual General Meeting.

The first annual general meeting of the Esparto Paper Mills, Ltd., was held at the London Chamber of Commerce, Oxford-court, London, E.C., on Monday, 10th Dec.

Sir Frederick Becker, J.P., presided.

The secretary having read the notice convening the meeting, and the auditors' report having been read,

The chairman, in submitting the directors' report and accounts, dated October 31st, 1923, said:—Gentlemen, you have the directors' report before you, and you will see that after maintaining the mills and machinery in an efficient condition and providing for depreciation, corporation profits tax, directors' fees, and managing director's remuneration, there remains a net profit for the eight months' trading of £43,699 1s. 1d. We have deducted debenture interest of £8,431 8s. 2d.; that leaves £35,267 12s. 11d., and there has been paid the dividend on the preference shares, £8,700 12s. 5d., and your directors recommend the payment of a dividend on the ordinary shares of 6d. per share (less tax), which will take £5,000, and the carrying of £5,000 to reserve fund, which will leave to be carried forward a balance of £16,567 0s. 6d., subject to income-tax.

Your directors draw attention to the fact that the preliminary expenses and the discount on the debenture issue have been written off from reserve, and the balance of reserve has been carried to depreciation account. This reserve was a capital reserve, which was created from surplus assets taken over on the liquidation of the old Carron Grove Co., and, although stamp duties and preliminary expenses were a very heavy item, we have thus eliminated them and start our new financial period with a clean slate. Our heritable property, buildings, plant, and machinery, is entered in the balance-sheet at a figure similar to that at which it appeared in the accounts of the old Carron Grove Co., less £13,698 13s. 11d. depreciation written off.

Assets.

You will see from the balance sheet that we owe £46,267 17s. 8d., we are owed £74,419 16s. 4d., we have in stock £39,271 19s. 9d. worth of goods, we have in the bank £61,125 12s. 7d. in cash, in investments £33,112 1s., and our liquid assets exceed our immediate liabilities in trading by £128,000. Our investments consist chiefly of shares in the Fourstones Paper Mills, a small but profitable esparto mill.

The results for a broken period in a disturbed and anxious market reflect great credit on Mr. Wallace, our managing director.

The company has had its name associated with the Canadian misfortunes of Becker and Co., Ltd. I should like to point out that our mills are esparto mills, and have never bought Canadian wood pulp, and the transactions between Becker and Co. and this company per Carron Grove amounted to only £81 0s. 2d.—there was one transaction—in the last two and a half years.

Extensions.

In regard to our extensions, these are proceeding according to plan, and we have every reason to think that the additional plant for coating paper will add to our revenue. The policy of extension in this direction has been in contemplation for several years, and has received the most careful consideration of the board. It was not entered into until Mr. Wallace had had an opportunity of visiting the principal plants in North America and on the Continent. The directors look forward with confidence to a most satisfactory result from this expenditure.

I will therefore move: "That the balance sheet dated October 31st, 1923, together with the directors' report, be received, approved, and adopted."

Mr Montesole seconded the motion, which, on being put to the meeting, was unanimously carried.

The Chairman then proposed: "That a dividend of 2½ per cent., less income tax, on the issued ordinary shares of the company be and is hereby approved, payable forthwith to the shareholders whose names appear on the register at this date."

Mr. G. R. Hall Caine, M.P., C.B.E., seconded this motion, which was carried unanimously.

The retiring director (Mr. E. B. Montesole) and the auditors (Messrs. Mackay, Irons and Co., P.A.) were re-elected, and a hearty vote of thanks to the chairman concluded the proceedings.

British Papermakers in Canada.

Tour of Pulp and Paper Mills.

Mr. C. R. Seddon, president of the Papermakers' Association, and Mr. T. Armstead (Thos. Owen and Co., Ltd.), who was accompanied by Mrs. Armstead, followed a wonderful tour of the pulp and paper mills of Canada during their recent visit. Some impressions of the journey have been given to the *Western Mail* by Mr. Armstead.

Naturally the vast pulp-making works of the Dominions attracted much of Mr. Armstead's attention. At Chicoutimi the visitors saw the largest pulp-making machinery in the world. A little further north, at Kenogami, will shortly be completed one of the largest paper mills in the world, the output of which will be 1,000 tons per day. This mill will be owned by Messrs. Price Bros. and Co., Ltd. The town has been erected by the firm, and it is a model lay-out. Communication with these towns is uncertain. For instance, Mr. and Mrs. Armstead were timed to leave Chicoutimi by steamer at midnight on Saturday; the boat actually left at three a.m. on the Monday.

In the same district water power has been, and is being, wonderfully developed. A scheme now in hand will harness 1,000,000 horse-power, and it is hoped that no coal will be required at the mills in the near future, all the steam being generated by electricity. The journey by steamer down the Saguenay River is a delightful experience, recalling memories of the Norwegian fjords. High cliffs on either hand, narrow channels, and a knowledge that the river is 400 ft. deep contribute to make the trip a memorable experience.

The travellers went on to Montreal, then doubled back to Three Rivers, where are some of the most important paper mills in Canada. Six large mills are within easy distance of Three Rivers.

At one of them can be seen machines turning out news-print at the rate of 1,000 ft. per minute.

Ottawa, another city of cheap water-power, was visited, and from there the visitors went to Temiskeming, where, practically out of the world, a new paper mill has been built on the edge of the forest, and a new town has grown up. Afterwards they visited in turn Toronto, Hamilton, Niagara, Buffalo, Boston, Washington, and New York, whence they sailed for home.

13 IS THIRTEEN AN UNLUCKY NUMBER ? WE SAY *NO* 13

? CURIOSITY ?

is a human failing. It is also a commercial asset. Curiosity is, in fact, one of the secrets of modern commercial success. It keeps you in touch with every modern development of the trade in which you are engaged.

It is a commonplace to say that the printing trade covers a range of activities greater than most.

Obviously, therefore, you haven't the time personally to gather the information to keep thoroughly in touch. This is done for you by the *British and Colonial Printer and Stationer*.

You probably have many friends in the trade, however, who are not keeping in touch.

CO-OPERATION

You can help your friends and us by introducing to them the *British and Colonial Printer and Stationer*.

Let us have their names and addresses : we will do the rest.

THE

British & Colonial Printer & Stationer

has been established for nearly 50 years. The more important features are :

Reports of Trade Associations, Societies, etc.,
Latest Commercial Intelligence
Technical Articles
Trade Notes
etc., etc.

A monthly issue contains a section devoted to the **Bookbinder** with notes and news and market prices.

The monthly **Lithographic** issue contains special litho matter including litho notes and news.

The **Quarterly Export** issue deals with colonial and foreign markets and provides a general review of the home trade.

COST

The yearly subscription to the *British and Colonial Printer and Stationer* is **Thirteen Shillings** including postage. Is it not worth it?

Send us your friends' names and addresses **To-Day**.

13 THIRTEEN SHILLINGS WELL SPENT 13

LOVE'S PAPER RECOVERY MACHINE.

Patented (No. 144485) by Joseph Love.

THIS Machine has been invented for the purpose of speedily recovering the small quantities of paper left on centres or spools which are thrown out from Printing Machines, etc. (commonly known as "Reel Ends"), so that it may be cut into suitable sizes by the Guillotine.

CHIEF ADVANTAGES:

1.—No spindles, bars, or cones are required, the reels being kept in position by a patent spring device thus saving time and labour in loading and unloading.

2.—It occupies a space of only six feet on the run, and is quite noiseless.

3.—The power required is such a small amount that it can be driven from any existing shafting.

4.—Centres of any kind or width can be worked on the machine.

5.—It can be run at the high speed of 500 feet per minute, and will recover approximately 3 tons of paper per day.

6.—It can be constructed to suit all requirements in the off-cut trade, and is equally valuable to Printers or in Paper Mills.

MACHINES SUPPLIED FROM STOCK.

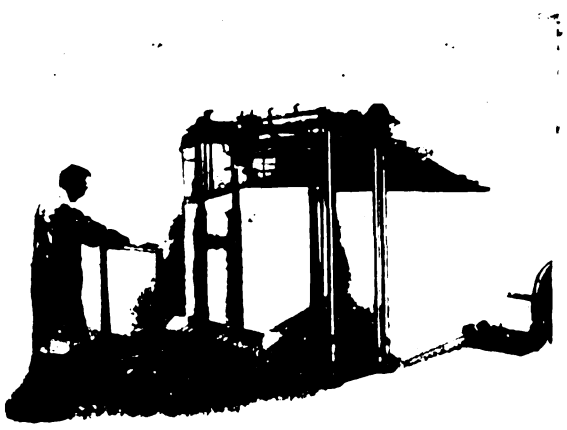
"SLOGGER"

Automatic Pile Feeder



H. T. B. Model

Whilst "SLOGGER" is working, the Interchangeable Pile Board is being loaded just where it is most convenient, either in Stock Room or anywhere in the Works then it is ready to truck to press, thus reducing labour and time to an absolute minimum.

This new model has been designed for modern Two-Revolution and Offset Presses, and gives maximum of output, with minimum of labour, for instance, only Three Minutes Required to change pile boards.

DESCRIPTIVE LEAFLETS OF BOTH STANDARD AND H. T. B. MODELS ON REQUEST.

H. T. B. MODEL *embodies Interchangeable Pile Boards, Movable Lay Boards, Slowing Down Device and Bevel Drive.*

Printers and Their Metals.

Lecture by Mr. A. H. Mundey (Fry's Metal Foundry) at Stationers' Hall on the 14th instant.

I am very appreciative of the high compliment which is conveyed in the invitation to give an address in this hall of the Worshipful Company of Stationers, and in that this is one of a series of craft lectures. I realise that my responsibility is a heavy one. I had the honour of listening to Mr. Hislop's splendid address last month, and when I realised how interested and keen a great body of printers, and those mainly compositors, could be in a series of inventions which are aimed at the complete replacement of metal type from the realm of printing, I need not tell you how such anticipations tended to depress a man who had to follow with a lecture on those very metals which it is sought to supersede by the photographic film, particularly when the lecturer is entirely dependent upon metals for his livelihood. But I do not think that I shall be accused of undue optimism when I say that I firmly believe that metals have still a very long period of usefulness in the printing world, and, therefore, I am taking heart of grace, and will attempt to prove that the metallurgist has a real place in the service, for which this Worshipful Company stands, in the making of the printed book.

Early Use of Metal Type.

There seems but little doubt that the earliest printer did not use metal, but wood type, for we are told that single types were carved from birch twigs; this material was not in every way satisfactory, and so it became necessary for him to use metal. Lead appeared to be the most suitable. It was found possible to cast it in simple moulds, or matrices, but it did not fulfil its purpose. It melted easily at a fairly low temperature, 623 deg. F., but it was too soft, it did not withstand pressure, nor the abrasive action of the paper upon it, nor did it completely fill the mould, but contracted on cooling, thus failing to give a sharp impression on the matrix. Something had to be added to or substituted for lead. Tin was tried, but although this metal has the property of hardening others, such as copper, when it is suitably alloyed, it did not effect the desired purpose sufficiently, and, moreover, tin is an expensive metal, and the large amounts necessary made the cost almost prohibitive. The metal next tried was antimony, and this beautiful and peculiar metal seemed to be entirely satisfactory. It was found possible to add antimony to lead in such proportions that the alloy filled the mould perfectly, expanding sufficiently to secure an excellent and sharp impression of the matrix. It was much harder, stronger and more durable than lead alone, and the alloy of lead and antimony seemed most promising.

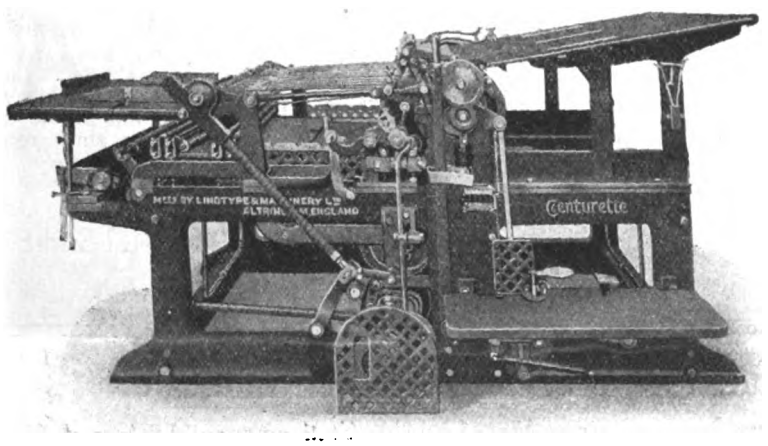
Here again there was some measure of disappointment. The alloy of lead and antimony proved to be rather brittle, and the skin of the casting had not that fine texture which is required in what the printer so well understands as the face. Further experiment demonstrated that the three metals already mentioned combined to produce the alloy which is desired by the good craftsman; moreover, the addition of a judicious amount of tin, varying according to the particular purpose in hand, makes an alloy which melts more easily, and at a lower temperature than one of lead and antimony only.

The Best Type Alloy.

Considering in the first place these three metals only, we have lead, a soft metal, fairly easily fusible, melting at 623 deg. F., plentiful and comparatively inexpensive, capable of being cast, but not taking a fine definition, contracting considerably on solidification, and not giving a fine face. Its softness makes it unserviceable alone; as it is easily distorted under pressure, and it is easily rubbed away by abrasion.

Antimony is a very brittle metal, with a beautiful crystalline structure, melting at 1166 deg. F. and expanding on solidification, but it is quite unsuitable for use alone, as type made of it would be altogether too brittle, and the temperature of casting would be too high for practical purposes. It is, however, admirably suited for conferring on an alloy its particular properties in a qualified degree, in proportion to the amount of antimony present.

Tin is a tough and ductile metal, harder than lead, and having a low melting point, 450 deg. F. When added in suitable proportions to lead and antimony, it acts in a very desirable manner, the temperature of melting of the alloy is lowered, the molten metal is more mobile and flows into every delicate line and space in the mould, it solidifies with just that amount of expansion necessary to produce a sharp and faithful reproduction, and produces a casting skin, thus giving a fine face.



The constitution of these alloys is very interesting, but rather complex. It is found that eighty-seven parts of lead and thirteen parts of antimony form an alloy which solidifies as a whole and is not seriously liable to separation on cooling, and it has the lowest melting and solidifying point of any of the alloys of lead and antimony. It is called a binary eutectic. It is not strictly a solution, as under the microscope its structure shows its constituent metals to some extent distinct from one another, but it may be conveniently compared with a saturated solution of salt or sugar in water. If a larger proportion of antimony than thirteen per cent. be present, then all that is in excess of that amount crystallises out in the process of cooling, and when solidified, these crystals of cuboid form, can be identified under the microscope, if the specimen be suitably polished and etched. The presence of tin does not interfere with the character of the structure, excepting to toughen and refine it. The cuboid crystals which separate out are now composed of tin and antimony, they are finer, tougher, and, as before stated, combine to produce a finer face. This alloy is now called a ternary alloy, as it contains three metals. This is not put before you as a complete or even an adequate description of the constitution of these alloys from a metallurgical and scientific point of view, but it may serve as a brief sketch of their nature.

The alloys of this series are shown in the accompanying tables, which give not only the proportions of the metals generally used for good class work, but also give the physical properties, as shown by mechanical tests on these alloys. It is not suggested that any printer is greatly concerned about the tensile strength, or the load necessary to crush a piece of stereotype or monotype metal, but I am conscious that I am addressing a body of young men who are apprentices and students, the future managers and overseers, and, I trust, in many cases, future employers, and it is certain that such men shall in the future take an intimate interest in all the scientific principles which govern the use of every class of material which comes into the printing office.

LINOTYPE AND MACHINERY LIMITED

9 KINGSWAY, LONDON.

Members of the Association of British Manufacturers of Machinery for the Printing and Allied Trades

	Tin	Antimony	Lead
Linotype metal	2.5 to 3	10 to 12	Remainder
Monotype metal (good average)	8	15	77

Linotype alloy solidifies at about 238 deg. C.—460.

Monotype alloy varies, as some printers require a higher grade of metal containing up to 10 per cent. of tin and 20 per cent. of antimony.

The alloys used for stereotype work vary with the nature and importance of the service, the following being fairly representative :—

	Tin	Antimony	Lead
a.	10	15	75
b.	9	19	72
c.	8	15	77
d.	5	15	80
e.	3	15	82

Typesetting Machine Requirements.

The metal under the heading of Linotype metal, is also suitable for Intertype, Linograph, Typograph, and any similar machines. As is perfectly well known to you all, the machines of this class produce slugs with the printing characters or faces upon one edge. The metal is in its molten condition pumped into a mould, one edge of which is formed by a row of brass matrices, the others conforming to the shape and size of the slug required. The metal passes through a pipe-like throat of the melting pot to a mouthpiece, a steel block beautifully fitted and drilled with many small holes to allow the metal to pass, or in some cases a slot, instead of a row of holes. It will be noticed that this grade of alloy is very near to that which I described as the eutectic, a portion of the antimony being replaced by tin. As the slug is, or should be, a solid and substantial little casting, the presence of extra antimony-tin cuboid crystals is not necessary, the type face is supported in a sort of mass formation, and if satisfactorily produced it should stand the wear and pressure of the stereotyper's flong under the brush or mangle, or even use in the press when used for printing direct.

There is a distinct metallurgical advantage in the fact that this alloy is very near the eutectic, for when once the mould is full and free from imprisoned air, the metal solidifies as a whole, without any period of plasticity intervening.

This enables the slug to be cut, trimmed and ejected with great facility, much greater than would be possible if a richer and higher grade alloy were necessary.

The Monotype type is quite different. In this equipment, the operator at the keyboard causes a number of holes or perforations to be made in a roll of paper similar to, but much smaller, than a pianola roll. This perforated roll is afterwards placed into a machine called the caster, where, by a most extraordinarily ingenious arrangement, the position and combination of the holes control a mechanism which selects the correct matrices, and permits them to be automatically brought into position in the mould. It would be folly for me to attempt to describe these mechanical marvels, in an address on metals, and I merely wish to indicate their functions in relation to the metal used. A pump, operating in connection with a pot containing molten metal, forces the fluid alloy up a nozzle and into

the moulds. The casting being a small one, the metal solidifies in a very short time, and can be ejected and replaced at a rapid rate.

This rapid cooling enables a higher grade metal to be used than that for slug casting, and so an extremely fine face and a harder type may be produced. These extra advantages have to be paid for in extra care and skill in the casting operation. As higher tin and antimony are present, there is a considerable deposition of solid crystals, before the final solidification of the eutectic and the production of the actual cast type. The feature of difficulty in this is that there is a liability for the crystals to solidify and collect in the channel of the nozzle, thus obstructing the passage. This must occur if the temperature of the nozzle be appreciably below the point of solidification of the tin-antimony compound. The careful and successful operator, therefore, takes care to keep this passage clear by bathing the nozzle with hot metal and other means in commencing work. In the linotype class of machines, that is, those casting slugs, it is easier to keep the passage clear as the metal is lower in tin and antimony and special heating devices, either gas or electrical, are applied to the mouthpiece. Photo-micrographs of these metals show the differences in structure and tendency to crystallise, as described, on cooling and solidification.

Stereotype Metal Problems.

The operations of stereotyping are well known to all engaged in printing, and need not be described, but the metallurgical problems are quite numerous and important. The type and illustrative matter, zincos, etc., are locked up in the chase, making the forme, placed upon the level table and the papier-mache flong, properly prepared, impressed upon it either by hand beating with a brush, or by mangling, or by pressing mechanically. Dried in position, the flong is then removed with an accurate impress upon it, and further dried. It is placed into the casting box, which has been heated, and the plate cast by either pouring in molten metal by hand into the box, or by pumping it, or by the use of one of the wonderful casting machines now becoming such a familiar feature in the principal printing offices of our country.

The most important machines are the Autoplate, the Junior Autoplate, and the Winkler Casting Machines.

In the first, the plate is cast in the horizontal position, and the metal entering the mould sweeps out the air, a supply of metal at the head giving not only fluid pressure, but a reserve for feeding the casting as it solidifies. The trimming and boring of the plate are effected in rapid succession, and the finished plate is delivered at the end of the machine practically ready for the press.

The Junior Autoplate casts vertically with a head of metal, commonly called the tail, above, providing the metal for feeding the casting and giving the necessary pressure.

The water cooling is a most important matter, any irregularity or mishap in this produces "sinks" and other defects. It is generally desired that the cooling should proceed from the back to the front of the plate, and from the portion furthest from the head towards the head.

Pouring temperature varies from 550 deg. F. to 670 deg. F., the lowest temperature possible for the production it a good plate is desired. Some of the very skilful stereotypers in London actually cast the plates when the metal is of the consistency of thin gruel and obtain the most exquisite results. It is not possible for anyone to give verbal instructions as to how this is effected; it can be done only by the skill produced by long experience, and by the use of the most perfect alloys and equipment.

Winkler Casting Machine.

The Winkler Casting Machine is another most ingenious piece of mechanism. It is designed to cast the plates and at the same time to dispense with the "tails," the use of pumps, the necessity of trimming and shaving, and the preheating of the casting-box. The casting-box is connected directly with the melting-pot, the metal entering by gravity through a long slit, which is opened and closed by a very ingenious valve in the form of a rod with twin bevels the whole length of the plate; the operation of closing severs the casting from the supply of metal, the "feeding" during solidification is maintained from the full pot, under the natural pressure of the head of metal. The melting-pot is wedge-shaped, and the mouthpiece or slit is at its lowest portion. It is insulated by means of firebrick, asbestos, and siliceous marl, and the temperature is maintained for a long time after the source of heat is shut off. The surface of the metal is well protected, and is maintained in as non-oxidising an atmosphere as possible. The plate mould is water-cooled, as also is the core or mandrel, the control of the water-admission being automatic. The cock cannot be opened until the casting-box is effectively closed, thus avoiding splashing of hot metal.

The heating is by coal or coke, by gas, or by electrical means, or by a combination of these. The electrical method of heating is greatly favoured, as it lends itself so completely to automatic control. The heating elements are immersed in the metal, and all external application of heat to the pot or container may be avoided, thus eliminating the danger of cracked pots to a very large extent. Effective thermostats are fitted. An electrically-wound clock, which is set to any desired time, switches on the current and starts the heating operation, so that the metal may be thoroughly molten and ready when the operators commence work. This is an attractive feature of this equipment.

In some cases the plates are nickel-plated, by electro-deposition, in order to give a harder and more durable surface. This is, however, by no means universal, nor is it quite free from disadvantages. On re-melting the plates, the nickel facing floats to the top of the metal bath in thin scales, and, provided the temperature is not unduly raised, no harm results, as the nickel is removed by skimming. But if, by any means, it becomes dissolved, the tin-nickel compound, which has a very high melting point, becomes an additional source of trouble. This also obtains in varying measure with other foreign metals; the chief enemies being zinc and aluminium, as these in falling out of solution, collect around them large quantities of tin-antimony crystals in spongy masses. The character of other metals used by the printer is a matter of great importance.

Characteristics of Metals.

Copper. The metallurgy and application of this metal to the art of printing would occupy the time of several lectures. It is the only red metal, tough, strong, has a rather high melting point, and is capable of being rolled into sheet, having an excellent surface. It is extremely fine and homogeneous in texture, and lends itself on this account particularly to the production of fine engraving and etching, and is correspondingly valuable to the printer. Copper may be electro-deposited upon stereo plates, preparatory to the deposit of nickel, and is also capable of deposition upon graphited wax impressions, hence is extensive in the production of electros. The usefulness of copper in the printing office cannot be over estimated. It is usually regarded as an impurity in type metals, and anything over a very small amount gives a great deal of trouble. The alloys of copper, brass, gun metal, etc., are of the greatest interest and use in a secondary fashion.

Zinc. This metal, so greatly used for the production of illustrations, is also of much interest. It is also capable of being rolled at a temperature of about 150 deg. C. and it is remarkable that sheets so rolled retain their toughness and flexibility, but when re-melted become quite brittle again. It melts at 420 deg. C., its chief use is in the production of zincos and may be etched in a somewhat similar manner to the lithographer's stone which it replaces to a great extent. Zinc is the second constituent in brass, copper being the principal. Zinc is a great enemy in type metal. It does not alloy with lead.

Aluminium. This very light metal is also used to replace stone in many of the more modern processes of lithography. It is also capable of being rolled into fine sheets, and is acted upon by some acids and not by others. Aluminium is readily acted upon by potash and soda and other alkaline bodies. Even strong soap solution corrodes it. Care has, therefore, to be taken of aluminium plates, or they may easily become ruined.

The importance of a knowledge of the properties of metals to the printers' engineer and manager, may be instanced by a question which was put to me some time ago. I was asked why it was that brass matrices made about twenty years ago, wore so much better than those made in recent times. I pointed out that the duty might now be much more strenuous than in former times. This did not, however, completely satisfy either the enquirer or myself, and I hazarded this explanation: That twenty years ago, most of the brass sheet and strip used in engineering was of the composition seventy copper, thirty zinc; recently, hot rolling brass of sixty copper, forty zinc, was largely used. As the latter is a much more complex alloy, containing at least two separate compounds of copper and zinc, it might be that the older, which was a solid solution, was less easily attacked by hot type metal. I obtained reliable samples, analysed them, and found that my supposition was absolutely correct.

In concluding my address, I feel that I must offer my sympathy to the young printer student. He must, in order to qualify himself for responsible duties in the future, be not only a competent craftsman, but be a reasonably good engineer, and have a good knowledge of metals, be a competent photographer, with a broad acquaintance with chemistry, electricity, and the intelligent use of the microscope. This may seem a formidable list, but a sound knowledge and appreciation of the scientific principles of one's work, brings great joy to the worker.

With regard to metals, it makes him realise that nothing but the best and the purest will enable him to produce the highest class work, and, having regard to the dire results of delays in modern printing works, the most economical work.

To all Non-Unionists in the Printing and Allied Trades:

The "WINKLER" High Speed Automatic Art Press.

With Oscillating Cylinder and Printed-Side-Up Delivery Without Sticks.

Discriminating printers recognise it to be the ideal machine for producing Fine Half-Tone and Multi-Colour Work.

Unequalled for Dead Register, Rolling Power, Impressional Strength, Speed, Absence of Gear Marks and Noiseless Running.

Occupies only about half the floor space of a two-revolution machine for the same size of sheet.

The middle inking roller is of smaller diameter, thus eliminating any possibility of circumference marks on solid surfaces.

The forme is supplied with **fresh** ink from **all** inking rollers both during the forward and backward space movement of the bed.

To prevent "picking" when printing difficult work on art paper **electric heating** of the bed is provided, the inking rollers being specially **water-cooled.**

Automatic Cylinder Check, Throw-off of inking rollers and Slow Motion.

SWISS MANUFACTURE.

INSPECTION INVITED.

Gold Inks

(LETTERPRESS)

IF you have never yet tried Gold (Letterpress) Inks or are familiar only with those hitherto obtainable, Lorilleux and Bolton's gold inks will be a revelation to you.

No modern printer keen on cutting costs and speeding up production can possibly afford to ignore the handiness and economy they offer.

The following points show the great superiority of Lorilleux & Bolton's gold inks:—

1. They do not clog or harden on the rollers.
2. Need no specially skilled operator.
3. Are suitable for either platen or cylinder machines.
4. The machines can be run at normal speed.
5. Retain their brilliance for long periods.
6. Print the type thoroughly and heavy solids without difficulty.

Available in light and dark shades of gold as well as silver.

Write for specimen prints and generous sample tin to-day.

Trade Notes.

PIECE WORK ON PERIODICALS.—A delegate meeting of the London Society of Compositors on Friday considered the provisional settlement reached between the Society and the London Master Printers' Association on the subject of making piece work compulsory under certain conditions in respect of mechanical typesetting on weekly periodicals in a selected number of printing offices. The meeting ratified the settlement subject to confirmation by a ballot of the membership. Ratification by the council of the L.M.P.A. is also awiated.

"TRAP" ENVELOPES.—In regard to the Post Office regulations relating to envelopes sent through the post unsealed, the Federation of Master Printers has obtained an assurance that no objection will be raised to the using up of existing stocks of court-shaped envelopes and others with openings which exceed only slightly the prescribed dimensions. The London Chamber of Commerce has been informed by the Postmaster General that there is no foundation for the rumour that it was intended to introduce in the New Year drastic regulations governing generally the size of envelopes sent through the post.

THE Remington Typewriter Co., Ltd, is purchasing the whole of the assets and business of the Yost Typewriter Co., Ltd. (which is being formally wound up), and in future the business will be carried on by the Remington Typewriter Co. at their head office, 100, Gracechurch street, London, E.C., and their branch establishments.

A CONFIDENTIAL report on the market for stationery in the British West Indies has been prepared by the Department of Overseas Trade from information furnished by His Majesty's Trade Commissioner in the British West Indies (Mr. J. L. Wilson Goode), and issued to firms whose names are entered on its special register.

THE London School of Printing starts its new session's classes on January 7th. Lithographic students of the School have produced an effective poster, in white lettering on dark blue ground, announcing the classes in salesmanship, photo-lithography, offset printing, estimating and costing.

THE annual meeting of the *Western Morning News* Sick and Funeral Fund was held at Plymouth last Wednesday, the vice-president, Mr. S. S. Martin, being in the chair. The president, Mr. Harold Harmsworth, sent a message apologising for his unavoidable absence. The secretary, Mr. F. E. Northey, reported that the fund, which comprises 200 members drawn from all departments of the associated newspapers, continued to be in a highly flourishing condition and the balance sheet showed a very satisfactory state of affairs.

BY the death, which occurred last week, of Mr. Isaac Seaman, there is removed from the ranks of journalism one of its oldest members. Mr. Seaman, who was in his 89th year, was formerly manager of the *London Review*, for 18 years editor and manager of *Public Opinion*, and for 33 years a sub-editor and dramatic critic. When he retired from journalism in 1896 he began an active career in Freemasonry.

A WELL KNOWN North of Scotland journalist and author, Mr. Robert Anderson, of Aberdeen, died on Wednesday of last week, aged 75. For 30 years he was chief sub-editor of the *Aberdeen Free Press*, and from 1903 to 1910 was editor of the *Aberdeen Daily Journal* and its associated group of newspapers. He had been chairman of the Aberdeen and North-East of Scotland District of the Institute of Journalists.

THE death is announced from cancer, of Mr. Frank Cobb, editor of the *New York World*.

MR. DAVID LIONEL TUCK, of Raphael Tuck and Sons, Ltd., Moorfields, E.C., who died October 4th last, aged 38 years, left £35,271 (net £34,377).

THE late Mr. Herbert Edwards (46), of Irlam o' th' Height, Lancs, late of W. Edwards and Son, Pendleton, paper merchants, left £11,799.

THE important subject of the superannuation of workpeople is being treated in *Industrial Welfare*, the monthly journal of the Industrial Welfare Society.

MR. CYRUS K. CURTIS, of Philadelphia, head of the Curtis Publishing Company, has bought the *New York Evening Post*.

AS THE body of the Italian journalist, Vincenzo Aloysio, was being placed in the coffin the doctor, arriving to perform his official duties, observed that Aloysio was not dead but in a cataleptic condition.

PRINTERS' BOMB?—A powerful bomb exploded on Wednesday of last week in the building of the Portuguese Royalist newspaper, *Correio Manha*, at Lisbon, causing considerable damage. The explosion is alleged to have been an act of revenge on the part of printers discharged as a result of the recent strike.

Trade Union Matters.

PRINTING TRADES FEDERATION CONSTITUTION.—The special committee of the Printing and Kindred Trades Federation, which, under the chairmanship of Mr. Isaacs, was appointed to consider the constitution of the Federation, states that it cannot recommend an Executive comprising a representative from each affiliated union, and suggests one of 10 members, of whom one would be a woman. On the wages movements question the committee was divided, some urging that the Federation should function in all national wage movements, and others that each union should decide its own policy and act independently. An important recommendation is that an affiliated union likely to be involved in a serious dispute must forward particulars to the Executive of the Federation, who would then call a conference with the representatives of those unions likely to be involved. Any union precipitating a strike during the progress of negotiations "or failing to observe the provisions of this clause shall forfeit its right to dispute pay from the funds of the Federation."

T.A. DELEGATE MEETING.—In response to resolutions from branches and sections comprising a membership of about 10,000, the Executive Council of the Typographical Association are taking a ballot of the members asking for an opinion as to the advisability of holding the delegate meeting in 1924, as provided by the rules, or of postponement. It had already been decided to hold the meeting at Cardiff.

Practical Dry Lithography.

Appeal to Master Printers.

It will be remembered that in our issue of November 1st we drew attention to the process of dry lithography as in practical use by Mr. W. Price, of 5-8, Peter's-lane, Smithfield, E.C.1. Having tried unsuccessfully to introduce his process commercially, Mr. Price has now issued a leaflet in which he appeals to master printers to assist him in this matter. After indicating the great demand for a process of dry lithography, which by dispensing with damping rollers, will "at one stroke bring the whole of lithographic printing within the scope of every letterpress plant in the world," Mr. Price states that he has been working the lithographic process without the need or use of damping rollers in any shape or form, in an ordinary trade litho house, for close on six months, and he indicates the favourable notices he has received in the trade Press. With regard, however, to getting his process placed upon the market, Mr. Price remarks: "After five months' endeavour, I have come to the conclusion that what is known as the freezing-out process is being applied, and I do not believe that if the large body of master printers once get hold of the facts, that they will allow those in control of the negotiations to go on with their 'ca canny' process, with the danger all the time that the process will be secured by the American houses, who will doubtless make you pay dearly for their advantage. Now, therefore, I issue this appeal for financial British control of the process. If you are interested, I invite you to come and see the process at work, and you do not need to make an appointment. . . . I desire to sell; my own resources being too small to put the process on the market. If you have a suggestion, send it along. Are you prepared to subscribe for British control?"

Openings for British Trade, etc.

Inquiries have been received by the Department of Overseas Trade (Development and Intelligence), 35, Old Queen-street, London, S.W.1, to whom further inquiries should be addressed with the reference number quoted.

ADEN.

A British firm in Aden wish to represent as agents, British manufacturers of stationery, etc. (Reference No. 630.)

SOUTH AFRICA.

A manufacturer's agent at Cape Town desires to secure the representation in South Africa of British manufacturers of papers (printing, news, browns, etc.), box papers, box papers, box stationery, etc., and stationery sundries. He has an organisation which covers the whole of South Africa, with store rooms at Johannesburg, Durban and Cape Town. He at present holds agencies for index cabinets, loose leaf ledgers, typewriter ribbons and inks, gums and carbons. (Reference No. 635.)

SWITZERLAND.

His Majesty's Consul at Basle (Mr. N. C. Haag) reports that a Swiss firm of paper bag manufacturers is desirous of importing various classes of paper from the United Kingdom) with the exception of writing paper), especially tissue and wrapping paper, packing and other kinds of waterproof paper, paper discs for cakes, etc. Roller composition is also required. (Reference No. 21189/F.W/M.C.2.)

THE proper time to do a thing is when it should be done.

Economy Through Standardisation.

U.S.A. Government Research.

Some important facts relating to testing and research work as applied to printers' supplies were mentioned by Mr. George H. Carter, the United States Public Printer, in an address at the recent conference of the United Typothetæ at Washington.

One matter touched on was the adoption of simpler sizes and standardised grades of paper, and Mr. Carter claimed that the Government Printing Office is far ahead of commercial printers in this respect.

Paper Sizes.

For example, he said, the office now has only seven standard sizes for all Government publications and these are based upon regular sizes of paper. Some years ago the Government had more than 50 different sizes. Three-fourths of the 100,000,000 Government books and pamphlets issued annually are printed in either octavo or quarto size. During the past year nine important periodicals, such as the "Weekly Commerce Reports," "Reclamation Record," and "Census Bulletins," which formerly varied from one-quarter to three-fourths of an inch, have been standardised to the size of the "Congressional Record." All of these publications can now be cut from a 24 x 38 inch, or double, sheet. This has resulted in a gratifying pressroom and bindery economy through uniform handling of the work.

It has even been possible, with the approval of the Joint Committee on Printing, to reduce the sizes of the millions of envelopes furnished Members of Congress for mailing printed matter from more than a dozen to only four.

With the co-operation of the various Government boards under the direction of the Bureau of the Budget, the size of letterheads and various forms, such as proposals, contracts, leases, etc., has been fixed at 8 x 10½ inches. This one size is saving the Government at least $50,000 a year.

So you see the simplification of sizes is not a new or untried thing in Government printing.

Grades of Paper.

Nor is the standardisation of paper grades a recently discovered idea so far as the Government Printing Office is concerned. For more than 30 years all the paper used by this plant has had to conform to standards fixed upon by the Joint Committee on Printing and for the last 13 years that duty has been delegated to a committee of Government paper experts.

Every pound of paper bought by the Government Printing Office must be in accordance with definite specifications stating the minimum requirements of quality acceptable to the Government as to weight, strength, stock, ash, and other essentials. The paper is carefully sampled on delivery and laboratory tests made to ascertain whether the contractor has complied with the specifications.

Grades of paper have been simplified so that no longer are the storerooms filled with endless varieties to satisfy the whim and fancy of every Government official For instance, the office carries only three grades of writing paper, an all wood stock and 50 and 100 per cent. rag writing, in four weights; the 50 per cent. rag writing in Substance No. 20, being the standard grade for all Government letterheads. Bonds are stocked in only two grades, 50 and 100 per cent. rag quality. An all-sulphite bond will be added this year to complete the line. All but a small quantity of bond paper now comes in the 50 per cent. rag grade of Substance No. 20 Ledgers also are in two grades, 75 and 100 per cent. rag stock. Similar simplification has been practised in other kinds of paper.

To insure proper testing, not only of paper deliveries but of all other material bought by the Government Printing Office, a thoroughly equipped commercial laboratory was established in the plant nearly two years ago. The laboratory has paid for itself many times already.

Research Studies.

In addition to its testing work and the preparation of technical specifications the laboratory conducts research studies of importance not only to the Government office but also to the industry in general. The biggest problem our chemists and engineers are now tackling is how to overcome static conditions and paper curl in the pressrooms by a humidity control system.

Experiments in the making of ink have led to the production of excellent stencil, copying, writing, and safety-check inks at considerably less than commercial prices.

The chemists are now working to develop an ink for taking proofs, which will not harden on the type surface as varnish inks do and which can be removed without the use of gasoline. They recently found a way to use discarded zinc etchings in making a satisfactory backing or soldering fluid for electrotype work. This resulted in the saving of 4 cents a pound on backing fluid, which formerly was purchased at 5 to 6 cents a pound

A careful investigation of solvents resulted in discarding certain trade mixtures and adopting simple solvents of our own make. Here was a saving of 10 per cent on a total annual expenditure of $4,000 For instance, one satisfactory solvent now costs 11 cents a gallon as against 35 cents formerly paid for a well-known commercial brand of similar mixture.

Laboratory Tests.

Tests by the shop laboratory cover every kind and description of material required in the operation of an immense printing and binding works. Not only are technical tests made of paper, but all deliveries of textiles, book cloths, leathers, and metals are examined by competent experts. A most interesting and useful study is being made of the fastness of dyes used in inks, paper, book cloths, and leathers.

The wide range and value of the Laboratory is further shown by recent tests of babbitt metal used for bearings on presses and all high-speed machinery. Deliveries of Babbitt metal were found to contain 80 per sent. lead and only 5 per cent. of tin, while the standard specifications called for 90 per cent. of tin and no lead. Thus we were able to detect at once the substitution of a wholly unsuitable metal.

All this goes to show the real importance of chemistry in the printing industry, the great need of definite standards for much of the material we use, and the value of laboratory tests by experts thoroughly familiar with trade requirements as well as with the technique of chemistry.

If the printers and bookbinders of America desire to take advantage of what has been done along these lines, the Government Printing Office is ready to assist in every way possible as a Government establishment. It seems particularly desirable that the Government and the commercial printers adopt uniform standards for at least the more important printing papers and materials. The present Government standards of paper, with possibly a few additional grades, may be found to meet nearly every requirement. At any rate, the Government Printing Office, through its testing section, is willing to co-operate with the master printers of America to work out suitable specifications in a practical way. The success of such an endeavour would be one of the greatest economies ever effected in the printing industry.

DURING October consignments to this country of printing paper (other than newsprint) from Germany amounted to 28,610 cwts., a figure which represents a proportion of 57 6 per cent. of the shipments from all the other countries of supply put together. From the commencement of the year paper of this class of manufacture to reach this country from Germany reached a total of 139,204 cwts.

AN Advertisement is always working.

Horace Walpole's Press.

Strawberry Hill, 1757–89.

All those interested in Walpoliana must feel indebted to Messrs. Constable & Co., Ltd (in conjunction with the Houghton Mifflin Company in America) for the issue of the "Journal of the Printing-Office at Strawberry Hill," now first printed from the MS. of Horace Walpole, together with some valuable historical and bibliographical notes by Dr. Paget Toynbee, M.A., etc., who is also responsible for the Chronological List and Index—writes "C.T.J.," in the "Publishers' Circular."

This journal is really a diary written in Walpole's own hand, and its existence was quite unknown to previous writers on the subject of this famous 18th century private printing press. This MS. was discovered just prior to the war, which circumstance held over the publication until the present time. It was found in the collection of Walpole's papers then in the possession of Sir Francis Waller at Woodcote, Warwick, who unfortunately was killed in action near Neuve Chapelle on October 25, 1914.

This Journal covers the whole period of the 33 years the press was running. It gives the names of the successive printers, and the duration of their terms of service; also authentic details as to the number of copies of books and fragments printed, thus correcting in some instances the commonly accepted statements as to numbers printed, the dates of printing, and also of publication. In the course of the Journal Walpole adds a transcript of some of the complimentary pieces he wrote, and had printed ready as tributes to distinguished visitors to the press.

With the Journal was found sundry notes, and also certain memoranda in Walpole's hand, including a number of bills rendered for printers' wages, agreements with his different workmen and the indentures of an apprentice, taken when Thomas Farmer had been in his employ six weeks, which was in 1759. This printer suddenly disappeared two years afterwards, and Walpole gives some details, which are to be found in Appendix Ciii. Thomas Kirkgate, his last printer, joined the press early in 1765, and stayed with him until the press finally closed down in 1789, save for the interval when Walpole went abroad late in 1765 and returned in 1768, when work was resumed.

The Notes by the editor following the Journal itself are a most interesting feature of the work. This consists of a detailed historical and bibliographical description of the various volumes and fragments mentioned by Walpole in his Journal as printed at the Strawberry Hill Press, and these Notes have been, so far as possible, collated with an actual copy either in a public library or still in private hands. All this involved a deal of research on the part of Dr. Toynbee.

In the Journal itself all the original spellings, punctuations and abbreviations have been followed.

The volume is printed on hand-made paper and appropriately in the Caslon old-faced types that Walpole himself used. It is bound in paper boards with parchment back, and the limited edition is issued at 42s. net, not an unreasonable price considering the amount of definite and most interesting information now given for the first time.

Paper Exchange Closes.

Owing to lack of support in the trade the Paper Industries Exchange, of Chicago and New York, were to definitely close on the first day of December. The Chicago office was maintained for the collection of statistics for a new association of box-board manufacturers

The decision to stop trading was reached at a meeting of the board of directors. The new trade association which will be an outgrowth of the old exchange will have no contact with the felt, wire and waste paper group except through committees that may be appointed by the respective organisations of these industries as the occasion may arise.

A REPORT on China's foreign trade in 1922 shows that imports of paper (including cardboard) represented 13,689,258 Haikwan taels, as against 15,311,873 in the preceding year.

"PENROSE'S ANNUAL." Lund, Humphries and Co., Ltd., 3, Amen-corner, London, E.C.4. Price 8s. net.

This, the twenty-sixth volume of this most useful work on process engraving, photogravure, colour printing and kindred arts, should be welcomed alike by the engraver and printer, as it supplies up-to-date information on the various illustrative and other processes that are at the present time occupying the attention of the crafts to which it appeals. Among the articles that will be read with profit and interest may be noted "Tri-Colour Engraving, Offset and Their New Competitor," by F. Thevoz; "On Printing Without Overlays," by R. B. Fishenden; "Some Practical Hints on Rotary Photogravure," by A. H. Lockington; "Step and Repeat," by W. T. Wilkinson; and "Metallic Inks," by E. S. Hanes. To the printer perhaps the most interesting articles will be those dealing with the new photo-typesetting methods, that threaten to revolutionise completely the present-day composing-room, and make scrap of the type and other heavy and costly material that is necessary for the carrying on of a letterpress printing business. In the last volume of the "Annual" some idea was given of what these processes might mean to the printer when perfected, and in the new volume the advances made in their improvement and practical adaptability for every-day work is duly chronicled, and illustrations of the new appliances are given. In this connection Mr. Arthur Dutton describes his "Photoline Letter-Setting Machine," and explains its simplicity of working, whilst he also goes into the question of cost, and puts the price of the machine at from £300 to £400. Mr. A. E. Bawtree writes of his "Photographic Type Composing Machine" and also illustrates it and gives a specimen page set up by it and printed, from which it may be gathered that the possibilities of the appliance are great and when still further improved, as no doubt it will be, it will seriously challenge the present typesetting methods. A machine that can carry some thousands of letter founts in a cabinet about three feet square is certainly a revolutionary proposition. Another new and rather wonderful piece of apparatus is the "Walton Type-Composing Machine" which possesses many interesting features for the printer, and can do a varied selection of work. The illustration and description here given should demand close attention. It may be noted that the inventor of this appliance is a clergyman, the Rev. T. Walton, vicar of St. Andrew's Church, Lambeth. The editor of the "Annual," Mr. Wm. Gamble, F.O.S., F.R.P.S., in his review of the year's work touches upon these new machines and their possibilities, and it is perhaps a pity that some description of the Hunter-August and the Robertson, Orrell and Brown, photo-typesetting machines, already familiar to our readers, was not included to complete the series. In the matter of illustration the "Annual" keeps up its high reputation, and examples of line, half-tone, photogravure and colour work are given, all of which are very creditable to the producers. The general get-up of the volume is in the usual excellent style, and it may be interesting to note that the inks used were supplied by Messrs. Shackell, Edwards and Co., Ltd.; the type for the text was cast from matrices supplied by the Lanston Monotype Corporation; the paper was from Messrs. Spalding and Hodge, Ltd., and that for most of the illustrations by Messrs. G. F. Smith and Son (London), Ltd; the printing machinery used was mostly that supplied by Messrs. Furnival and Co., Ltd.; and the cloth for binding was made by the Winterbottom Book Cloth Co., Ltd. In conclusion, we may add that the last clause of the greeting in the beginning of the book well applies to its contents:—"Some books are to be tasted, others to be swallowed, and some few to be chewed and digested."

MESSRS. B. WINSTONE AND SONS, LTD., in a neat leaflet conveying "A Message of Goodwill," tell of the arrangements they have made for giving personal service to clients in all parts of the country with a view to building a bigger volume of "Better Printing in 1924 through Better Printing Inks."

Calendars, etc., Received.

A CALENDAR produced by photo-litho-offset by students of the London School of Printing bears a reproduction in four colours of an old master—"The Madonna in Prayer" by Sassoferrato. The extent to which the rich colouring and delicate tones of the original are reproduced says much for the ability and resourcefulness of the instructors of the London School.

FROM Messrs. Slater and Palmer comes a hanging wall calendar, each sheet of which bears a fine half-tone illustration as well as a month's date. An ingenious device is adopted to assist ink-users in the correlating of colours. Each sheet is pierced with six circular apertures so as to allow six samples of colour printed on a card at the back to show through; the sheets also vary in colour, so that the tint of each printed sheet can be compared with five contrasting colours.

MESSRS. T. G. AND J. JUBB send two very acceptable calendars. One is a daily tear-off wall calendar, with bold figures in red and eminently suitable for office use. The other, also a hanging wall calendar, bears two months' dates to a sheet and carries a series of very clever and amusing drawings in colour by Lawson Wood, the series being entitled "The Correct Thing."

FROM Messrs. Edmund Bush and Son, Ltd. of Crown Point-road, Leeds, printers' engineer and furnishers, comes a perpetual wall calendar with interchangeable date cards. Handsomely produced, with gold lettering on red leatherette, the calendar makes a neat and useful addition to the office wall.

"SKILL of Hand alone is insufficient for Modern Needs" is the message of a handsome illustrated folder produced by Messrs. John Swain and Son, Ltd., to set forth the many ways in which they can assist printers and others in connection with process block making and other desiderata in the production of advertisements.

WE acknowledge and reciprocate the good wishes conveyed in a handsome card sent us by the printing house of M. C. Modi and Co., of Bombay, India.

Electrotypers and Stereotypers

MANAGERS & OVERSEERS' ASSOCIATION

The last meeting of the year was marked by a good attendance of the members of the Association, and took place on Tuesday of last week at the usual headquarters, St. Bride Institute, Bride-lane, E.C.4, the chair being occupied by Mr. J. Black (vice-president). Very little business was on the agenda for the consideration of the members.

Mr. W. M. Forsyth, on behalf of the stewards appointed for the members' informal dinner to be held on February 4th at "Ye Olde London Restaurant," Ludgate-hill, E.C., reported that the arrangements already made gave every promise of a successful evening.

A resolution was moved that a sum not exceeding £12 be granted from the funds of the Association to be placed at the disposal of the stewards to be spent for any purpose they might think necessary.

Mr. W. H. Longley (treasurer), in discussing the point, wanted more explicit explanation of the purpose of the grant, and a satisfactory reply being given, the resolution was unanimously carried.

One or two other matters of direct Association business engaged the attention of the members for a short while, and after the expression of seasonal greetings from the chair, the meeting terminated.

MESSRS. SAMPSON LOW, MARSTON AND CO. LTD., send us a copy of "Gladys Peto's Children's Annual," a volume which—with its profusion of delightful illustrations in black and white and in colour, together with a variety of large type reading matter in prose and verse—will bring joy to many a child this festive season. The price is 6s. net. The book is excellently produced and printed by Messrs. Hudson and Kearns, Ltd.

COMPETITION is keen at the base but there is none at the top.—*Wiseman.*

SPECIAL PREPAID ADVERTISEMENTS

Payment is accepted, for advertisements under the following headings, on the basis of seven words to the line (minimum three lines):—

Situations Vacant, Agencies,
Machinery for Sale and Wanted,
Businesses for Sale and Wanted,
Partnerships and Investment,
Miscellaneous.

One Insertion	3/0
Three Insertions	6/0

For every line exceeding three lines **6d.**

Situations Wanted.

Under this heading operatives are granted a Special Rate for a minimum of three lines (twenty-one words):—

One Insertion	1/6
Three Insertions	3/0

For every line exceeding three lines **6d**

THURSDAY, DECEMBER 27, 1923.

Printers and Process Block Prices.

MUCH interest has been aroused in the trade by the formation of the new company, Combined Photo-Process Users, Ltd., particulars of which appeared amongst the commercial intelligence in our issue of the 13th inst. The new company has circularised the printing industry with a view to getting master printers to become shareholders, and thereby obtain blocks at a promised 25 per cent. discount off present standard rates. The position is complicated, however, by the fact that there exists an agreement between the Federation of Master Printers and the Federation of Master Process Engravers whereby, in consideration of a discount of 2½ per cent. to certain members of the Federation of Master Printers, the latter Federation agrees, on behalf of its members, to uphold all prices set forth from time to time in the official schedule of the Federation of Master Process Engravers, and not to buy imported blocks. Both Federations are now giving serious consideration to the situation created by the new company, and we understand that the matter will come before the organisation committee of the Federation of Master Printers at a meeting on January 2nd, and be reported to a council meeting on January 8th.

* * *

Printers' Paper Samples.

A QUESTION of interest to many paper agents, merchants and printers, not to mention advertising specialists, is involved in the system of compiling and storing of samples and sample sheets of paper. We do not recollect having dropped across any authoritative exposition on the subject, which really is a very vital one closely linked up with trade development and turnover. The compilation of collective samples affects the maker and the merchant only, but the housing of samples affects alike the maker distributor and user of paper. It is an undoubted fact that a heavy percentage of sampling matter goes directly to waste, because there are so many printers without an intelligent interest in their business. Among smaller printers in particular there seems to be a disinclination to take advantage of the opportunities presented by the papermaker and merchant for speeding up business. Customarily, if the average printer requires to submit or secure any sample of paper not carried in stock, he sends out to the local merchant or writes the maker. A great deal of this time could be saved if he retained and classified the sample and sample books he inevitably receives. Unfortunately, there is no doubt that there are many printers who actually throw valuable sample books away rather than make a proper place for them. On this score there is something to be said for the papermaker or merchant who only issues his books on request or distributes them carefully through the medium of the representative staff.

* * *

November Paper Imports.

ARRIVALS of paper and cardboard in this country last month—amounting to 1,308,664 cwts.—show an increase of 214,171 cwts. (19·5 per cent.) over the corresponding month last year, and 595,756 cwts. (83·6 per cent.) compared with the same month for the preceding year. With the exception of the October returns, the imports for November represent the largest monthly figure occurring during the course of the year, and are higher than any individual month in 1922. Printings (530,746 cwts.) accounted for 40·5 per cent. of the total; packings and wrappings (339,854 cwts.) 25·9 per cent.; strawboards (286,607 cwts.) 21·9 per cent., and coated papers (11,854 cwts.) ·9 per cent. The only decline was in the case of millboards (83,197 cwts.), which formed 6·3 per cent. of the total quantity received. The total value of the month's imports—£1,368,376—marks an increase of £187,779 (15·9 per cent.) compared with November last year. January to November paper and cardboard receipts were considerably larger than in the corresponding period last year, the actual figures being: 11,497,902 cwts. (£12,430,246), against 10,018,454 cwts. (£11,259,940). There is thus an increase in quantity in favour of the present year of 14·7 per cent., while the value represents an advance of 10·3 per cent.

* * *

Sources of Supply.

WITH regard to the countries sending printings to the British market during the month, Newfoundland occupies by far the most prominent position with 243,946 cwts., an increase of 153,906 cwts. compared with the corresponding month a year ago. The next position on the list is taken by Norway, 70,207 cwts, an increase of 10,346 cwts. Supplies from Sweden (46,527 cwts.), however show a decline of 51,911 cwts. Germany's contribution (29,407 cwts.), although showing an increase of 21,388 cwts. compared with November last year, was on a similar scale to the average of the past few months. The figure of 137,668 cwts. credited to "other countries" is again a large item. In packings and wrappings the largest supplier was Germany with 133,376 cwts., a significant figure when compared with the 31,868 cwts. of November last year. While the receipts from Sweden (106,357 cwts.) show a decline of 6,349 cwts., those from Norway (48,879 cwts.) fell by 7,697 cwts. German shipments of coated papers to the British market rose from 3,969 cwts. in November last year to 5,908 cwts. last month.

THE increase in Norwegian exports during the first nine months of the present year is due chiefly to the enhanced exports of the paper, pulp and timber industries. The paper and cellulose exports alone show a rise of over 22½ millions to Kr,200.3 millions.

Honouring Mr. Chas. J. Drummond.

Complimentary Luncheon.

Numerous and well-deserved tributes were paid to the character and life work of Mr. Chas. J. Drummond, M.B.E., at a luncheon held in his honour on Thursday at the Holborn Restaurant. Lord Burnham, who presided over a gathering of about eighty friends and admirers of Mr. Drummond, was no less eloquent than other speakers in giving utterance to the virtues possessed by the guest of the occasion. Among those present were: Sir Ernest Benn, Bart., Sir Rowland Blades, Bart., M.P., Mr. Alfred F. Blades, Mr. H. C. Bolton, Sir Vansittart Bowater, Bart., Rt. Hon. C. W. Bowerman, M.P., Mr. W. I. Burch, Mr. W. R. Codling, C.V.D., C.B.E., Sir Cecil Harrison, Mr. George Eaton Hart, Mr. George W. Jones, Mr. W. Lindley Jones, Mr. E. S. Lendrum, Mr. T. E. Naylor, M.P., Sir Wm. Waterlow, K.B.E.

Apologies regretting absence from the gathering were received from Sir Evan Spicer, Sir Jas. Truscott and Sir Arthur Spurgeon.

Lord Burnham, in proposing the health of the guest, said he had known Mr. Drummond

Mr. Charles J. Drummond, M.B.E.

for many years, and on an occasion such as the present, he thought it was excusable if he dealt biographically with some of the distinctive periods of Mr. Drummond's long and public spirited life. Mr. Drummond was apprenticed to the printing trade the same year in which he (Lord Burnham) was born, and soon rose to office in the London Society of Compositors, which he joined in 1869. In those days he was really the adjudicator and umpire for the whole trade. There was no Master Printers' Association, and both sides to disputes, when they occurred, were quite willing to accept him as arbitrator and to abide by his award. Speaking of the good feeling that existed in the printing and allied trades, and which Mr. Drummond did so much to cultivate in days gone by, his lordship went on to say that he wished the industries throughout the country had the same feelings as they had. The interests of their trade were one and indivisible whilst the relations between employers and employed were healthy and friendly. That condition of things he attributed in no small degree to the pioneer work done by their guest in making these things possible, and preventing there being engendered those feelings of suspicion and sometimes hostility which have been the cause of so much industrial unrest. (Hear, hear.) Therefore, on that account alone, if for no other, he thought they were all under a great debt to Mr. Drummond for what he did in the early days of trade unionism in the printing trade. After referring to the appointment of Mr. Drummond as one of the first labour correspondents of the Board of Trade and his work on committees and tribunals during the War, and his work on behalf of some of the best institutions in the City, including the old printing school at St. Bride Institute, his lordship said that not only had he proved himself to be a good citizen, but in every sense their guest was a very remarkable man. That he could say without any exaggeration. The highest standard of British conduct and patriotism had been embodied in his pleasant personality. That being their opinion of him, it was sincerely gratifying to be allowed to take part in a testimonial that had attained to such a happy consummation, and which had, as a matter of fact, exceeded their anticipations. His Lordship then read the letter sent to Mr. Drummond on behalf of the committee, which, signed by himself, Sir George Rowland Blades and Mr. C. Bolton, was as follows:—"To Charles J. Drummond, M.B.E., J.P.—A committee has been formed for the purpose of embodying in some practical form our regard and respect for you and Mrs. Drummond, and to recognise your splendid services, not only to the printing trade generally, but for your great work in Masonic circles and for the cause of charity. We have much pleasure in informing you, on behalf of the committee and subscribers, that there has been a most gratifying response on all sides, with the result that we are in course of purchasing an annuity for you and your wife which, supplemented by the value of the life policy which you have surrendered, will amount to nearly £200, on your joint lives and to the survivor. It is the earnest wish of all concerned that you and your wife will have very many years of health and happiness to enjoy the rest you have so well earned."

The toast having been heartily accorded, Mr. Drummond, in returning thanks, said he felt a certain difficulty in the circumstances in which he was placed to say what he would have liked. He appreciated far more than words could convey the splendid and successful efforts of the committee on his behalf. He doubted whether any Fleet-street man dared look forward to a gathering so representative of all walks of life in connection with the printing and allied trades. He could not promise that he would yet retire into private life, because, frankly, he could not do it. Scarcely a post reached him without a request from someone to do something, and it gave him the greatest possible pleasure to assist. (Cheers.) He had tried in a humble way to realise that life was not worth living if lived for oneself alone. (Cheers.)

Mrs. Drummond—who was the only lady present—was asked to say a few words, and replied: "I thank you all for what you have done for me and my dear husband."

Mr. Bowerman, in proposing a vote of thanks to the chairman, referred to the warm interest Lord Burnham always took in all that concerned the welfare of the printing trade.

Sir Vansittart Bowater, seconding, also spoke of the kindness displayed by the chairman in giving so much of his valuable time on behalf of the trade.

Lord Burnham, in replying, said that both the proposer and seconder were old friends of his. Mr. Bowerman was at one time Father of the Chapel in the *Daily Telegraph* and Sir Vansittart Bowater was a man of much more than local reputation.

Personal.

Viscount Burnham will preside at the inaugural banquet of the International Advertising Convention at 7 p.m. on January 9th, at the Savoy Hotel.

Mr. Percy W. Greenaway, printer and stationer, of Camomile-street, Bishopsgate, was on Thursday last week elected alderman of the ward of Bishopsgate, in succession to the late Sir Edward Moore. At the poll Mr. Greenaway obtained 963 votes against 237 for Sir Chas. Eves.

In Mr. Andrew Melrose's annual competition for 250 guineas for the best first novel, the eighth prize winner is Mr. A. G. Thornton, a member of the literary staff of the *Daily Chronicle*.

Mr. Robert Neasham, of the composing-room staff of the *Yorkshire Post*, has retired after over half-a century's service. Four years ago Mr. Neasham was the recipient of a presentation from the proprietors on completing 50 years' service.

THE
UNIVERSAL MODEL "C" ENGRAVING MACHINE

is a machine of precision for the production of copperplate engravings and steel dies.

Simple in operation and quickly learnt, it will earn its cost in a few months.

Saves loss of eyesight and consequent loss of skill to the engraver, performing the drudgery of his work. Upwards of 100 different styles of lettering available. With its adjustments, from one masterplate, hundreds of different heights, widths, spacings and slopes of lettering from a complete alphabet can be obtained. Circular masterplates for company seals and monograms can be supplied.

NEWTON PRESS, LTD.—Capital £500, in £1 shares; printers, binders, stationers and publishers, proprietors and publishers of newspapers, journals, magazines and other literary works, advertising agents and contractors, etc. (Private company). Directors: M. Heseldin and Mrs. M. Bernstein. Registered office: Newton Works, Macklin-street, Drury-lane, W.C.2.

ALF. HARRISON AND SON, LTD.—Capital £10,000, in 5,080 preference shares of £1 and 19,680 ordinary shares of 5s. each; to adopt an agreement with A. E. Harrison, G. W. Harrison and H. T. Harrison, and to carry on the business of publishers, printers, newspaper, magazine and periodical proprietors, advertising contractors, etc. Private company. First directors: A. E. Harrison, G. W. Harrison and H. T. Harrison. Registered office: 224, Burley-road, Leeds.

HORSESHOE PUBLISHING CO., LTD.—Capital £1,000, in £1 shares; to adopt an agreement with C. H. Stacey for the acquisition of the business carried on as the Horseshoe Publishing Co. at St. Leonard's chambers, Bristol, together with the premises, plant, stock, furniture and other properties connected therewith. Private company. Subscribers: C. H. Stacey and Mrs. E. R. Stacey. Registered office: St. Leonard's-chambers, Bristol.

S. MITCHELL AND CO., LTD.—Capital £12,500, in £1 shares; to acquire the business of S. Mitchell and Co., of 7, Burnett-street, Bradford, packing material manufacturers and merchents; to adopt an agreement with Herbert Mitchell, A. B. Mitchell, Hubert Mitchell and Lillie Mitchell, and to carry on the business of manufacturers, importers and exporters of, agents for and dealers in packing materials of paper, rubber, rope, etc., and their substitutes, paper bag makers, printers, lithographers and manufacturing stationers, etc. Private company. First directors: Herbert Mitchell, A. B. Mitchell, Hubert Mitchell and Mrs. L. Mitchell. Registered office: 7, Burnett-street, Bradford.

T. B. GRIMSHAW, GOODWIN AND CO., LTD.—Capital £8,000, in £1 shares (2,000 5 per cent. cumulative preference and 6,000 ordinary); manufacturers and merchants of all kinds of rope, twine, string and paper, etc. Private company. First directors: T. B. Grimshaw, F. Grimshaw and W. B. Grimshaw. Registered office: 8, New Cannon-street, Manchester.

THE WORLD LIST OF SCIENTIFIC PERIODICALS.—(The word "limited" being omitted from the title by licence of the Board of Trade). To take over from the proprietors an unpublished manuscript (referred to as the World List) being a list of periodicals containing the results of scientific research with an indication of the libraries in Great Britain, where such periodicals are to be found, together with all books, documents and papers relating to the "List" and benefit of all contracts and engagements, to which the proprietors are entitled in connection therewith, and to adopt an agreement with Sir Arthur Schuster, P. C. Mitchell and R. Mond. Management vested in Council, first members of which are:—Sir Arthur Schuster, Kt. Ph.D., D.Sc., etc., P. C. Mitchell, C.B.E., F.R.S., D.Sc., and R. L. Mond, M.A., F.R.S.

HARRIS, EDWARDS AND CO., LTD.—Capital £5,000, in £1 shares; manufacturers and merchants and wholesale and retail dealers in all kinds of drapery, stationery and goods manufactured of paper, etc. Private company. First directors: P. S. Cohen and J. E. Edwards.

MCCLELLAND ADVERTISING CO., LTD.—Capital £5,000, in £1 shares (4,000 preferred ordinary and 1,000 deferred ordinary); to acquire the organisation and business of J. A. M. McClelland and to carry on the business of advertising agents and contractors, etc. Private company. Subscribers: E. S. Evans and F. Richards. Registered office: 104, High Holborn, W.C.

COMPANY MORTGAGES AND CHARGES.

Fresh Obligations registered pursuant to Section 93 of the Companies' (Consolidation) Act, 1908, and Satisfactions registered pursuant to Section 97 of the same Act. (The registration of Satisfactions is not compulsory).

HUDSON AND STRACEY, LTD. (printers, etc., Watford and London).—Deposit on December 7th, 1923, of lands, buildings and hereditaments known as Loates-lane, Watford, to secure all moneys due or to become due from company to Barclays Bank, Ltd.

EMERY AND SON, LTD. (artistic and commercial printers, newspaper proprietors, etc., Hove and London).—Particulars filed of £6,000 5th debentures authorised September 27th, 1923, charged on the company's undertaking and property, present and future, including uncalled capital (subject to £500 first, £500 second, £2,590 third and £500 fourth debentures) the whole amount being now issued).

HUGH STEVENSON AND SONS, LTD.—Bond and disposition in security charged on certain lands, premises, machinery, etc., in Glasgow, Perth and Leith, dated December 5th, 1923, to secure all moneys due or to become due from company to the Midland Bank, Ltd., to the extent of £10,000, and three years interest thereon at 5 per cent. per annum amounting together to £11,500.

ALF. PARKMAN, LTD. (printers and wholesale stationers, etc.).—Mortgage dated December 10th, 1923, to secure all moneys due or to become due from company to Lloyds Bank, Ltd., not exceeding £1,200. Property charged: 29 and 30, Marlborough-street, Bristol, and factory in the rear thereof.

MISANI GOODERHAM YOUNG, LTD. (advertising agents, etc, London).—Particulars filed of £600 debentures authorised by resolutions of November 22nd and 30th, 1923, charged on the company's property, present and future, including uncalled capital, the whole amount being now issued.

HENRY HUGHES NEWSPAPERS, LTD.—Deposit on November 23rd, 1923 of deeds of the printing works and offices at Clarence Corner, Pontypool, to secure all moneys due or to become due from company to Barclays Bank, Ltd.

JUPP AND MARTIN, LTD. (manufacturing and general stationers, paper merchants, etc., Brighton).—(a) Debenture dated December 3rd, 1923, to secure not more than £750, charged on the company's undertaking and property, present and future, including uncalled capital (if any). Holder: A. Willmott, 14, Old Jewry Chambers, E.C. (b) Second debenture of even date to secure all sums not exceeding £400 now or to be owing to the mortgagees, charged on the same property and subject to the above charge. Holder: Mrs. E. S. Martin, 16, Macaulay-road, Clapham, S.W.

BANKRUPTCIES, etc.

Re MAYFAIR, LTD.—Under the winding-up order made against this company, proprietors and publishers of *Mayfair*, on July 31st last, Mr. J. Barwick Thompson, assistant official receiver, has now issued his report on the liquidation. The debenture-holder, Mr. J. C. Keen Hargreaves, says that, if the realisations of the receiver, who was appointed on his behalf on August 2nd last, from the publication of a proposed issue of *Mayfair* are successful, he will forgo a portion of the moneys which will accrue to him in order that the claims of the creditors may be satisfied. The statement of the company's affairs shows liabilities of £9,906, and, in the case of creditors, a deficiency of £2,710.

Re ELDRED ALEXANDRE HENRY HUNTER, paper agent, late of 193, Upper Thames-street, E.C., and Riverscroft, Shepperton.—A general meeting of the creditors under this failure was held on December 12th, before Mr. F. Vyvyan, official receiver, at the London Bankruptcy Court. The receiving order was made on September 19th, 1923, and accounts had been lodged showing liabilities £9,326 against assets valued at £578. The chairman explained that the meeting had been called to appoint a trustee in the place of the official receiver, and after some discussion a resolution was passed for Mr. W. A. J. Osborne, accountant, Balfour House, Finsbury-pavement, E.C., to act in that capacity with the assistance of a committee of inspection.

BRITISH PAPERMAKERS (EXPORT), LTD.—A meeting of the creditors of this company, in voluntary liquidation, will be held at the London Chamber of Commerce, Oxford-court, Cannon-street, E.C.4, on Friday, the 28th inst., at three o'clock. Mr. Leonard G. Lane is the liquidator.

JOHN ALLEN AND SONS (IVYBRIDGE), LTD.—At a meeting of creditors of John Allen and Sons (Ivybridge), Ltd., held at Donnington-house, Norfolk-street, Strand, W.C.2, recently the liquidator, Mr. R. J. Blackadder, stated that the petition for the compulsory winding-up of the company had been withdrawn. He explained the position to the creditors, and it was decided to continue Mr. Blackadder as voluntary liquidator.

PARTNERSHIPS DISSOLVED.

F. M. Cooper and C. H. Wood, publishers, 45, Pearl-chambers, East Parade, Leeds, under the style of the Standard Publishing Co.

W. J. Belsey and C. S. Grace, commercial advertising specialists and contractors at Blenheim Chambers, Junction, Southampton, under the style of Belsey Brothers and Grace.

THE BANKRUPTCY ACT, 1914.

RECEIVING ORDER.

G. M. Maynard, 344, Yord-road, Wandsworth, London, printer.

Thomas De La Rue and Co.

The Convertible 8 per cent. mortgage Debenture Stockholders' Committee, appointed last June, have now issued their first report. This states that the whole of the circumstances surrounding the sale by the Messrs. De La Rue to Warrillows, Ltd., of a majority interest in the company, and the subsequent issue of debenture stock to the public, have been submitted by the company to two eminent counsel, and, acting on their advice, legal proceedings have been instituted against Mr. Stuart De La Rue, the former governing director and one of the vendors. These proceedings are being taken in the name of the company.

Warrillows, Ltd.

Mr. Justice Romer in the Chancery Division last week sanctioned a scheme of arrangement and a petition for the reduction of the capital of Warrillows, Ltd.

Mr. Whinney, for the company, said they carried on extensive business at Birmingham as lithographers, printers' sundriesmen, box-makers, etc. The capital was £500,000, which was increased to £700,000, but the company got into difficulties and it was through the help of the bank, who were the largest creditors, that the company was able to get on its legs again. He detailed the financial arrangements that had been made and said that the capital was to be reduced from £700,000 to £270,000.

His Lordship, in giving his sanction, also dismissed a petition for the compulsory winding up of the company, presented by J. S. Davey and Sons, Ltd.

Chas. Marsden and Sons, Ltd.

In the Winding-Up Court, on the 18th inst. Mr. Justice Romer made an order for the compulsory liquidation of Charles Marsden and Sons, Ltd., papermakers, on the petition of Charles Walmsley and Co., Ltd., engineers, of Atlas Works, Elton, Bury.

Mr. W. Hart, who appeared for the company, asked for an adjournment with a view to a scheme of arrangement. A meeting of the shareholders had been called for last Friday, and it was hoped that a scheme would shortly be put forward which would secure for the unsecured creditors a larger amount than they were likely to get by a compulsory order.

Mr. H. C. Bischoff, who said that this was a company of the Becker Group, explained that the petitioners were judgment creditors for over £28,000. He opposed any adjournment which was being asked for, not to make any proposals to avoid the petition, but to get rid of it by passing a resolution for a voluntary liquidation. The notice for this purpose was issued after the petition was presented. The debt was not disputed and there was no answer to the petition.

Mr. Hart said the company was one of considerable magnitude, employing some thousands of hands, and it would need a little time to consider the position.

After Mr. Hart had read an affidavit and Mr. Bischoff had read a circular issued by the company, his lordship said the directors seemed to want a liquidation.

Mr. Hart: With a view to reconstruction.

Debenture Holders' Actions.

A motion for judgment in the debenture holders' action, National Provincial and Union Bank against the Irish Paper Mills Co., Ltd., came before Mr. Justice Tomlin in the Chancery Division on the 18th inst.

Mr. Bischoff, for plaintiffs, said they were trustees of the trust deed of the debentures.

His Lordship made the usual order in a debenture holders' action that the trusts of the indenture be performed.

Dobson *v.* Charles Marsden and Sons, Ltd. papermakers, was another debenture holders' action which came on as a motion for judgment in default of defence.

Mr. Hind, for the plaintiffs, said he could not proceed with the matter because that morning the defendant company had been wound up.

The motion was accordingly adjourned.

Premier Paper Mills, S.A.

The Premier Paper Mills, Ltd., Klip River, near Johannesburg, has at last turned the corner after a long period of pioneering and experiment, not unmixed with many disappointments, and is now earning a substantial profit on its issued capital, says the *British South African Export Gazette*, on the authority of a correspondent in South Africa. The following observations are added by the writer: "I am very glad to be told this, bearing in mind the fact that I have in the past freely expressed my opinion that without a substantial protective tariff, the manufacture of paper in the Union was, from the economic point of view, foredoomed to failure. At the time I wrote, the company had abandoned the use of wattle bark as their raw material, experience having proved that it was too expensive to handle and treat, and had fallen back upon imported pulp. But it was found that this expedient was an equally unsound proposition commercially, and in the end the Government had to come to the rescue of a promising nascent industry by imposing a heavy duty on imported paper bags, kraft, candle carbon papers, etc., similar to those being locally manufactured. In addition, the Railway Administration made a substantial reduction in freight, and accorded a similar preferential rate for imported size and other essentials used in the production of the company's products.

"With this full measure of protection the Premier Paper Mills would seem to be well on its feet. At present there is one machine installed for making paper bags which has an output of five tons per month, and this department of the company's business has proved so successful that another is to be laid down shortly. My informant also tells me that, in addition to kraft and candle papers there is every prospect of the company shortly starting the manufacture of paper for 'news' and other purposes, the experiments the directors and their experts have been conducting with the baobab having proved it to be the finest wood fibre in the world, and capable of making anything from 'news' to the best quality writing paper. As a result, the company has obtained a concession of 50,000 acres of baobab, which is the largest tree known, and grows to a great age, or sufficient to supply all its needs in pulp for the next 50 years." A special plant to treat this fibre is mentioned.

AN application was made to Mr. Registrar Francke on December 14th for the recision of the receiving order in the case of "George Harrison" and this was granted.

THE Darwen Paper Mill Co., Ltd., Darwen, announce the resignation, owing to ill-health, of their London representative, Mr. T. Gilbert Paton, who has held the position for the last 20 years, and whose services gained the confidence and appreciation of the company. Mr. Paton will be succeeded by Mr. H. Vernon Coles, of Messrs. Coles, Son and Co., Bridge House, 181, Queen Victoria-street, E.C.4. Mr. Coles, who has a thorough knowledge of the "news" branch of the trade, will represent the mill as agent in London from January 1st next, and no doubt will receive the support extended to Mr. Paton in the past.

Government Contracts.

Contracts were placed with the following firms during November:—

Stationery Office.

GALLEYS.—Hewitt Bros., London, W.C.

PRESSES.—G. and G. Ponton, Glasgow.

Employment in Paper and Allied TRADES.

Reporting on the condition of employment in the paper trade the *Ministry of Labour Gazette* for December states this was moderate on the whole; it showed a slight improvement, but a number of mills were still working irregularly. With letterpress printers employment was generally fair and better than in the previous month, the General Election creating a certain amount of extra work. Some short time was, however, reported in London, and employment was reported as bad at Bradford and Aberdeen, whilst some decline was reported at Glasgow. In the lithographic printing trade employment was bad at Manchester and Liverpool, and generally fair at the other principal centres. With bookbinders employment was generally moderate, and showed some improvement on the previous month in London.

Statistics concerning unemployment in insured industries gives the estimated number of persons in paper and paper board making as 56,560, made up of 40,440 males and 16,120 females. The number of unemployment books remaining lodged at November 26th was 5,165, of whom 3,840 were males and 1,324 females. The percentage unemployed at November 26th was 9·1—9·5 in the case of males and 8·2 in that of females. The increase as compared with October 22nd was 0·1 per cent. males, showing a decrease of 0·1 and females an increase of 0·7. In cardboard boxes, paper bags and stationery, the estimated number of insured workers is given as 55,640, comprising 19,740 males and 35,900 females. The total number unemployed at November 26th was 3,712 (1,156 males, 2,556 females). The percentage unemployed in Great Britain and Ireland was 6·7 (6·6 in Great Britain only), the percentage of males being 5·9 and females 7·1. Compared with October 22nd, the total decrease was 0·6 per cent., 1 per cent. representing females, while apparently there was no change in the case of males. In wall paper making and staining out of a total estimated number of employees of 4,780, 185 were unemployed, or 3·9 per cent., representing an increase of 0·3 per cent. as compared with October 22nd. In stationery and typewriting requisites (not paper) 240 were unemployed at November 26th out of an estimated total of 4,800 workpeople. The total percentage of unemployment was 5·0, a decrease of 0·4 as against the position on October 22nd.

The estimated number of insured persons in printing, publishing and bookbinding is given as 231,010, and of this number 12,170 were unemployed at November 26th, 8,139 being males and 4,031 females. The total percentage of unemployment was 5·3—5·4 in the case of males and 5·0 in females. A total decline of 0·3 per cent. is shown as compared with October 22nd, there being a decrease of 0·6 in males, but an increase of 0·1 in females.

A table which summarises the returns from trade unions relating to unemployment shows that out of a total membership of 76,741 in printing, the percentage of unemployment at the end of November was 3·5, as against 4·6 at the end of October and 5·2 at the end of November, 1922. There was a decrease of 1·1 in the month and of 1·7 on the 12 months. With regard to bookbinding there were 14,537 union members, and the percentage unemployed at the end of November was 3·8, at the end of October 4·5 and at the end of November, 1922, 6·2. The declines were 0·7 and 2·4 respectively compared with a month and a year before.

Returns furnished by pulp and paper trade unions in Sweden concern a membership of 7,663 at the end of September. The percentages unemployed were 2·8 at September 30th, 2·2 at August 31st, and 5·0 at September 30th, 1922.

Finnish Paper Mills.

In a review of the economic situation in Finland, *Mercator* for December 7th says: The depression of prices from which the principal exports are suffering has begun to result in limitation of output and stoppages. In the paper industry there are altogether rather more than 60 machines, and 12 of these (at six mills) are now idle, so that the total output of paper, which is about 220,000 tons annually, has been reduced by between 15 and 20 per cent.

Mr. Thomas E. Clarkson.

Mr. Thomas E. Clarkson, who has been appointed general manager of the Turner Paper Mill Co., Ltd., Rawcliffe Bridge, Rawcliffe, Yorks, in succession to his brother-in-law, the late Mr. Joseph Turner, has spent 31 years in the paper trade. He commenced his papermaking career at the Star Paper Mill, Fenniscowles, during the time that Mr. Joseph Turner was general manager. In these early days Mr. Clarkson was an evening student at the Blackburn Technical School in chemistry and commercial subjects, obtaining a first prize for shortland in his second year. Just over 25 years he accompanied Mr. Turner to Rawcliffe, and when his brother-in-law was taken ill in 1915, Mr. Clarkson was appointed general manager, a position he occupied for two years, by which time Mr. Turner, had recovered and again took charge. Mr. Clarkson was then appointed deputy manager, and has now, on the lamented death of Mr. Turner, been again appointed general manager.

Assiduous in studying the technical side of papermaking, Mr. Clarkson attended the Saturday afternoon classes in paper manufacture, held at the Manchester Technical School, in 1900 and 1901. As a consequence, he took certificates of the City and Guilds of London Institute and the Papermaker's Association, while for home-work done during the session, he headed the list with 197 marks out of a possible 210. It is interesting to note that the marks were awarded by Mr. Julius Huebner, the teacher of the class.

Public work has also claimed a great deal of Mr. Clarkson's time. For six years he was chairman of the Rawcliffe Parish Council and represented that body on the Rawcliffe and Snaith Education Sub Committee as well as on the Rawcliffe Education Charity. He also acted as one of the employers' representatives on the Goole War Pensions Committee during the war. Since the Armistice, however, he has not sought election on the council, and the only public office he holds at present is that of vicar's warden at Rawcliffe Parish Church, a position he has held for nine years.

Mr. Clarkson is a keen cricketer and has been a playing member for the Rawcliffe United Cricket Club for 25 years.

German Paper Indusry.

A review of German trade and industry, based on reports of the Prussian Chambers of Commerce for November and furnished to the Department of Overseas Trade by H.M. Commercial Secretary at Berlin, has the following to say regarding the paper industry:

The degree of employment in the paper industry was, in general, not unfavourable as compared with other branches of industry. By the middle of October, however, the number of unsatisfactorily employed works which had to curtail working hours or work for stock preponderated. Since then the position has grown considerably worse. The financial difficulties (growing costs of production, diminishing receipts owing to falling off of sales, restriction of credit and the difficulty of obtaining the latter from the banks) increased continually and the stock of orders was reduced.

According to one report from an industrial association, inland trade was practically at a standstill. The raising of even the most necessary funds for raw materials, wages and salaries, etc., met with the greatest difficulties. In order to maintain the factories, the industry is more than ever dependent on exports. In the paper producing and working up industry, the possibilities of export in general declined more and more, owing to excessively high prices. For the rest, the conditions as regards production were not unfavourable, especially for the paper raw material industry. The water conditions improved, and sufficient German coal was obtainable (the demand having fallen off in view of restrictions of work), though it was, in part, more expensive than British coal. The supply of auxiliary materials, with the exception of dyes, was adequate. The production of wood pulp increased, but the demand was generally small.

Don't lay your faults to inheritance but to lack of insistent effort.

Death of Mr. Daniel McNeill.

We regret to announce the death of Mr. Daniel McNeill, for some time general manager for Jas. Cropper and Co, Ltd, Burneside Mills, Kendal.

Mr. McNeill came of an old papermaking family, and was the third son of Mr. Daniel McNeill. He was born at Currie, Midlothian, in the year 1860. He served his papermaking apprenticeship at Kinleith Mills, and from there went to Robt. Craig and Sons, Airdrie. Leaving there, he took up the position of night foreman at the Northfleet Paper Mills, Kent, where he got his first experience of wood pulp boiling, which material was then in its infancy. He afterwards spent short periods in Ainsham and Beltonford Paper Mills, Dunbar.

Mr. McNeill went to Burneside in 1889, and it was not until 1922 that he resigned, but he continued to live on at his home there till his death. He was no doubt a victim of the strains of the war years, when extra responsibility and extra work were cheerfully taken on under increasingly difficult circumstances

When he resigned the following reference was made to the fact at the shareholders' meeting of Jas. Cropper and Co, Ltd.:—"Since we last met we have lost the services of our general manager, Daniel McNeill. His health compelled him to resign his active duties here last October. He still remains on our staff in an advisory capacity, but we shall all miss more than we can say his cheery presence among us and his wisdom and clear-sightedness in business matters. His influence on the policy and construction of our mills will remain with us for all time. He came to Burneside in 1889, when the production of the company was 3,700 tons a year. He has seen that production trebled in 33 years, and he has maintained the name and quality of our paper and made it respected throughout our land."

During the war Mr. McNeill rendered valuable service in the papermaking industry of the country. He served on the Northern Committee of the Papermakers' Association, and was chairman of the M.G. and Fine Glazed Section.

In his younger days he was an athlete of some distinction, and in later years took a keen interest in golf, being a prominent member of the Kendal Golf Club, of which he was captain in 1912–13 and president 1915–22. He was afterwards elected a life member of the club. He took an active part in all matters affecting the welfare of the inhabitants of the district, besides being chairman for many years of the local Conservative Association and chairman of the Bryce Institute in the village of Burneside. He was for some years chairman of the Finance Committee of the Westmorland Insurance Committee.

News-print Production.

According to the News-Print Service Bureau, New York, which gives statistics for October, the 45 United States companies reporting produced 122,073 tons and shipped 124,894 tons; the 20 Canadian companies produced 114,475 tons and shipped 112,996 tons, making a total production of 236,548 tons and shipments of 237,890 tons in both countries. These companies also produced 2,167 tons of hanging, of which 630 tons were made in Canada. Shipments in United States exceeded production by 2,821 tons and production in Canada exceeded shipments by 1,479 tons. Stocks at the end of October totalled 21,934 tons in the United States and 20,123 tons in Canada, a combined total of 42,057 tons which is equivalent to 4·5 days' average production.

Comparing production of 51 identical companies during the first ten months of 1923 with that of the same period of 1922, the United States companies show an increase of 52,813 tons, or 5 per cent., the Canadian companies an increase of 163,286 tons, or 18 per cent., and the total of all these companies shows an increase of 216,099 tons, or 11 per cent.

The average daily production of newsprint paper by these 51 companies reporting for October amounted to 92·8 per cent. of the average daily output during the three months of greatest production in 1922, with allowances for changes in machines, the loss in production being chiefly caused by low water.

New Inventions

Casting Printers' Strip Material.

A patent by the Lanston Monotype Corporation, Ltd., relates to means for guiding and actuating the matfix in apparatus of the kind described in Specification 110,013 for casting printers' strip material. The matrix is guided on all four sides in an opening 15, Fig. 5, in a block 14, which is screwed to the side block 2, Fig. 2, of the mould. The block 14 is preferably formed with a groove 21 to avoid injury to the design on the cast element during ejection. The matrix is in the form of a rectangular block 19, Fig. 4, which may have a design on its lower face, and is then preferably formed with a slot 19¹ to mark the degree of overlapping of the matrix design upon the element, and to facilitate the seating of the matrix upon the design. The matrix has a slot 22 to receive a T-shaped head 25 on an actuating rod 26, which is operated by the centreing pin lever 13. The head 25 has vertical play in the slot 22, and has a flat pressure pad 36 on its lower face. The actuating rod is operated through a spring 27 by a plunger 29, the upper reduced portion of which is detachably engaged by the centreing pin lever 13. The lever moves between nuts 31 and a washer 34 on the plunger so as to have a certain amount of idle movement. The side walls of the mould are clamped together by a pressure screw in known manner. The rear end 38 of the mould blade is preferably curved to give a point contact with the adjustable stop. The forward end of the blade may have a step or projection 39 to prevent the cast element from being lifted with the matrix. The mould base may have a clearance 40 so that the cast element does not rub against it. Specifications 7,202, 1915, and 109,480 are also referred to.

FIG. 2.

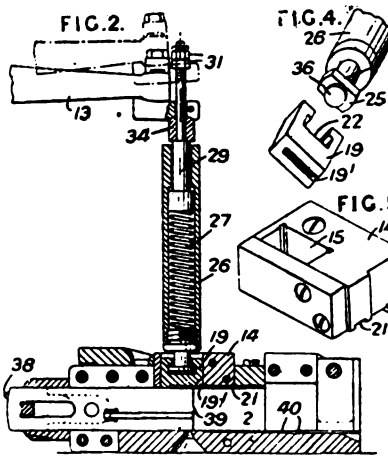

FIG. 4.

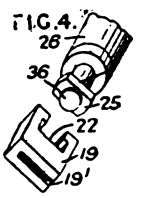

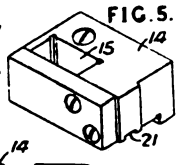

FIG. 5.

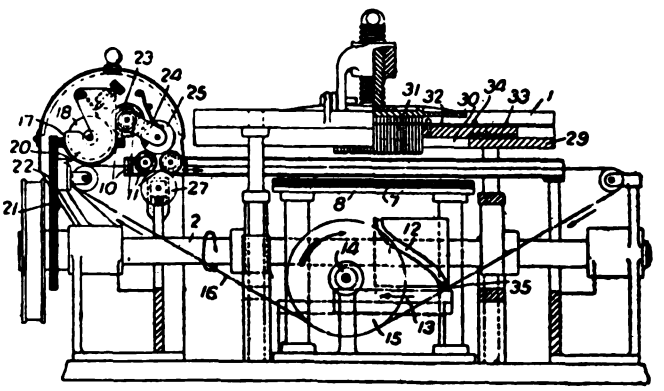
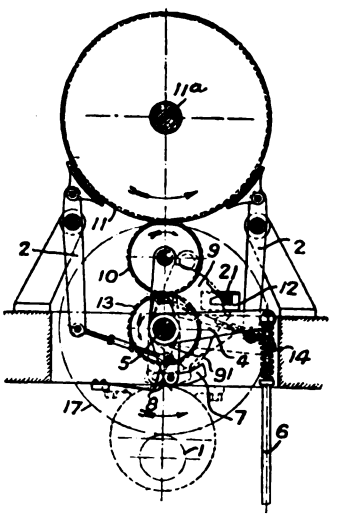


Printing and Embossing Surfaces.

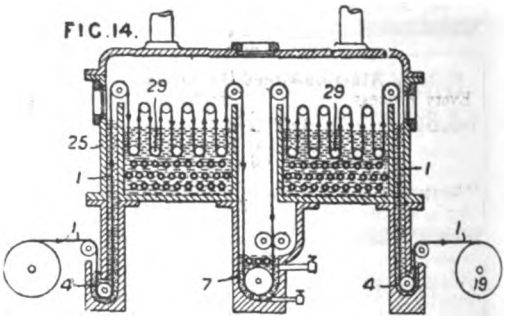
By an invention patented by Mr. M. Schlötter, printing, etc., rollers are manufactured by depositing electrolytic iron upon a cylindrical metal core, annealing the deposited iron and hardening it after it has been worked upon. The core may consist of the shaft on which the roller is to be mounted or it may be an easily fusible alloy which is subsequently melted out. A protective coating of nickel or other metal may be electrolytically deposited on the completed roller.



Platen Inking Apparatus and Type-Holders.

In an invention patented by Mr. A. Wilden the type 31 of a small platen machine, comprising a vertically reciprocating type bed 1 and a rubber impression surface 7 on a table 8 over which the web to be printed is drawn intermittently, is inked by rollers 11 on a carriage 10 reciprocated by chains 16 passing round chain wheels 15 actuated by a pinion 14 engaging a rack 13 moved backwards and forwards by means of a pin 35 engaging a grooved cam 12 on a rotating shaft 2. Ink is supplied from a roller 18 in a trough 17 having slight horizontal play in the machine frame so that a pin 21 on a gear wheel 22 moves the trough and its roller intermittently to the right, and transfers ink to the driven gelatine roller 23, the trough and its roller being returned to the left by a spring 20. From the gelatine roller 23 the ink is transferred to a steel spring-pressed distributing roller 25 carried by links 24. A second spring-pressed roller 27 also contacts between the inking rollers 11 when they reach their left-hand end position. The roller 25 is cut at an angle at one end and pressed by an axial spring against a fixed pin so as to receive an endwise movement. The types 31 project through openings 30 in the bottom 29 of the type bed 1, and are formed at the top with projections resting on the edges of hollow type holders 32. Slides 33 are provided in the ends of each type holder to enable the types to be clamped in any suitable position, these slides having an actuating pin 34 and a spring 35 for retaining them in set position.

Rotary Machine Gearing.



Under an invention by the Maschinenfabrik Augsburg-Nürnberg Akt. Ges., rotary printing machines are driven at the start by an auxiliary slow speed drive which is cut-out when the main drive attains a speed greater than the low speed, the arrangement being such that the auxiliary drive takes place through a gear wheel which is mounted so as to be released automatically from the wheel it drives. As shown, the printing machine is geared to the shaft 11ᵃ of the main motor, and the auxiliary motor 1 is geared by a wheel 17 to a countershaft 5 geared by a wheel 13 to a wheel 10 mounted in a quadrant lever 9 pivoted about the shaft 5. The lever 9 is moved to bring the wheel 10 into gear with the wheel 11 when the auxiliary motor is started, by a pawl 7 on a three-armed lever 4 which is actuated to release the machine brakes 2 by an electromagnetically-operated rod 6 acting through a spring 14. When the main motor is thrown in, the lever 9 is returned to its inoperative position on the wheel 11, attaining a greater speed than wheel 10 by the action of the teeth of the wheel 11, which act to move the lever 9 in a clockwise direction, and so moves the wheel 10 out of gear. A stop 12 limits the motion of lever 9, and a spring 8 causes the pawl 7 to re-engage notch 9¹ when the brake is put on. The machine may also be driven by hand in either direction by moving wheel 17 axially into gear with a hand-operated gear. The lever which changes the gear energises the brake magnet to release the brake and throw in wheel 10. A bolt 21 is also operated to lock the lever in position, and allow the machine to be driven in either direction by the hand-drive.

Coating and Dying.

In an invention by Mr. O. Minton, Coating and impregnating apparatus is combined with a liquid-sealed vacuum drying chamber. The web 1, for example, of paper, passes through a mercury seal 4, round rollers 29 immersed in heated mercury, then through a bath 7 of the liquid with which the web is to be treated, round more drying rollers 29, and then out of the evacuated chamber 25 by way of the second liquid seal 4 to a winding-up spool 19. The bath 7 may alternatively be located at the entrance or the exit of the chamber, and the drying means may take other forms such as heated cylinders or electric heaters between suspended loops of the material.

FIG. 14.

Water Resisting Paper.

According to an invention for which a patent application has been made in this country by Mr. E. Fues, neutral salts, such as calcium and magnesium chloride, which in certain conditions exercise an acid action, are employed in addition to, or in place of, the acid substances used in the process for the manufacture of water-resisting paper claimed in the parent Specification. Relatively large quantities of colloidal substances such as casein, animal glue, &c., may also be added, and also colouring-substances and glycerine, sugar, &c., which latter render the paper flexible. The casein or animal glue may be added in the rag-engine, or paper may be impregnated with a solution of acid-acting substances, formaldehyde and glue. The solutions may be applied cold or heated, and either by impregnating or by coating. The coating process may be carried out in stages, the different reacting ingredients being applied on opposite sides of the paper. The product may be coated with varnish, asphalt, pitch, tar, or the like, and threads, fabrics, and the like may be embedded in the covering layers thus put on. A cardboard or millboard may be produced by uniting several water-resisting webs, or these webs may be combined with other untreated paper webs.

Disinterested Advice.

In "Notes for Buyers," the house organ of Messrs Spicers, Limited, "Ubique" writes: "By the way do you take in the weekly journal of the craft, the 'BRITISH AND COLONIAL PRINTER AND STATIONER'? I haven't a farthing of money interest in it, but fair's fair; and when I see this country producing a weekly printing trade paper which the craft in other great countries cannot produce, and when I see such plenty of good craft matter in it, I feel constrained to put in a word about it. You are surely not doing yourself justice unless you take it and regularly glance over it."

SUBSCRIPTION FORM.

Please send me weekly "The British and Colonial Printer and Stationer," at 13s. per annum (including postage) until countermanded.

Wholesale Stationers.

Council Meeting of the National Association.

The forty-first meeting of the National Council of the National Association of Wholesale Stationers and Paper Merchants was held at the Council Chamber on Thursday, December 13th, Mr. A. Dykes Spicer (the president) being in the chair.

It was agreed that all members should be advised with regard to the terms on which the National Council recommended that business should be conducted with reference to purchases from abroad.

It was hoped to arrange a further joint meeting with the Federation of Master Printers early in the new year, points then to be brought forward being discussed by the National Council.

The subject of standardisation was fully considered, and arrangements are being made for a further conference to be held at an early date.

The question of the abolition of German export duties, as affecting the members of the Association, was fully considered by the meeting.

It was unanimously agreed to accept the invitation of the Honorary Advisory Council of the Seventh International Printing, Stationery and Allied Trades Exhibition, 1925, that the ruling president of this Association should become vice-president of the above Exhibition.

The attention of the National Council was called to the recent very great extension of the scope of the Inquiry Register and Debt Collecting Department, which has been carried on by the Association for many years. The membership of this department has recently been more than doubled, and now includes the majority of the leading houses in the trade. The efficiency of the department is greatly enhanced by reason of the fact that its special attention is directed specifically to the firms with whom wholesale stationers and paper merchants mainly deal, and in this respect the department is of the greatest use in affording to members the latest information in connection with such firms. Particulars were given of the very large amount collected by the Association on behalf of members, and the successful manner in which the department is carried on has been greatly appreciated by those participating in it.

Various subjects to be taken up with the Papermakers' Association were fully considered.

The general secretary reported that general objections to the proposed standard charges put forward by the railway companies under the Railways Act, 1921, had been lodged on October 13th last.

A report was also made on the meetings which had been held by the Railways and Traders' Conference (London Area), on the Traders' Panel of which this Association is represented.

Attention of members was drawn to the increased liabilities of employers as a result of the Workmen's Compensation Act, 1923, which would come into operation as from January 1st, 1924. A statement of the important amendments had been prepared by the general secretary and would be circulated to all members of the Association, together with certain advice on their position.

Certain questions raised in connection with delays in deliveries by the railway companies were considered, with a view to the necessary action being taken, and the opinion of the National Council was taken in connection with certain charges imposed by H.M. Customs, etc.

The annual meeting of the National Council will be held at 2.15 p.m. on Thursday, February 14th, 1924.

MR. E. M. FELLS, 14, Upper Thames-street E.C.4, who has just returned from a visit to the mills he represents in Norway and Sweden, informs us that the Aktieselskabet Papirfabriken Brager, Drammen, has been reconstructed, and that Consul Oscar Bommen has taken over the management of the company. The mill has been rebuilt, the machinery brought quite up to date, and it is now making first-class quality M.G. sulphites, caps, M.G. colours, and envelope papers. Mr. Fells is confident that the new company is in a position to fill all requirements in their grades of paper.

Pioneer Paper Trade Golf.

Coming-of-Age Dinner of the Glasgow and District Paper, Stationery and Allied Trades Golf Club.

A large company of members and their friends attended the "coming-of-age" dinner of the Glasgow and District Paper, Stationery and Allied Trades' Golf Club, which was held in the Grand Hotel, Glasgow, on December 12th. Mr. W. A. Collins presided, and was accompanied to the platform by Messrs. John Wylie, Jas. Paterson, Duncan Cameron, Wm. Maitland, J. Monte Wilson, Colonel Rose, Wm. Jeffrey, Wm. Brodie and D. Kirkwood.

The toast of the club was submitted by Mr. J. Monte Wilson, an ex-president. He was not, he said, one of the original quartet who started the society, but he joined in the second year, and he had happy recollections of those early days. He referred to the kindness of the Ayrshire clubs in granting facilities for their spring and autumn meetings, which were attended latterly by about 80 competitors. The club had done a great deal in creating a good social feeling among members of the trade.

Mr. W. Jeffrey, the president, in acknowledging, referred to the excellent work accomplished by the officials of the club during the past 21 years. They had got a splendid heritage, and it was their duty to hand it on undiminished in splendour.

The chairman, in proposing the health of Mr. David Kirkwood, who is resigning the secretaryship, which he has held since the club was started, said Mr. Kirkwood had been the life and soul of the organisation. He was a man of great energy and tact. He had the knack of making new members feel that they were good sportsmen, and his bonhomie at their golfing gatherings was infectious. He had very great pleasure in presenting him with a wallet of Treasury notes, a handsome clock, and a special golf club, also a gold watch chain, which had been subscribed for by the members, in recognition of his valuable services to the club. He hoped Mr. Kirkwood would long be able to attend their golf meetings. (Applause).

Mr. Kirkwood thanked the members heartily for the beautiful gifts. He mentioned that after he and three members of the trade had enjoyed a game at Western Gailes, he suggested the propriety of forming a club. A meeting was held in May, 1903, with Mr. George Parker in the chair. The attendance was small, but they were encouraged to go on by Mr. Collins, who from first to last had been "the power behind the throne." Their first president was Mr. Peter Craik, and he was succeeded by Mr. Monte Wilson, who, by his enthusiasm, put the club firmly on its legs. They had now a large membership, and several handsome challenge trophies. Theirs was the pioneer club in the trade, and he was glad to say that their example had been followed across the Border. (Applause).

Other toasts followed.

The entertainment was in the hands of Mr. James S. Chrystal and an excellent programme contributed to the pleasure of the evening.

U.S. Board Exports.

Total exports from the United States in September of bristols and bristol board reached 250,269 lbs., of the value of $18,629. Paperboard and strawboard exports were 4,811,107 lbs. ($217,386).

More than half the total export of bristol and bristol board went to Canada, namely, 161,525 lbs. ($8,797). Cuba was the only other considerable individual customer, with close upon 47,000 lbs. ($4,450), followed by the Philippine Islands with 9,917 lbs. ($826), and Australia 7,518 lb. ($1,030).

Total exports of paperboard and strawboard reached 4,811,107 lbs. ($217,385). Close upon half the total exports went to Canada, namely, 2,083,659 lbs. ($79,021). China absorbed 1,301,612 lbs. ($54,538), followed by Cuba 483,835 lbs ($17,469). Japan occupied the fourth place with 276,600 lbs. ($25,510) and Australia was fifth with 214,763 ($11,998). Other important markets, apart from those in South America, included England, 144,480 lbs. ($8,484); Hong Kong, 56,597 lbs. ($2,646); and New Zealand 49,559 lbs. ($3,513).

India's Paper Imports.

Statistics Concerning the Principal Ports.

The following details concerning the imports of paper at the principal ports of India have been compiled by our correspondent in India, and represent information of considerable value:—

BOMBAY.

	1921-22 Quantity	1921-22 Value Rs. lakhs	1922-23 Quantity	1922-23 Value Rs. lakhs
	cwts.		cwts.	
Packing paper ...	27,903	7 90	47,759	11.6
Printing paper ...	80,129	22.81	152,726	35.9
Writing paper and envelopes ...	54,135	23.51	72,529	24.75
Other kinds of paper	145,378	21.61	186,436	30.89
Paper manufactures	1,994	1 69	2,544	1 58
Pasteboard, millboard and cardboard of all kinds	76,391	10.78	67,033	6.81
Total ...	385.930	87.08	529,027	110 85
Pulp of wood ...	4,319	0.81	8,197	1.14

MADRAS.

	1921-22 Quantity cwts.	1921-22 Value Rs. lakhs
Packing paper	1,978	0.93
Printing paper	27,216	9.83
Writing paper and envelopes ...	10,444	6.57
Other kinds of paper	12,905	3.33
Paper manufactures	3,891	3.67
Pasteboard, etc.	10,966	3 82

Besides the imports at the principal port of Madras, imports valued at about Rs.5 lakhs were imported at the minor ports of the Presidency.

Regarding the year 1922-23, though the detailed statistics are not yet published, the following note appears in the review published by the Government of Madras:—

"Imports of paper and pasteboard expanded from Rs. 33.80 to Rs. 47.02 lakhs. The small stocks at the beginning of the year, coupled with the fall in manufacturers' prices induced larger imports. The shares of the United Kingdom and Norway and Sweden increased from 57 and 13 per cent. to 65 and 17 per cent. respectively, while the share of the United States declined from 7 to 3 per cent. The contributions of Germany and the Netherlands together were almost the same, viz., 9 per cent. Printing paper imports went up by Rs. 5.49 lakhs, writing paper and envelopes by Rs. 5.66 lakhs, and other kinds of paper by Rs. 4.40 lakhs, while paper manufactures and pasteboard declined by Rs. 0.63 and 1.70 lakhs. Imports of stationery increased from Rs. 9.80 lakhs to Rs. 10.80 lakhs, the United Kingdom being the chief source of supply."

KARACHI.

	1921-22 Quantity cwts.	1921-22 Value Rs. lakhs
Packing paper	852	0.33
Printing paper	23,668	8.47

13 IS THIRTEEN AN UNLUCKY NUMBER ? WE SAY ***NO*** 13

? CURIOSITY ?

is a human failing. It is also a commercial asset. Curiosity is, in fact, one of the secrets of modern commercial success. It keeps you in touch with every modern development of the trade in which you are engaged.

It is a commonplace to say that the printing trade covers a range of activities greater than most.

Obviously, therefore, you haven't the time personally to gather the information to keep thoroughly in touch. This is done for you by the *British and Colonial Printer and Stationer*.

You probably have many friends in the trade, however, who are not keeping in touch.

CO-OPERATION

You can help your friends and us by introducing to them the *British and Colonial Printer and Stationer*.

Let us have their names and addresses : we will do the rest.

THE

British & Colonial Printer & Stationer

has been established for nearly 50 years. The more important features are :

Reports of Trade Associations, Societies, etc.,
Latest Commercial Intelligence
Technical Articles
Trade Notes
etc., etc.

A monthly issue contains a section devoted to the **Bookbinder** with notes and news and market prices.

The monthly **Lithographic** issue contains special litho matter including litho notes and news.

The **Quarterly Export** issue deals with colonial and foreign markets and provides a general review of the home trade.

COST

The yearly subscription to the *British and Colonial Printer and Stationer* is **Thirteen Shillings** including postage. Is it not worth it?

Send us your friends' names and addresses **To-Day**.
